Mr. LONGWORTH. Why if the gentleman will read the bill he will observe that they will report whenever either the House or the Senate or the President calls upon them to do so.

* * * * * * *

Mr. CLAYTON. Is not this board intended for delay, and not for the reduction of the tariff?

Mr. LONGWORTH. I decline to yield further.

* * * * * * *

Mr. SIMS of Tennessee. May I ask the gentleman a real question?

Mr. LONGWORTH. I would like to have a real question.

Mr. SIMS. Why do men who believe in a tariff for revenue only want to know what it costs to make or not to make foreign goods that come in competition with our own?

Mr. LONGWORTH referred this question to the Democratic members of the Ways and Means Committee.

WAIT UNTIL THE DEMOCRATS GET IN.

Mr. Brantley, of Georgia (for the bill). I am too hopeful and optimistic a Democrat to read in the future, as some of my brethren do, disaster for by party by reason of the enactment of this bill, because by reason of our victory in November, 1910, I am assuming that in November, 1912, a Democratic President will be called to the White House.

[Applause on the Democratic side.] If that occurs, then, in July, 1913, the board authorized by this bill will be a Democratic board and will so continue throughout that Democratic administration. * * * Democracy, as I understand it, believes in a tariff for revenue and abhors the doctrine of protection, but does not close its eyes to the fact that a tariff, even for revenue alone, does affect the industries of the country. * * * The Democratic Party will take charge of the House in the Sixty-second Congress. Its first duty will be to revise the tariff downward. * * * We expect to frame our tariff legislation in the coming Congress without the aid of the board.

MR. UNDERWOOD AGAINST COMMISSIONS.

Mr. UNDERWOOD. Mr. Speaker, the American people have commissioned the Democratic Party to revise the tariff. That was the issue in the last campaign. There are sufficient facts obtainable for the Democratic Party to revise the Payne tariff bill downward to an honest revenue rate, and it is going to be done, commissions, tariff boards, or anything else notwithstanding. Now, I am not in favor of a tariff commission and never have been. A tariff commission carries with it the idea that a set of men outside of the Congress of the United States should advise the Congress of the United States how to transact the business that the people of the United States have commissioned the Congress to do. I am thoroughly opposed to a tariff commission in any form whatever.

THE PRESENT GOVERNOR OF THE PHILIPPINES.

Mr. HARRISON. I oppose it (the tariff-board bill) because I believe it is a useless expenditure of public money. I oppose it because I do not see any place in the framing of a Democratic tariff bill for revenue only for an inquiry into the difference of cost between production here and abroad. [Applause on the Democratic side.] That is the main purpose if the bill upon its face, and to that I enter a demurrer that it is no part of the Democratic scheme to entertain such an inquiry. * * * I believe that the members of the Ways and Means Committee are not only as competent but more reliable than can be any board of men appointed by the President for a six years' term, while we have to go before the people for reelection every two years. [Applause on the Democratic side.] * * * I am opposed to this waste of public money. Why, Mr. Speaker, this bill is nothing more nor less than a plank to help the Republican Party across a swamp. [Applause on the Democratic side.] The purpose of the creation of each one of these commissions which they are presenting to us with such frequency nowadays is but to asphyxiate some reform. The purpose of this bill is to harass, to delay, to prevent Democratic tariff reform, and if it does not accomplish that it will accomplish nothing at all. [Applause on the Democratic side.]

* * * * * * *

Mr. BORLAND. Does the gentleman know that the Democratic House could lick off the earth the tariff board at the next session?

Mr. HARRISON. Yes; by withholding the appropriation.

* * * * * * *

Mr. KITCHIN. Have you ever known a Democratic district convention, a Democratic State convention, or a Democratic national convention that ever declared in favor of a tariff board or tariff commission of any kind?

Mr. HARRISON. Not only that, but I believe it is absolutely opposed to all Democratic tariff principles.

THE GENTLEMAN FROM GEORGIA.

Mr. HARDWICK. Mr. Speaker, it does not seem to me as though it is good Democratic politics to assist our Republican friends in pulling their chestnuts out of the fire. They are in trouble with the tariff question. It beat them last November and it will beat them in 1912 just as certainly as the sun rises and sets on election day that year unless we help them out of the hole. [Applause on the Democratic side.]

Mr. CULLOP. Unless we are sidetracked by such galvanized projects as the one presented here.

Mr. HARDWICK. Yes; and for one I am opposed to giving them any such aid and comfort.

* * * * * * *

"What sort of Democrats are to be appointed on this commission? What are to be their tariff views? How much 'protection' does it take to constitute revenue in the minds of those two minority members of the board? God alone knows, and the President of the United States alone can answer. For one, my friends, I am opposed to running any such unnecessary risk. For one, I stand on the traditional ground of opposition to these commissions; of opposition to legislative encroachment on the constitutional functions of Congress."

DEMOCRATS DO NOT NEED INFORMATION.

Mr. SIMS. Our first duty is to pass a bill repealing the Payne bill without the information that this board would gather. How long do you suppose our bill will last if we pass one? If it lasts as long as the Dingley bill, we will not need the work of the board for 10 or 12 years. Why not wait until there is a Democratic House here, and when the 84 new Democratic Members come here and can help make a tariff board, if we have to have one, for the Democrats? * * * The people thought they elected men who knew enough about the tariff to revise the Payne-Aldrich bill without the aid of a newly created Republican tariff board.

A WASTE OF PUBLIC MONEY.

Mr. RICHARDSON of Alabama. Practically every Democrat stood courageously against such a board being formed. We denounce the useless waste of public money ($250,000, sundry civil bill) for a purpose, a makeshift, a false pretense, and its only object was to appease and placate the public and avert the overthrow of the Republican Party in November.

PRESIDENT, EVEN, WOULD BE PARTIAL.

Mr. BORLAND (for the bill). I realize that this tariff board will be appointed by a President who has affirmed his belief in the doctrine of protection. I am not shallow enough to believe that he can divorce himself entirely from personal and political interests, or that he will appoint a board entirely at variance with his own economic and political views.

SEES THE MANUFACTURERS IN IT.

Mr. COX of Indiana. I can not bring my mind to support this measure. I believe it to be wrong in principle; I believe it to be wrong in policy * * *. I am a little suspicious that, as the manufacturers are solidly for a tariff commission, they see behind this bill some way, some manner, whereby their interests will be protected. * * * I fear that this measure will ultimately lead Congress to enact a measure based along protective lines.

TRYING TO TRAP THE DEMOCRATS.

Mr. SISSON of Mississippi. I can not, as a Democrat, subscribe to this bill to create a tariff commission. It is a concession to the Republican idea of protection. * * * It is an admission that the "right to steal," using the language of the gentleman from Wisconsin, should continue until you get a report from this commission, giving Congress the facts as to the amount stolen. * * * When the Republicans were in power in this House, they wrote tariff bills without a commission to report facts. * * * They come now and endeavor to lead the Democrats into a well and smoothly set trap. * * * What has become of our Democratic courage? Shall we now surrender all the fruits of our victory? [Applause on the Democratic side.] * * *

WOULD NOT TRUST THE PRESIDENT.

Are you not transferring the rights of this House under the Constitution to the Executive when you permit the Executive to select these men on this commission to gain information for you? * * * If we had a Democratic President, I would be more opposed to the passage of this bill than I am now, because this would be a surrender of the dearest of Democratic principles. * * * Within the last few years the Executive lash has been wielded as never before, and like dumb, driven cattle the Members of this House have been lashed into line and have been compelled to do the Executive bidding. Unless this tendency is checked our free institutions will perish from the earth, and in their stead we will have an imperial despotism. In conclusion, Mr. Speaker, I appeal to the Democrats not to vote for this Republican measure.

MEANS PLUNDER AND SPOLIATION.

Mr. BYRD. When did anyone ever hear of a Republican advocating any measure touching the tariff that did not mean the plunder and spoliation of the people? [Applause.] Briefly stated, this bill proposes a permanent tariff board or commission composed of three stalwart Republican protectionists and two weak-kneed Democrats who shall exploit the world in search of data; * * * but in the light of 40 years of Republican history, how can any Democrat be convinced otherwise than that this board will be named and dominated by the minions of the trusts? [Applause.]

MR. KITCHIN SEES NO AID TO DEMOCRATS.

Mr. CAMPBELL of Kansas. I would not take away from the American farmer the best market in the world and divide it with anybody.

Mr. CLAYTON of Alabama. That sounds like one of the old-time Republican speeches.

Mr. CAMPBELL. It is my doctrine, and it is the doctrine that my party has been standing for ever since 1860.

Mr. CLAYTON. You rob him with the tariff.

Mr. CAMPBELL. No; we give him a market with the tariff; and I would protect every American industry that needs it, including the market of the farmer.

Mr. JAMES. President Taft would not.

Mr. CAMPBELL. Oh, I think he would.

Mr. CLAYTON. Would you protect cotton, for instance?

Mr. CAMPBELL. I would if it needed it.

Mr. CLAYTON. How?

Mr. CAMPBELL. By protecting any industry that would suffer from foreign competition, including cotton.

Mr. KITCHIN. You really believe, then, that this tariff commission is an aid to protection?

Mr. CAMPBELL. I believe it is. If I did not think it was, I would not vote for it. If I were a free trader, or opposed on general principles to a tariff for protection, I would not vote for this bill.

Mr. KITCHIN. You do not think, then, that a tariff commission will aid the Democrats in the next Congress in writing a good Democratic bill?

Mr. CAMPBELL. No; nothing could aid the Democratic Party to make a good tariff bill.

Mr. KITCHIN. It will be a hindrance to that, will it not?

Mr. CAMPBELL. I am not opposed to putting obstacles in the way of the Democratic Party.

Mr. KITCHIN. And you believe this tariff commission will be an obstacle, do you not, now, honor bright?

Mr. CLAYTON. Come down to brass tacks and tell us.

THE GENTLEMAN FROM ARKANSAS.

Mr. MACON (on motion to strike out the enacting clause). I believe that this is an attempt on the part of the administration to fasten upon this country a tariff board to gather partisan information * * *. I have never heard of a Democratic convention, small or great, declaring in favor of a tariff board * * *. This is just as obnoxious as a tariff commission would be * * *. I have made the motion to strike out the enacting clause, knowing that if that is done the bill will be dead, it being my desire to kill it at the earliest possible moment.

THE GENTLEMAN WHO PRESIDED AT BALTIMORE AND ST. LOUIS.

Mr. JAMES. Of course, we may say that the President of the United States is a great and good man. I shall not dispute that. But to say that he is more than human, I deny. [Applause on the Democratic side.] You lodge in him by this bill the right to go into my party and take members of that party whom he calls Democrats and place them upon this board for the purpose of gathering this information. Now, there are Democrats and there are Democrats. [Laughter.] * * * Personally I have always been against boards and commissions. I believe the fathers of the Republic were wise, even wiser than they knew, when they lodged with the great House of Representatives of the people the right to formulate tariff legislation. [Applause.] * * * I believe that Democrats know better who are Democrats than a Republican President knows who are Democrats, and for that reason I offer this amendment.

WHEN THE DEVIL WAS SICK.

And so the speeches ran. There were many more of them all of the same tenor. Even our amiable friend from Indiana [Mr. BARNHART], now chairman of the Committee on Printing, got into the discussion.

I think—

Said he—

I understand what the word "bipartisan" means, but I am not quite ready to admit that the present President of the United States is able to comprehend fully the word "bipartisan."

When the devil was sick, the devil a monk would be;
When the devil was well, the devil a monk was he.

The Democratic devil was feeling pretty good about the time he was coming into power at the close of the Sixty-first Congress. The Payne bill had left the country in a prosperous industrial condition and the Treasury was full. There was plenty of money to experiment with and the Underwood bill was put into effect. It has been tried for three years and has been found wanting. The Treasury is in need of funds more than ever in our economic history, and the "well devil" of 1911, which destroyed a tariff board, upon which a Republican President had placed three Republicans and two Democrats, is now "the sick devil" of 1916, which seeks Republican support for a tariff commission, to be appointed by a Democratic President, who has not yet appointed a single Republican to any of the numerous boards he has been authorized to fill. Clinging to his idols, "the sick devil" of 1916 has still the audacity to ask Republicans in an appeal to patriotism to vote for a Wilson-Underwood tariff commission upon the strength of an indorsement of the Underwood tariff law by the Democratic National Convention lately assembled at St. Louis.

Before they vote for the Democratic program as submitted in the bill presented by the gentleman from North Carolina [Mr. KITCHIN] it is suggested that those Republicans who at least believe in protection shall peruse the frank and open sentiments of the Democrats of 1911, who are going to vote for a tariff commission in 1916. For one I prefer, if I am to vote for a tariff board or a tariff commission, to wait until the auspices are a little more favorable. I do not believe we are called upon to sacrifice our party principles to help the Democrats out of the financial hole which they deliberately dug for themselves.

## The Revenue Bill.

### EXTENSION OF REMARKS
OF
### HON. NELSON E. MATTHEWS.
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. MATTHEWS. Mr. Speaker, availing myself of the privilege of extending my remarks, I desire to present my views on the pending revenue measure prepared in secret by the majority members of the great Ways and Means Committee of the House without consulting any one of the minority members on that committee, and, for that matter, no one on the minority side knew anything about the bill until it was introduced, accompanied by a rule from the majority members of the Committee on Rules which allowed two days of general debate, after which the bill must be read in full without interruption, and no chance to offer any amendments to any section of the bill until the reading was finished. Then one day was permitted to offer amendments with only five minutes' discussion on any amendment by any Member, and the hour was fixed at which a vote on all the amendments must be taken, and then the bill to be voted on as a whole.

Here is a bill that proposes to raise about $200,000,000 of additional revenue over and above the revenue raised by laws now in force, and by a system of internal taxation, which is a direct tax levied on the people, and is a well-timed, bold, and deliberate attempt on the part of President Wilson—as he absolutely controls the present majority—to sidetrack and, if possible, destroy all hope of ever framing a tariff based on the theory of protection to our manufacturing and agricultural interests against cheap labor in other parts of the world.

The bait offered Republicans to abandon their time-honored principles and come over and help our Democratic friends out of the mire in which they are floundering is a "tariff commission," composed of six members, all to be appointed by the President, who are to each receive a salary of $7,500 per year and all expenses; also a secretary, with a salary of $5,000 per year, together with a host of clerks and retainers. The bill appropriates $300,000 for the first year's expenses of the commission, and the expenses of the second year will probably be $500,000.

In passing let me say that for years prior to 1912 the Democrats were complaining and crying out against the very large number of persons in the employ of the Government, and yet during the first three years of Mr. Wilson's administration over 30,000 employees have been added to the pay roll, causing an increase of expense for salaries from that source alone of $36,000,000 or over per annum. And this increase has been caused by the numerous new commissions and offices created since March 4, 1913. At the rate we are going in creating new offices and commissions to regulate the affairs of corporations, firms, and individuals it will not be long until even the farmer will have to employ a lawyer to find out whether or not he is carrying on his business of farming in such a manner as not to violate any of the thousand and one laws passed not only by the General Government but by the States as well. Many, if not all, of them tend toward paternalism. A few short years will find the country governed by commissions entirely.

An increase in the present "income-tax" law, doubling the tax and then some.

A small duty on dyestuffs for a period of five years, after which, if the manufacturers of dyes do not produce 60 per cent of all the dyestuffs used in the country, the duty goes off. If they do, they take off 20 per cent each year for five years. How much capital can be induced to invest under such a law?

A tax on munitions of war. Rather late, is it not, after these people have made hundreds of millions of dollars on shipments to Europe and are now ready to quit shipping abroad and will soon have only the United States for a customer?

A direct inheritance tax levied on estates. As it is now, 30 States have taxes on inheritances of this kind, and 12 other States levy taxes on shares of estates passing to collateral heirs. This looks very much like double taxation, as the States will never give up this method of raising taxes.

Then, last and worst of all, comes the antidumping clause. An attempt to get up some scheme to counteract, if possible, the ruinous effect of the present Underwood tariff law, which Secretary Redfield warns the majority is sure to come about as soon as the war in Europe is over. Importations are now the largest this country has ever known, with the central empires of Europe unable to send us any of their products except as England permits. It is admitted by all that if the Payne-Aldrich tariff law had been in force during the past three years hundreds of millions of dollars of additional revenue would have been collected, the Public Treasury would now be overflowing with money, and we would not now have to resort to all sorts of taxation to raise the revenue necessary to carry on the Government, even with the extraordinary expense incurred by reason of the increases of the Army and Navy, and it would not be necessary to issue bonds to pay for the expenses brought about by our uncalled-for interference in Mexican internal affairs, as this bill now proposes to do.

Chairman KITCHIN calls this a sugar-coated pill and begs the Republicans to swallow it. Says he does not like it himself, but will hold his nose and swallow it because, forsooth, some one told him the President wanted him to do so.

Suppose we do as he requests. Our Democratic friends will at once send out word all over the country and try and fix the odium that may be attached to the bill on the minority, and point with glee to the fact we voted for the bill and have abandoned our principles of indirect taxation and protection theories, and no doubt will claim we have indorsed the President's Mexican policy.

By the way, what are the President's Mexican policies, and, for that matter, what are his policies generally? We may think we know to-day, but judging by the past no one knows what they may be to-morrow. When he first went into office we all supposed the Democratic platform adopted at Baltimore represented his views. Since then about every plank in that platform has been broken and discarded.

Then, again, we imagined we had him where he could not escape when he sent his notes to Germany, Austria, and England. "Where, oh, where, are we at?" Does anyone know, including the President? No administration ever talked more and did less than the present.

Let me close by reading an article appearing in the Republican, of Paulding, Ohio, which I think states the case exactly so far as our foreign policies are concerned. The editorial is headed, "He kept us out of war":

He kept us out of war, while millions of dollars' worth of our property shipped in neutral bottoms was sunk by the unwarned and unlawful attack of submarines.

He kept us out of war, while cargo after cargo of our goods, consigned to neutral ports and lawfully upon the highway of the seas, was seized and taken to belligerent harbors, there to be condemned or confiscated to the use of the seizing power, leaving the American owners to pursue the tollsome process of litigation to procure payment for their property.

He kept us out of war, while our mails, including even diplomatic communications, were delayed, opened, and censored by unskillful clerks who acted without the sanction of international law.

He kept us out of war, while innocent nationals of the United States, lawfully sojourning in Mexico, were despoiled of their possessions, were wounded in their bodies and in their souls, or even gave up their lives.

He kept us out of war, while pious men and women from these United States, who had gone to Mexico on an errand of the highest import, were deprived of their homes, of their virtue, and of their lives.

He kept us out of war, while untold millions of American property on Mexican soil was plundered, illegally levied upon, and destroyed.

He kept us out of war, while armed bands of desperadoes, equipped with guns and cartridges shipped to them by his consent, violated our soil, insulted our sovereignty and our flag, burned our buildings, and murdered our people in their own homes.

He kept us out of war, while a thin blue line of heroes penetrated the Mexican deserts in search of a former pet of his—now under the ban—and found themselves surrounded and shot down by soldiers wearing the uniform of a government which he had recognized and which could never have existed, and which could not exist now, except by his favor.

He kept us out of war, until, confronted by impending defeat for re-election, he realized that some show of force and of forcefulness was necessary, and then he permitted his own Congress to hamstring the legislation designed for the national defense and summoned the militia to do the work which experts have long been telling him and the country could best be done by an enlarged and better equipped Regular Army.

I can not see my way clear to support this bill unless amended in many particulars.

## Tariff Commission.

### EXTENSION OF REMARKS
OF
### HON. HENRY A. BARNHART,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, July 7, 1916.*

Mr. BARNHART. Mr. Speaker, the tariff question has been the most disastrous political scarecrow that has ever beset American business tranquillity and prosperity. Not that the tariff itself has really had good or evil influence on commercial and industrial pursuits, but the beneficiaries of a high tariff became so deeply intrenched through special-privilege legislation they built up or destroyed prosperity just as it suited their selfish purposes. If a reduced tariff, as a benefit to the consuming millions, was proposed, the high-tariff capitalists threatened business depression and were powerful enough to coerce and frighten the country into hard times. On the other hand, if they were favored with legislative assurance that they could make fat profits they would turn their money loose and lead business activity into prosperous times—especially for themselves. They were always ready to let business go along undisturbed if Shylock was assured his pound of flesh, but if not the curse of the high-finance gods was upon us and business stood still and the people and the country suffered.

But in recent years the people have had their eyes opened to the fact that big business was making a political football of the tariff to pad already fat bank accounts, and they put the scheming high-tariff agents out of Congress and elected a majority of Representatives who favored the kind of tariff legislation that would permit everybody to prosper rather than a favored few. Then the high-tariff Shylocks commenced crying, "Panic! panic! A panic will get you if you interfere with our power and our profits!" But there was no panic, because President Wilson and Congress at once blocked this unholy undertaking by enacting a banking and currency law which prevents disgruntled capitalists from precipitating panics if they can not have their way. And this banking and currency law has been the most important factor in our present matchless prosperity.

But the high protective tariff leaders are again howling calamity if they can not have their way, and this can be forever silenced, just as we silenced the panic threats by the banking and currency law, which makes honest banking safe and the people's deposits secure. We can create a nonpartisan tariff commission that can, will, and ought to take the tariff question out of politics. I favored this when I first entered Congress, openly fought for it two or three times in tariff legislation, and several times introduced bills proposing such legislation. My last effort in this respect was a tariff-commission bill introduced at the beginning of the present session of Congress. And now that we have such legislation favorably reported for passage, I hope it will go through by such an overwhelming vote that no future Congress will ever dare to repeal it and industry and commerce and general business prosperity in our country will be free from the possibility of a combination of capitalists and politicians disturbing business at the time of every presidential election.

Such a nonpartisan tariff commission will have power to go into every phase of the tariff question, such as ascertaining the difference in wages at home and abroad, the cost of production, the cost of raw material, the need of Government revenue, and, indeed, analyze all details of the tariff question so that such changes may be made from time to time as justice to home business and Government welfare demands. Pass this bill and every honest business man in the country will call us blessed and we will be forever free from the danger of evil business agencies blighting our possibilities and from the scheming politicians who would sacrifice any business and industrial stability and security in order to win elections. Pass this bill and take the tariff so surely out of politics that the politician who hereafter attempts to ride into office on a self-created business scare will ride himself into political oblivion.

## Work of Hon. William E. Humphrey in Congress.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM S. GREENE,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 5, 1916.*

Mr. GREENE of Massachusetts. Mr. Speaker, I wish to print in the RECORD an editorial from the American Reveille, of Bellingham, Wash., in regard to the work and character of Hon. WILLIAM E. HUMPHREY, of Washington. I indorse the editorial fully and commend it to the people of his State as giving only just and merited praise to one who has served them so long and well. Perhaps I am more intimately acquainted with Mr. HUMPHREY than is any other Member of this body. I have known him ever since he entered Congress, and for 10 years served with him upon the same committee. No Member of this House more faithfully or honestly represents his people. I never knew a more industrious, courageous, and patriotic and upright man than Mr. HUMPHREY. All of us recognize him as one of the leaders of this House. His speeches are circulated throughout the country, and are among the ablest made upon this floor. Several years ago he made a speech in my home town, and the people still remember it and speak about it.

These are perilous times in our country's history. The editorial states a truth that should not be forgotten when it says:

More great questions will probably come before Congress within the next six years than during any other six-year period in our history.

This is a time when the Nation demands strong men, able men, courageous men, and patriotic men in the Senate, and such a man I know Congressman HUMPHREY to be. His transfer from this body will be a loss to the House, but he can be of greater service to his State and the country in the Senate. His work upon the great Rivers and Harbors Committee, so far as his own State is concerned, is practically complete, every important project having been cared for, if the pending bill is enacted into law.

Mr. HUMPHREY will at once take front rank in the Senate. It would take any other man from Washington years to command the influence in that body that Mr. HUMPHREY will possess the day he enters it. He has served in this House with a large number of men that will compose the next Senate. He will take from here the good will and best wishes of all his colleagues. He will have the advantage that 14 years of legislative experience will afford.

His election means so much to the country and to the Republican Party that I take pleasure in letting the people of Washington know, in so far as I can, the estimate that his colleagues and the Republican leaders throughout the country place upon his services and ability. I make no apology for speaking of him as I do. I know him well from years of intimate association, and if all the people of Washington knew him as well as I do there would be no opposition to his election. His election concerns not only the State of Washington but the entire country. It would be a national loss for him to quit public life, especially at this time.

Mr. HUMPHREY is acquainted with public affairs. He knows the wants and needs of the present and has courage and ability to meet the demands of the future. He knows by actual experience the methods and procedure of Congress and how legislation is written upon the statute books.

This I do know, that the State of Washington could do nothing that would place her so high in the councils of the Nation and in the councils of the Republican Party as to send WILLIAM E. HUMPHREY to the Senate. I have too much confidence in the good judgment and patriotism of the people of the State of Washington to believe that at this crucial time, when big men, men of ability, men of energy, men of courage and patriotism are so needed in high office, that they will fail at the

coming election to send Congressman HUMPHREY to the United States Senate.

The editorial mentioned is as follows:

[From the American Reveille, Bellingham, Wash., June 27, 1916.]

CONGRESSMAN HUMPHREY'S RECORD.

Congressman HUMPHREY, after 14 years in the House, is a candidate for the Senate. He is the best known and most influential man in public life from the Pacific coast. He is one of the Republican leaders of this Nation and one of the foremost orators in the country. His speeches are as widely read and circulated as those of any man in Congress. He commands the confidence of the Republican leaders throughout the Nation. Congressman HUMPHREY has always been a Republican. He has stood true to his convictions when it meant much to stand by his party. He will be of far greater benefit and will have more influence in the Senate than any other man that the State of Washington could possibly select. Like Burton and WEEKS, who went from the House of Representatives, he will at once become a leader in the Senate. It would be the height of folly for the State of Washington to fail to elect Mr. HUMPHREY in this critical period in our history. More great questions will come before Congress for settlement within the next six years than perhaps in any other six-year period in our history. It would be a grave mistake, if not a calamity, to our State and a loss to the entire country if Mr. HUMPHREY should, particularly at this time, be retired to private life.

By request we give a condensed statement of Congressman HUMPHREY'S record.

Congressman HUMPHREY voted and worked for the following legislation:

LABOR.

He voted for—
Employers' liability act.
Workmen's compensation bill.
All safety-appliance laws.
All eight-hour laws.
Eight-hour law for women in the District of Columbia.
Immigration bills.
Law limiting hours of service for men on railroads.
Law prohibiting importation of convict-made goods.
Law creating the Bureau of Mines.
Law creating the Children's Bureau.
Law creating the Department of Labor.
Child-labor law for the District of Columbia.
General child-labor law.
Law requiring material for the construction of the Panama Canal to be purchased in the United States.

And many other laws similar to the above. In fact, Mr. HUMPHREY has voted for all laws that have been of benefit to those who earn their bread by the sweat of their face.

PENSION LEGISLATION.

He voted for—
Age pension law.
Law increasing pension of widows.
Indian veterans' pension law.
Bill to pension widows and orphans of Spanish-American War veterans.
And for every other bill, public and private, that came before Congress to assist the soldiers, their widows, or their orphans.

THE FARMER.

He voted for—
Rural credits.
For good-roads bill.
For all acts to strengthen and extend the rural free delivery.
For postal savings banks.
Mr. HUMPHREY was one of the first men in Congress to advocate the postal savings bank law.

AMENDMENTS TO THE CONSTITUTION.

He voted for these amendments to the Constitution:
For the election of Senators by the direct vote of the people.
For the income-tax amendment.
For the equal-suffrage amendment.
For the national prohibition amendment.

REFORM MEASURES.

He voted for—
The Hepburn law, prohibiting rebates and discriminations by the railroads.
Law enlarging the power of the Interstate Commerce Commission so as to give it power, among others, to fix rates, to fix through rates on rail and water lines, and to compel terminal connections and facilities.
For law to ascertain the physical valuation of railroad, telephone, and telegraph lines.
For law prohibiting the giving of passes.
For law prohibiting corporations making contributions to campaign funds.
For law requiring publicity of campaign contributions both before and after election.
And many other reform measures similar to those enumerated.

HEALTH AND MORALS.

He voted for—
The Federal meat-inspection law.
Pure-food law.
"White slave law."
Law prohibiting the importation of opium for other than medicinal purposes.
Mr. HUMPHREY was very active in his support of the above measures.

ALASKA.

He voted for—
The law giving Alaska a Delegate in Congress.
He drew and had passed the present Alaska game law.
Was one of the most active and influential men in Congress in favor of the law providing for the Government to construct a railway in Alaska.

PANAMA CANAL.

Mr. HUMPHREY gave his earnest support to every measure looking to the building of this great work. No man had more to do with the passage of the law making the canal free to American ships in coastwise trade than Mr. HUMPHREY, and no man fought harder to prevent the present Democratic administration from repealing this law.

LOCAL LEGISLATION.

While taking an active part in all legislation of a general character, Congressman HUMPHREY never neglected his own State or district. In the House Mr. HUMPHREY has had charge of the legislation giving, among others, the following appropriations to our State:
Puget Sound Navy Yard, $5,000,000.
Fortifications on Puget Sound, $4,000,000.
Public buildings, over $1,000,000.
Lake Washington Canal, $2,600,000.
Other river and harbor improvements (including Columbia and Snake Rivers), $20,000,000

These are some of the needed appropriations that he has helped to secure for the State.

Congressman HUMPHREY has never hesitated to take a position on all great public questions and has not waited to discover whether or not they were popular before doing so. In other words, Mr. HUMPHREY has been a leader and not a follower. Looking over his record to-day in the light of the present, there are few that will contend that he has not been right on all great measures that have come before Congress during his term of service.

WHERE HE STANDS TO-DAY.

Congressman HUMPHREY for several years has been preaching what we now term "preparedness," and was one of the first men in the country to advocate what all parties now indorse upon this proposition. He is opposed to militarism and believes in preparedness only as an insurance of peace and as the best means of preventing the awful horrors of war. He wants our country so prepared that no foreign soldier can land on our soil.

For a decade he has been urging a battleship squadron for the Pacific strong enough to protect our coast from attack and invasion.

He believes in an American merchant marine, not only to make us commercially independent, but also as a necessary measure of self-defense.

He believes the Panama Canal should be free to every ship that flies the American flag.

He believes most emphatically in protection and in a tariff commission.

He believes that American markets belong to the American producer; that our work and wages should be given to American labor.

In other words, he believes in America first.

Mr. HUMPHREY believes that the Underwood law should be immediately repealed and that there will be no great prosperity in our State until it is. As he himself has expressed it, he believes in "patriotism, preparedness, protection, and prosperity."

## Pension Appropriation Bill.

### SPEECH

OF

# HON. GEORGE W. RAUCH,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, June 17, 1916.*

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 15775) making appropriations for the payment of invalid and other pensions of the United States for the fiscal year ending June 30, 1917, and for other purposes.

Mr. RAUCH. Mr. Chairman, the bill which I have presented to the House of Representatives is the pension appropriation bill. It appropriates $158,000,000 for the payment of invalid and other pensions of the United States for the fiscal year ending June 30, 1917.

This country owes a debt of gratitude to its soldiers that it can never adequately pay. They left the comforts, the pleasures, and the safety of home and assumed the hardships, the trials, and the dangers of war to fight for the preservation of their country. While it is true that some of them did not see long service, at the time of their enlistment none of them could see the end.

War is a terrible engine, and when once set in motion no one can tell where it will stop. It is projected by human hands, but no sacrifice has been sufficient to satisfy it and no sorrow deep enough to touch it. It comes with the mighty sweep of an onrushing flood, leaving death and destruction in its path. It took from us the flower of our American citizenship, because the rank and file of the American soldiery always came from the common people. Of them it has been truly said:

They are our strength, and should be our pride. They are the ones who in times of peace produce the wealth of this country, and they are the ones who in times of war bare their breasts to a hostile fire in defense of the flag.

Money can not compensate them for their suffering or their valor, but we can see to it that no one of the faithful and brave soldiers whose services contributed to the victory should ever suffer either for the necessaries or the comforts of life.

Mr. Chairman, the policy of the United States with reference to pensions is a well-fixed and established policy. Attempts to show that the Democratic Party has been unfriendly to pension legislation must fail upon an examination of the record. I expect to print in the CONGRESSIONAL RECORD a list of the pension laws that have been passed by Democratic Congresses. It was not my intention to do so if reference had not been made during the discussion of this bill to various bills which have been passed increasing the rates of pension and enlarging the scope of our pension laws by either party when in power.

Mr. DYER. May I ask the gentleman a question?

Mr. RAUCH. Yes.

Mr. DYER. Will the gentleman be able to state whether or not during this adminstration any such law has been enacted increasing pensions?

Mr. RAUCH. I will be able to state, I will say in answer to the gentleman, that the most liberal pension law ever enacted in our Government was passed by a Democratic Congress. I will state——

Mr. DYER. When was that?

Mr. RAUCH. That was the Sherwood bill.

Mr. DYER. That was a Democratic House, a Republican Senate, and a Republican President. I am speaking of since President Wilson came into office that the Democratic Party has no right to lay claim in their platform about having been liberal to the old soldiers, or any soldiers, by passing any general legislation on that subject whatever.

Mr. LOBECK. Will the gentleman yield further?

Mr. RAUCH. Not just at present.

Mr. LOBECK. Simply for a question. Did not a Democratic House in the Sixty-second Congress pass the original Sherwood bill which was more liberal than the conference bill which came back from a Republican Senate?

Mr. RAUCH. That is undoubtedly true. The bill which came back from a Republican Senate was not as liberal as the provisions of the House bill. It is the object of this bill, however, to appropriate money for the payment of pensions under existing law. The Committee on Invalid Pensions has jurisdiction, as we all know, of bills which in their subject matter proceed to increase the rates or to enlarge the scope of our pension system. This bill appropriates $158,000,000 for the payment of invalid and other pensions of the United States, and $65,000 for the payment of fees and other expenses of examining surgeons. The appropriations for 1916 were $164,000,000 for the payment of pensions and $100,000 for the payment of fees and expenses of examining surgeons. The bill, therefore, represents a reduction in expenditure of $6,035,000 under that of last year. This reduction is in accordance with the estimates and recommendations of the Commissioner of Pensions. There is no doubt in my mind, nor in the mind of the committee, but what the amount carried in this bill will be adequate for the payment of pensions under existing law.

At this time I wish to refer to another feature of the bill, and that is a provision on page 2, as follows:

*And provided further*, That all allowances made, or hereafter to be made, to medal of honor pensioners under the act of Congress approved April 27, 1916, shall be paid from the moneys appropriated for the payment of invalid and other pensions, and section 3 of the said act of April 27, 1916, is amended accordingly.

I suppose this provision is subject to a point of order, but I do not think there is a disposition on the part of anyone to make it. On April 27, 1916, Congress passed an act creating an Army and Navy medal roll of honor. The men on this roll are paid a pension of $10 a month. According to the language of the act these pensions are to be paid by the Commissioner of Pensions in the Department of the Interior out of any money in the Treasury of the United States not otherwise appropriated. To have this law as it is requires that separate certificates of these particular pensions be issued and that a separate roll be made up; that a separate account be kept and separate requisitions made by the commissioner. This provision, therefore, amends the act of April 27, 1916, so as to provide for the payment of these pensions out of this appropriation bill. The amount of money is not large. It amounts, I am told, to only about $12,000. This proposed change in the law has the recommendation and the approval of the Commissioner of Pensions, and also of the chairman of the Committee on Invalid Pensions, the bill coming from that committee, and having been considered by that committee before it was passed by the House. This amendment is intended to facilitate the work in the Bureau of Pensions, and I trust that no one will make a point of order against it.

I wish also, Mr. Chairman, to insert in the RECORD as a part of my remarks a table showing the amount of money expended for pensions by the United States Government. It may be interesting to this House to know at this time that for the War of the Revolution the United States Government paid out $70,000,000 in pensions, for the War of 1812 $45,972,895.76, for the Indian wars $13,315,227.19, for the War with Mexico $49,618,948.68, for the Civil War $4,614,643,267.43, the War with Spain and the Philippine insurrection $49,944,441.84, Regular Establishment $35,472,408.77, unclassified $16,508,447.41.

We are all in favor of our pension system. I know of no one who would abandon it. Criticisms have been made that here and there we find abuses. I submit that that would be true under any system that might be devised. It is impossible to always ascertain all the facts in each and every case. My experience with the Bureau of Pensions has been that that bureau has at times maintained what I thought was an attitude of hostility toward the granting of pensions, but I have been met with the suggestion and the statement that the bureau regarded it as its duty to safeguard the Treasury against abuses which have existed and did exist, few in number, perhaps, but which have caused criticisms of one kind and another to be made against it. One thing is true, no fit man in the United States who is called upon to volunteer or to enlist in the service of his country can help but feel that the Government will take care of him and his in the event of misfortune coming to him as the result of his military service. I believe it contributes largely—I will not say to the patriotism of our people—but I believe it would contribute to a great extent to the enlistments that we would have in the event we should be confronted with a war of such magnitude as to make it necessary for us to call upon our citizenship to volunteer.

I will not pursue the discussion further at this time, as I am very anxious to have this bill passed.

Mr. RUSSELL of Missouri. Will the gentleman yield?

Mr. RAUCH. I yield.

Mr. RUSSELL of Missouri. I see that the estimate for this appropriation bill last year was $166,500,000 and some odd, but we actually appropriated at that time, I believe, only $164,000,000.

Mr. RAUCH. I will say in reply that these reductions have been made as a result of subsequent estimates submitted by the Commissioner of Pensions, and the reductions are made possible by reason of the fact that the pensioners are now all very old and rapidly passing away.

Mr. RUSSELL of Missouri. The fact is that they are dying at the rate of approximately 100 every day, is it not?

Mr. RAUCH. I think that is approximately correct.

Mr. RUSSELL of Missouri. This year, I believe, the estimate was $160,000,000, and I understand you to state that this bill carries $158,000,000.

Mr. RAUCH. This bill carries $158,000,000 approximately.

Mr. RUSSELL of Missouri. About $2,000,000 less than the estimate that was made only a few months ago?

Mr. RAUCH. Yes.

Mr. RUSSELL of Missouri. I will ask if this bill will not annually decrease in about the same proportion, two or three million dollars a year, unless we do enact some other general legislation?

Mr. RAUCH. I think I can say to the gentleman that the bill, according to the opinion of the Commissioner of Pensions, will be reduced more rapidly in succeeding years than it has been in the past.

Mr. RUSSELL of Missouri. And the probability, you think, will be that if no other general legislation is passed calling for additional money, the appropriation necessary a year from this time would fall down to $155,000,000, or less than that?

Mr. RAUCH. I think if there should be no additional pension legislation the next pension appropriation would not carry more than $152,000,000.

Mr. RUSSELL of Missouri. I notice that of the amount appropriated at the last session of Congress, $164,000,100, I believe it was, there was about $500,000 of that unexpended?

Mr. RAUCH. I think the gentleman is correct.

Mr. RUSSELL of Missouri. Is it not probable, then, that this $158,000,000 being appropriated by this bill may not all be necessary to pay the pensions, but some of it may lapse into the Treasury, as it did a year ago?

Mr. RAUCH. Of course, it is not the policy of the Committee on Appropriations to unnecessarily appropriate money. But, on the other hand, it is the policy of the committee to give these various departments of the Government a working balance when it is impossible for them to submit absolutely correct estimates as to what the expenditures will be for the next fiscal year.

The following record shows that the insinuation that the Democratic Party has not been friendly to the soldiers is absolutely without foundation. In fact, the laws resulting in the greatest benefit to them have been passed when the Democrats were in power. A Democratic House passed—

First. Act of August 15, 1876, providing for the issuance of artificial limbs, or commutation therefor, to disabled soldiers and seamen, and providing transportation for the purpose of having the same properly fitted.

Second. Act of February 28, 1877, increasing the pension of those who lost both an arm and a leg.

Third. Act of March 9, 1878, granting pensions on account of service in the War of 1812 and the Revolutionary War, requiring a service of but 14 instead of 60 days on the part of the survivors of the War of 1812, and granting pensions to widows regardless of the date of marriage to soldiers of this war. It also granted pensions to widows of soldiers of the Revolutionary War on a service of 14 days. Former laws required a marriage prior to the treaty of peace in the case of widows of the War of 1812.

Fourth. Act of June 17, 1878, increasing to $72 per month the pensions of those who lost both hands, both feet, or the sight of both eyes incident to the service.

Fifth. Act of March 3, 1879, increasing to $37.50 all pensions on account of amputation at the hip joint. This sum was afterwards increased to $45 per month by a Democratic House.

Sixth. Acts of January 25 and March 3, 1879, granting arrears of pensions from the date of discharge, generous measures which benefited more than 225,000 pensioners at once and caused the annual pension rate to leap from $33,780,526.19 to $57,240,540.14. The Republican Party had control of both Houses of Congress for more than 10 years after the close of the war, but passed no legislation of this character.

Seventh. Act of June 21, 1879, abolishing biennial medical examinations and providing that in no case shall a pension be withdrawn or reduced except upon notice to the pensioner and a hearing upon sworn testimony.

Eighth. Act of June 16, 1880, giving $72 per month to all those who became totally helpless from any cause incident to the service.

Ninth. Act of February 26, 1881, for the protection of pensioners in the Soldiers' Home.

Tenth. Act of July 4, 1884, which established the proper relations which should exist between attorneys and clients and fixed by law the fees to be allowed in pension cases. By this act a Democratic Congress placed the strong arm of the law between the helpless applicant and the rapacious agent.

Eleventh. Act of July 14, 1892, establishing an intermediate rate of pensions between $30 and $72 per month and fixing the rate at $50 for all who required frequent and periodical, though not regular and constant, personal aid and attention.

Twelfth. Act of August 5, 1892, granting pensions to Army nurses and forbidding the demanding of a fee by claim agents for prosecuting this class of cases. This was a generous recognition of the noble heroines who, leaving home and loved ones behind, in self-sacrifice braved pestilence and hardships to minister to the sick in the hospitals of the Army.

Thirteenth. Act of December 21, 1893, making a pension a vested right.

Here are some other contributions to the pension laws which were either approved by a Democratic President or passed by a Democratic House of Representatives:

Fourteenth. Act of April 18, 1884, making it a felony for any person to falsely or fraudulently represent himself to be an officer of the United States.

Fifteenth. Act of March 19, 1886, increasing from $8 to $12 per month the pensions of 79,989 widows and dependents on the roll at the time, as well as tens of thousands who have since been placed there. These certificates were issued by a Democratic Commissioner of Pensions without any expense or unnecessary delay to those deserving beneficiaries.

Sixteenth. Act of May 17, 1886, amending the reports of the War Department, which discriminated against a large and worthy class of soldiers, relieving thousands of unfortunate veterans of the hardships worked by the resting of charges against them based upon technical errors in the records.

Seventeenth. Act of August 4, 1886, increasing the pensions of 10,030 cripples—armless and legless veterans.

Eighteenth. Act of January 29, 1887, benefiting about 30,000 survivors and widows of the Mexican War.

Nineteenth. Act of June 7, 1888, granting arrears to widows from the date of the death of the husband and providing that all United States officials authorized to administer oaths should administer all oaths required to be made in pension cases in the execution of vouchers for pensions free of charge. This arrearage act benefited at once more than 200,000 soldiers' widows.

Twentieth. Act of August 27, 1888, increasing pensions on account of deafness.

Twenty-first. Act of February 12, 1889, granting an increase in pensions from $72 to $100 per month to all persons who lost both hands in the service and line of duty.

Twenty-second. Act of March 1, 1889, relating to the payment of pensions to the widows or dependent heirs where subsequent to the issurance of the check the pensioner dies.

Twenty-third. Act of March 2, 1889, removing certain technical charges in the record and relieving a large and meritorious class of soldiers.

Twenty-fourth. Act of March 2, 1895, which abolished the rates of $2 and $4 and fixed the lowest rate of pension at $6 per month.

Twenty-fifth. The act of May 11, 1912, known as "Sherwood law" by which the present rates were fixed based upon present age of soldier, sailor, or marine and the length of service rendered by him during the late Civil War. This law carried substantial increases to practically every survivor of that war.

Twenty-sixth. The act of March 4, 1913, amending act of May 11, 1912, and providing automatic increases from date of birth of pensioners on the roll without further formal application therefor.

Twenty-seventh. Act of February 19, 1913, granting an increase to Indian war survivors from $8 to $20 per month.

Twenty-eighth. An act which passed the House February 16, 1916, known as Key bill, providing pension for widows and orphans for soldiers, sailors, or marines who served during the late Spanish War and Philippine Insurrection regardless of the cause of death. This is the third Democratic House of Representatives which has passed this bill. It has never reached a vote in the Senate. It is now on the Senate calendar with excellent prospects of becoming a law at an early date.

Twenty-ninth. February 16, 1916, the House of Representatives passed the Keating bill, which provides a pension of $20 per month for surviving soldiers, sailors, or marines, and $12 per month for their widows, with $2 additional on account of each minor child, who served 30 days during Indian hostilities from 1865 to 1891. This bill was passed by the United States Senate May 9, 1916, with certain amendments, and is now in conference and will become a law at an early hour.

Thirtieth. June 19, 1916, the House of Representatives passed what is known as the Ashbrook bill, which provides a rate of

$20 per month for every widow of a soldier, sailor, or marine who served during the late Civil War or during the late Mexican War, who was his wife during any portion of his service, and who is entitled to pension under any existing law, or the widow of any soldier, sailor, or marine who is entitled to pension under any existing law, who is now 70 years of age or shall hereafter become 70 years of age; also that any widow whose name has been dropped from the roll by reason of remarriage and whose second marriage has been dissolved without fault on her part shall be entitled to have her name restored to the roll at the rate of $12 per month; and further providing that marriage subsequent to June 27, 1890, and prior to June 27, 1905, shall give title to Civil War widows under the act of April 19, 1908. This bill is now on Senate Calendar and has been amended to the effect that instead of June 27, 1905, marriage prior to the date of approval of this act shall give title under the act of April 19, 1908, thus moving up the bar of June 27, 1890, 26 years. The bill was further amended so that widows who had remarried and whose second marriage had been dissolved without fault upon their part should now have title if at the date of the death of their first husband they would have had title under any law that now exists. It will be seen from the foregoing résumé of the Federal pension acts that the most rapid strides and liberal legislation for soldiers, sailors, or marines, their widows, minors, and other dependent relatives have been provided for by legislation at the hands of the Democratic Party.

PENSIONERS BY STATES AND FOREIGN COUNTRIES.

*Pensioners and amounts paid, arranged by States, insular possessions, Canal Zone, and foreign countries, during the fiscal year ended June 30, 1915.*

| | Number. | Amount. |

SUMMARY.

| | Pensioners. | Payments. |
|---|---|---|
| Pensioners residing in States and Territories and payments to them | 743,327 | $164,537,494.15 |
| Pensioners residing in insular possessions and Canal Zone and payments to them | 160 | 35,551.80 |
| Pensioners residing in foreign countries and payments to them | 4,660 | 945,220.19 |
| Total | 748,147 | 165,518,266.14 |

CIVIL WAR SURVIVORS.

The following shows the loss and percentage of loss to the pension roll by death of Civil War soldier pensioners from the year 1911 to 1915, inclusive:

*Losses to pension roll, 1911 to 1915.*

| Year. | On roll at beginning of year | Loss by death during year. | Percentage of loss |
|---|---|---|---|
| 1911 | 562,615 | 35,243 | 6.2 |
| 1912 | 529,884 | 33,981 | 6.3 |
| 1913 | 497,263 | 36,064 | 7.2 |
| 1914 | 462,379 | 33,639 | 7.3 |
| 1915 | 456,370 | 33,255 | 8.4 |

TOTAL EXPENDITURES FOR PENSIONS.

Amounts paid by the Government in pensions to soldiers, sailors, and marines, their widows, minor children, and dependent relatives, on account of military and naval service since the foundation of the Republic:

| | |
|---|---|
| War of the Revolution (estimated) | $70,000,000.00 |
| War of 1812 (service pension) | 45,972,895.76 |
| Indian wars (service pension) | 13,315,227.19 |
| War with Mexico (service pension) | 49,618,948.68 |
| Civil War | 4,614,643,267.43 |
| War with Spain and Philippine insurrection | 49,944,441.84 |
| Regular Establishment | 35,472,408.77 |
| Unclassified | 16,508,447.41 |
| Total | 4,895,475,637.08 |

The following table, also compiled from the annual reports of the Commissioner of Pensions, shows the number of pensioners on the roll, the annual value of pensions, the disbursements on account of pensions, the number of original applications filed, and the number of original claims allowed each fiscal year from 1879 to 1915, inclusive:

| Fiscal year. | Number of pensioners on the roll. | Annual value of pensions. | Disbursements on account of pensions. | Total number of applications filed, original. | Total number of claims allowed, original. |
|---|---|---|---|---|---|
| 1879 | 242,755 | $25,493,742.15 | $33,664,428.92 | 57,118 | 31,346 |
| 1880 | 250,802 | 25,917,906.60 | 56,689,229.08 | 141,466 | 19,545 |
| 1881 | 268,830 | 28,769,967.46 | 50,583,405.35 | 31,116 | 27,394 |
| 1882 | 285,697 | 29,341,101.62 | 54,313,172.05 | 40,939 | 27,664 |
| 1883 | 303,658 | 32,245,192.43 | 60,427,573.81 | 48,776 | 38,162 |
| 1884 | 322,756 | 34,456,600.35 | 57,912,387.47 | 41,785 | 34,192 |
| 1885 | 345,125 | 38,990,985.28 | 65,171,937.12 | 40,918 | 35,767 |
| 1886 | 365,783 | 44,708,027.44 | 64,091,142.90 | 49,895 | 40,857 |
| 1887 | 406,007 | 52,824,641.22 | 73,752,997.08 | 72,465 | 55,194 |
| 1888 | 452,557 | 58,707,220.92 | 78,950,501.67 | 75,726 | 60,252 |
| 1889 | 489,725 | 64,246,552.36 | 88,842,720.58 | 81,220 | 51,921 |

[1] Does not include 72 pensioners, class, "Brothers, sisters, sons, and daughters" under "general law," formerly carried on the New York agency roll.

## River and Harbor Appropriations.

## SPEECH

OF

# HON. LAWRENCE Y. SHERMAN,

OF ILLINOIS,

IN THE SENATE OF THE UNITED STATES,

*Thursday, May 11, and Friday, May 12 (legislative day of Tuesday, May 9), 1916.*

The Senate had under consideration the bill (H. R. 12193) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. SHERMAN. Mr. President, I understand that the rules which govern the Commerce Committee ordinarily would keep the curtain of secrecy on the transactions of that committee, but our capable and kindly chairman of the committee has removed that obstruction; and, for myself, I very cordially join with him in doing so. If any objection should therefore be raised to divulging what has occurred in the committee, it must not be charged to the chairman or to myself nor to the watchful Senator from Iowa [Mr. KENYON], who preceded me.

With this preliminary observation, I read from the CONGRESSIONAL RECORD of May 9, 1916, on pages 8680 and 8681. The Senator from North Carolina [Mr. SIMMONS] used the following language:

Mr. SIMMONS. Mr. President, the Senator from Iowa has denounced the Democratic Party for extravagance and he has cited the present river and harbor bill as an illustration of the failure of the Democratic Party to carry out its platform pledge of economy. I wish to ask the Senator if, as a member of the Committee on Commerce, he is not tht only Republican membtr of that committee who voted against reporting this bill in the form in which it now is?

Mr. KENYON. I think not.

Mr. SIMMONS. Then, I ask the Senator if there were others?

Mr. KENYON. The Senator from Illinois [Mr. SHERMAN], I think——

Mr. SIMMONS. The Senator from Illinois, I think, voted against some of the provisions of the bill.

Mr. KENYON. He voted against reporting the bill, I think. I know he signed the minority report.

Mr. SIMMONS. He voted against some of the new items of the bill.

Mr. KENYON. He signed the minority report.

Mr. SIMMONS. Tht Senator from Illinois voted against some of the new items of the bill, but I do not understand that the Senator from Illinois, or any other Republican Senator on the committee, voted against the bill as a whole.

Mr. KENYON. I will say that, in my judgment, as I remember the matter, the Senator from Illinois voted against reporting the bill as it was reported; but I am not absolutely certain as to that.

Mr. REED. Mr. President——

Mr. KENYON. I yield to the Senator from Missouri.

Mr. REED. I think I can throw a little light on the attitude of the Senator from Illinois. I think he voted in favor of every appropriation for his State, but was very economical as to other States.

Mr. KENYON. Mr. President, I think the Senator from Illinois did not hear the statement which has just been made by the Senator from Missouri; it is a very unfair statement; for the Senator from Missouri, as I remember, was seldom present at committee meetings, and the Senator from Illinois claimed the right to file a minority report, and said that he objected to many items in the bill. I think the Senator from Missouri is not fair in his statement.

Mr. REED. I think the Senator from Iowa did not understand me, or he would not say I am unfair. I say, as I understood the attitude of the Senator from Illinois, he voted in favor of all appropriations for his own State, but when it got to other States he was economical.

Mr. KENYON. I will say this about the Senator from Illinois——

Mr. SHERMAN. I will answer that.

Mr. KENYON. That the Senator from Illinois——

Mr. SHERMAN. Will the Senator yield to me?

Mr. KENYON. I will yield.

Mr. SHERMAN. I will answer the statement made by the junior Senator from Missouri [Mr. REED] in due time, when I have more leisure, and when I can do so under the rules as they might be administered here without taking the Senator from Iowa off his feet.

The cutting off of the appropriations for my own State will not deter me in the least from criticizing or voting against any of the items of this bill, should I deem it proper to do so when I get the opportunity. If the penalty for such criticism is to be the cutting off of appropriations from this bill that may affect my own State, I will challenge the Senators to cut them off at their pleasure, and I will take the consequences.

Mr. KENYON. I hope the Senator from Missouri will join in that challenge.

Mr. SHERMAN. That possesses no terror whatever for the Senator from Illinois; and I refuse to be punished or afflicted in that way.

Mr. REED. Mr. President, no one has made the slightest suggestion that anything could at all imperil the courageous attitude of the Senator from Illinois. I did not charge that the Senator from Illinois was not economical with reference to appropriations for other States; but I failed to notice him practicing any particular economy when it came to the State of Illinois. That is all I said. I know that the high courage and magnificent patriotism of the Senator from Illinois will lead him to take an exalted ground when it comes to the discussion of this bill; and yet I venture to say that he will in no single instance move to reduce an Illinois appropriation.

Mr. KENYON. Mr. President, the Senator——

Mr. SIMMONS. Mr. President——

Mr. KENYON. Just a moment. The Senator from Illinois asked the committee that the State of Illinois be permitted to spend $5,000,000 of its own money. That is all the Senator from Illinois asked of the committee. I suppose that remarks of the kind we have heard must be made about men who express their convictions about this bill, but they seem to me very unfair to the Senator from Illinois.

Mr. SIMMONS. Mr. President, I, of course, do not care to enter into the controversy as to how the Senator from Illinois voted, because I do not remember as to that. I was, however, under the impression that the Senator from Iowa was the only Republican member of the Committee on Commerce who voted against this bill as a whole. I thought the Senator from Illinois voted against some new items which were put on the bill, as some Democratic members of the committee probably did; but there are eight Republicans on the committee; and, if the Senator from Illinois joined the Senator from Iowa in voting against the bill, they are the only two Republicans, I am sure, who did pursue that course. I think the bill comes here with the joint approval of all the members of the committee, except those two Senators. I am speaking of the bill as a whole; I am not speaking of items, because I think there were differences in the committee as to items.

Mr. LEWIS. Mr. President, may I interrupt the Senator from Illinois, my colleague?

Mr. SHERMAN. Yes.

Mr. LEWIS. Mr. President, I desire to say that I take joint responsibility for the consequences of the incorporation into the bill of provisions concerning the waterway of the State of Illinois; and if there be any objections concerning it, those objections should not fall wholly upon my colleague, but should fall equally upon me. I desire, however, to ask the Senator if he will not state from the record that the item discloses no sum of money to be drawn from the Treasury of the Federal Government, but a mere permission on the part of the Federal Government for the State of Illinois to spend its own money upon a

waterway of the State that cooperates with the Federal Government, without extracting money from the Federal Treasury.

Mr. SHERMAN. Yes, sir.

Mr. LEWIS. Such is the exact statement of the item, is it not?

Mr. SHERMAN. The statement is true, Mr. President. There are—and I shall get to that in due season—some items which relate to Lake Michigan, the Calumet River, and certain improvements in the harbor of Chicago, for the breakwater, for certain improvements along the lake shore; but those are matters that do not particularly belong to the State of Illinois, any more than the million-dollar appropriation for the Passes of the Delta of the Mississippi River is local to the State of Louisiana or local to the State of Arkansas. Although the Mississippi River washes the shores of Louisiana, Arkansas, and Illinois, the expenditures are not local in their character.

The only expenditure local in character for any of these improvements would be that item referred to by my colleague, the senior Senator from Illinois [Mr. LEWIS], calling for an expenditure by the State of its own funds, not one dollar of which, either in the way of appropriations, bond issues, surveys, or any expense of administration, will be drawn from the United States Treasury. It is a matter that will fall wholly upon the taxpayers of that State.

The 65-mile link that is sought to be improved and connected with the waterway system of the Mississippi Valley will, when completed at the expense of the State, be added as a part of a great waterway system. The Erie Canal, the Great Lakes, the sanitary district channel, 27.15 miles in length, the 65 miles proposed to be improved, together with the improvement of the Illinois River to its mouth, where it empties into the Mississippi, will form a waterway that will join the Hudson River with the Gulf of Mexico via the Mississippi River. This 65 miles is to be paid for entirely by the State. That is the only amendment which the Senator from Illinois in the committee offered to the bill, and the committee had the fairness and the courtesy, especially through its chairman, to adopt the amendment. It was done accordingly, and it is found in the bill as printed.

So far as the other items are concerned, I will get to them in due time. Concerning none of them, I apprehend, did either my colleague or myself appear before the committee either in the House or in the Senate and make any request. The various interests concerned, the navigation interests on the Great Lakes, the manufacturing interests of the Mississippi Valley, and the transportation interests may have been before the committee. Of that I do not know, as I have not read the proceedings published by the House committee having charge of this bill. So it is possible that some of our constituents may have been before the committee or may have interviewed Representatives or Senators. I do not know as to that, nor do I regard it as reprehensible if they did.

Mr. LEWIS. Mr. President, I must say that my colleague is in no wise responsible for the appearances I did make from time to time before administrative bodies, such as the Engineers, seeking recommendation to the committee on behalf of these different projects. My colleague is absolutely innocent, if there is any offense in the matter one way or the other, and I am altogether responsible, and he is accurate absolutely in his statements that he in no wise participated in presenting them before the committee. I am wholly responsible, if any responsibility attaches.

Mr. SHERMAN. I thank my colleague for the statement which I know to be correct.

The first of those items, Mr. President, is for the harbor at Waukegan, which is on the west shore of Lake Michigan, the item involving an expenditure of $16,000. The Government has built near this point a naval training school, at which there are a number of students in constant attendance. The other items are:

Harbor at Chicago, Ill.: Continuing improvement, by the construction of a breakwater to form an outer harbor, $714,300.
Harbor at Calumet, Ill.: For maintenance, $25,000.
Chicago River, Ill.: For maintenance, $30,000.
Calumet River, Illinois and Indiana: For maintenance, $20,000: *Provided*, That the upper limit of said project shall be at the intersection of the Grand Calumet River and the Indiana Harbor Canal.
Illinois River, Ill.: Continuing improvement and for maintenance below Copperas Creek, $55,000.

There are two locks, one at Copperas Creek and one at Henry, in this river, both of which are maintained by the State, as well as having been built almost entirely by the State. My recollection is, that the Copperas lock on the Illinois River was in part paid for many years ago by an appropriation from the Government. Below the Copperas Creek locks there are two locks at Lagrange and Kampsville, before it empties into the Mississippi River. Those are the locks for the improvement and maintenance of which this $55,000 item is allowed.

For my part, Mr. President, if any Senator sees fit to criticize those items or sees fit to move to strike them out, one of them, some of them, or all of them, I shall not criticize the Senator for doing so, nor will I burst the vials of my wrath and empty my sarcasm upon his devoted head if he does so and leaves every item for his own State intact. I am perfectly willing so far as it affects the junior Senator from Illinois if the Senate wishes to move to strike them out, some of them or all of them. I will vote against such a motion, as I have a right to do if I wish; but if every one of them were struck out Mr. President, amounting in the aggregate to $855,300—if they were struck out entirely and the improvements or maintenance should suffer accordingly and the interests concerned, my colleague and myself could well afford to suffer whatever the result would be for the purpose of the greater good, if only the Senate would follow the precedent thereby made and strike out other items, so that millions might be saved from waste for the few thousands that would be stricken out.

The Senator from Missouri [Mr. REED] had the kindness to suggest that I voted in favor of every appropriation from my own State, but became afflicted with economy when voting on other States, and that I practiced no economy when it came to Illinois. This tacit admission that he has a vulnerable spot somewhere in his own State does not lead him to attack the Illinois items. He rather attacks the motions of those who oppose the waste in this bill. It is unavailing to argue with those who can not or will not discriminate between the useful and the useless. I had no part whatever in placing the Illinois items in the bill; they are there pursuant to recommendations of the Board of Engineers. Some of those which the Senator from Missouri is defending are in the bill after being rejected by the Board of Engineers. The Senator is at liberty to move to strike out any item he does not approve. I shall continue to oppose much of this bill, although it may excite the unfavorable comment of the Senator.

Then, continuing after the item last read, there has been added at my request the following, which is the amendment I referred to a moment ago:

And the improvement of navigation of the Illinois River, authorized by an act of the Illinois General Assembly providing for an expenditure of $5,000,000 therefor by the State of Illinois, be and is hereby authorized in accordance with said act.

Now, I wish, following the amendment which I have read, to add the act to which it refers, with some comment which I desire to make. This act was approved, as I remember, on the 18th day of June, 1915.

It was the culmination of a long agitation which began many years ago—about the time, likely, that the sanitary district of Chicago first cut through the limestone bench that separates the headwaters of the Illinois River from Lake Michigan.

At some remote age, geologists tell us, the waters of Lake Michigan and the Great Lakes generally had their outlet down the Illinois Valley into the Mississippi. Through some change resulting from a gradual recession of the waters or a convulsion of nature, the exit of the waters was changed in another direction, and they found their way through the Niagara River. The cuts that have been made in the limestone, the geological sections that are exhibited, furnish strong circumstantial evidence of that condition.

So the sanitary district engineers, in the blue prints and plans that were made, and borings, finally got the levels, and constructed a ditch that joins Lake Michigan with the headwaters of the Illinois. A permit was obtained from the War Department, in proper season, for the diversion of a part of the waters of Lake Michigan through this artificial channel, using it primarily as a sanitary measure for the disposition of the sewage from the city of Chicago. A great deal of litigation resulted from it. A final decision was had in the Supreme Court here some years ago, in a case to which the State of Missouri was really a party, and the State of Illinois a party defendant, in an application on which an original hearing was had in the Federal Supreme Court and commissioners were appointed to take evidence in what the court held was in substance a controversy between two States. The validity of that legislation under which the channel was dug was upheld.

About the time it began there was an agitation to make this a part of the connecting link between the Great Lakes and the Gulf; so a considerable campaign was carried on for some years, until finally, on November 3, 1908, an amendment was adopted to the State constitution. We can not incur a State debt in Illinois unless by an amendment of our constitution, and that was done accordingly.

The adoption of this amendment and the canvass of the vote was proclaimed by the governor of that State November 24, 1908. That constitutional amendment I shall read.

I offer no apoligies whatever for reciting these proceedings at length in the CONGRESSIONAL RECORD. I do so because in the welter of appropriations in all the rivers and harbors, great and small, with their merits and demerits, that have been provided in the last 40 years, for the first time an improvement in a great scheme of interstate waterway transportation that did not cost the Government a penny was put up to the War Department, and the War Department refused the permit to expend the money.

I recognize that there are a great many things that may become hallowed by time and precedent. The most obnoxious of all these holy usages, the very acme of governmental devilry, consists in everything being unconstitutional or improper unless it draws money out of the Government Treasury. I suppose if $5,000,000 had been provided that the Government should expend, it would have been regarded as a most meritorious project; and everybody, with glad acclaim, would, with tumultuous and offensive haste, have fallen over each other, in the committee and elsewhere, to vote the $5,000,000 out instanter, as they did these other large sums of money. But the precedent that an administration could be found in any State that asked for an improvement that was not to be paid for by the Government was so novel, so shocking to the sense of senatorial and congressional propriety, that it could not be indulged in for an instant. A precedent would be created; some improvement would be made where money would be expended, and the War Department or the Chief of Engineers or Congress would not be consulted about it and be required to insert an item in the bill. So I apprehend that this being out of the ordinary usage, and it being such exceedingly bad taste not to ask for an appropriation here, of course it might be regarded as dangerous, and be looked upon with more or less suspicion. That is the reason why I insert these proceedings at length in my remarks.

This amendment, adopted November 3, 1908, is in the following language:

*Provided further,* That the general assembly may, by suitable legislation, provide for the construction of a deep waterway or canal from the present water-power plant of the sanitary district of Chicago, at or near Lockport, in the township of Lockport, in the county of Will, to a point in the Illinois River at or near Utica, which may be practical for a general plan and scheme of deep waterway along a route which may be deemed most advantageous for such plan of deep waterway; and for the erection, equipment, and maintenance of power plants, locks, bridges, dams, and appliances sufficient and suitable for the development and utilization of the water power thereof; and authorize the issue, from time to time, of bonds of this State in a total amount not to exceed $20,000,000, which shall draw interest, payable semiannually, at a rate not to exceed 4 per cent per annum, the proceeds whereof may be applied, as the general assembly may provide, in the construction of said waterway and in the erection, equipment, and maintenance of said power plants, locks, bridges, dams, and appliances.

All power developed from said waterway may be leased in part or in whole, as the general assembly may by law provide; but in the event of any lease being so executed the rental specified therein for water power shall be subject to a revaluation each 10 years of the term created and the income therefrom shall be paid into the treasury of the State.

In pursuance of this constitutional provision, on the 18th of June, 1915, an act was approved as passed by the Illinois General Assembly. This act provided:

That a deep waterway or canal be constructed by the State of Illinois as soon as practicable, to be known as the Illinois Waterway, from the water-power plant of the sanitary district of Chicago, at or near Lockport, in the township of Lockport, in the county of Will, to a point in the Illinois River at or near Utica, in the county of La Salle; and that there shall be erected, equipped, and maintained by the State of Illinois power plants, locks, bridges, dams, and appliances sufficient and suitable for the development and utilization of the water power of said waterway or canal; and that the cost of constructing, erecting, and equipping the aforesaid public works shall be paid out of the proceeds of bonds of the State of Illinois, to be issued and sold as hereinafter provided.

The other provisions concern the details of the bond issue and the marketing of the bonds, the letting of contracts for the construction of the improvement, and providing for a commission to carry into effect the powers conferred by the act. The act contains, among other things, a provision in section 18, as follows:

When the said waterway shall have been completed in conformity with the provisions of this act, and paid for with the proceeds of bonds authorized to be sold under the provisions of section 12 hereof, and said bonds shall have been paid either out of the earnings of said waterway or by the State, or both, then the said channel, or so much thereof as shall have been completed, shall be tendered to the Government of the United States for navigation uses, conditioned upon the obligation or agreement of said Government to maintain the channel as a waterway free from tolls for navigation and to operate and maintain the locks free of cost to the State of Illinois. For all uses other than navigation the channel and it appurtenances shall be, and forever remain, the property of the State of Illinois.

I wish to insert the whole of this act, without reading it, except as I may refer to it in the course of my remarks, Mr. President.

The PRESIDING OFFICER (Mr. WALSH in the chair). Without objection, it will be so ordered.

The matter referred to is as follows:

ILLINOIS WATERWAY.

[House bill No. 914. Approved June 18, 1915.]

An act to provide for the construction of a deep waterway or canal, to be known as the Illinois Waterway, from the water-power plant of the sanitary district of Chicago, at or near Lockport, in Will County, Ill., to a point in the Illinois River at or near Utica, in La Salle County, Ill., to provide for the issuance of bonds to pay for said deep waterway, to provide for the development and utilization of the water power that may be generated from the water flowing through said waterway, to create a commission, to be known as the Illinois Waterway Commission, and to make an appropriation to carry out the provisions of this act.

*Be it enacted by the people of the State of Illinois, represented in the general assembly,* That a deep waterway or canal be constructed by the State of Illinois as soon as practicable, to be known as the Illinois Waterway, from the water-power plant of the sanitary district of Chicago, at or near Lockport, in the township of Lockport, in the county of Will, to a point in the Illinois River at or near Utica, in the county of La Salle, and that there shall be erected, equipped, and maintained by the State of Illinois power plants, locks, bridges, dams, and appliances sufficient and suitable for the development and utilization of the water power of said waterway or canal, and that the cost of constructing, erecting, and equipping the aforesaid public works shall be paid out of the proceeds of bonds of the State of Illinois, to be issued and sold as hereinafter provided.

SEC. 2. The construction, management, and operation of said waterway or canal, power plants, locks, bridges, dams, and appliances shall be under the control of a board of five commissioners (at least one of whom shall be a civil engineer), to be known as the Illinois Waterway Commission; no more than three of which said commissioners shall belong to or be affiliated with the same political party.

The said commissioners shall be appointed by the governor, by and with the advice and consent of the senate. If appointed while the senate is not in session, their tenure of office shall, nevertheless, begin from the date of their appointment. The governor shall each year designate one of said commissioners to be the chairman of said commission.

Of the commissioners first appointed, two shall hold office until the 1st day of July in the year 1917; two shall hold office until the 1st day of July in the year 1919; and one shall hold office until the 1st day of July in the year 1921. The successors in office of the commissioners first appointed as aforesaid shall also be appointed by the governor, by and with the advice and consent of the senate, and each successor in office thus appointed shall hold office for a term of six years from the date of the expiration of the term of his predecessor and until his successor is duly appointed and qualified, except that members who shall be appointed to fill vacancies occurring otherwise than by lapse of time shall hold office only for the unexpired term of the member in whose place the new member shall be appointed.

The said commission shall adopt an official seal and may authenticate all its official acts with the same.

For all legal purposes the said commissioners shall be deemed officers of the State, and all business, contracts, writing, and acts shall be done and made, and suits prosecuted by them or against them, in the name of the Illinois Waterway Commission. Before entering upon the duties of his office, each commissioner shall take and subscribe the following oath:

"I do solemnly swear (or affirm, as the case may be) that I will support the Constitution of the United States and the constitution of the State of Illinois, and that I will faithfully discharge the duties of the office of member of the Illinois Waterway Commission according to the best of my ability; I do further affirm that I do not own land on or adjoining the route of the Illinois Waterway or Canal, and that I am in no manner, either directly or indirectly, interested in any land within 5 miles of center line of said contemplated waterway or canal which will be directly affected by its construction other than a common interest as a citizen of this State, and that I will not buy or trade in any land which will be so directly affected on the route or within 5 miles of center line of the same during the time that I act as commissioner under this act."

Each commissioner shall also give an official bond, payable to the people of the State of Illinois, in the sum of $50,000, with at least two sufficient sureties, to be approved by the governor, conditioned for the faithful performance of the duties of his office and for a faithful accounting for moneys intrusted to him as such commissioner whenever and as often as he shall be lawfully required. Such oath and bond shall be filed in the office of the secretary of state.

SEC. 3. The said commission may, by and with the approval of the governor, appoint a secretary, a chief engineer, an attorney, and such additional accountants, engineers, experts, inspectors, and other employees as it may deem necessary to carry out the provisions of this act and perform the duties and exercise the powers conferred by law upon the commission.

The positions of secretary, chief engineer, attorneys, private secretary, and experts temporarily employed shall be exempt from the classified civil service of this State.

The commission shall each year select one of their number to act as the treasurer of the commission, and the total bond of the member acting as such treasurer shall be $75,000, or such larger sum as the commission shall fix. The chairman shall be the executive officer of said commission, and shall sign all official documents emanating from or authorized by said commission. All appointees of said commission shall hold their respective employments during the pleasure of the commission, and said commission shall prescribe the duties and, with the consent of the governor, fix the compensation of all its appointees, agents, and employees.

Said commission shall have power to pass all ordinances, rules, and regulations which may, in the opinion of said commission, be necessary for the proper management and conduct of its business and to accomplish the objects for which it is created.

All business of said commission shall be transacted at regular meetings of the commission or at meetings held in accordance with its rules.

The affirmative vote of at least three members of said commission shall in all cases be necessary to transact business and to authorize the making of any contract or appropriation or expenditure of money.

SEC. 4. Each of the aforesaid commissioners shall receive a salary of $5,000 per year, payable in equal monthly installments, and that one of the said commissioners, who shall be designated as chairman of the commission, shall, in addition to his annual salary of $5,000 as commissioner, receive the further sum of $1,000 per year, making his salary $6,000 per year, so long as he shall be chairman of said commission.

SEC. 5. The secretary shall furnish such bonds as the commission shall prescribe, and he shall be the custodian of the records of said commission and shall enter upon a permanent record the official minutes of all meetings of said commission, in which shall be entered all the official acts of said commission and the record of the votes of the several members of the commission upon all ordinances, acts, or resolutions authorizing the making of contracts or the expenditure or appropriation of moneys.

The said commission, before entering into any contract for the construction of any part of said waterway or canal, or any other of the said public works connected therewith, shall cause to be made plans and specifications for said public works, together with reliable and carefully prepared detailed estimates of the cost of constructing, completing, and installing all of said public works. No change of plan which shall materially increase the expense of any such work or create any claim against the State for damage arising therefrom shall be made, unless a written statement, setting forth the object of the change and the expense thereof is submitted to the commission and its assent thereto be obtained at a meeting when at least four members of the commission are present. The commissioners may at any time suspend any contract while the work is in progress if, in their judgment, the work is not being performed to the best interests of the State, and may complete the same in such manner as will be to the best advantage of the State, and the cost of completing the said contract shall be paid by the bondsman for the contractor or by the contractor failing to perform the work.

SEC. 6. "A." The route adopted for said waterway or canal shall be through and along the sanitary district channel or tailrace from the water-power plant at Lockport, where the existing lock, 22 feet in width and 130 feet in length, between the upper and lower gates, shall be reconstructed to a width of not less than 55 feet, and in length between the upper and lower gates not less than 300 feet, or an additional lock alongside of the existing lock shall be constructed not less than 55 feet wide and not less than 300 feet long. The existing drop under normal conditions of flow shall be maintained, such lock to connect said Illinois waterway with the main channel of the sanitary district of Chicago.

"B." The channel of the tailrace of the sanitary district of Chicago's power plant from the aforesaid lock to its junction with the upper basin at Joliet, a distance of about 2 miles, shall be used substantially as it now exists.

"C." From the junction of the aforesaid tailrace to the State dam at Jackson Street, Joliet, the basin shall be improved by the removal of existing sediment and obstructions, so that a channel of not less than 8 feet in depth and 200 feet in width shall be obtained.

"C–1." *Provided*, If the sanitary district of Chicago at any time develops water power in the Desplaines River below Joliet and destroys thereby all or any part of the water power at said Jackson Street Dam, said district shall restore to the State at said point in electrical energy 10,000 horsepower, now existing at said dam, or as much thereof as shall be destroyed, and the State shall have the rental therefrom.

"D." The existing lock at the lower end of said upper basin and at the entrance to the Illinois and Michigan Canal shall be rebuilt, or a new lock constructed, to a width of not less than 45 feet and in length of not less than 250 feet. The lift shall remain substantially as at present. This lock shall be designated as Lock A.

"E." From Lock A to Lock B, which last mentioned lock is to be constructed immediately north of Du Page River, the channel shall follow and occupy the present Illinois and Michigan Canal, and said canal shall be enlarged so as to obtain a minimum depth of 8 feet and a minimum width of 36 feet on the bottom and minimum width of 60 feet at the water line.

"F." The said Lock B shall have a width of not less than 45 feet and a length of not less than 250 feet, and a lift of about 12 feet.

"G." From Lock B to Lock C (which said Lock C is hereinafter provided for) a distance of about 1,500 feet, the channel of the Illinois & Michigan Canal is to be followed and utilized. This section of the channel is to be deepened so as to have a depth of not less than 8 feet and a bottom width of not less than 36 feet and a water-surface width of not less than 60 feet. This is the section of the channel crossing the Du Page River.

"H." Lock C shall be constructed at or near the present Lock No. 7 of the Illinois & Michigan Canal and shall have a width of not less than 45 feet and a length of not less than 250 feet, and a lift of about 4½ feet.

"I." From Lock C to Lock D (which said Lock D is hereinafter provided for), a distance of about 6 miles, the channel shall follow and utilize the channel of said canal, deepened to not less than 8 feet. The width of the surface of the water shall be maintained at not less than 60 feet and the width upon the bottom shall be not less than 36 feet.

"J." At or near a point opposite the upper end of Dresden Island, Lock D shall be built connecting the Illinois & Michigan Canal with Illinois River and shall be of the following dimensions: Width of not less than 45 feet, length not less than 250 feet.

*Provided, however*, That if the alleged rights now claimed by the Economy Light & Power Co. to a dam and water power in the Desplaines River near its junction with the Kankakee River shall be finally declared invalid by any court of competent jurisdiction or shall in any manner be terminated or in any manner acquired by the State so as to permit the use for such waterway of the Desplaines River between Brandon Road and Dresden Heights, then, and in that case, the commission shall, with the written approval of the governor, change the route of the waterway from a point at or near Brandon Road in the Illinois & Michigan Canal, where a lock not less than 45 feet wide and not less than 250 feet in length shall be constructed, thence a channel constructed not less than 36 feet wide on bottom and not less than 60 feet wide at water surface, to a point in the Desplaines River at or near Brandon Road, and thence in the Desplaines River to Dresden Heights where the channel shall not be less than 8 feet in depth and 150 feet in width. At or near Dresden Heights a lock and dam shall be constructed of suitable size, that shall conform in dimensions with other locks as provided in the Illinois River as hereinafter mentioned and water power developed as the property of the State of Illinois.

No work shall be done toward reconstructing Illinois & Michigan Canal between a point at or about Brandon Road and Dresden Heights prior to April 1, 1916; unless, before that time, the alleged rights now claimed by the Economy Light & Power Co. to a dam and water power in the Desplaines River near the junction with the Kankakee River shall be finally declared valid by the Supreme Court of the United States.

The commission is authorized to collect data—make surveys, maps, etc., for the purpose of estimating and reporting to the governor and the next general assembly the cost of developing that part of the Desplaines River between Joliet and Brandon Road, and also the cost of developing power at Brandon Road and probable income from such power developed, with a view at an early date of incorporating the channel of the Desplaines River between the sanitary district power house at or near Lockport, Ill., and Brandon Road into the Illinois waterway, and for the purpose of conserving, preserving, and developing for the State the water power that can be developed at or near Brandon Road in the Desplaines River, which would accrue to and be the property of the State.

"K." From a point at or near Dresden Island, hereinbefore described, the waterway shall follow the channel of the Illinois River for a distance of about 24 miles, to a point in the Illinois River at or about the west end of Ballards Island, thence on an angle to a point on south bank about 1,000 feet east of the south end of dam at Marseilles, Ill. This channel shall be dredged where necessary so as to secure a minimum depth of 8 feet and a width of not less than 150 feet.

"L." From this point in the south bank of the river there shall be constructed a channel for purposes of navigation only, which shall afford a waterway not less than 8 feet in depth and a width of substantially 100 feet, with practically vertical walls, the center line of said channel extending for a distance of about 600 feet in a southwesterly direction to a point not less than 500 feet south of the top of the south bank of said river, and thence in a westerly direction, substantially parallel to the Illinois River, to a point at the south bank of the Illinois River near or opposite Bells Island, but the northerly boundary line of the right of way for said channel through section 24, township 33 north, range 4 east of the third principal meridian shall nowhere be farther north of the center line of said channel than 100 feet nor shall it anywhere approach the top of the south bank of the Illinois River nearer than 450 feet. No material excavated from said channel, in the first or most easterly 2,000 feet thereof, or so much of same as is situated in said section 24, shall be placed or deposited on the northerly side of said channel.

Except as is hereinabove otherwise provided, the center line of said channel shall be as nearly as practicable the center line of the proposed waterway, as recommended by the United States engineers in their report and survey of the Illinois River during the year 1902 and 1904, as appears from sheet No. 52 of said report and survey of the Illinois River now on file in the War Department of the United States Government.

That portion of the channel above described as the first 600 feet thereof, or any other part thereof as may be necessary for the requirements of navigation, may in the discretion of the commission be widened to a width of approximately 150 feet. A suitable guard lock or other safety device shall be installed in said channel. At the westerly or lower end of said channel, at or near its place of junction with the Illinois River, a lock shall be constructed of not less than 55 feet in width and of not less than 300 feet in length, and of a sufficient depth to maintain not less than 8 feet of water for navigation purposes between upper and lower levels. Said lock to be known as Lock "E." But nothing in this act contained, nor anything the said commission may do thereunder, shall ever have the effect of, or be construed as creating, recognizing, establishing, or enlarging any right, title, interest, or claim of any person or corporation whatsoever in and to the said Marseilles Dam or any interest therein, or the right to maintain the same, in or to any water power thereby developed; nor as waiving, restricting, or limiting any right or power of the State of Illinois with respect to said dam or water power, or at any time hereafter preventing or interfering with the State of Illinois in the exercise of any right, power, or option it may lawfully have in respect to or concerning the said dam or water power.

"M." Thence the channel of said waterway shall continue in the Illinois River at a depth not less than 8 feet and a width of channel of not less than 150 feet, for a distance of about 16 miles below Marseilles Dam to a point just above Starved Rock, where a dam and lock shall be constructed; said lock to be designated and known as Lock "F."

"N." At the aforesaid point (described in paragraph "M") above Starved Rock in the Illinois River there shall be constructed a permanent and substantial dam of concrete of the most modern design and type, at least equal to or better than the design and type of the dam across the Mississippi River at or near the city of Keokuk, Iowa, sufficient to control the water in the pool created by said dam to an elevation of 1½ feet above previous maximum high water at the highway bridge across the Illinois River at Ottawa. The elevation of the crest of this dam shall not exceed minus 121 Chicago city datum, and the water in the pool above said dam at the highway bridge at Ottawa shall be so controlled during all except flood stages of water that the elevation of the water at said highway bridge shall not exceed an elevation of minus 121 Chicago city datum. Whenever the stage of water at the highway bridge in the city of Ottawa shall exceed minus 121 Chicago city datum the sluice gates shall be immediately opened and the stage of water shall be maintained at minus 121 Chicago city datum, as nearly as possible, and the said gates shall remain open, if necessary, to their full capacity to maintain said water at said stage, and if the excess water, with the sluice gates all open, shall still raise the stage of water above minus 121 Chicago city datum, said sluice gates shall be kept open until the stage of water at said highway bridge shall again reach minus 121 Chicago city datum.

The sluice gates in said dam shall be of capacity at least 30 per cent larger than any flood water flow of record, and shall be so controlled, operated, and manipulated that the stage of water at the highway bridge at Ottawa shall at no time exceed 1½ feet above the high water heretofore existing at said highway bridge across the Illinois River at Ottawa, Ill. A lock designated as Lock "F" shall be constructed in connection with this dam; said lock shall have a width of not less than 55 feet and a length of not less than 300 feet. Provision shall also be made at this site for enlarging this lock to a width of not less than 80 feet and a length of not less than 600 feet, or an additional lock may be constructed not less than 80 feet wide, and not less than 600 feet in length.

"O." In the construction of said dam at Starved Rock provision shall be made for the development of water power which may be created at this site. This power, as well as other water power created by water passing through said waterway or canal, shall be utilized by the

State and may be leased and the income therefrom shall be applied to the payment of the interest and principal on bonds issued for the construction of the work named herein.

"P." The channel of the Illinois River below the aforesaid dam shall be improved so as to secure a depth of not less than 8 feet of water and a width of not less than 150 feet to a point at or near Utica.

"Q." The said Illinois Waterway shall be constructed so as to afford for navigation a channel of a depth of approximately but not less than 8 feet throughout its course at all times. Additional depth of the channel as commerce may require may be hereafter provided for through appropriate legislation, by and with the cooperation of the State and the Federal Government, when a sufficient depth of channel in the lower Illinois River and the Mississippi River shall have been attained or provided for by the Federal Government to warrant the deepening of the channel of the aforesaid Illinois Waterway, it being deemed and hereby declared that the said Illinois Waterway is practical for a general plan and scheme of deep waterway along the route hereinbefore mentioned, and is deemed most advantageous for such plan of deep waterway.

SEC. 7. Wherever, in the construction, maintenance, use, and operation of any dam, controlling works, embankment, wall, crib, or other improvement or structure, any existing drainage or sewer system constructed and maintained by any city, village, or incorporated town is destroyed or materially interfered with, then it shall be the duty of the Illinois waterway commission to alter, rebuild, or reconstruct or otherwise provide for so much and such parts of such drainage and sewer systems as to restore the same to as good efficiency as before the passage of this act. In the altering, rebuilding, and reconstructing of such drainage and sewer systems, streets, avenues, alleys, and private property shall be replaced and restored to as good a condition as they were before said work was commenced. The work of altering, rebuilding, and reconstructing or otherwise providing for such drainage and sewer systems shall be done by the commission under the general supervision of the city council or board of trustees of the city, village, or incorporated town affected, and to its reasonable satisfaction, the whole cost thereof to be paid by the Illinois Waterway Commission, and the work to be done and completed prior to the completion of any dam or other work or structure causing such drainage or sewer system to be changed or interfered with.

Modern bridges of adequate size and of suitable design, including all necessary piers, abutments, substructures, superstructures, and approaches, shall be constructed across the full width of the channel to replace present structures owned by municipalities, townships, and counties, wherever changes or rebuilding in said existing bridges shall, in the opinion of the said Illinois Waterway Commission, become necessary, the original cost of the same to be borne by the Illinois Waterways Commission. One-half of the cost of maintaining these bridges shall be borne by the municipality, township, or county, and one-half of such cost shall be borne by the State.

The work of building, constructing, and paving approaches, retaining walls, and sidewalks, and other work made necessary by the raising and lengthening of bridge spans as aforesaid, shall be done by the Illinois Waterways Commission, under the supervision of city councils of cities, boards of trustees of villages, or the highway commissioners or other authorities having supervision of roads and bridges in the municipalities affected, and shall be paid for by the Illinois Waterways Commission.

At the city of Ottawa, dykes shall be built along the east side of the Fox River and along the north side of the Illinois River commencing at or near a point at the center line of Shabbona Street produced to the Fox River and extending along the banks of the Fox River and Illinois River to a point at or near the intersection of Chester and Canal Streets, and the lowlands back of said dykes shall be filled with sand, earth, or other material to an elevation of not less than —117 Chicago city datum, all at the cost and expense of the Illinois Waterway Commission. In filling that part of said lowlands lying back of said dykes and lying south of Main Street and west of Division Street, the Illinois Waterway Commission shall fill the same to a depth of 18 inches from the top surface of said fill with good soil suitable for the raising of a good grass sod thereon. It shall also be the duty of the Illinois Waterway Commission to dyke and fill with sand, earth, or other material the ravine in said city of Ottawa, commonly known as the West Side Ravine, from its junction with the Illinois River to a point at or near Ottawa Avenue, the elevation at the top of said dyke and fill to be —110 Chicago city datum, all at the expense of the Illinois Waterway Commission.

All that land lying north and west of Fox River in the city of Ottawa from a point about midway between Madison and Jefferson Streets to a point at or near the aqueduct of the Illinois and Michigan Canal, and all that land lying north of the Illinois River between the Chicago, Burlington & Quincy Railroad bridge and Clay Street shall be filled with earth, sand, or other suitable material, so that no part of the surface of said land shall have a lower elevation than —119 Chicago city datum. No filling shall be done north of River Street, west of Ontario Street.

It shall be the duty of the city council of the city of Ottawa to procure the consent of the property owners whose lands are to be filled, but in case consent can not be obtained by said city council, the said lands may be taken or damaged as is in this act provided.

It shall also be the duty of the Illinois Waterway Commission, at its cost and expense, to dyke and fill with sand, earth, or other suitable material, to an elevation of —110 Chicago city datum, the following described property now owned by the State of Illinois, to wit:

All that land lying to the west of the Fox River, north of the Illinois River, east of LaSalle Street, and south of the lateral canal or side cut, situated in the city of Ottawa.

Said land above described, excepting that portion thereof which is north of the south lines of blocks 20 and 21 of State's addition to the city of Ottawa, shall, when dyked and filled to the elevation aforesaid, be and the same is hereby dedicated to the public as a public landing, subject to any existing rights of any lessee thereof until the expiration of any such lease.

If, when said Illinois Waterway Commission is ready to fill said land last above described, there shall be any valid and binding lease of or right to use any part of said land for a tailrace, then such tailrace shall be inclosed and covered by a suitable structure.

The work of building said dykes and of making the fills hereinbefore mentioned in this section shall be begun by said Illinois Waterway Commission immediately after the water is turned in on said dam and shall be completed by said Illinois Waterway Commission within one year from the time said water is first turned in against the said dam.

It shall be the duty of the Illinois Waterway Commission to build, construct, and maintain, wherever necessary, along the north and south sides of the Illinois River, exclusive of islands, from the dam at or near Starved Rock eastwardly to the city limits of the city of Ottawa, good, substantial, and permanent walls or dykes of such character and materials as will prevent seepage from the river to the lands adjoining, the said walls or dykes to have a core of concrete, extending from top of said wall or dyke down to bedrock or hardpan, said core to be in thickness not less than 1 foot. The center line of said dykes or walls, from a point not more than 1,000 feet east of said dam to be constructed at or near Starved Rock shall not exceed a greater distance than 150 feet back from water line at normal stage of water: *Provided*, This requirement of proximity of 150 feet to the water shall not have any application to that part of the north bank, shore, or edge of said river lying or situate between the proposed dam and the commencement or beginning of the high land or elevation to the east thereof constituting the westerly end of Buffalo Rock; along which said stretch of territory said Illinois Waterway Commission shall have the right to construct said walls or dykes as far north from the north edge of the water in said river as may be absolutely necessary in order to create a practical waterway under the provisions of this act, said dykes or walls, however, in no case or event to be north of, upon, or to interfere with the right of way of the Chicago, Ottawa & Peoria Railway as now existent.

It shall be the duty of the Illinois Waterway Commission to build, construct, and maintain the dykes or walls herein described, so that, together with the natural banks of said river, impervious to seepage, the elevation of the banks of said river on both sides thereof between the points aforesaid shall in no place be less than an elevation of minus 105 Chicago city datum.

It shall also be the duty of the Illinois Waterway Commission to build, construct, and maintain between the points last above named on both sides of said river drains, ditches, or intercepting sewers of sufficient character and description to dispose of all the water from all creeks, ditches, drains, and all surface water naturally flowing into said river between said points.

SEC. 8. When it shall be necessary, in the opinion of said commission, for the economical and successful construction, operation, and maintenance of said waterway and other public works herein specified to enter upon and use any public property or property held for public use said commission shall have the power to do so and to enter upon, occupy, use, widen, deepen, and improve the waterway, canal, pool, or lakes, but the public use thereof shall not be unnecessarily interfered with. The property which the said commission is authorized to enter upon and use under this section includes all property and all interest in property which the State of Illinois has lawful power to appropriate to the use of said waterway or other public works without making compensation therefor.

SEC. 9. Whenever the said commission shall pass an ordinance or resolution for the construction of any part of the said waterway or canal or other public works or adjuncts thereto the making of which will require that private property should be taken or damaged, such commission shall cause the compensation therefor to be ascertained and paid and acquire possession thereof in the same manner, as nearly as may be, as is provided for in an act entitled "An act to provide for the exercise of the right of eminent domain," approved April 10, 1872, and the amendments thereto: *Provided*, That the proceedings to ascertain such compensation shall in all cases be instituted in the county where the property sought to be taken or damaged is situated in the circuit or county court of said county. The property which the said commission is authorized to acquire under this section shall include all property and all interest in property which the State of Illinois has not the lawful power to appropriate to the uses of said waterway and other public works without making compensation therefor.

The State of Illinois shall be liable for all damages to real estate or other property which shall be overflowed or otherwise damaged by reason of the construction, enlargement, or use of any channel, ditch, drain, outlet, embankment, wall, dam, crib, or other improvement or structure of any kind made under the provisions of this act and action to recover such damages may be brought against the said Illinois Waterway Commission in the county where any such real estate or property is situated or in any county through which said Illinois waterway extends or in which any part of it shall exist, at the option of the party whose property shall be claimed to have been so damaged; and all suits to recover any such damages shall be begun in the circuit court of the county so selected by such party in which to bring the same, and service of summons shall be had in the manner as provided by law for the service of summons at common law upon corporations by leaving a copy of such summons with any member of the said commission who shall be found in the county where the suit is brought or by leaving a copy thereof at the principal office of said commission and informing the person in charge of said office of the nature thereof; and in case judgment is rendered against the defendant in such action the said judgment shall be held, deemed, and considered as a binding and conclusive judgment against the State of Illinois in all respects and for all purposes; and the same shall be promptly paid in like manner and out of the same funds as other payments are made for the expense and cost of constructing said waterway. Nothing herein contained shall deprive either party to said judgment to right of appeal or writ of error as in other cases.

And in case judgment shall be rendered against the defendant for damages as aforesaid the plaintiff shall also recover his reasonable attorney's fees, to be taxed as costs of such suit: *Provided, however*, That in order to recover such attorney's fees it shall appear on the trial that the plaintiff had duly notified the commission in writing at least 60 days before such suit was commenced by leaving a copy of such notice with some one of such commissioners, stating in such notice that the plaintiff claims damages to the amount fixed in such notice by reason of the causes which shall in such notice be stated, and that he intends to bring suit for the same: *And provided further*, That in case it shall appear that the said commission did prior to the beginning of such suit offer the plaintiff in settlement of such damages an amount which shall be as large or larger than the amount of damages recovered by the plaintiff in such suit no such attorney's fees shall be recovered. This section shall extend to and apply to any corporation, municipal or otherwise, which shall be a plaintiff in any such action, as well as to natural persons.

SEC. 10. Subject to the limitations contained in this act, the said commission is hereby authorized to acquire by purchase all property, real and personal, which in the opinion of said commission is necessary or desirable for the construction, equipment, and maintenance of the

public works hereinbefore specified, and to appoint and employ all assistants, agents, and employees, to enter into all contracts, and to do all other acts which in the opinion of said commission may be necessary or desirable for the construction of said waterway and for the erection, equipment, and maintenance of said power plants, locks, bridges, dams, and appliances and the necessary adjuncts thereto. All contracts for work to be done and material required by said commission under authority of this act, the expense of which will exced $500, shall be let to the lowest responsible bidder therefor upon not less than 30 days' public notice. The terms and conditions upon which said contract shall be let shall be given by publication in three newspapers of general discussion in the State of Illinois printed in the English language, and also in two engineering papers for circulation in the United States; and said commission shall have power and authority to reject any and all bids and readvertise: *Provided, however,* That said commission shall or may cause any piece or pieces of work to be performed by direct employment of labor without the letting of a contract, which, in the discretion of the commission evidenced by the affirmative vote of not less than three of the commissioners, can be most economically performed by that method; and all labor so employed shall be under the direction of the chief engineer and his properly authorized assistants: *And provided further,* That with the approval of the governor machinery for doing said work may be purchased upon a like vote without soliciting competitive bids where in the judgment of the commission the machinery to be purchased is not subject to competition.

The said commission is hereby directed, in letting contracts for the construction of the aforesaid public works, to require of all contractors, as a condition precedent to the acceptance of their bids, that such contractors and their subcontractors shall adequately insure all workmen and other employees employed by them against risk of all injury or death suffered in the course of their employment. All compensation for either injury or death shall be paid according to a law approved June 28, A. D. 1913, entitled, "An act to promote the general welfare of the people of this State by providing compensation for accidental injuries or death, suffered in the course of employment within this State, providing for the enforcement and administering thereof, and a penalty for its violation, and repealing an act entitled 'An act to promote the general welfare of the people of this State by providing compensation for accidental injuries or death suffered in the course of employment.'"

The commission shall further require all contractors and subcontractors to file with said commission the name of the company or companies furnishing the insurance and the acknowledgment of such company or companies that such insurance has been furnished.

In case the State shall undertake the construction of said public works, or any part thereof, by the direct employment of labor, any employee of the State injured in the course of his employment, or in case of his death in consequence of said injury, his dependents shall be relieved and compensated out of the funds under the control of said commission in accordance with the workmen's compensation act heretofore referred to in this section.

SEC. 11. Said commission is hereby vested with all police powers necessary to preserve the peace and protect property and preserve health within the territory contiguous to said waterway, within a distance of 2 miles on either side thereof, but excluding therefrom all territory within which any incorporated city, town, or village is vested by law with the same police powers which are hereby granted to said commission. For the enforcement of said police power the said commission is authorized to organize a police force, said police force to be disbanded and discharged when said waterway shall have been completed. The members of said police force shall have all the powers vested by law in police officers and constables. The said commission shall also have power to prescribe sanitary regulations for all camps, boarding houses, and dwellings where employees of said commission or contractors are domiciled; and any violation of any police or health rule or regulation of said commission shall be deemed a misdemeanor punishable as such upon trial and conviction as provided by law in other cases. Said commission shall have power to appoint a health officer, who shall be a physician, and to prescribe his powers and duties.

SEC. 12. For the purpose of defraying all expenditures of said commission made by authority of this act, there is hereby appropriated to the Illinois Waterway Commission the following sums:

| | |
|---|---|
| For channel excavation and dredging | $1,240,200 |
| For locks and dams | 1,404,550 |
| For right of way and damage to land | 318,250 |
| For levees, land filling, road work, bridges, sewers, and drains | 437,000 |
| For power and electrical equipment | 1,000,000 |
| For office expenses, salaries of appointees and employees of the commission, and other administrative and contingent expenses incurred by the commission | 600,000 |
| Total | 5,000,000 |

or so much thereof as may be necessary, payable out of the "Waterway funds" hereinafter provided for; and for the raising of which sums so appropriated there shall be issued and sold in the manner and at the time or times as hereafter recited, bonds of the State of Illinois to an amount not exceeding $5,000,000, as authorized to be issued by an amendment or provision of the constitution of the State of Illinois, which was duly ratified by a vote of the people on November 3, 1908, and proclaimed adopted by the governor on November 24, 1908, and the proceeds thereof shall be paid into the State treasury and shall be kept in a separate fund to be known as the "Waterway fund." The commission shall be charged with the duty of selling said bonds, or any part thereof, to the highest bidder after advertising for a period of 10 weeks and at least once each week, in at least two daily newspapers, one of which shall be published in the city of Springfield and at least one other in the city of Chicago. The said commission may reject any and all bids made in pursuance of said advertisements, and in such events is authorized to readvertise for bids in the manner above described as many times as may be necessary to effect a satisfactory sale. Two-fifths of each issue of said bonds shall be in denominations of $500 each, and three-fifths in denominations of $1,000 each; and in the sale of said bonds, as hereinafter provided, the Illinois Waterway Commission shall, in the case of intending purchasers who bid the same price, give the preference to those who bid for the smaller quantity. Said bonds shall not all be issued and sold at one time, but shall be issued and sold from time to time, as the work progresses, in amounts necessary to meet the obligations incurred by said commission as they shall be estimated by the chief engineer and reported to and approved by said commission. The bonds issued shall be dated as of the 1st day of January, or the 1st day of July, next preceding the date of their issue, and shall draw interest, payable semiannually, evidenced by interest coupons, at a rate not exceeding 4 per cent per annum. All bonds issued shall be made payable in 20 years from the date of their issue, and, in the discretion of the said commission, may be made redeemable in 10 years from the date of their issue. They shall be engraved and printed under the direction of the governor, shall be under the seal of the State, shall be signed by the governor, and countersigned by the treasurer and auditor of the State, and until sold shall be deposited with the State treasurer. The estimate made and approved, as aforesaid, of the funds which will be required to meet the obligations for the said work, including maturing interest on outstanding bonds for a period of six months, beginning with the 1st day of January or July next ensuing thereafter, shall be made and filed with the governor of the State of Illinois in the months of April and October of each year.

SEC. 13. All payments for salaries, wages, work done under contract, materials, supplies, machinery, lands, damages to lands and other expenditures made under this act shall be made by the State treasurer out of the aforesaid waterway fund upon warrants drawn by the auditor of public accounts, based upon bills of particulars and vouchers certified by the official or agent of said commission having knowledge of the facts upon which the said vouchers are based, audited by the secretary and approved by the chairman of the commission and the governor. The said commission shall prescribe the manner in which payments shall be made for the current and emergency expenses and provide for safeguarding all disbursements of funds on this behalf. The said commission shall have power to keep under its control a fund not exceeding at any one time $50,000, to meet immediate demands and expenses, and for the purpose of creating the said fund the auditor of public accounts is authorized in the first instance to issue his warrant for the sum of $50,000 at the direction of the said commission and payable to its treasurer; and the auditor of public accounts is authorized thereafter, upon approval of the governor, to issue warrants for the purpose of maintaining said fund at the sum of $50,000, but shall only issue said warrants upon the presentation to him of receipted bills of particulars and vouchers, certified by the official or agent of said commission having knowledge of the facts upon which the vouchers are based, audited by the secretary, and approved by the chairman of the commission and the governor, showing the disbursements made by said commission out of the aforesaid fund.

SEC. 14. The said commission shall, on or before the 1st day of January in each year, make a full report to the governor of the State of Illinois of all business transacted by it during the year ending on the preceding 30th day of November, including a statement of all expenditures, contracts entered into, work done, and obligations outstanding or contracted for at the date of the making of each report. The governor shall cause the books and affairs of said commission to be audited in each year by an accountant or accountants employed by him for that purpose, and the cost of such audit shall be paid as a part of the cost of the work authorized by this act, upon vouchers approved by the governor.

SEC. 15. There shall be included in and added to the tax levied for State purposes a direct annual tax for such amount as shall be necessary to pay and sufficient to pay the interest on each bond issued under this act as it falls due, and to pay and sufficient to pay and discharge the principal of each of such bonds at par value as they fall due. The rate of such annual tax shall be fixed by the officers charged by law with fixing the rate for State taxes on the valuation of real and personal property in this State subject to taxation, as provided by law. The tax imposed as herein provided shall be assessed, levied, and collected in the manner prescribed by law, and shall be paid by the several county treasurers into the treasury of the State. The proceeds of such tax shall be invested by the State treasurer in securities in which he is authorized by law to invest the trust and sinking funds of the State, and, together with the interest arising therefrom, any premium received on the sale of said bonds and interest accruing on deposits of money received from the sale of said bonds and from miscellaneous sources shall constitute a sinking fund, known as the waterway sinking fund. Said fund shall be used solely for the purpose of paying the principal and interest of bonds issued in accordance with the provisions of this act, and to the application of which sinking fund to the payment of said bonds and interest, and to the payment in full of which said bonds and the interest the faith of the State of Illinois is hereby pledged.

SEC. 16. Said commission shall have power from time to time to develop and to lease any water power created by the water passing through said waterway or canal, subject to the following conditions:

Before any such lease shall be made at least 60 days' public notice of the intending letting shall be given by publication in a daily newspaper published in the city of Springfield, and also at least one in the city of Chicago and three others elsewhere in Illinois, and such other notice as the commission shall deem best. The said commission shall require the bids to be accompanied by security, and may reject all bids not satisfactory to them and readvertise until they receive satisfactory bids; whereupon they shall lease said power to the highest responsible bidder. No lease shall be for a period exceeding 10 years, but the said commission may provide for not more than one extension of any lease for a further period of 10 years at a rent to be fixed by appraisal to be made by three disinterested appraisers, to be selected or appointed in such manner as shall be provided in the lease. Said commission shall also have power to lease from time to time any of the lands or lots acquired by said commission, upon the same terms and subject to the same limitations as are hereinbefore provided in regard to water power: *Provided,* That after such lease or leases shall have been so entered into the same shall by such commission be transmitted to the governor; unless such lease or leases is or are ratified by the governor, then the same shall have no binding force and effect on either party thereto.

SEC. 17. Said commission shall establish and collect reasonable rates of toll for the use of said waterway, and all tolls, rents, and other moneys received by the said commission, from the operation of the aforesaid public works, shall be deposited in the State treasury as a part of the aforesaid waterway sinking fund, which shall be kept and used to meet the interest and principal falling due upon said bonds, and to be used by said commission in its discretion, in buying up for cancellation any of said bonds before maturity at not more than the par value thereof, together with accrued interest thereon. The method of disbursing the said waterway sinking fund shall be the same as is hereinbefore provided for the disbursement of the proceeds of the said bonds: *Provided,* The use of said canal or waterway and locks shall be free for transportation of any property of the United States or persons in their service passing through the same.

SEC. 18. When the said waterway shall have been completed in conformity with the provisions of this act, and paid for with the proceeds of bonds authorized to be sold under the provisions of section 12 hereof, and said bonds shall have been paid either out of the earnings of said waterway or by the State, or both, then the said channel, or so much thereof as shall have been completed, shall be tendered to the Government of the United States for navigation uses, conditioned upon the obligation or agreement of said Government to maintain the channel as a waterway free from tolls for navigation and to operate and maintain the locks free of cost to the State of Illinois. For all uses other than navigation the channel and its appurtenances shall be, and forever remain, the property of the State of Illinois.

SEC. 19. This act shall not be construed to interfere with the prerogatives and duties of the rivers and lakes commission otherwise than as herein provided.

SEC. 20. This act shall in no wise and in no manner disturb or oust the Illinois & Michigan Canal as a legal entity and existing institution, until such time as the said Illinois waterway shall be completed, pursuant to the terms of this act, and neither shall this act, nor the operation thereunder, interfere with the operation and conduct of the said Illinois & Michigan Canal as at present carried on and conducted, save only and except so much as may be necessary in the construction proposed under this act, and then only when absolutely necessary, until the said Illinois waterway shall be completed, as provided by this act. And, pursuant to the above, the present commissioners of the Illinois & Michigan Canal, and other officers and appointees thereof, or their successors in office, shall continue in office as said commissioners of said Illinois & Michigan Canal, clothed with the same power and authority as at present vested in them until said Illinois waterway shall be completed, as provided herein.

SEC. 21. All acts and parts of acts in so far as they are in conflict with this act are hereby repealed.

SEC. 22. If any section, subdivision, sentence, or clause of this act is for any reason held invalid or to be unconstitutional, such decision shall not affect the validity of the remaining parts of this act.

Approved June 18, 1915.

Mr. SHERMAN. Following the passage of this act application was made to the War Department for a permit for the construction of this improvement. Originally many of those who supported the improvement believed in a deep waterway. That is the language used. Just what a "deep waterway" is is a matter of opinion. From the report made by an Army engineer who considered that question a 14-foot channel in depth became fixed in the minds of a good many people. Lyman E. Cooley, a civil engineer who somewhat specialized on waterways, perhaps was responsible for the 14-foot channel. I think he is one of the original engineers, probably the first, who presented in blue prints a practicable scheme for the construction of the Panama Canal. At any rate the public—a part of it—and certain distinguished gentlemen in public office regarded a deep waterway and a 14-foot depth to be maintained in the channel as synonymous; that one could not exist without the other; and that that is what it meant; and that anything else was a departure from the purposes of the constitutional amendment and the authorized expenditure of the money, and hence arose a difference of opinion that exists to this time.

After the adoption of this amendment various general assemblies met—one following it in 1909, another in 1911, another in 1913. In none of them was anything done. Differences of opinion developed—both the one that I have referred to and two others. One of the principal differences grew out of a by-product of the general scheme. Originally it was intended to be a waterway improvement, using the sanitary district channel as a part of the improvement. But the water power had become a material question, and so when these general assemblies came along differences of opinion among the promoters of the scheme developed. In the minds of some it became much more important to develop water power and use it for various purposes than to improve the waterways, and so the incident in the controversy at times assumed the proportions of the principal.

Possibly political differences may have arisen. It is barely possible at times that contractors had something to do with it. I do not like to be overly suspicious, but I have learned to be somewhat incredulous, when $20,000,000 in contracts are in sight, about the disinterestedness of the views that may be held by some who are concerned in the contracts thereafter to be let. At any rate, the controversy grew apace, and nothing was done between 1909 and 1915. A part of this controversy grew out of the practicability or use of a 14-foot channel.

A good many people in the Mississippi Valley country, not only in my own State but in several of the adjoining States, became obsessed, as I look at it, with the idea that if a 14-foot channel were dug, and a sufficient amount of water could be turned in from Lake Michigan, with the quantity derived from tributary streams, it would make a deep-water channel sufficient to bring up the lower Mississippi River steamers or Gulf steamships from below and to bring down the Lake steamers from above. I never regarded such a thing as any more than a dream, to be promoted solely for the expenditure of the whole $20,000,000. The inherent difference between the construction of a Lake boat and a Mississippi River boat presented an insuperable objection. It was idle to think for a moment that a waterway of that kind could ever be excavated or maintained if the water should be obtained from the Lake and tributary streams to a depth of 14 feet that would permit an ocean-going boat from the Gulf to navigate the artificial channel, although some people even argued that Gulf boats could come up the Mississippi River, under the improvement suggested by this $20,000,000 appropriation and with appropriations to be furnished by the Government, so that navigation from tidewater to the Great Lakes would be complete.

Some people had pleasing aquatic visions every once in a while, about some of the Mexican Gulf steamers—that steamships would come up under an improvement of that kind; that they would be something like the Ward or Mallory line steamships, navigating the river with the artificial channel as easily as a flat-bottomed Mississippi steamboat. I have heard it argued; I have heard it in speeches; I can find printed documents of that kind.

I do not know, Mr. President, that there is anything more startling in that pleasing vision than a large part of the items in this river and harbor bill. They are very similar. I do not question the motives, but I do have some doubts about the soundness of the judgment, of the interests of the individuals backing the respective schemes of inland waterway improvement. Nothing seems to start an otherwise sensible person to "seeing things" like visions about waterways.

At any rate, these differences continued, and prevented any enabling act being passed pursuant to the constitutional powers duly given by this amendment, until 1915. Meanwhile, several gentlemen collected data. River engineers interested themselves. Some navigation interests began to find out, on a practicable basis, what could be done and what could not be done. They began to figure on how money could be expended, what kind of a water-carrier system could be built up, and it was found after a while that the average depth of water maintained by the Government between St. Louis and Cairo was about a maximum of 8 feet. Down at a certain point, Chain of Rocks, unless there was a considerable sum of money spent, and much blasting done, and many other improvements made in the Mississippi River between St. Louis and Cairo, where the mouth of the Ohio River is, there would be no more than an 8-foot depth maintained in the Mississippi. This gave the 14-foot advocates some valuable food for thought. Of course those who were entirely and irrevocably and enthusiastically committed to the 14-foot channel saw no difficulties, and they waved it away with an airy statement that the Government would soon make a 14-foot channel in the Mississippi.

Well, if they do not move faster in that particular than they move in some other things, there is no one in this generation that will ever be drawing dividends from any water carrier over a 14-foot channel. For instance, Mr. President, if the Government does not move faster than it does in opening the Plaza out here, which is almost under the senatorial nose, how many years would it take, proportionately, to complete this scheme for a 14-foot depth from St. Louis to Cairo, much less from St. Louis to Minneapolis?

I came here over three years ago—the first time my startled vision observed this Senate Chamber, except from the galleries—and contemporaneously with my arrival the Plaza was a "chestnut" on our desks. Litigation had followed. Condemnation proceedings, under the right of eminent domain conferred by an act of Congress, had been had in due form. Divers verdicts had been returned. Objections had been filed. The Baltimore & Ohio Railway Co., it was said, had received an exorbitant sum. The company promptly denied it, and so the matter stands, and the per diems of employees go on. My attention was called to it among the first things I noticed. I suppose, like all other novices, we begin having our experience on the District of Columbia Committee; and a Senator realizes, after a few meetings have been held, that he is only a Government alderman, a "city dad," so to speak, listening to complaints, as all of us do, about the height of the curbing and the level and the overflow of somebody's cellar and the shutting off of light and the addition of a street lamp or two at some corner where it will be more convenient for the public that pass that way. So one of the principal things that served to distract myself and my colleagues serving on that committee was the Plaza. Some money had been appropriated; but, a good deal like some things of larger moment, a change of administration had occurred; and it seemed to me that the Plaza, and the small owners of property in the condemned area, got caught in the whirl, a good deal as Huerta did in Mexico. The change of administration was a grievous burden to be borne by both. Some of the Plaza property owners are bankrupt, but they are not dead. Huerta is dead, but the Plaza is still undone.

If I were to draw a picture of Father Time it would not be the common one with a flying beard like Abraham of old, not

with a scythe curving over his spine, not with an hourglass with the sands of time swiftly falling. I would change it. If I were a cartoonist like Clifford K. Berryman or John T. McCutcheon, I would draw a picture of the Plaza in Washington as being something that is not only aged but will go on, like Tennyson's brook, forever. I do not expect to live long enough to see it wound up. It is a Government undertaking. So these visionary enthusiasts who expect to see a 14-foot channel in the Mississippi River are doomed to disappointment. It may be that it will be seen 100 years from now, if the money holds out. I do not know whether the money will hold out or not, unless some new sources of taxation are discovered; and by the time that is done possibly the scheme will be abandoned because some more improved methods of transportation will be discovered. Navigation of the air may be complete in that time. I remember years ago, Mr. President, of hearing a traveling showman of some kind, who was somewhat given to reciting elocutionary selections, recite "Darius Green and His Flying Machine," and very likely many of my colleagues of my generation can remember that that was regarded by many as a standing jest. If anything was supposed to be Utopian, things hoped for but never to be realized, it has been flying machines. They are flying a good deal nowadays, especially in Europe. They are not a jest there; they are an ever-existing menace.

We are beginning in earnest here to try to find out how we will develop that branch of our public defense. By the time we get to the improvement of the Mississippi River so that it will be possible to bring a Mexican Gulf steamship up and land it in Chicago with a 14 or 30 foot channel, that will be so far in the future that these improvements in aerial navigation will have come and transportation by rail and by water will be as much out of date as transportation with an ox team would be if it were attempted to-day.

But this was all done and the disputes had continued for some time. In 1915, because of learning at last that the 8-foot channel in the Mississippi River was an insuperable obstacle in the average stage of water to navigate with anything that drew more than 8 feet, people began to come to mother earth on such improvements, and so they drew the conclusion very sagely that it was useless to make more than an 8-foot channel any place in the Illinois River or in the connecting links between the headwater of the Illinois and the sanitary district.

It was at this stage of the proceedings, Mr. President, that a lucid interval occurred in Illinois in waterway legislative affairs, and the general assembly planted its feet on some specific, sane sort of a measure. That is what led to the enactment of the measure I have referred to and inserted in the CONGRESSIONAL RECORD. It provides for a channel of a given width and with other requirements, according to the estimates of the engineers, and a depth of 8 feet to correspond with the maximum average depth, except in flood water of the Mississippi River, between the mouth of the Illinois River and Cairo.

From St. Louis, Mo., to Cairo, Ill., is a link in the Mississippi River improvement that is always treated separately in appropriation bills. That has held true for a good many years. So in keeping with the depth that has been maintained there at an average stage of water during these years this improvement for an 8-foot depth was given by this act of the general assembly.

An application was made to the War Department and was referred to the engineers. The Board of Engineers, in all fairness to it, I ought to state, heard the application, referred the legal questions involved to their counsel, who prepared a report, and on that they combined their engineering knowledge, coupled with that opinion from their legal authority, and arrived at a conclusion. That conclusion was favorable to the application of the State for a permit to make this improvement.

The Chief Engineer, under the provision of the law governing that subject, had a final opinion to render on the subject. At about this time the governor of the State came, and in an interview with the Secretary of War he sought—and that was before the decision was known—to present some of the general questions outside of the ones passed on by the engineers to the Secretary. The whole subject is covered in the following communication from Gov. Dunne, of Illinois:

I received by mail yesterday a communication from the Secretary of War ad interim Gen. H. S. Scott, inclosing "memorandum" signed by Gen. Kingman, Chief of Engineers. I am amazed to learn the conclusions arrived at by the Chief of Engineers. When, as governor of the State of Illinois, I appeared before Secretary of War Garrison on October 26, 1915, I was aware that certain legal questions and questions of public policy had been raised in the department against the granting of the permit, applied for in July, 1915, and I was prepared with counsel and briefs to argue these questions of law and public policy, to wit: First, the question of the right of the State to develop water-power rights incidental to the building of the waterway; second, the question of the right of the State to impose reasonable tolls upon vessels passing through the waterway.

I stated to Secretary of War Garrison and Chief of Engineers Kingman that we were prepared to argue these questions of law and policy, whereupon I was informed by Mr. Garrison that these matters had been referred to the Judge Advocate General and had been disposed of by him favorably to the State of Illinois, and it would be unnecessary for myself or counsel of the waterway to enter into a discussion of these subjects. Since that time I have been favored with a copy of the opinion of the Judge Advocate General, B. H. Crowder, from which I quote as follows:

"Proceeding now to the legal questions and discussing, first, the objection that the granting of this application would confer upon the State the right to construct power dams, appropriate public navigable waters of the United States to its own use, and charge tolls through the improved portion of the river. I can not see that the departmental approval of the plans, together with its permission to the State to affect the navigable capacity of the waterway as here requested, is of the nature of a grant at all, but rather is only the necessary Federal assent whereby a State may exercise a jurisdiction which is its own. The State already has the sovereign authority to do all that is here contemplated subject to the legislation enacted by Congress under its paramount power. It is not a question of the department granting to the State something which it could not otherwise have, but permitting the State to use what it already has, subject to any existing Federal legislation."

"The United States is not the owner of the bed or banks of a navigable waterway of the United States, nor of the water therein (which, indeed, except in a limited sense, is not the subject of ownership at all), but such property and jurisdiction are in general in the State or in the individual riparian owner according to local law." * * *

"Upon similar principles and it is so settled, the State of Illinois, in the absence of Federal legislation to the contrary, has the right to charge tolls for the use of improvements made by it to the navigable capacity of its rivers. So it was decided, in Huse *v.* Glover (119 U. S., 543). The principle is well established. Sands *v.* Minnesota River Improvement Co. (125 U. S., 288); Monongahela N. Co. *v.* United States (148 U. S., 312, 329); Minnesota Rate Cases supra; Kellogg *v.* Union Co (12 Conn., 6); Bank *v.* Lovell, (18 Conn., 500)."

After Secretary of War Garrison had made the announcement that it was unnecessary for us to take up any time in discussing these questions he dictated a memorandum referring the application for the approval of the plans and permit to the Engineering Department for examination and consideration, upon public hearing at Chicago by the local engineer, and in Washington by the Board of Engineers for Rivers and Harbors, and then to be sent to the Chief of Engineers and him for final hearing. Both myself and counsel thereupon rested confident in the assumption that the engineering department was to pass only upon the engineering features of the project. Indeed, during the public hearing at Washington it was announced by the Board of Engineers, through its chairman, Col. Black, as follows: "There are a number of legal questions involved in the matter with which the board has nothing to do, and inasmuch as the time of the board is valuable and your time is valuable as well we request you to confine yourselves this morning to any arguments you have to submit to the engineering and navigation features, which are the parts to be considered by this board."

I was there at that hearing and within the very limited time, bounded by a limited knowledge of the subject, I helped in the presentation of the matter to the Board of Engineers. Continuing from this statement of Gov. Dunne:

Moreover, as I understand it, the power and authority of the Chief of Engineers and of the Board of Engineers of the War Department is confined by the Federal statutes to passing engineering plans, which is what the local engineer, the division engineer, and the Board of Engineers for Rivers and Harbors actually did. Judge of our amazement then to find that on January 15, without any notice to us and without any opportunity to be heard and contrary to the instructions of former Secretary of War Garrison, who had agreed to give us a hearing before finally determining the matter, the whole subject is summarily disposed of by the Chief of Engineers on two questions, neither of which are engineering problems, and both of which had been passed upon favorably to the State of Illinois by the Judge Advocate General in his written report to Secretary of War Garrison.

The Judge Advocate General correctly decided, in accordance with the law, that the United States had no control over the water-power rights incidentally developed by the building of the waterway, and that such rights were the property of the State of Illinois, and correctly decided that the State had the right to impose reasonable tolls for the use of the improved waterway until paid for. Moreover, the policy of the Federal Government, in so far as the canal connecting the Chicago River and the Illinois River is concerned, has been to permit the collection of tolls. The Illinois and Michigan Canal constructed by the State of Illinois pursuant to authority, given by the Federal Government was permitted to charge these tolls in the State of Illinois for three-quarters of a century, and is now doing so without any objection from the War Department of the United States. The Chief of Engineers in his "memorandum" handed to the Secretary of War ad interim admits that the proposed Illinois waterway "is an engineering possibility," but, in my judgment, has acted beyond the scope of his authority and jurisdiction in discussing questions of law and public policy, and I believe that if the Secretary of War ad interim had been as fully cognizant of the whole situation as was Secretary of War Garrison that we would have been given an opportunity to present our case to him before any final action was taken, and that after such final hearing we would have been granted a permit.

It is the intention of the State of Illinois, through its governor and its waterway commission, to apply for a rehearing on this matter, and I confidently believe that upon a full presentation of law and facts that a permit will be granted.

E. F. DUNNE.

FEBRUARY 29, 1916.

I wish now to read from a memorandum prepared by the Chief Engineer for the Secretary of War. It is dated January 15, 1916, headed "Memorandum for the Secretary of War in the matter of the construction of Illinois waterway." This is

signed by Dan C. Kingman, Chief of Engineers, United States Army:

[Memorandum for the Secretary of War in re for construction of Illinois waterway.]

JANUARY 15, 1916.

This waterway is a route, partly natural and partly artificial, from the navigable portion of the Chicago Drainage Canal to the improved portion of the Illinois River, which thus forms a link between the waterways of the Great Lakes and the waterways of the Mississippi River systems. This is proposed to be developed to a ruling depth of 8 feet. Improvement is to be effected by locks and dams and by channel excavation where necessary. In connection with the dams a large water power is to be developed, possibly as great as 80,000 horsepower.

The State of Illinois proposes to execute these works of improvement and to retain for itself in perpetuity all rights to the water power developed and to collect in the form of tolls from these utilities—that is to say, from navigation and water power—a sum sufficient to pay the interest on all the bonds which it may be necessary to issue for the improvement, to provide a sinking fund to pay the bonds themselves in 20 years, and provide all money necessary for operating and caring for these works.

I pause here for the purpose, Mr. President, of reminding the Chief of Engineers that he is in error in a necessary question of fact. He says that it is proposed—

To collect in the form of tolls from these utilities—that is to say, from navigation and water power—a sum sufficient to pay the interest on all the bonds which it may be necessary to issue for the improvement, to provide a sinking fund to pay the bonds themselves in 20 years, and provide all money necessary for operating and caring for these works.

It must be that the Chief of Engineers, although very learned in other things, did not sufficiently inform himself before he prepared this opinion. On military matters or matters of river or lake engineering I have no doubt this gentleman is possessed of superior and technical information. I do not know what the reason is—it may be lack of time; it may be an inadvertent opinion—but I can see no well-grounded excuse for an error of this gravity. It has to a considerable degree impaired my confidence in the Chief Engineer. The Board of River Engineers are practical men who have detailed knowledge of the problems they are called on to solve. Usually or in a matter of consequence they carefully survey the ground in person, they collect all of the available data, they get both the low stage during the driest period known in the history of a waterway as well as the flood period. They avail themselves of currents of shifting channels, of erosion, accretion, formation, and a thousand things that are found in the course of the inland waterway, so that they are informed sufficiently before they undertake to give an opinion or to enter upon an improvement involving the expenditure of any considerable sum of money. But here is the Chief Engineer under his signature saying that a State proposes to collect from tolls and water power enough to pay the entire indebtedness incurred to raise money to make the improvement.

I do not think this engineer ever read section 18 of the act. If he did read it, Mr. President, it made no impression upon his understanding, or his understanding was such that all of the impressions made this side of the New Jerusalem would have availed nothing. That is the reason why I am putting it in the CONGRESSIONAL RECORD and placing it before Senators, who habitually analyze and take the full measure of statutes and sections and principles and inform themselves of facts before they decide. Section 18 says:

When the said waterway shall have been completed in conformity with the provisions of this act, and paid for with the proceeds of bonds authorized to be sold under the provisions of section 12 hereof, and said bonds shall have been paid—

Now, observe the language—

either out of the earnings of said waterway or by the State, or both, then the said channel, or so much thereof as shall have been completed, shall be tendered to the Government of the United States for navigation uses.

Now, I wish to read section 12, or so much of it as is applicable to this particular principle. It provides for the issue of an amount not exceeding $5,000,000 in bonds. The commission shall be charged with the duty of selling said bonds or any part thereof to the highest bidder after advertising, and so forth; and it provides for the denomination of the bonds, when they shall be dated, the rate of interest they shall draw, and then continues with the following provision:

All bonds issued shall be made payable in 20 years from the date of their issue, and, in the discretion of the said commission, may be made redeemable in 10 years from the date of their issue.

That is what this provision means when applied to section 18. In 10 or 20 years at the utmost these bonds will be paid. If there is anything derived from the water power developed, which by any mishap should reach the State treasury or any toll should be collected for lockage or for the use of this channel, it would be used as far as it would apply.

There is a provision in all the creation of indebtedness in that State, both for municipalities and for the State itself, which has been in force since 1870. Every bond issue or indebtedness of any character at the time of its creation shall by the same act that creates it and authorizes the issue of the security provide for a levy of a direct annual tax that shall pay both principal and interest of the entire indebtedness within a time not exceeding 20 years.

It is in pursuance of that requirement that section 12 of the act of June 18, 1915, is drawn. So in 10 years, if the State sees fit, or not exceeding 20 years at the outside, the money of taxpayers or whatever income the State may have will be used to satisfy this indebtedness.

But as the language of the act is, if from one or both sources the indebtedness shall be paid, the waterways when completed shall be tendered to the General Government. It becomes theirs absolutely for all navigation purposes; and I do not understand that the Government has any business with an inland waterway within the borders of a State for any other use whatever. It is only by virtue of the interstate-commerce act or the power, rather, contained in the Federal Constitution.

So this portion of the Chief Engineer's opinion is an error. This improvement, practically the whole of the $5,000,000, a part of the $20,000,000, will be paid for by direct taxes upon the assessed value of property in that State.

Continuing the opinion of the Chief of Engineers:

After the State is completely reimbursed for its expenditures it proposes to offer the navigation facilities to the United States as a gift, subject to the condition that the United States shall operate and care for them ever afterwards without any tax or tolls whatever.

That this is a good business proposition for the State of Illinois, I think there is no doubt. That it is an engineering possibility, I think there is also no doubt. But I do not think that it is the best engineering solution of the problem that sufficient study could devise, although I think it would be admissible if anyone chose to adopt it, were it not for certain conditions which render its enforcement uncertain and its results unfair and inequitable.

It would be a very simple matter, if this waterway in question were a stream lying wholly in the State of Illinois, its source and its mouth being both in that State, and the public rights on the river being no greater for the citizens of that State than those of any other. But this is very far from being the case.

I do not know what he means. I apprehend anybody who knew the physical condition of the land and water in that part of the country would be unable to tell what the Chief Engineer means by that. The mouth of this river is wholly inside the borders of that State. The headwaters of that river are wholly inside the borders of that State. It is formed by the junction of the Kankakee and the Desplaines Rivers. These rivers constitute the southwestern slope of the watershed that lies between the Mississippi Valley and Lake Michigan. On the southeasterly slope of that watershed all the waters run into the lake, and so reach the ocean through the Great Lakes, the St. Lawrence River, and connecting waterways that unite the various lakes in the system. All the parts of the river he refers to are within the borders of the State. What he means by saying if it were entirely within the State it would be a matter easily disposed of I am unable to say. To give a very liberal construction, however, to his opinion I connect it with the following portion of the same paragraph. He continues:

There now exists a waterway, partly natural and partly artificial or artificially improved, from the city of New York, at the mouth of the Hudson River, via this river and the canals built by the State of New York; thence via the Great Lakes to Chicago, passing through the connecting waters and harbors improved at the cost of the United States; thence to Lockport over waters improved by the State of Illinois; thence partly by canal and partly by improved waterway to be built by the State of Illinois to the improved portion of the Illinois River below, and finally by the Illinois River (improved in part by the United States) to the Mississippi; and thence to the sea by the navigable waters which connect with this river and form this system.

I referred a bit ago, in reading his opinion here, to the fact that this river lies wholly within the limits of a single State. Both its headwaters and its mouth, together with every tributary stream that flows into it, are in the State of Illinois. None of the waters that come from Wisconsin, none of the rivers that are navigable, in fact, connect with the Illinois River. The Rock River runs down by another course and over a territory not connected with this controversy.

The riparian rights of every inland waterway are determined by the local laws and provisions of the respective States. We referred to that in the consideration of the water-power bill. It was discussed here at considerable length. Until I came to this body three years ago I do not think that for the last 16 years I have been out of some kind of waterway litigation connected with either the Illinois River or the Mississippi River.

In connection with this opinion of the Chief of Engineers, I wish particularly to place in the CONGRESSIONAL RECORD the undisputed condition of titles within the borders of that State

affecting riparian owners, whether they be public or private in character. All riparian owners on the Illinois side of the Mississippi River own to the center of the navigable channel of the river. The freehold found in the river bed is owned by a farmer, for instance, on the banks of the Mississippi River until it reaches the center of the channel used by the pilots in navigating the river. At times its channel changes. Considerable litigation has arisen because of the changes in the channel. Such changes are occasioned sometimes by some elemental convulsion in the navigable channel; once by an earthquake, many times by great freshets, by the flood waters that come from above; and at times by the erosion of the banks and the breaking through of the river which cuts off old land and old channels and forms new ones.

As to the whole of Kaskaskia Township, in Randolph County, Ill., may be a little questionable whether it may not be in the State of Missouri, if the strict common-law rule had been applied. The old channel of the Mississippi River on the west side of the township suddenly changed by the river breaking over during high water and bodily appropriating the channel of the Kaskaskia River, that ran parallel with it for nearly 6 miles, the whole length of the township. It broke into it and took the channel, so that now the old channel of the Mississippi River opposite Kaskaskia Township, between Illinois and the Missouri, part of the stream, is almost dry and the former bed of the river is covered with water lillies and swamp grass. The old channel has therefore ceased to exist as a boundary line, and the new one is moved over on the east side of the township. That litigation—for it will result in that at some time; it will come in due season—will settle the question, and I need not go into those details.

The riparian owner holds to the center of the Mississippi River. That is a part of his freehold. I have a right, as the owner on the Illinois side of the bank, to enjoin anyone from cutting ice that arrests the particles of water and imprisons them, and so makes them a part of my freehold. I can stop anyone from cutting grass; I can stop him from hunting and fishing, because the Mississippi River bed annexed to my freehold, covered though it is by water, subject to the right of navigation only—a perpetual easement for the public, subject to that right only—the bed of the Mississippi River is as much my land as is the place where my homestead is. That is the law in that State.

On the other side, the Iowa shore, for instance, between high water and the center of the navigable channel, is a belt of land owned by the State of Iowa. That is the precise question that affected the water-power bill here. If I had any interest in the State of Iowa, if I were its law officer or its governor, the first time that a corporation created under the laws of the State of Iowa, or of any other State, or under the laws of Congress, should undertake to condemn the riparian ownership of the State of Iowa in the Mississippi River in this belt of land, extending from high-water mark to the center of the channel, I would apply on behalf of the State and see whether this Government, by the exercise of such legislative power, could take away from a State without its consent that belt of land.

I do not think the property of a sovereign State is subject to the law of eminent domain. How can one sovereign in our form of government undertake to condemn the property of another sovereign inside of its local rights and within its own undoubted reserve powers in the interior of the State?

The owner on the Illinois River, for instance, owns to the center of the navigable channel of that river. If he owns on both sides, he owns the entire bed of the Illinois River, and it is appurtenant to and a part of his freehold, and it passes by conveyance in the ordinary way.

It has been decided not only by repeated adjudications in that State by the court of last resort, but it has been recognized by at least three well-considered and lengthy opinions in the Federal Supreme Court that that is a matter first to be decided by the supreme court of the State concerned, and that the United States Supreme Court will not interfere to set aside the adjudication of a sovereign State on the local rights within its own borders. So as to the part of the Chief Engineer's opinion, in which he says that if it were a matter that lay wholly within the borders of a State it would present a very simple question; if that is what he means, the question is much simpler than he thinks, because it is wholly within the power of the State, and the General Government has nothing to do with it, except to see in the one instance that the rights of navigation are not interfered with. The power to do that arises from the commerce clause of the Constitution.

While on this portion of the argument I had as well notice what he says about the charges that might be imposed on this 65-mile piece that furnishes the connecting link between New York City and the inland waterway transportation by way of the Hudson River, the Erie Canal, the Great Lakes, and the Sanitary District Channel of Chicago—this 65-mile improvement of the Illinois River, of the Mississippi, and so to the Gulf. The Engineer continues, in this part of his opinion, and I will read this much before I comment further:

> The rights and interests, therefore, of a great many people are affected by this short piece of canalization, about 62 miles in length—

It is 65 miles, as a matter of fact—

> as this is the link between what might be called the Mississippi Valley waterways and the Great Lakes and Hudson waterways.
>
> The State of New York has already expended more than a hundred millions in the last enlargement of the Erie Canal. The United States has spent enormous sums in the Hudson River improvements, the Great Lakes improvements, the Illinois River improvements, and the Mississippi River system of improvements.

The engineer is in some error about the great sums that have been expended on the improvement of the Illinois River. No very large sums, as we measure them nowadays at least, have ever been poured into that devoted river if they all be looked up. There has been much more expended by the State itself, collected from the taxpayers of that section, than in any other way. He continues:

> The value and importance of a short waterway connecting very extensive ones can not be measured by its length alone. There existed an admirable waterway from the city of New York to the port of Colon, thence from Panama to Yokohama or any other eastern port, and there was a short gap, less in length than this Illinois waterway, where there was naturally no navigation. It was considered worth while to spend hundreds of millions of dollars to open up this route, and the control of the Panama route was the virtual control of the entire distance. If one were to consider the tolls which it should carry, it would not be based upon a proportionate mileage between the two termini, but would be based upon what the whole traffic would bear. Something of this kind would occur in the case of through business on the Illinois waterway improvement, which is the link connecting these two long water routes.
>
> Freight can be carried by water under favorable conditions for one-tenth of a cent per ton-mile, or for 6.2 cents for the entire length of the route, but I think it evident that a very much higher rate than this would be charged by the power that controlled this waterway.

I want, first, to say that the Illinois and Michigan Canal, as already intimated in some former documents from which I read, has for 75 years been charging tolls. When it did business at all it collected tolls—of late years, like most canals, it has fallen into decay and shippers have quit using it—and at one time it collected over a million dollars in tolls per annum. It reached about the high-water mark in 1882. Since that time it has declined, until practically there is nothing there worth considering at the present time; but it charged tolls, and no complaint was ever made; no terms were imposed when the sanitary district channel was excavated. Nearly $80,000,000 have been paid by the property owners resident in the sanitary district; $100,000,000 will be expended finally. It began about 1889. In that improvement no terms were exacted; no limitations were imposed by the War Department at the time when the permit was given for this improvement. The authorities of the sanitary district, the trustees, came here some years ago upon the opening of the channel; they needed more water. They sought and received the necessary permit from the War Department to divert the waters of Lake Michigan. Some data were presented, and the water is still drawn from Lake Michigan to flood the channel.

I remember the testimony of both expert and nonexpert witnesses as to how much the permanent level of the Illinois River had been raised when the water from Lake Michigan was turned into the headwaters of the Illinois. About 5 feet and an inch was the permanent raising of the level of the river. That was purely an artificial change made by this improvement. It drew a considerable volume of water from Lake Michigan, but still no terms were exacted by the Government when that permit was given. There was no provision made that the sanitary district trustees should not utilize the water power. As a matter of fact, the gravity fall of the dam where it begins its first great drop on the way down the valley has been utilized, and the hydroelectric power generated there has been wired off, and is in use now, both for lighting and for power purposes, up and down the valley and in the city of Chicago; but no terms were exacted at that time of any kind, although they really asked for something on which the Government possibly might have exacted terms. It might absolutely have refused the right to take water from Lake Michigan by way of the Chicago River and turn it into this artificial canal, but it did not do so.

There are two locks built wholly by the State, one at Henry and one at Copperas Creek. Both of these locks charge tolls for boats going through. They have charged tolls for many years. Those locks were put in under permits from the War Department. The only thing the War Department was vigilant about was that navigation should not be impeded, and that no

obstruction should be placed in the river by the contemplated improvements. So the tolls are only such as are reasonably necessary to maintain and operate the locks.

Under the act which I have read into the RECORD, or asked to have inserted, there is a provision that the commission having charge of this improvement may fix the tolls for freight and passengers. Under that power I have here a certified copy of the tolls which have been fixed, and I read this provision:

That the toll charges for freight and passenger boats, launches, scows, barges, and other crafts navigating the Illinois waterway between Lorkport, Ill., and La Salle, Ill., or any part thereof, will be at the rate of one-tenth of 1 mill per ton-mile—

As I figure that out, it is one-tenth of what the Chief Engineer said it would be—

to be estimated upon the displacement of such craft, and in addition thereto the sum of 25 cents for each lock in said waterway through which such boat, launch, scow, barge, or other craft passes.

So the fears of an excessive charge are groundless.

In this connection I should like to add another reason why there is nothing to be feared. If in this same bill which we are considering no point of order is made, an amendment can be added giving the Interstate Commerce Commission power to fix rates on the entire water haul. It has the power now to fix rates on a part rail and part water haul. There is no reason why in this bill or in a separate bill the Interstate Commerce Commission should not be given power to fix the rates over the 65 miles or the whole of the waterway in question at what they think is reasonable. In an indirect way the Interstate Commerce Commission has power to do so now. They have power to fix the rates where the transportation is part rail and part water, and in the distribution of the part that would be charged to the 65 miles they can arrange for such a reasonable part to be charged to the 65-mile link as they think proper. That would prevent any abuses whatever.

The Chief of Engineers continues:

All of the rivers and waterways of the United States that have been improved by the General Government have been made absolutely free of tolls, and the same has been done by the State of New York with its magnificent system of canals. Articles of commerce originating along the Illinois waterway, when they leave it, can pass without tolls through all the improved sections of water, including the canals of New York, until it reaches the sea. And everything that originates from the sea to Chicago will pass without charge until it reaches this llittle section and then will be compelled to deliver to the toll gatherer its percentage of tax. It is true that tolls are now charged by the State of Illinois on the upper portion of the Illinois River which is at present maintained by said State, but on no other part of the entire route is any toll charged. I do not think it good engineering to tax in this peculiar and very exceptional way one little section of a long inland route I do not think that, owning to this very peculiar and exceptional condition, any executive branch of the Government should undertake to permit this unusual thing to be done without special instruction from Congress.

That is what I am seeking to have given.

There are several dams capable of developing a large amount of water power in the aggregate. The whole question of dams on navigable waterways, however slight the navigability may be, is now up for consideration by Congress. I do not think it wise or prudent for any executive department at this time to snatch this question out from under the control of Congress and to attempt in one particular case to settle it in advance of the pending action.

With the exception of the State of New York, none of the States, I think, have successfully maintained and developed their canals. The Government has given up a good deal of public land at one time or another with a view to securing improvement in navigation. It has generally turned out a failure and the amount contributed by the Government has been lost. To prevent the failure of this improvement in the course of its accomplishment and after the interstate commerce affected has been taxed for the construction of the works of improvement, very definite and very binding laws should be had to govern the matter. No executive department can make laws at all, and any attempt to regulate or govern such a matter where a State was a party against an executive officer would result in failure.

In order that any engineering project should be a success, a means of paying for it and maintaining it must be assured, and where two things are being developed at the same time—in this case navigation and water power—and each one is contributing toward the cost, it must be determined and carried out what portion each of these interests should pay. It ought to be determined just what proportion navigation should pay, and there ought to be some means of enforcing this proper proportion. It should also be decided whether power houses, transmission lines, and similar things pertaining to the production and transmission of hydroelectric power should be charged to the cost of construction and assessed upon navigation or not.

There are other similar things that further study and thought would doubtless reveal, but it is submitted that enough has been said to indicate that every principle of sound engineering requires that the decision of what shall be done and how to do it should rest with the primary source of power—that is, with Congress.

DAN C. KINGMAN,
*Chief of Engineers, United States Army.*

That is the whole of the opinion. It expressly says that it ought to be submitted to Congress, and that is the reason why the amendment I offered in committee was prepared and offered. So, upon the whole, he undertook to decide two questions, neither of which was submitted to him. One, the question of public policy, the other as to the right of the State to charge or collect tolls for this improvement.

I wish to state that an application for a rehearing is pending before the department. I have a copy of that application, which I shall not read except as I refer to it in the comments I may make hereafter. The petition is signed by Gov. Dunne of Illinois and by the counsel representing the waterway commission, Mr. Mathias. I ask that the petition be inserted in the RECORD as part of my remarks without reading.

The VICE PRESIDENT. Without objection, it is so ordered.

The petition referred to is as follows:

CHICAGO, ILL., *March 31, 1916.*

To the honorable SECRETARY OF WAR and
The honorable CHIEF OF ENGINEERS,
*Washington, D. C.*

SIRS: On behalf of the State of Illinois we have the honor to request that a rehearing be granted of the application of the State of Illinois made by its governor, Hon. Edward F. Dunne, dated June 16, 1915, for the approval of the plans for the improvement of certain portions of the Des Plaines and Illinois Rivers and the Illinois and Michigan Canal.

Under the provisions of sections 9 and 10 of the act of March 3, 1899, it is required that the plans be approved by the Secretary of War and the Chief of Engineers.

The approval of the plans was refused by the former Chief of Engineers, Gen. Kingman, on considerations which seemed to him to involve important questions of public policy without having given to the sovereign State of Illinois an opportunity to be heard upon these questions. It is most respectfully urged that when two sovereign powers (the Federal Government and the State government) have coordinate jurisdiction and duties respecting any function of government, the genius of our institutions requires, for the sake of harmonious cooperation, that full consideration be given and an opportunity to be heard be granted concerning every doubt or question which arises to affect the relative rights of the two sovereign powers. This was not done by the former Chief of Engineers, Gen. Kingman, and we believe that had an opportunity been afforded the State of Illinois to present its views upon the questions of public policy which seemed to have controlled his decision, Gen. Kingman, as Chief of Engineers, would have approved said plans.

The State of Illinois therefore respectfully petitions that it be granted an opportunity to be heard upon the following questions of public policy:

1. The purpose of the act of March 3, 1899, was "simply to create an additional and cumulative remedy to prevent such structures (dams, etc.), although lawfully authorized, from interfering with commerce." (Lake Shore & Michigan Ry. Co. v. Ohio, 195 U. S., 365.)

The fact, if it is a fact, that Congress has at some time or other ordered a report by the engineering department upon the Illinois waterway, which has resulted in no congressional action, and the fact that Congress is considering, with a great contrariety of opinion, several bills for the amendment of the general dam act, neither one nor the other nor both are any justification for the War Department failing to consider the said plans upon the merits in relation to navigation interests nor any excuse for refusing to execute the laws of the land.

2. The public policy of the Nation which in most cases is doubtful and difficult to ascertain is best exemplified by the laws rather than by agitation to amend the laws.

3. The jurisdiction of the Federal Government over navigable waters of the United States is limited by the Constitution to regulations respecting interstate and foreign commerce.

4. The State of Illinois has full power to legislate concerning the improvement of navigation of the Des Plaines and Illinois Rivers, so far as intrastate commerce is concerned, and also subject to such Federal regulations as exist, so far as interstate commerce is concerned.

5. Any law of Illinois affecting interstate commerce on navigable waters in Illinois is binding so long as Congress has not legislated thereon. Yet the Federal Government by appropriate legislation may supersede and render ineffective such Illinois law, so far as interstate commerce is concerned.

6. The Federal Government has the power to regulate toll charges on navigable waters of the United States and to prevent excessive or unreasonable toll charges thereon.

7. The State of Illinois has no power or right to discriminate as to toll charges on interstate and intrastate commerce.

8. The Interstate Commerce Commission in regulating toll charges on interstate commerce on improved waterways of the United States may take into consideration in the determination of reasonable toll charges the revenue derived from hydroelectric power created as incidental to the improvement of the waterway for purposes of navigation.

9. It is not just that the people of the State of Illinois should expend $5,000,000 to improve a waterway for the use of intrastate and interstate commerce unless the people of the United States who engage in interstate commerce thereon pay their fair proportion of its cost and maintenance, unless the State wishes to do so for the incidental benefits resulting therefrom.

10. The Federal Government has the power whenever it chooses to exercise it to take over by appropriate proceedings any structures built in aid of navigation by any State in any navigable wafers of the United States and to operate and control the same.

11. The presumption must be indulged that the State of Illinois in the fixing of toll charges will be controlled by considerations most conducive to the general welfare of the whole people of the Nation and the State. They must and will be treated alike.

12. Section 18 of the act providing for the construction of the waterway provides that when the waterway shall have been completed and paid for out of the proceeds of the bonds and the bonds shall have been paid, whether out of the earnings of the waterway or by the State, or both, then the waterway shall be tendered to the Government of the United States for navigation uses conditioned upon the obligation of the United States to maintain the channel as a waterway free from tolls for navigation and to operate and maintain the same free of cost to the State of Illinois. This shows that it is not the intention of the State to charge unreasonable tolls, because provision is made for paying the bonds at maturity, notwithstanding the earnings of the waterway may not be sufficient for that purpose.

13. It is just and lawful that the State of Illinois, upon surrendering the waterway to the United States, should retain the hydroelectric power created as incidental to the improvement of navigation. The jurisdiction of the Federal Government in the premises is limited to interstate and foreign commerce. It will obtain these proposed im-

provements to navigation costing $5,000,000 free. If it is required to pay a reasonable sum for electric power to operate the locks at the dam at Starved Rock, the charge would be a very small fraction of 1 per cent of what it would cost the Government to build such a dam and locks.

14. The proposed improvement will provide a navigable waterway where there is no usable waterway now.

15. The State of Illinois has the same interest to foster and protect with reference to the waterway as has the United States.

16. The act of March 3, 1899, should be considered as a complement to rather than a check upon the sovereign power of the State.

17. The approval of the plans does not ratify, affirm, or approve the Illinois waterway act, nor impose any obligation upon the United States, nor prevent Congress from passing a law taking exclusive jurisdiction of the Illinois River for purposes of interstate commerce, nor impose upon the United States any duty to accept the tender of the waterway 20 years hence if it does not choose to do so. The United States may impose the terms and conditions of such transfer under its power of eminent domain if not by agreement.

We further respectfully request that if there are any objections to the plans of an engineering nature which appear to you as important that we be given an opportunty to be heard concerning the same. It may be that your knowledge and experience have suggested to you certain changes that would improve the locks or other features of the proposed public improvement and we would be most grateful to be advised of them and would cordially adopt them, provided we can do so under the provisions of the law.

The importance of an early disposition of this matter is called to your attention in order that the State of Illinois may proceed in the performance of a service not only to its own people but to the whole people of the United States.

We therefore respectfully request that a rehearing of said application be granted and that the said plans be approved.

Most respectfully submitted.

E. F. DUNNE,
*Governor of the State of Illinois.*
LEE D. MATHIAS,
*Counsel of the State of Illinois in this behalf.*

Mr. SHERMAN. Mr. President, I wish to explain, at some risk of repetition, the details of this improvement, in order that it may complete what I have to say on this branch of this bill.

On September 24, 1914, a report was made by the board of engineers acting on behalf of the State. They present the following facts based on the investigation they had made:

At the present time a navigable depth of over 7 feet exists normally for a distance of 262 miles of a total of 327 miles between Chicago and the Mississippi River. This distance of 65 miles between the Illinois River at La Salle and the Chicago Drainage Canal at Joliet is now limited to a draft of 4½ feet through the Illinois & Michigan Canal.

Various projects following the Des Plaines and Illinois Rivers have been presented during the past 14 years providing an adequate depth for navigation from the southern terminus of the drainage canal at Joliet to the Illinois River at La Salle. These projects have not matured. This has been due not so much to inherent defects in the projects or to lack of appreciation of the economic worth of the undertaking, but rather it has been due to undetermined legal factors affecting the available flow of water from the drainage canal and to opposition by water-power claimants.

Your board of engineers has based its investigation upon the following premises:

(a) That the proposed waterway would be available for immediate construction and use.

(b) That the construction now contemplated be in harmony with possible future developments, permitting an increase in size at such time as existing obstacles may be removed and as commerce may demand.

The Illinois & Michigan Canal may be utilized for this waterway in part or as a whole by deepening the channel and by enlarging the locks. Some of the existing locks may be dispensed with by constructing new locks of greater lift. The channel thus formed, however, is poorly adapted to future enlargement, both as to increase in width and in depth, and the relative frequency of the locks limits the speed of water transportation by this route.

The Illinois River may be utilized in part for this waterway by raising the stage and by deepening its bed. The river waterway possesses advantages over the canal type, in that it gives a greater present width and depth, is readily adapted to any desired future enlargement, and creates a channel requiring a minimum for maintenance and operation and affording a maximum in waterway facilities. The greater speed of transportation in a river waterway of ample channel and unobstructed by frequent locks results in cheaper freight costs and consequent benefit to the public.

The plan involves the deepening of the Illinois River from La Salle to Starved Rock; the construction of a lock and dam in the Illinois River at Starved Rock; the construction of a connecting channel and lock between the Illinois River and the Illinois & Michigan Canal at Walbridge Creek, just below Marseilles; the construction of a crib dam in the Illinois River just above Marseilles and a connecting channel and lock between the Illinois & Michigan Canal and the Illinois River at this point; the construction of a connecting channel and lock between the Illinois River and the Illinois & Michigan Canal at a point just below Dresden; the improvement of the Illinois & Michigan Canal by deepening the bed and constructing new locks from Dresden to the southern terminus of the drainage canal at Joliet; and the construction of a new lock at the sanitary district power house at Lockport. This plan utilizes the Illinois River as a waterway for 45 miles of the total distance of 65 miles from Joliet to La Salle.

In this plan the channel of the Illinois & Michigan Canal is to remain 60 feet in width at the water surface, is to be 36 feet in width at the bottom, and is to have a uniform depth of 8 feet of water. The minimum width of the channel in the Illinois River is to be 150 feet and the minimum depth of water 8 feet.

The locks contemplated in the Illinois River at Starved Rock and at the sanitary district power house at Lockport are to have a width of 55 feet, a length of 250 feet, and a depth of 8 feet, while the locks in the Illinois & Michigan Canal are to have a width of 45 feet, a length of 250 feet, and a depth of 8 feet. Locks of the dimensions adopted for the Illinois & Michigan Canal with a 12-foot lift will cost approximately $90,000,000, while locks of the same lift and depth, but having a width of 35 feet and a length of 170 feet, the size of those on the Hennepin Canal, would cost approximately $60,000,000.

The construction of the larger locks will permit employment upon the contemplated work and upon subsequent work on the waterway of large dredge boats in the Illinois and Mississippi Rivers, as well as of those in the Great Lakes, and will insure competition upon dredging contracts in the waterway unrestricted to one locality or to any one combination of contractors. Your board of engineers is therefore of the opinion that foresight and ultimate economy warrant the increased expenditure for the larger size locks even in the Illinois & Michigan Canal.

The comparative estimated cost of the plan is as follows:

| | |
|---|---|
| Illinois & Michigan Canal, Joliet to Dresden | $509,480 |
| Locks and river connections at Marseilles | 682,130 |
| Dam, lock, etc., at Starved Rock | 1,583,000 |
| New lock at sanitary district power house, Lockport | 300,000 |
| Total estimated cost, say | 3,075,000 |

By modification in the design of the dam and at somewhat increased cost, electrical power may be generated at Starved Rock. The energy of the stream under the proposed conditions with a flow of 10,000 cubic feet per second is 23,600 horsepower on the turbine shaft. The cost of this power plant is not included in the foregoing estimates.

Your board of engineers recommends the adoption of the plan herein outlined, since at slightly increased cost, it provides a channel not only of greatest present efficiency, but one which best lends itself to future progressive development for future commercial needs. This plan requires least for maintenance and operation, allows the highest speed of transportation, and results in consequent lowest freight costs. The adoption of this plan puts under immediate development the major portion of the ultimate Illinois waterway.

Respectfully submitted.

LYMAN E. COOLEY,
*Consulting Engineer.*
E. J. KELLY,
*Assistant Chief Engineer, the Sanitary District of Chicago.*
WALTER A. SHAW,
*Member Illinois Public Utilities Commission.*
LE ROY K. SHERMAN,
*Member Illinois Rivers and Lakes Commission.*

I now wish to read from a report made by the War Department under date of January 23, 1911, on this same question and relating to this specific proposition:

THE MOST ADVISABLE DEPTH AND DIMENSIONS FOR THE WATERWAY.

SIR: Waterways from the Great Lakes to the Mississippi River have been proposed, varying in depth from 4½ to 24 feet. In determining the most advisable depth of the waterway it is necessary to consider the probable commerce, its character, its origin, its destination, and the dimensions of the vessels in which it can be most economically transported. Experience has shown that as a general rule coarse and bulky articles seek water transportation, while the finer manufactured products are shipped by rail. Of the 62,363,218 tons transported through the St. Marys Falls Canals in 1910 about 97 per cent consisted of iron ore, coal, grain, and lumber. Crude manufactured products, such as pig iron, ingots, and steel rails, are also naturally shipped by water, and in thickly settled communities like New York there is a large water commerce in building materials, such as brick, stone, lime, cement, sand, and gravel.

The Illinois River flows through one of the richest farming regions of the United States. There are along its banks large mineral deposits, especially coal, building stone, and the ingredients for making cement, so that the valley itself is capable of producing a large amount of the commodities which seek water transportation. The natural markets for this section are now Chicago and St. Louis, and were both New Orleans and the Northwest connected with the Illinois River by suitable water transportation they might become additional markets. * * * In addition it is the expectation of many of the advocates of a waterway from Chicago to the Gulf that much of the commerce of the Great Lakes can be diverted thereto, although it now generally moves in an east and west direction. Finally there is the commerce of the Gulf, expected to largely increase with the completion of the Panama Canal, some of which, it is claimed, would be carried to Chicago were an adequate waterway provided. There are, therefore, four sources of possible commerce for the proposed waterway—first, its immediate banks; second, the tributary rivers; third, the Great Lakes; and, fourth, the Gulf of Mexico.

TYPES OF VESSELS.

The types of vessels which can most economically handle such commerce differ radically. A vessel navigating the ocean has to combat violent storms and severe wave action, and requires such relations between length, width, and depth as to secure good lines, great stiffness of hull, and maximum stability. For ocean service the experience of the past 50 years has evolved an economic freight steamer with a draft between 20 and 30 feet, though at a few of the principal ports vessels from 30 to 40 feet are being introduced.

On the Great Lakes, since storm waves are not as large as on the ocean, and harbors of refuge are more frequent, less structural strength is necessary in vessels, and for the same draft the displacement may be much greater than on the ocean. Experience on the Great Lakes has evolved an economic bulk-cargo steamer with a length of 550 to 600 feet, which, when loaded to an ultimate draft of 21 to 24 feet, carries a cargo of 10,000 to 15,000 tons. The package freighter employed on the Lakes by the various railway corporations is of somewhat smaller dimensions and has a draft of 18 to 19 feet. These two types of vessels now carry the bulk of the iron ore, coal, grain, and merchandise of the Great Lakes, and the cost of transportation has been reduced at least half in the past 20 years.

On rivers vessels are not exposed to wave action, and their structural strength and draft for the same displacement can therefore further be diminished. The early river packet was a frail stern or side-wheel steamer having a draft of 3 to 10 feet, but as a freight carrier it has now been generally displaced by barges, which experience has demonstrated to be more economic. These barges have a draft not exceeding 8½ feet and a capacity up to 3,000 tons. They are assembled in tows and handled by a powerful towboat, in which the same economies in steam consumption are obtained as in the modern lake or ocean steamship.

The experience of foreign nations in river navigation is similar to that of the United States, as is illustrated by the enormous traffic of the River Rhine, which, according to the "Statistik des Deutschen Reichs. Band 226," amounted in 1908 to about 54,000,000 tons between Strassburg and the Dutch frontier. The low-water depth of the channel upon which this large volume of freight was carried, as described in the preliminary report of the United States National Waterways Commission, 1910, was only 9.8 feet for 110 miles from the Dutch frontier up to Cologne, thence 8.2 feet for 82 miles to St. Goar, thence 6.6 feet for 79 miles to Mannheim, and thence 4 feet for 84 miles to Strassburg. About 30 per cent of the traffic of 1908 used the river above Cologne, where the available depths vary, as above stated, from 4 feet in the section immediately below Strassburg, to a maximum of 8.2 feet in the section immediately above Cologne. Bulky commodities are transported in fleets of barges towed by special steamers designed for the purpose. The United States general consul at Berlin reported to the Department of State under date of August 18, 1909, that the capacity of the largest Rhine barges is over 2,600 tons, with a length of 336.6 feet, a beam of 39.6 feet, and a maximum draft of 9.4 feet; that the largest Rhine towboat has a length of 249.3 feet, a breadth of 29.5 feet, and that the most powerful have from 1,300 to 1,450 horsepower. Under date of March 7, 1910, he reported that the Rhine boats on an average are 237 feet long and 30.6 feet beam, with carrying capacity of from 480 to 1,000 tons on drafts of 4 to 7½ feet. Package freight is carried in separate steamers, and he stated that the capacity of the largest Rhine freight steamer is 975 tons, with a draft of 7.9 feet, a length of 278.9 feet, and a breadth of 29.5 feet. According to a report made by Maj. F. A. Mahan, retired, Corps of Engineers, in 1903, the total number of sailing vessels and towed barges on the Rhine was then 8,379, and the total number of towboats was 745, while of other steamers of all classes there were but 378, including 156 package-freight steamers. According to information furnished by the American consul general at Frankfort, in 1908 the Rhine fleet consisted of 1,318 steam vessels, with indicated horsepower of 295,849, and 9,759 barges, with a carrying capacity of 3,960,378 tons, or 11,077 vessels in all. These figures plainly show the predominating character of towboat navigation. No other river of Europe carries a commerce comparable with that of the Rhine, and it is clear that for the proposed waterway a channel equal to that now found on the Rhine would be adequate for an immense traffic. * * *

SIZE OF CHANNEL.

As a channel of 8 feet depth is now maintained from Cairo to St. Louis, and can be extended from St. Louis to Utica at relatively small cost, business caution dictates that a waterway of this depth be obtained and tested before entering enormously expensive projects of questionable utility.

Should commerce respond to these comparatively moderate expenditures and utilize the waterway provided, and should an increasing traffic demonstrate the necessity for additional depth, then a channel of 9 feet depth can be constructed from Cairo to Utica. This can be obtained at a small additional cost and will correspond to the depth provided by the existing projects for improving the Ohio and lower Mississippi Rivers. * * *

The board considers a bottom width of 160 feet in canal and 200 feet in the open river above the mouth of the Illinois sufficient for a channel of 8 or 9 feet available depth. For safety and ease of navigation the channel should be excavated to 11 feet in rock cuts and canals, and the locks should be given 11 feet depth, 80 feet width, and 600 feet useful length. With these lock dimensions three barges, carrying about 9,000 tons of freight, may be locked through with their towboat. A waterway of these dimensions would have a capacity exceeding 100,000,000 tons per annum, and would accommodate barge tows carrying about nine times the ordinary trainload of this vicinity. In addition, the vessels using it would be capable of navigating the Ohio and lower Mississippi Rivers. * * *

ILLINOIS & MICHIGAN CANAL.

By virtue of the act of Congress of March 30, 1822, dedicating to the State of Illinois the land necessary for a canal connecting the Illinois River with Lake Michigan, the act of March 2, 1827, granting to the State certain public lands for the purpose of aiding in its construction, and the acceptance by the State of the conditions imposed therein, the State of Illinois obligated itself to construct a suitable waterway from Lake Michigan to the navigable waters of the Illinois River. In accordance with this agreement the State constructed the Illinois & Michigan Canal, from Bridgeport to La Salle, and improved the upper portion of the Illinois River by the construction of locks and dams at Henry and Copperas Creek.

For many years this waterway was a valuable transportation route, but in recent years the State has neglected it and failed to maintain it abreast of the needs of commerce. The work now proposed by the State in connection with the canal of the Chicago Sanitary District contemplates a waterway from Lake Michigan to Utica, which, although departing from the line of the old canal, substitutes a waterway more than sufficient for any probable navigation. This will in effect fulfill the original agreement between the State and General Government for this section and incidentally develop a water power which the State considers a profitable business investment. State or local agencies are better adapted than the General Government for conserving water power for their citizens.

*Major, Corps of Engineers.*
JOHN BOGART,
*Civil Engineer.*

I have read this at length in order that it may be heard in the Senate. I know how difficult it is to read matters that are inserted in the CONGRESSIONAL RECORD after they are printed, because of lack of time and the press of other urgent matters.

I particularly call attention to the reason for limiting this improvement to 8 feet in depth. The paragraph from the engineers' report under this date of January 23, 1911, which I have read, indicates the wisdom of this experiment. It says that—

Caution dictates that a waterway of this depth (8 feet) be obtained and tested before entering upon enormously expensive projects of questionable utility.

A good many expect that this whole $20,000,000 will be spent. The more prudent part of the population, as well as the public officers in that State, think it wise to experiment with an 8-foot channel. Accordingly this law of June 18, 1915, was enacted.

I think the only profitable inland water transportation will be the barge service. If there was anything that could be done profitably with a deeper channel and a different type of boat, it would have been done long ago in the lower Mississippi River. No reason exists why, from Cairo to New Orleans, there has not developed a very large river transportation. No inherent navigation or engineering difficulties are presented. There is no lack of depth of channel the year round; and during the greater part of the year, even above Cairo, on the 8-foot channel, the closed channel, because of winter, much of the time is not found. From Cairo below there is an open channel practically 12 months of the year in excess of 8 feet—9 feet part of the way—and very much in excess of 9 feet the remainder of the way to the Gulf.

This channel has been in existence for many years. It was in existence in Mark Twain's time, when he was a pilot running from New Orleans to St. Louis and return. It was there before the railroad had come as a rival. It was there for many, many years before a locomotive ever framed itself in the imagination of George Stephenson. An examination of an old map I have, published in the year 1849, of the Mississippi Valley country shows that there was not a single railroad then entering the city of Chicago. There was in the whole Mississippi Valley of the now populous States of Minnesota, Wisconsin, Iowa, Illinois, Missouri, Arkansas, Kentucky, and the adjoining State to mine of Indiana, but a total of 120 miles of steam railroad in existence, and that was struggling, as the reports show, under an insufferable load of bankruptcy, and ultimately failed; and the holders of the indebtedness took it over, and thought they had an elephant upon their hands when they got it, in 1850 or 1851.

In 1850, by an act of Congress, a grant of land was made to the State of Illinois for the purpose of constructing a railroad. Each alternate section on each side of the road for the whole length of the State was given, beginning with Chicago for the Chicago branch and running to what is now Centralia, Ill., and thence to Cairo; and from Centralia running through the central part of the State to Dunleith, where it connected or now connects with a bridge which crosses the Mississippi River and connects with the railroad systems of the Northwest. This was the nucleus of the Illinois Central Railway, the charter lines of which are now about 705 miles, but the purchased, leased, and operated lines of which now aggregate many thousand miles. It extended itself by leases and purchases and by the construction of lines from Cairo, until ultimately it reached the city of New Orleans.

While this development took place, when I think of the projects provided in this bill and the hopes that seem to spring eternal in the statesman's breast when he approaches river and harbor legislation, I inevitably recur to the channel of the Mississippi River from Cairo to the Gulf. It has been open for years. By referring to the reports from the War Department, having charge of that matter, it will be seen that the Passes of the Mississippi River have been extended, deepened, and cleaned by a self-dredging operation, using the forces of nature, devised by Capt. James B. Eads many years ago, so that the flow of the water deepens the passes and opens them up for navigation by boats of heavy draft coming up from the Gulf to New Orleans. All that has been there during all these years—a channel free to the boatman, free to the captain, free to all the rivermen, free to everybody that would build a craft of any description, place it upon the channel of the Mississippi River, and float it or navigate it from Cairo to the Gulf and return.

That has been open all these years, with no tolls, no charges of any kind—the greatest inland river in the world. Its navigable properties exceed those of the Orinoco. It runs through the most fertile agricultural country in the world. Mr. President, if we return to the days of Herodotus and Josephus, if we read ancient and modern history, no place in the civilized world or in ancient times has been found with a population and an area equal to the Mississippi Valley. The Euphrates and the Nile and their population, and the cities builded upon their commerce and their agriculture, the mighty peoples that have passed away, the days of Nineveh and Babylon and Tyre, all pale into insignificance alongside of the accomplished results

of the mighty growth of Chicago and New York, and the great inland cities that are second or third to these.

Mr. President, to show what growth has been possible under those conditions with steam transportation, while sitting at one of the innumerable banquets that I have been guilty of attending in the last 25 years with Fernando Jones—and I feel like inserting it in the RECORD—Mr. Jones spent the whole evening in telling me how he remembered seeing Indians coming to the trading post, old Fort Dearborn, in Chicago, with their furs from the Northwest, and exchanging them for other merchandise at the trading post of the Indian traders at that point. There is a living memory of the growth of that city. Mr. Jones died only a few years ago; so there is the memory of a recently living man reaching from the aboriginal inhabitants, from the wilds of nature, to a city of two and a half million people.

I cite this not for mere historical reference, but as introductory to a conclusion I shall draw. While all this improvement was made, while a great population settled on the borders of this great valley, while agriculture, commerce, banking, manufacturing, and transportation grew up, here was the Mississippi River, the greatest free channel of inland water transportation in the world. The water still flowed; the seasons came and went; a paternal and beneficent Government sent the snag boats up and down the river; and even before the war, in the days when Mark Twain held a pilot's wheel, he speaks in his Life on the Mississippi of what the snag boats were doing. They pull out trees and logs and stumps and snags and sawyers, dredged out bars, and have been doing so many years. All of that was done during these years to improve navigation and make it safer to attract that form of transportation.

I turn back. I will not read that. I have the report here of what happened during these years. When I went to St. Louis many years ago, about 1877, the first time that I left the hayfield and got that far from home, I remember then the line of steamers that was drawn up, tied to the levees along the river. It was a fairly good line of boats in those days, although they were then somewhat decayed. I need only to turn back to many years ago to find a record of the number of steamboats that drew up at St. Louis engaged in the lower Mississippi trade, because practically the lower Mississippi River from St. Louis down or from Cairo below was open the year around.

Its glory has passed away. It departed years ago. The magnificence of the Mississippi River trade has vanished. With all these advantages, with the open channel, with the paternal Government improving the channel, removing obstructions of every kind, there grew up right alongside the river in that time the Illinois Central Railway Co. Steam power could be as well used on a river steamboat at one time as another. It was applied then in a locomotive and it was put upon an iron rail and later on a steel-surfaced rail. So the extent of the St. Louis steamboat trade melted away. It has been gone for years. More than 40 years ago the river trade vanished. When the war broke out, when trade was cut off between the northern and southern sections, when the pilots left the wheel and the crews forsook their boats and took the musket, they did not know that that was the end of river traffic, but it was. By the time the war had concluded, 1865 or 1866, the steam railroad had begun to develop itself. Consequently when the old boat owners at the close of the war undertook to resume their traffic they found no shipping. Business was at an end.

In 1850 or 1851 the Illinois Central Railroad began to be constructed, reaching from Chicago and from northwestern Illinois south to Cairo. It was only opened for local traffic. It continued to develop, as I have indicated. In a little while it reached out and bought and leased lines and built new lines, and built a bridge across the Ohio River, and leased the Yazoo & Mississippi Valley Railway line down to New Orleans.

Bear in mind, we must keep it in mind in the Senate in all future legislation on this subject, this was done while the great father of waters carried his flood from Lake Itasca to the Gulf, and while a steam railroad builded itself up in competition with the channel from Cairo to the Gulf and drove the river traffic away from the Mississippi.

However, if I turn to the boats that came to St. Louis about the time the war broke out and compare them with the number of boats tied up at the levees this afternoon, it can be seen that the inevitable drift of the larger affairs of the world to the transportation question has solved itself by the fitness of things. It is not a question for the puny hand of man to attempt to legislate against the laws of trade. It can not be done. The inevitable course of commerce, the development of mechanical power applying the forces of nature to transportation, are stronger than any laws we can pass. They will beat any river and harbor bill in the world. So during this time inevitably we kept on with the development of steam railroads.

*Friday, May 12, 1916.*

Mr. SHERMAN. Mr. President, it is a great pleasure to hear encomiums delivered upon one of the thirteen original States. I do not know what this country would have done had it not been for the State referred to by the Senator from New Jersey [Mr. MARTINE]. I know that the world of art would have lost something that would have been irreparable. From my earliest recollections, my fond gaze has dwelt upon "Washington Crossing the Delaware"; if it had not been for that State that pleasant reminiscence of my early life would have been absent. I very cheerfully join in all that the Senator from New Jersey has said of that State, that is great in commerce, in agriculture, and in many other things which I forbear to mention.

I was referring last night, Mr. President, to some of the causes for the decay of inland waterway transportation. They are very numerous, and I shall not undertake to detail all of them. I shall only refer to such of them as may be material in view of proposing some reasonable remedy. If nothing can be done by organized society, acting through the instrumentality of government to restore the inland waterway traffic, then it would be useless to discuss it, and much more useless to provide these large sums of money in this and previous bills of a like kind.

I have thought, however, that possibly there was a remedy for a part of the loss of the water-carrier system of the country. It has been so far the larger part of my effort to direct attention to the amendment which I have offered to the bill, which would permit the improvement of this 65-mile link that would complete the water communication between the Hudson River and the Gulf of Mexico via Chicago.

The National Waterways Commission some years ago—I think about 9 or 10 years ago—began their investigation of this same subject. They drew upon many sources of information; they prepared a voluminous report, gathering a multitude of facts, arrived at some conclusions, and embodied many papers from authorities on the subject. These three volumes of the report constitute a mine of information for all of those who are interested in this and kindred subjects.

Some of the principal reasons for the decay of inland water transportation are found in one of the volumes of this report containing Documents Nos. 11 to 22, and I refer to page 66 of that volume. It notes the lack of development of river equipment already referred to.

It has been based—

The report continues—

It has been based in large part upon legitimate grounds—an unwillingness to invest capital in an industry so highly speculative. The risks are not alone those of railway origin, but they arise in part from the natural difficulties of navigation. Obstructions due to snags and bars on all the rivers, except the Missouri, have to a considerable extent been removed, although they are constantly reappearing. The barrier at the mouth of the Mississippi, which until 1878 gave the railways a decided advantage, is now gone. But there still remain many obstacles. Ice stops navigation for many months of each year in the upper river. The swiftness of the current demands a costly adjustment of business methods to meet the requirements of upstream traffic—a difficulty absent in the Lakes. The shifting and irregular current and the uncertainty of the water supply menace navigation. To such an extent is this true on the upper Mississippi that the one line now operating between St. Louis and St. Paul declines to make season contracts, and accepts shipments for single trips only. Then, there are the variations in depth of water, most strikingly shown on the upper Ohio with the January and February floods, when the river sometimes rises at Cincinnati to 70 feet above low-water mark. This variation in water depth is not alone dangerous to navigation but it prevents the application of capital to the greatest economic advantage. On the Lakes, with an assured depth of water, the largest vessels can be employed and loaded to their capacity. It is not profitable to build vessels on the rivers which can run only in the best stages and which must lie idle during the rest of the year. But light-draft vessels are not economical in good stages of water. Moreover, these sharp and sudden variations in the stage of water have made fixed wharves impossible and have compelled the use of the less efficient floating dock. In low stages the cost of loading and unloading is sensibly increased in many places by reason of the steep and high river banks.

But navigation is hindered not alone by variations in stage of water due to floods and droughts, but also by the normal difference in depth of the different sections of the river system. The lack of development in the past of any through traffic from the upper Mississippi to New Orleans and the persistence of the costly practice of transfer at St. Louis have been due to this difference in depth of the lower and upper river and to the consequent difference in draft of vessels employed. It was to meet this difficulty that the barge system was introduced, whose units, similar to railway cars, could be dropped or attached at will and handled on different stretches of river without the necessity of transfer of load.

I read so much of this report at this stage of my comments for the purpose of connecting it with the improvement which we propose to make in the Illinois River. It costs more to transfer freight—and the bulkier the freight the more truth there is in the criticism—between points where the bulk must be broken and the transshipment made than it does often for many hundreds of miles of the original shipment. The upper Mississippi River has not been and will not, without the expend-

iture of an impossible sum of money, ever be dredged, leveed, or improved in such a way as to make its depth, that will be steadily maintained, equal to that of the lower stretches of the river.

The Mississippi River from Cairo to the Gulf is necessarily, because of its many tributaries which join it at and below that point, of great minimum depth. At that point the Ohio River adds its volume. Above there, not to mention the smaller rivers, such as the Kaskaskia and the Illinois, the Missouri River at Alton on the Missouri shore adds its floods to the Mississippi. From that point on down below it is not an exaggeration to say that the volume of the Mississippi River water is doubled. So from Cairo, where the Ohio River joins the Mississippi, there is a constant and permanent increase in the minimum depth even at low-water stages.

This is one of the best stretches of navigable inland river waterway in the world, and, as I suggested yesterday afternoon, if there was anything in the development or in the maintenance of inland waterway transportation as it existed prior to the railroad era, this part of our inland waterway system would have successfully met the competition of the steam railways. However, it was not done.

Yesterday afternoon I referred to the unsuccessful rivalry between the Mississippi River from Cairo to the Gulf and the steam railways, and especially of the competition with the Illinois Central Railway. Here on the headwaters of the river above Cairo to the end of navigation in Minnesota was the most favorable area for gathering freight in the world, and especially the bulky kind of freight. The great staple grains that came from the agricultural sections and in later years manufactures were able to furnish a volume of traffic that, if it were possible for a waterway to compete with steam railways, would have successfully met that competition in an open field, but it did not do so. When we add to it the condition of the river channel from St. Louis north, except during the low-water stages, it would require the bulky freight to be broken at St. Louis if continuous river transportation were desired. It is useless, even for the most enthusiastic advocates of river-and-harbor bills and such internal improvements, to think that the upper stretch of the Mississippi River can ever be so developed as to furnish a depth of channel that will accommodate traffic equal to that from Cairo south. So, the river, at least for practical purposes, is to be divided by physical reasons into two sections, making continuous water transportation impossible throughout the whole length of the river because of its difference in depth.

To avoid this difficulty, which was inherent in the ordinary steamboat traffic of the earlier days and of what remains of it at the present time, it has been hoped that the barge service would be a practicable way of using the river throughout its whole length. This much of the suggestion is embodied in the report from which I have just read.

I wish to add here to this report what has happened since the report was prepared. Since this investigation was made, a considerable development has occurred. Some changes have been made in motive power. Gasoline has been substituted for steam power. The future of electrical power no one can foretell. Like the navigation of the air, it possesses boundless undeveloped possibilities, but the barge service has become a very practical way of transportation of freight on the inland rivers. Barges for many years have been used on the Ohio River. They are employed in the down-river traffic as a rule. From Pittsburgh and vicinity, near the headwaters of the Ohio, a considerable commerce in coal, coke, and coarse or bulky freights has been developed and has been carried down the stream in considerable volume. The figures for many years are accessible in the reports and I shall not allude to them here because I do not wish to take the time to do so.

I wish to say sincerely that I am attempting no filibuster; I shall not engage in one. I am making these comments on this bill solely for the purpose of addressing myself to public sentiment. I am not overly optimistic about defeating this bill or any objectionable features in it this session so as to bring about any great economy, but I do believe that the time that my colleagues and myself shall take in criticizing some features of this bill will be well employed in the public interest. I hope ultimately that it will arouse public sentiment and result in economies that would justify much more time than my colleagues and myself will take, or desire to take.

The barges carried in tows by powerful motor boats can effect a considerable saving in transportation. In addition to that, the self-propelled barge is coming into use. This would avoid the necessity of tows; it would allow each barge drawing a limited number of feet of water, flat-bottomed barges, to propel themselves over the comparatively shallow waterways of these inland rivers on the artificial channels in question. If this were done, it would furnish a very effective kind of transportation—more so than existed at any previous time. Some of the barges will carry 3,000 tons. This is an extra large size; but an average tow of barges, even under the old method of transportation, will carry 1,500 tons of freight. A single tow of barges on a seven or eight-foot depth is equal to an average trainload of box cars with an average capacity per car of something like 40 tons. An average train would consist of from 37 to 38 cars; and a single tow of barges that can be used in such waterways would equal the capacity of an entire freight train by rail transportation.

The rate by water is very much lower. The speed does not at all approximate that by steam-road transportation. Because of these and some other differences—the lack of reaching many general markets—it will not be available for the transportation of all species of merchandise. It will limit itself to certain kinds. The coarser, less advanced manufactured forms of merchandise will naturally be the ones that will seek this form of transportation. The forms of merchandise more advanced in manufacture, being relatively less bulky and more valuable, necessarily will seek steam-road transportation, whereby they may reach markets at more certain intervals and with less loss of time.

Because of these changes it has been deemed by river men that it is possible to restore a great portion of the river traffic upon certain lines. It is possible with a 7 or 8 foot channel to carry all of the barge traffic that is likely to be developed in this country. I believe I am correct in that statement and am sustained by the authorities on the subject.

Keeping this in mind, and remembering that between St. Louis and Cairo there is a depth of only 8 feet, there is found the reason for this act of the General Assembly of the State of Illinois, approved June 18, 1915. It provides for an 8-foot depth. It will extend from the city of Chicago by a contemplated barge service with a continuous minimum depth of 8 feet until it reaches the Mississippi River. The Sanitary District Channel of which I spoke yesterday can maintain that average depth or more. A portion of the 65-mile link in the waterway in question is the old Illinois and Michigan Canal, and the remainder of it uses the channel of the Illinois River. The improvements made as contemplated by this act will be of the character that will maintain at least 8 feet depth at all stages of water. It will enable this barge service, which seems to be the only profitable method of utilizing the inland waterways, to be established and maintained. If this can not be done, then it is useless to talk about the development of waterways in order to furnish cheaper transportation facilities.

I think it is proper here to state, Mr. President, that the conclusions at which I have arrived I think are sustained by the physical conditions of the Mississippi Valley and of continental United States. I think the transportation world has gradually settled to the fixed conditions I shall enumerate.

There are three methods of inland or coast transportation that are worthy of the support of appropriations by Congress. Beginning with the larger and more important, they are the harbors and inlets or rivers opening into tidewater that are immediately upon the shores of the two oceans or the Gulf. In other words, tidewater transportation is one of the purposes for which Congress can appropriate money and not be extravagant, if it is done prudently and within reasonable limits.

Secondary to that is the great system of inland fresh-water lakes. The Supreme Court of the United States declared them to be inland seas for practical purposes. In their importance, in the number of miles covered by the known transportation lines on the Lakes, and in their great area, these bodies of water properly rise to the dignity of seas. If they were in Europe they would have been denominated seas long ago. But the early pioneers called them lakes. The old maps of the days of Marquette and La Salle, of Hennepin and his associates, refer to these great bodies of water as lakes; they can be successfully given support in their harbors, their breakwaters, their piers, their terminal facilities, their shore improvements, by proper appropriations by Congress. So, because of the magnitude of the interests involved and the traffic that may be carried economically over their bosoms, these bodies of water constitute a proper subject for congressional help.

The third, and as I think the last, of the waterways of our country that can be properly helped by Congress are the large inland rivers. These must be confined to the Ohio and Mississippi Rivers and a very few of their tributaries. Among all the numerous projects that have enlisted the attention of Members of this body, of the river improvements there are none that possess any attractive features outside of the Mississippi River, the Ohio, and possibly certain of their tributaries; and the limitations on the tributaries would make them very few in number.

I think, when these three subjects have been considered, there is nothing more of merit.

The barge service can be used on all the inland waterway improvements, including the Lakes. It is more particularly applicable to the rivers, because the Lakes have a type of boat that is peculiarly adapted to lake transportation. Having that in mind, therefore, the Illinois General Assembly thought it fit to attempt an improvement of this kind. They were strengthened in that decision by the report I read yesterday from the War Department, prepared by the engineers having this matter in charge, where they said it was prudent, instead of starting these improvements on a large scale, with a great depth of water, to confine them to something like 8 feet in the first instance.

I remember when my colleague [Mr. LEWIS] and myself left our seats here and went to Illinois—it was along in March, 1915, as I now remember—for the purpose of advocating the passage of this act. The bill was then pending, and in joint session the legislature heard what we had to say. We used this paragraph and recommendation of the Army engineers as one of the reasons for the passage of the act.

Another reason I referred to very briefly yesterday, that we had authorized—I think in a somewhat unguarded moment—by constitutional amendment the expenditure of $20,000,000 for this waterway, lying wholly within the borders of that State. I have always been quite outspoken in my views on that subject. I voted against the constitutional amendment when I voted in my home precinct in Springfield, Ill. I never made any secret of my doing so. I thought it unwise, in view of the available accurate knowledge on the subject, to embark in a $20,000,000 expenditure at a venture. The $20,000,000 has been available for every legislature since January, 1909. For various reasons—largely differences of opinion in the legislature and in the administration, both Democratic and Republican—there never has been a majority of the legislature that could agree upon any specific project of improvement; but the $20,000,000 remains a constant menace, as I consider it, to every taxpayer in that State.

When the barge service had been investigated it was found to be a practical measure, and that if the barge service did not present anything for the restoration of the river traffic, then there was not anything that would ever effect the change.

So I came to the conclusion that the best way was to experiment. Gov. Dunne, of that State, came to the conclusion that the proper thing to do was to proceed along the line indicated by the Army engineer in his report. So competent engineers in Chicago began to investigate. They made extensive surveys; they prepared plans; and finally they agreed on one that was practicable for an 8-foot channel, with an expenditure of a little less than $5,000,000. But most public projects cost more than the estimate; and so the bill was prepared and approved, after its passage, by the governor, providing for this expenditure of $5,000,000, to which I referred on yesterday. This was for the purpose of developing a barge service.

Certain objections were made. I think two Representatives in Congress from Illinois made strenuous objections to the improvement. As I get it, their objections are based upon two grounds—maybe more, but I have heard of two: That it ought to be a deep waterway, and that 8 feet depth was not within the meaning of the constitutional amendment. They urged that it ought to be 14 feet. How they ever became obsessed with the notion that anything was not deep unless it was 14 feet deep, nobody has ever explained. Eight feet is deep at times. If a man is only 6 feet tall and can not swim and is in 8 feet depth of water, it is deep water for him.

Mr. KENYON. Mr. President——

The VICE PRESIDENT. Does the Senator from Illinois yield to the Senator from Iowa?

Mr. SHERMAN. Certainly.

Mr. KENYON. That was a sort of a slogan, was it not, that was adopted—"Fourteen feet to the Gulf"?

Mr. SHERMAN. Yes, sir.

Mr. KENYON. How did that slogan originate?

Mr. SHERMAN. It originated partly from the report of Lyman E. Cooley, who prepared the first plan for the Illinois Valley improvement. It originated partly from the superheated imaginations of certain statesmen in Chicago. It was contributed to by some very good citizens outside of Chicago, down the Illinois Valley, whom I consider visionary on that subject. But from both sources or all sources the 14-foot channel became, as the Senator has suggested, a slogan.

We went out into the campaign of 1908. I was asked to lend my voice for whatever it might be worth to the promotion of this project, but I preserved a discreet and, I trust, a dignified silence. I said, because both political parties had indorsed it in that State, I would not fight it. I thought it was useless. I have done a great many useless things in my life and I do not like to do any more than I can help. I am not feeling that what I am doing now is useless, because we hope at some future time it will bear fruit in economy that will make a living, breathing thing out of that plank of the platform adopted in Baltimore in 1912, and we have some such platform in our party. I do not want to make this a political question, I do not know, and I am a little prejudiced it may be; but I think our platform has probably got a little more spirit in it and it is executed in performance a little better than the other. However, I do not want to discuss that. I want to speak about waterways.

At any rate the 14-foot channel got in the public mind. I declined to contribute to that obsession. I informed everybody privately when I was not on a platform and was at liberty to speak my honest sentiments that I intended to vote against it, and I did, and I always said so. I was warned that it was somewhat unpopular to vote against a project of that kind. I said I am a private citizen. At that time I was not a candidate for any office, and I considered not being an applicant for public favor I could do as I pleased individually, which I proceeded to do. I voted against it, but I got beat, like I have suffered a great many times there and elsewhere.

It went through. Immediately after its passage the trouble began. There was a Republican governor and a Republican legislature, but the legislature, sad to relate, was divided. We have had family troubles in that country like we have had over many other jurisdictions in this Republic of ours. So the legislature divided, and as they had two ideas which became so important they forgot the 14-foot slogan in the melée that occurred. One wanted waterway and another wanted water power. The by-product of this unfortunate project became of more consequence than the principal object of the improvement. So out of these controversies, like the unfortunate Kilkenny cats, they hung about for an unprecedented period and literally consumed each other in fruitless quarrels. No legislation resulted. I was at that time in private life, engaged in the practice of law in Springfield, and the only things I heard of legislative difficulties were the rumbles about the lobbies of hotels at night. But so it was that no legislation was had in 1909.

The 14-foot slogan was revived in the 1910 election, and both sides and all parties accused each other with great enthusiasm with lack of patriotism and of being against internal improvements. I was still in private life and I took great satisfaction, I enjoyed myself without measure, in telling both sides what I thought of them. I only say this in explaining what the junior Senator from Iowa asked about this slogan, its origin, its progress, and its elimination.

The 1911 legislature repeated the program with some variations. Some thrills were added; some new chapters were written. Meanwhile my predecessor during the 23 months I first served here had come to the Senate. The legislature in 1909 had ignored the primary nomination of Albert J. Hopkins and had elected Mr. Lorimer to the Senate. He was an advocate of the 14-foot depth of waterway.

I remember some of the addresses made on that subject when the 14-foot slogan was literally making the welkin ring through that part of the country. The people from the lower Mississippi River were given to understand that not only steamboats but craft from the Gulf would be able to navigate it on a 14-foot channel. From the Lake Michigan way very graphic portrayal was made of magnificent lake steamboats coming majestically down through the cornfields of the Illinois Valley. It had cool, alluring sort of sound. Everybody thought that he could get his freight hauled for nearly nothing, the taxpayer mostly footing the bill, and he forgot he was one for the time being when he listened to this 14-foot slogan.

So between the two the thing went along until 1911, and it failed again; 1913 came, and by that time everybody had forgotten the waterway. There was no real attempt made in 1913 to pass any legislation.

Meanwhile there had been a change of administration, not only here, but in a good many other States outside of that one. A new governor had come in. A legislature came in that was nondescript in character. It was composed of the somewhat disturbed remains of the two old parties and a new one that had appeared upon the scene. The newcomer was very lusty in the noise it made and respectable somewhat in numbers. So in 1913 nothing was done.

In 1915 the public mind had become somewhat restored to a normal basis following the elections of 1914. The 14-foot slogan had been forgotten. It was aroused, but in that time, measuring from 1909 up to 1915, the barge transportation had not only been investigated but had been found practicable. This National Waterway Commission had made its report. Every thinking person in the Mississippi Valley interested in those

problems had a copy of the report. I procured a copy, and I have one in my library in my office. Yet I went through it in those days. I was interested, because I pay taxes in that country. I wished to see what could be done. The governor and the legislature took the matter up and it resulted in the passage of this act of June 18, 1915, that carried out in a practicable way, as I think, the barge service over this proposed improvement.

There is no place else in the Western Hemisphere that presents as fair a test of whether inland river traffic can ever be restored or not as this does. I think I investigated all of the possibilities, and I will not stop to place in the RECORD the millions of tons of merchandise that will contribute to this traffic. Forty-eight trunk lines of railway are in the city of Chicago that either begin there or end there, having offices where a major part or a large part of the business is transacted. The lines that pierce the Pacific coast radiate from that center.

In a very recent time another continental plan has been builded from that city. The Chicago, Milwaukee & St. Paul Road that reached into the West and Northwest for many years and stopped many miles before it reached tidewater in the West built an addition. The Puget Sound division was added to the St. Paul road. It went over to the coast. Its terminal is on the water of Puget Sound.

There was not so much uproar about it—not much excitement. I was in the city when the first freight train went through carrying through traffic from Lake Michigan to Puget Sound. A few railway engineers noted it; the Railway World was alive to the importance of it; but beyond that the general public made little note of the change. Not near as much publicity was given it as the campaign for the $20,000,000 amendment, under which nothing is done yet.

These facilities for transportation bring in a tremendous tonnage to this point. In addition to that, manufactures, that I will not stop to show the annual output of, are there. All along the Northwest country are cities of smaller size with a very great acreage of highly productive territory. The agricultural productions from the wheat fields of the Northwest and all the Mississippi Valley and its varied agricultural possibilities contribute to the merchandise that may be carried here.

So it seems to me here is the greatest of all that can be tried on this form of transportation. The barge service, carrying from a thousand tons to 3,000 tons in a barge, either in tows or self-propelled, by this proposed improvement will open up this second largest freight center in North America to water transportations of the Gulf, and on the way it furnishes not only the outbound traffic but the inbound coming from the opposite direction, with all the river cities of St. Louis and below.

So the possiblities here are very great. Based upon this and upon the further idea that it was safer to make an experiment, as the river engineers recommended, with a part of this appropriation rather than to take a plunge and spend it all, we provided for an appropriation of $5,000,000.

So the next thing that was necessary was to obtain the permit from the War Department. I regret to say that certain representatives, already referred to, from that State had so firmly embedded in their minds the 14-foot slogan that they appeared and opposed the granting of the permit. I do not know whether it would be just for me to say that they were somewhat behind the procession or not; I would not want to be so unkind as that; but I believe their claim that nothing but a 14-foot channel will answer the purposes of the amendment and the expenditure of the whole of the $20,000,000 and more is not in accordance with existing conditions. I believe they are not up with information on the most practicable methods of carrying freight by water inland. So they have opposed it in appearing before the Board of Engineers and possibly before the Secretary of War they have succeeded or contributed something to the opinion of the Chief Engineer that I read and incorporated in the RECORD yesterday.

I continue some extracts from the same volume of the National Waterway Commission's report which bear on the same question:

> Although it must be admitted that from a navigation standpoint the condition of the Mississippi is much superior to what it was in the days of its commercial prosperity, yet much remains to be done, and much which is once done has frequently to be repeated.

We are in a struggle with nature all the time on this. I have lived along these rivers ever since I can remember. I think I know their moods, their conduct, their high and low water behavior as well as any layman in that country. I have gone to sleep, Mr. President, in a tent upon the hillside and I have wakened in the morning and gone down and found a sand bar formed over night during high water that prevented a steamboat from navigating that portion of the channel where it had been accustomed to run theretofore. That is one of the continual problems that mother nature is putting up against us on this question all the time, and it will last forever. There may be in the wisdom of the river engineers some time a method discovered of harnessing up these forces so that we will use them somewhat as we do the currents at the jetties down at the mouth of the river.

In the estimated cost of water transportation I do not find that any part of this $850,000,000, the part of it that has been distributed to inland waterways, is ever taken as a continuing principal in estimating water freight. Money ordinarily is worth 4 per cent. Large concerns, whose bond issues run up to $160,000,000, pay 4 per cent. That is about the best rate that the market will command. When the Government enters upon one of these improvements, it is proper, from a business viewpoint, to charge the cost of the improvement as a capital-stock investment.

If that were done, about 4 per cent ought to be included as either interest or dividends on the cost of the undertaking. If that were figured in on the part of the $850,000,000 that would be distributed to the inland waterways, it would be found that the Government or the taxpayers were contributing to every shipper on an inland waterway to the cheapness of his freight. That is a continuing problem. Every time a river and harbor bill goes through Congress it is from twenty to fifty million dollars added to the charge of the original cost of these improvements; and there ought to be always figured some kind of an income which could be had, either call it interest or dividends, on the appropriation as a part of the freight cost. Still, that is the vice in all public undertakings.

I do not know of anything that is managed by the public that is managed like a private concern of a like character. A good deal of the supposed cheapness of the governmental performance of a service or the production of a commodity grows out of that fact. We delude ourselves very often in estimating cheap water freight when the Government makes these improvements in the same way.

So, it seems to me, that when we approach this question we ought to figure out that ultimately somebody has got to pay the bill. I do not know what benefit is received by the man who lives far inland, the farmer, who is a hundred miles from any of these waterways that the Government is making appropriations to subsidize, so as to make them competitive with steam roads, in order that he may have cheap freight by railway to get his product to market; but still every person who is accessible to an inland waterway insists that the improvement be made, so that he may be given cheaper rates. The principle ignores the great body of people who live outside the zone of water freight competition.

The Senator from Iowa [Mr. KENYON] made a very proper suggestion, it seemed to me, in connection with this matter, that it is only a limited part of the population that is benefited. Even if it be considered as a reduction of freight rates on the steam and electric lines, still that benefit does not go beyond the territory affected, whereas, as he very pertinently suggested, the charge or the appropriation itself is distributed throughout the entire area of the country.

Mr. KENYON. Mr. President——

Mr. SHERMAN. I yield to the Senator from Iowa.

Mr. KENYON. If we are going to concede as a principle that we must dig canals and improve rivers to regulate freight rates, and that that is the only way we can regulate freight rates, then we confess, do we not, the impotency of Congress to deal with that question, and we concede that the railroads are more powerful than is the Government?

Mr. SHERMAN. Yes, sir; it is a confession of that failure.

Mr. KENYON. I assume the Senator from Illinois is not willing to concede that we can not by law handle freight rates in this country, and not by the building of canals and the canalization of streams at tremendous expense?

Mr. SHERMAN. No, sir. If we can not handle the question through the medium of law and of governmental agencies already established, it is useless for us to undertake to regulate railways by building inland waterways and canals and bringing them to a juster rate.

Mr. KENYON. And if this Congress or any other Congress is unable to grasp that question and solve it, would it not be a good idea for them to go home and let a new Congress come in?

Mr. SHERMAN. It certainly would. I think it would be most eminently just, if that conception of public duty has firmly fixed itself upon this Congress, that it pass through the fiery furnace of another campaign and an election, in order to find out what our beloved constituents think about us. That is one of the reasons I am talking here, Mr. President.

I know in certain States that nobody has ever been beaten on a certain ticket, but it is an open field in other places. In the territory from which the Senator from Iowa hails or the one which my colleague [Mr. LEWIS] and I have the honor to represent, it is always an open question who will be elected. It does not make any difference, because a man merely is nominated on some ticket. It is never a foregone conclusion that he will be elected. He must go out and give evidence of the faith that is in him, and he must count that faith in a sufficient number of votes. I know that there are 12 or 13 States where there is no campaign other than for the nomination; but I am not referring to them. I will let that matter be fought out in the primaries in those States by such as do not agree with this proposed method of controlling freight rates. I do not know whether it will make much change or not. I think in many ways those States have more political sense than we have in the other States, because some of the States which I have mentioned keep sending their men back here all the time. Farther north, principally the Senators and Representatives wear themselves out in continual primary fights or in elections. So Congress is converted for some of us into a kind of sanitarium. The only regular hours we have are when we get back here. I know for my part I always gain in weight when I come to Washington, and that I run it off when I go home.

The wise thing, however, to do, as the Senator from Iowa suggested on the day before yesterday and as I have said my purpose is, is to arouse public sentiment upon this question. In a smaller area, and dealing with smaller sums, I have had the same experience. I think more fervent curses have been poured out upon my head at different times when I took my hatchet and went out in an appropriation committee on the floor of the Illinois Legislature during the time that I had the misfortune to do penal service in that body, and killed favorite appropriations, than for any other thing that ever happened to me. I have now enemies whom I made 20 years ago, Mr. President, because I cut off $40 in one place. It hurt worse than if I had chopped off a million dollars.

I have had a number of telegrams from my State beseeching me to support this bill and saying that it will be hurtful to certain of their appropriations if I do not do so. I should dislike very much to see any meritorious appropriation reduced or cut out of the bill, but if the price of obtaining these appropriations is the supporting of what I consider unjust appropriations in many particulars we must temporarily pay the penalty. The next time it will be the same old fight over again. So, like the Senator from Iowa, I am willing to arouse public sentiment and take the chances.

This thing has grown to be a scandal. I know somebody said that a long time ago. Some one will exclaim "platitudes!" Yes; very well, call it a platitude. Extravagance of all kinds is a platitude. All folly is a platitude because it is so common. Of course, river and harbor bills are platitudes. They have been here for the Lord knows how long. It is the same thing over and over. I am not going to undertake to discuss all the numerous items in this bill, because I have not been here long enough to absorb the particulars of the various projects. Some of them, I am told, are old familiar friends. They are like the poor, we have them with us always; and until they are killed they will "bob up serenely" at every session, demanding liberal appropriations. There it not anything more popular in this country than to yell for the flag and liberal appropriations at the same time and to invoke the name of preparedness by claiming that in order to reach an enemy with troops and supplies we must have waterways of all kinds, from Racoon Creek in New Jersey down to the Gasconade in Missouri.

Well, I remember one time, probably 15 or 20 years ago, Mr. President, reading a report to secure some information in regard to the Illinois and Michigan Canal. I knew it was dead long before some of the canal commissioners did. For several years the pay roll of the Illinois and Michigan Canal exceeded its receipts. One year the pay roll exceeded the receipts by $27,000. I began to look it up in order to see whether it would not be better to kindly but firmly chloroform a foundling of that kind by cutting off its appropriation. So I investigated and found among one of the reports of the old trustees of the Illinois-Michigan Canal something that related to preparedness, although I was not thinking about it then, and that question was not before the country. It said that one of the reasons why this great improvement ought to be made was that in case of war—and this was long before the Civil War—troops and supplies could be transported from Great Lake points down the Mississippi River and to all connecting points; that it would be a valuable waterway in the event of war and would facilitate the public defense. Well, since then I have thought a good deal about the transportation on the Illinois-Michigan Canal. It has decayed steadily. The railroads took the business, and, anyhow, if we were to depend upon the transportation on the canal or on any waterway to reach the front with supplies, with men and munitions, the enemy would have conquered us, burnt our capital, and subjugated our people months before supplies could ever reach a given point. For facility of transportation and for its furtherance there is nothing to take the place of steam and electricity on the railway lines.

This report continues—and there is much of it so applicable to present conditions that I think I am justified in making these quotations:

The destruction of banks, due to shifting channels, and the fact that the Missouri uses the lower Mississippi as a dumping ground make continuous dredging necessary, and any lessening of vigilance in this direction through failure of congressional appropriations is promptly punished by a serious impairment of the navigability of the stream. Yet, however serious navigation difficulties may appear to us, they can not, except to a small degree, explain the decline of river commerce. For, in spite of all obstruction, we possess free waterways which are in many respects superior to those of Europe, yet we have but a fraction of their tonnage. A dead low-water channel of 4½ feet prevails throughout the year from St. Paul to the mouth of the Missouri. Four feet draft prevails on the Missouri at low water as far as Kansas City. From St. Louis to Cairo there are only a few days in the year when a boat drawing 8 feet can not operate freely. Below Cairo for 840 miles there is a 9-foot depth during low water, and for the last 270 miles boats of 25 to 30 feet draft can operate. On the Ohio, from Cairo to Pittsburgh, there is a 9-foot depth during medium stages of water, which is being improved to a 9-foot depth at low water. In comparison with these figures, it should be noted that much of the canal and up-river boat traffic of Europe is performed on 1 meter (3.28 feet) draft; most of it is done on 2 meters (6.56 feet) draft, and 10 feet draft is exceptional. Hence it is lack of uniformity in different sections of the river, and a resulting inability to use equipment to the best advantage, rather than the shallowness of the streams which must be accounted the important navigation obstacle.

This only confirms what I have already said: That this difference in the navigable depth of the two stretches of the river—the upper and the lower Mississippi—renders it impracticable to use a river boat, because the upper-river boats of comparatively light draft can only be used on the upper river—they are constructed in that way—and, as a rule, they do not run below St. Louis. When it comes to the transportation from St. Louis down, a larger boat is used, and that boat can not be used on the upper river because the waters above are inaccessible to a boat of that draft. And so this returns us to the barge question. At every interval where this subject has been approached in the last 12 or 15 years, both by engineers and by practical river men used to the forms of transportation, the consensus is that the practical form of freight carriage is by barge and nothing else.

Again—

Whether, as a result of the two causes just mentioned, railway competition and navigation obstacles, or whether, because of a lack of initiative on the part of river interests after the war, the steamboat business has been wholly lacking in the administrative organization necessary to cope with so superbly organized an industry as the railway. Capital has kept out of it. The river steamboat, except that it has changed from a passenger to a freight carrier, is the same craft as always. As late as 1906, out of a total of 1,435 steam vessels on the Mississippi River system, 1,358, or 95 per cent, were of wood. The old inefficient "roustabout" labor is still employed, and no attempt whatever has been made to introduce mechanical appliances for loading and unloading. There are very few satisfactory wharves and docks, many of the landings being made on the river bank and the goods dumped on shore without cover. As the rivers are at the lowest levels, goods must be hauled uphill to reach a place of sale. Good natural landings are few and artificial ones are too expensive to be within the reach of small communities. Thus the terminal expenses as compared with the more flexible railway are very heavy.

Adequate terminal facilities are in very few instances owned or controlled by water lines.

St. Louis, Mo., has little wharfage, either public or private, except the graded river bank; East St. Louis has almost no public landings and few private ones; Cairo, Ill., has several piers and slips and some few floating-boat landings and warehouses, but all under private monopoly; Memphis and Vicksburg have limited public landings, consisting merely of graded banks and occasional floating warehouses. The other cities are less well provided. Such transfer facilities as exist at the Lake Superior and Lake Erie grain, ore, and coal harbors are unknown on the Mississippi. The injury to freights and cost of transfer by reason of necessary rehandling at the water's edge, and the subsequent cartage up the bank and across the city to the consignee are usually sufficient to outbalance a decided higher freight rate by rail.

In many cases all satisfactory terminal property has been acquired by the railways. For example, portions of the river front at Pittsburg, New Orleans, St. Louis, and Vicksburg are owned by railway corporations. The primary purpose of the railways is not to check the development of water transportation, but to secure desirable land for switch tracks and yards, yet its effect upon the development of steamboat traffic is disastrous.

I do not subscribe to the generally accepted view that railways are continually endeavoring to destroy water transportation. In some instances, where there are parallel lines between competitive points, this probably is done. It has not been the primary purpose, however, but with a large part of water transportation, it is to the advantage of steam railways that it be improved. Much of this can not be carried to the point where the ultimate consumption is had, or to large distributing centers, and so it finally comes to a point where the railway

takes it and carries it to some interior point where waterways do not penetrate. In that event a portion of the haul is absorbed by the railways. They receive a benefit in the divided traffic which results from the initial river traffic.

I can not refrain here from saying that a steam railway itself, if based upon that ground alone, could not destroy river traffic. River traffic, if it were desirable and conducted at a reasonable rate, would continue, even though railways were builded at all competitive points. Transportation is a part of commerce. It is one of the necessary elements in our country—more so even than in countries in the Old World, where distances are less, where population is more dense, and where the primitive forms of the collection and distribution of merchandise could still be indulged in. Our railways have taken the traffic away from the waterways because they are a superior carrier. They are superior in many ways, both in saving of time and in reaching points where waterways are impossible, and can not be by any possible species of artificial improvement ever conducted. So I regard it as a part of the natural development of transportation that the railway carrier has taken the traffic away from the rivers inland. It might be regarded as artificial to a very large degree. All commerce is artificial, because it follows the centers of population—great peoples—where the markets are afforded, and where the exchange is made between the producer and the consumer.

Nearly half of the steam vessels operated on the Mississippi, representing, however, only about one-quarter of the tonnage, are owned by individuals and are run independently, with very little thought of securing united action toward better organization of river traffic. This makes it impossible for shippers to arrange for through handling of goods. Repeated rehandlings by irresponsible steamboat captains cause damage to the goods and make location of responsibility for the damage difficult and the settlement slow and costly. Practically the only traffic which is well organized is that of coal on the Ohio, and this is largely under the control of a single corporation. Of the total tonnage in 1906 of unrigged vessels, 98.6 per cent was owned by corporations.

Finally there was and still is a fundamental cause of decline of river commerce to be found in the relation of traffic movement to traffic agencies. So long as wheat and corn were produced near the waterways and could be disposed of at markets located on the rivers traffic by river continued, but so soon as either of these conditions was no longer present the railway began to take the business. If grain were shipped from a river port and required transfer to rail for delivery at a primary market, like Chicago, the expense of transfer and the lack of all facilities for satisfactorily handling turned the traffic at its source to the railways. When grain began to be produced away from the waterways it had to be loaded at first into railway cars, and once in the cars it remained there until it reached its market. The movement of the wheat area northwestward to a region west of Lake Superior and the advance of the corn area westward enhanced this tendency, and the railways encouraged it both by the provision of suitable facilities for storage and handling and by the adjustment of their rates.

The corn belt of the United States reaches very nearly 1,400 miles from east to west and about 800 miles from north to south. It is estimated that if that part of the corn belt of North America were suddenly rendered sterile there would not be enough corn produced on earth, not even including Argentina, to render it one of the staple articles on the great grain exchanges of the world. The barge service that I am referring to on an 8-foot channel will reach the whole of this corn belt. It will also reach a great deal of the cotton belt, cotton being another great agricultural production of this country.

The effect upon the Mississippi River is strikingly shown by the fact that although in the fifties there were many towns with prospects of rapid and successful development, yet at the census of 1900 there was not a river town from St. Paul to St. Louis with 40,000 people and only three—Quincy, Davenport, and Dubuque—with over 25,000 inhabitants.

I could add there, to this report, what is literally true—that a large part of the development of manufactures, commerce, and transportation and the increase in population in the river towns is in such towns as are liberally supplied with steam railways. Some of them are division points or terminals of great railway lines. The city of Rock Island, for instance, draws a large part of its population, business, and manufacturing from the steam railroads, with which it is well supplied. The same thing can be said of Davenport, across the river. It practically makes the two cities one single point for commercial purposes. If the railways were taken away from such places, they would relapse into their former condition.

Again—

Madison and New Albany, Ind., both declined in population between 1890 and 1900, and neither of them had 25,000 people in the latter year, whereas Indianapolis, preeminently a railway center, which in 1840 had less population than either of the towns mentioned, and in 1850 almost exactly the same number, had in 1900 a population of 169,000. So far as export business by way of New Orleans is concerned, the long, roundabout journey, combined with lack of satisfactory steamship facilities at New Orleans, has had its influence in turning traffic eastward by rail.

The kind of business which has most satisfactorily developed on the Mississippi River system has been that transported in the form of rafts, the lumber business, and that handled by barges, of which coal is the best example. The former flourished on the upper Mississippi and is still prosperous on the lower Mississippi and the Ohio and tributaries, because, as already indicated, it can be slipped into the water and carried to its market with little expenditure of labor and with no necessity of transfer. So soon as the forests were cut off on the banks of upper Mississippi River tributaries rafting began to decline and a rapidly increasing proportion of lumber and log output was carried by rail.

The Ohio River coal traffic illustrates peculiarly well the kind and method of business to which the river system is at present adapted. In this industry, to be sure, are some of the advantages which are lacking in any other, namely, administrative organization, mechanical loading appliances, and the highest development of barge traffic. But, in addition to all this, coal can be loaded direct from the mines into the barges and can then be transported without any rehandling to its destination, which is the river steamboat, the ocean-going steamship, the sugar plantation on the bay, or the railway coal yard on the river bank. In other words, the Mississippi can at present handle traffic successfully which begins and ends within its banks, but traffic requiring transfer to the railway at any point on its course will have a tendency to resort to the railway for the entire distance. Whether this situation is due to a control of terminal and transfer facilities by the railways and a refusal to prorate with the waterway, whether it is due to lack of initiative on the part of river interests in developing transfer facilities, or whether it is due to the greater cheapness of an all-rail haul, the fact remains that carriage involving transfer no longer makes use of the Mississippi River system.

At this point I wish to consider the importance of opening up, if it is possible to do so, the barge system of transportation. It is to be hoped that at some time the Panama Canal will be relieved of the trouble with its banks and will be open for navigation. At that time there will be a change in the trade channels and in the transportation world. We began to see some small effects of it during the time it was open. Since the opening of the Panama Canal the commerce of the Mississippi River has been revolutionized. We only felt some of the elementary impulses, some of the effects that would follow in a very large measure when traffic had adjusted itself to the new channel. It seems, from some data that I have, that it is cheaper to-day for many manufacturers, when the Panama Canal is open, to ship their manufactured products by rail from the Mississippi Valley to New York, and thence transport it by ocean steamers to the Pacific coast by way of the Panama Canal, than it is to ship such products directly by rail from the Mississippi Valley to the Pacific coast.

This condition will present itself in a much more acute form after the Panama Canal shall have been opened and well established as a part of the waterway system of the world. The first and most immediate effect in certain parts, especially the central and southern Mississippi Valley country, will be to draw a large part of the merchandise south toward the Gulf. It will make of New Orleans and other Gulf ports inevitably important centers for the collection and distribution of that merchandise. Instead of going by way of the continental railway lines that reach tidewater on the Pacific coast it will reach that market by way of the Mexican Gulf, the Panama Canal, and the Pacific Ocean.

This necessarily will change the trade channels of the Mississippi Valley. The rates that I have just quoted from Chicago and surrounding points in the West and Northwest indicate that instead of trade taking for the Pacific coast the overland way across the western country it will change, as stated, its direction. It will seek in some instances an Atlantic coast port by rail, and there, by transfer to steamship, it will reach, by way of the Panama Canal at a joint rate, the market on the Pacific coast. That joint rate will be less than the all-rail haul from the northern Mississippi Valley to the Pacific coast.

So this amounts to a change of travel or a change of transportation of merchandise—two ways. One will draw it south, the other east, cutting off the transportation that has heretofore been had west and northwest for much of the larger freight intended for Pacific coast points.

If Alaska should be developed it too is affected by this question. So this again to the people in the northern Mississippi Valley country is a powerful reason why the barge service contemplated in this act of the general assembly of that State should be carried into execution as speedily as possible. In that event it will give to tidewater from these interior points a cheap water transportation, so that they may avail themselves of a rate that will enable them to compete with other points east and south. If this be not done, then competitive points of production in agriculture, the mine, and manufacturing will be laboring at a very marked disadvantage in the northern and western Mississippi Valley as compared with the competitors east and south.

The State represented in part by the Senator from Iowa [Mr. KENYON], the Minnesota and Wisconsin country, my own State, Indiana, and Missouri are vitally connected with this problem. If we shall be able to compete with points south of

us and east of us when the canal shall be opened, so that we may survive and transact business upon a profitable basis, we must have some cheaper freight rates in order so to do.

This is one of the larger questions presented in the denial of the War Department of the right to make this improvement. To us it becomes a vital problem. It was the larger problem that presented itself to us who supported this measure in 1915 before the general assembly of that State, which, when we arrived at the conclusion that barge service was practicable and at a rate that would render us able to compete with points east and south, led us to the conclusion that the States could profitably expend $5,000,000 for the development of this 8-foot channel.

It seems to me that to deny this permit under such circumstances would be a blow to the public interest not only of the State that I represent in part but to all the surrounding States and to the States even that lie far beyond and which the Mississippi River does not touch. Take the great wheat belt of the northern spring-wheat country and the Dakotas, take the country that lies even west of the Dakotas, and they are interested in the same question, because a large part of their traffic is to Chicago and Duluth and Great Lakes points where the merchandise or the grain is collected for distribution to other countries or for the export trade.

New Orleans is 900 miles nearer the Panama Canal than New York. This waterway of 1,400 miles between Lake Michigan and the Gulf of Mexico ought to be opened up at once, it seems to me, to the commerce of the Mississippi Valley. Here is the largest practicable waterway in length in the world. When the 65-mile link shall have been constructed, with an 8-foot depth minimum, it furnishes from Chicago to the Gulf 1,400 miles of waterway connected with the Great Lakes.

I am not overly optimistic about what will be the result, but if it should fail it costs this Government nothing. There is not a dollar of it comes out of the Public Treasury of the United States. It comes from the taxpayers of the State concerned, and if it fails, as a matter of prudence, the other $15,000,000 will be saved. If the gentlemen who are opposing the granting of this permit representing certain districts from Illinois should be successful in their contention and the 14-foot depth should be constructed, it, too, would fail for the same reason that an 8-foot channel or depth would fail. If a barge service is not possible with 8 feet, it is equally impossible with 14 feet. If it should fail in the one instance, it would cost us $5,000,000; if it failed in the other instance, it would cost us $20,000,000; and out of prudence we ask the safer way that would develop the water traffic as much, and by which if it failed we would save the other three-quarters of that sum in the bonded indebtedness of that State.

I wish to speak here of a matter of general public concern. I do it somewhat reluctantly. It is not a very pleasant task. It is an old saying that the Constitution never ought to stand between friends. I am sure, remembering my short experience on the Commerce Committee and that the bar of secrecy has been lifted, that the law of economy applied to the Public Treasury never has come between friends on that committee. I fail to remember a single criticism on that committee in the expenditure of what aggregates $42,000,000 of the public funds.

I remember two items stricken out, one relating to an improvement in Connecticut, the other to an improvement in the East River. They went out for some incomprehensible reason although both of them are on tidewater, although the New York improvement concerns have access to the Brooklyn Navy Yard. We have heard a great deal about how convenient these inland waterways would be in case of war, how on the Gasconade River in Missouri the embattled West could reach the enemy expeditiously and destroy them by being carried over its raging depths, and that Raccoon Creek in New Jersey would be another that would aid to spread great devastation among the foe. But I failed to hear a single argument raised why it was not necessary to make access to the Brooklyn Navy Yard for the ordinary deep seagoing vessels. So out went the appropriation.

The Senator from Connecticut [Mr. BRANDAGEE] appeared and he asked for a very modest appropriation, it seemed to me, where the people of Connecticut had already spent by taxing themselves voluntarily about $1,000,000 for the improvement and at a point where a very large commerce comes and goes every year. It too was denied.

I am sure that it may grate upon the susceptibilities of some who have already announced that it is disagreeable to them for me to refer to some figures I have. I do not do so for the purpose of annoying those gentlemen, but in order that it may be in the CONGRESSIONAL RECORD for the purposes indicated by the junior Senator from Iowa and myself, the effect it will have upon the public by making it a little more accessible for them if placed in the CONGRESSIONAL RECORD.

New York, for instance, pays of individual income and corporation tax $27,638,744 annually. This is for the fiscal year ending June 30, 1915. It will be a no less sum for the current year and no less in the future. She gets altogether for every purpose, for her harbors, for every facility for the greatest commerce there is in the Western World, a return of $2,167,500 reported in this bill, allowed by the committee, with the East River provision stricken out.

Connecticut, for instance, is an Atlantic Coast State and, like New York, it is a highly developed State in its manufacturing and in its commerce. Like most of the old States along the Atlantic coast, it is true, they have the advantage of many years of development. They have, like New York, some century or more back of them. But that is not to their discredit. They seem to have used both in this generation and all proceeding ones the advantages that have been given them. They have not been sluggards in the race. They have not slept upon the facilities furnished them by either civilization or by nature.

Their great manufactures, their inventive genius, their banking, their transportation, the men that they have raised in years past and have given to the public service—all that they have done indicates that not one talent that either of those States has has been buried like the slothful servant's so that it has produced nothing. On the contrary, they have so used every facility that they have that they have produced some of them a thousandfold. Still when they come in and ask that a small part of the many millions in one State shall be allowed for an improvement it is stricken out.

In Connecticut a total of $211,000 is allowed by the bill as reported by the committee, not including the item I have referred to that was not allowed by the committee.

I repeat here the same figures for this State of her income tax, individual and corporate. Connecticut, with her small territorial area as compared with some of the other States, paid $1,283,695 income tax for the fiscal year ending June 30, 1915. And still what I consider a tidewater improvement that would be proper because it falls within one of the three classes that I have announced, that I think contains the only justifiable improvement for rivers or harbors in this country, is denied.

I might go a little further into some of the Pennsylvania items. Of course there are no waterways nor harbors within the borders of that State that seem to be asking for very much. Some improvements are allowed at the junction of the two rivers that form the Ohio and at certain other points, Erie Harbor and elsewhere, but in the aggregate the total amount allowed for improvements in that State was $60,960, and the total amount of public revenue contributed by direct taxation, by individual and corporate income tax, is $9,367,696.

I come now to another State. Virginia has $236,000 allowed exclusively for that State, and its income tax is $627,938. It gets something over a third of it back. If New York got a third back, it would have $9,000,000. Then, of course, that is not a fair way to look at it. I do not offer that as a conclusive argument but only a significant comparison.

North Carolina and Virginia have certain improvements in common, as the territory and the coast line are adjacent or contiguous, and for the two States their combined appropriations for river and harbor purposes are $1,503,600, as I have collected and aggregated them here. The income tax collected in North Carolina is $381,378. So the combined income tax of both States would not pay by half a million dollars the appropriations that go to those States alone. They are not to be blamed for not having more income tax. I have considerable sympathy for a person who does not have enough income to get caught by the internal-revenue collector. But that does not justify this omniverous demand for some of these improvements.

The Senator from Iowa spoke of one item connected with North Carolina that has been reappearing here for many, many sessions. I could not, if I tried, add to the graphic, picturesque, and complete description of that alleged improvement as he gave it.

South Carolina pays $161,401 individual and corporate income tax altogether, and it gets $255,000 back for appropriations for its various harbors and inlets and coves.

Georgia is not quite so well treated, but it has no ground of complaint. I might remark here that because some of the States are wealthy and have those who pay income taxes it has been said that they ought not to complain, that they have made it off of somebody else, that they have grabbed it from some of the less fortunate States, that they are old, that the centuries have dealt kindly with them and their forebears. Well, how old is Georgia? I have a book some place in my library written by John Locke, and in that is Georgia's Grand Model, his form of government that was framed by those old Englishmen in the privacy of their studies across the sea. That was in the days

of Oglethorpe or before. It is one of the thirteen original States.

It dates back almost to New Jersey, New York, and Connecticut. Almost at the time the second generation from Roger Sherman in Connecticut were inventing some of the devices that they subsequently sold to us out West, Oglethorpe and his colony had left England and had colonized themselves in what is now the State of Georgia.

Now, what have these men and their successors been doing? Why could they not have had incomes just as well? It would hardly be fair to stop there, because a great Civil War came and a part of their property was confiscated by emancipation and by subsequent constitutional amendments. If you keep on going in this Congress with nitrate plants, with shipping bills, with armor-plate plants, with Government ownership and operation of railways, with income taxes, with emergency taxes, with all forms of direct taxes, it will not be very long until you confiscate all the property of everybody else except the people who have no income, and then there will be a stoppage. After you have confiscated everything you will either have a socialistic Government or we will all start in new, bankrupt together.

You are thinking about everything else in this Congress except how you are going to get the money. Thirty-two million dollars in this bill, $85,000,000 in hard roads, $10,000,000 or $15,000,000 in an armor-plate plant, $18,000,000 in a nitrate plant—all in the name of preparedness. By the time we are prepared to fight we will be bankrupt. If I were at the head of a hostile country which contemplated activities against this Republic of ours, I think I would maintain some kind of an espionage, a secret service that would promote river and harbor bills and just keep on promoting them and kindred schemes, and by the time we got ready to fight we would be financially exhausted. That is where we seem to be headed.

Still it was sarcastically suggested a day or two ago that I was very patriotic, which meant just the reverse of what it appeared. Anybody who opposes extravagant appropriations is a suspicious character in this Capitol.

Georgia, in individual and income tax and corporation tax, paid $440,600 the last fiscal year ending June 30, 1915, and it got back by the report of this committee and in this bill $727,250. This is thrift. You give a little and you get much. This is statesmanship, because you tax the other fellow, and that is always the highly desired thing in revenue legislation. It is highly desirable to get the burden on somebody else's shoulders. They have succeeded admirably, beyond even their own expectations, possibly.

Here is the State of Florida. I believe in improving a great part of the Gulf and coast country. It paid in income tax, corporation and individual, $229,509 the same fiscal year, and it gets back in this bill $985,500.

The confiscation of the Civil War is being recouped by river and harbor bills and income taxes on the ones who, or their ancestors, were largely responsible for the confiscation attending the war amendments. I am only alluding to this as one of the conditions that attend the mutations of government. It is a part of this educational process of which I spoke.

Alabama, for instance, with a total of $261,760 paid in income tax, has in this bill $295,000 for its various rivers and harbors; Mississippi paid $108,180 income tax, and it gets $321,000 for rivers and harbors; Louisiana paid $626,177 income tax, and it gets back $1,191,000, in even numbers—not quite twice as much. Then Texas comes along, and it has got an income tax to its credit of $1,048,277, while it has in this bill $2,728,500 for various items, all the way from the Trinity River down to meritorious measures.

Some of these Gulf ports ought to be developed just as the East River item ought to be allowed, just as the one in Connecticut ought to be allowed; just as many of them on the coast are properly allowed. These fall within one of the three classes that I consider the only ones that are justified by any river or harbor appropriation in this country.

Here is the whole State of Michigan. As my memory serves me at present, Michigan, of all the interior States, apart from tidewater, has more coast on the fresh-water lakes than any other State in the Union, and can show more proper traffic points, because about its border are the greater number of the chain of lakes, and these connecting waterways, like the one at Detroit, which link one great lake with another. Michigan gets a total of $1,525,775 in this bill, but it pays $2,913,307 in income tax alone, to say nothing about the war tax or the emergency tax under the act of October 22, 1914.

I wish to say that probably the emergency act of October 22, 1914, will produce in the neighborhood of approximately $80,000,000 annually. On the 30th day of June, 1916, this fiscal year will have expired. We shall then have a report of the total moneys collected under that act for that year; but from the 22d of October, 1914, to the 30th of June, 1915, we collected about from fifty-two to fifty-four million dollars for the fragment of the year, with the act in its infancy. So, by estimating per month, and making due allowances for collection, we shall have about $80,000,000 out of this act in this fiscal year, ending next June 30. Three-fourths of that, Mr. President—$60,000,000—will be collected outside of the States that get the great bulk of this appropriation in the river and harbor bill. It is a tax that is not distributed throughout the country; it is distributed upon the people who are transacting business. It is a tax upon the energetic, a tax upon the producer, a tax upon the active man who is doing something in the world; and the more a man does under this administration the more he is penalized for doing it.

That is the only tinge of politics that I will permit to enter this discussion, for I do not myself wish to approach the political features, the differences between the two parties in the discussion of this bill, and I only refer to this tax to show the extremely unfair methods of its distribution throughout the country.

Wisconsin pays $875,352 in income tax and receives $265,000 in appropriations for rivers and harbors. Illinois pays $5,654,157 in income tax and gets $855,300 of total appropriations around the Great Lakes. I think all these appropriations are either directly or indirectly connected with Lake Michigan.

I have aggregated the entire income tax collected from 12 of the States, being Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas, Tennessee, and Kentucky. They have paid a total into the Treasury of $5,340,234 of income tax for the last fiscal year ending June 30, 1915, and they have in this bill a total aggregate appropriation of $10,820,250. Of that $10,000,000 and more, I will approximate my criticism, but at least one-half of it could be stricken out, and the cause of water transportation in this country would not be thereby diminished a particle.

I now take up the question to which I alluded a while ago, somewhat prematurely, it is true, but I thought it advisable to discuss the questions that I have, rather than to take up the one that I had in mind at the time—a somewhat distasteful task, as I have stated.

There is evidently a more or less insidious lobby about Congress in more things than that of the revision of the tariff act of 1913. There is a joinder of interests. A water-power bill went through here not very long ago. I am not particularly affected by it. So far as it does interfere with any of the property rights of citizens of the State that my colleague and I help to represent, or attempt to take away property rights of that State, we shall appeal to the courts in due season for such necessary protection under existing law as we think we ought to have. The water-power bill has undertaken to authorize, as I said yesterday, the confiscation or the condemnation of the property of a State. It has attempted to invade that part of a State that is within the domain of its reserved powers; a part of the State powers that are as sovereign and unassailable as any of the granted powers of the General Government. These efforts, of course, will be resisted in the proper way.

In addition to that, it has authorized corporations to be created, or it has vested in the hands of local corporations now created under the laws of the several States the power of eminent domain. All of the riparian rights along the northern Mississippi country and its tributaries are in the hands either of private or public owners—public, the State; and private owners, individual and corporate ownership. Still, under the bill to which I have referred, a corporation created under the laws of the State of Iowa is vested with the power of eminent domain. It may apply by petition to any court of proper jurisdiction, and there may have determined the value by a jury of any of the riparian rights in the hands of a private owner. It may even go further and attempt to take the State property under the same proceedings. When that is done with a private owner it concedes that the power can lawfully be exercised. It takes from you or me, Mr. President, the riparian right that is an individual right; it takes from us unwillingly the title of our land and vests it in the hands of a private corporation, for what purpose? Is it for the purpose of building a railroad, a common carrier, a part of the system, State or National? Not at all. It puts it in the hands of a company to develop hydraulic power for purely private purposes, to sell it, to run factories, to run electric lines, to be substituted for steam on what are now steam railroads, to be used for lighting purposes, to be wired off and relayed for hundreds of miles away from the generating point.

If that had been done by some State legislature, if that act had been passed by the legislature of my State, not a newspaper in the city of Chicago would have hesitated to criticize, in the baldest and most reprehensible language, the faithless legislators who had so grossly abandoned and betrayed the rights of the citizens of that State; but here there was little said, here hardly a word of criticism was heard; not a great eastern newspaper anywhere raised its editorial voice to protest against it. I suppose that, too, was done in the name of "preparedness."

So the water-power scheme went on apace. Now there is a waterway scheme, but it does not "scheme" unless there are appropriations, and thereby hangs the tale of a river and harbor bill.

I am not thin skinned about lobbying. I am perfectly willing to throw my office door open and let any citizen of the United States, representing himself or a corporation, come in and talk about what he wants in the way of legislation, provided he does it in broad daylight. I keep open house for every constituent I know of in the country. I have no objection to people coming here and talking about their affairs and urging legislation. I think you will find, Mr. President, in the report of the Committee on Finance some testimony of your humble servant. Nearly a thousand people came into my office in the summer of 1913 and the fall of that year, while the tariff legislation was pending here, and I had no objection to their coming. I am not particularly animadverting on what I consider to be a combination here; I am only stating the facts.

The river and harbor bill is inextricably tied up with the water-power interests. All of them have double teams. That is the reason why the strength of Samson is developed in pulling down the pillars of the temple of economy. It is the easiest thing in the world to get votes enough. All these bills are written, it may be, with that end in view. I know a Senator reprobated that idea a few days ago, and he said the suggestion was almost not to be borne that a bill had been framed with a view of getting votes enough to pass it. I do not think, in view of common practices here, that is very reprehensible. I do not think many of us ever wrote a contested bill in our lives that we did not have in our minds the different sections that might be drawn in in a certain way to get votes enough to pass the measure.

If it is a good measure, I do not see any objection to that. It is a question of expediency. Practical legislation is always tied up with the question of how many votes you can get for a bill. You would never get beyond the bill-writing stage; you would otherwise never be a statesman; you would be simply a bill carpenter, if you did not get votes enough to pass the measure. I am not referring to these matters, I hope, in a way to wound the sensibilities of anyone; but there is a joinder of these interests in this Capitol. There is the most shameless, reprehensible logrolling in river and harbor bills that is known in any form of legislation.

If you took any one of the projects which has been criticized by the junior Senator from Iowa [Mr. KENYON] alone and made it stand on its merits, it would go down into oblivion with the criticism justly made of it and be met with the merited ridicule which it would provoke. But when you join a great number, Mr. President, of these items in a bill the forces behind it, by the simple process of aggregation, soon produce a majority sufficient to pass the measure, and that is what has happened here. It accounts for the strength of such measures.

I think it would be proper now to refer to the portion of the CONGRESSIONAL RECORD which I read yesterday at the beginning of my remarks. I was temporarily diverted from taking it up in due form and place because my colleague [Mr. LEWIS] referred to some of the items in this bill which were local to the State of Illinois. I ought properly to have said whatever I cared to say at that time. The matter in the CONGRESSIONAL RECORD related to occurrences in the Committee on Commerce.

I wish to say, first, that there is no record kept of any roll calls there, so far as I know, and I do not think any roll calls were had, because no Senator asked for them. If a roll call had occurred it would not have changed anything. I think substantially the same result would have been arrived at. When some of the items which were objectionable to me were voted on I voted against them. The vote was oral, and to many items no objection was made. On some of the additions of new items I voted "no." I offered the amendment to which I have referred relating to the act passed by the Illinois Legislature, to which I have devoted the greater part of the time since I have been commenting on the bill.

Mr. President, this amendment concerning the ruling of the War Department, and making a peremptory direction by Congress to permit this improvement, was adopted and is in the amended bill as reported by the committee.

Some color is given to the offering of this amendment by the opinion of the chief engineer himself. He says that if this permission should be given it rests with Congress to direct it to be done. So this amendment simply follows out a suggestion of the chief engineer.

In the CONGRESSIONAL RECORD of May 9, 1916, the junior Senator from Missouri [Mr. REED] is recorded as having made the following statement:

I think I can throw a little light on the attitude of the Senator from Illinois. I think he voted in favor of every appropriation for his State, but was very economical as to other States.

I did not vote on any appropriation for my own State, nor was any question raised about it. There was no necessity of voting one way or the other. I suggested to the Senator on the floor here that if he desired to make any motions to amend or to strike out any of the appropriations it was within his power, and that it would not change my attitude in relation to this bill if he did so. I will add to that that even if it should result in losing these appropriations it would not induce me to withdraw my opposition to some features of this bill.

I regard that as of the very substance of the evil that is sought to be prevented by the opposition to a bill of this character. It is, however subject to criticism and however void of merit any item or items in the bill may be, that if one item in the bill concerns the immediate locality that you represent you are either by way of necessity or by way of prudence, at least, or in common honor, bound to take the whole of the bill, good and bad, in order to secure what you want yourself. No regard is had to the merits of the item.

That is what is the matter with bills of this kind and all similar legislation where a great number of interests are united. The strength of the bill thereafter becomes not its merit but the union of interests, whether meritorious or otherwise, that are combined for the purpose of producing votes to pass the bill. If all the vicious projects were stricken from the bill, it would lose its voting strength. That, from the earliest ages of this country, in the history of legislation, has been the groundwork of the somewhat hackneyed word "logrolling." It has flourished, and in the river and harbor bill it has reached the greatest development ever known in this country. That is probably because the interests involved are more extensive, covering a wider area of country, and because the improvements that are meritorious in character, calling for larger expenditures of the public funds, furnish a barricade behind which indefensible schemes may hide. So, under this cloak, there have gradually crept in a great number of illegitimate expenditures that are sought to be protected by the good measures that impliedly are threatened with destruction unless the improper ones are included in the bill and let go through unscathed and uncriticized.

If the Senators who object to my attitude, or the attitude of the Senator from Iowa [Mr. KENYON], will point out anything that is improper, and give any reason for having any one or more of those items stricken out, I anticipate that the Senate will strike them out, as they are in duty bound to do.

It was further said by the Senator—and I have no controversy with him, and I am not saying this by way of criticism, or with any desire to arouse his antagonism:

I did not charge that the Senator from Illinois was not economical with reference to appropriations for other States; but I failed to notice him practicing any particular economy when it came to the State of Illinois. That is all I said. I know that the high courage and magnificent patriotism of the Senator from Illinois will lead him to take an exalted ground when it comes to the discussion of this bill; and yet I venture to say that he will in no single instance move to reduce an Illinois appropriation.

I will say to the Senator that he is at perfect liberty to move to strike out any of those items, if he wishes, and I will vote as my judgment requires when that motion is made. If he will point to an item that does not refer to the navigation on the Great Lakes, or elsewhere which is without merit, I am perfectly willing that it shall be stricken out, and will vote to strike it out myself. By recurrence to those items it will be found that all of them are in connection with the Calumet or the Chicago River, either in Indiana or in Illinois. If the Senator will examine the locality, he will find, from the shore in Lake County near Waukegan until it reaches around the south shore of the lake to Indiana Harbor and beyond, a continuous network of harbors, piers, factories of all kinds, foundries, machine shops, blast furnaces, and every species of manufacture known to iron and steel.

There is a crescent on the west and south shore of Lake Michigan that, outside of New York City, handles the greatest commerce—and these are the recorded figures—the greatest commerce there is in the new world. If the Senator thinks that these appropriations are unworthy of maintenance or improvement, he can vote accordingly. I shall have no harsh words for him, neither will I endeavor to empty upon him the

sarcasm or ridicule he so often employs if he does so. I do not desire to take time that way nor to apply any of the moments that I shall occupy in the Senate in doing so.

I continue on that same subject that my recollection is I saw the Senator in the committee room but twice during the entire consideration of this bill. I think I was present at every meeting that was held concerning the river and harbor bill. He may have been there oftener than that time, I do not know, but I only saw him there upon the two occasions referred to. At one of those he presented with his usual ability and conciseness the claims of the Missouri River improvement which, so far as I could see, in spite of its condemnation by the Army Engineers, was in no immediate danger of strangulation at the hands of the committee. But when any apprehended fears were dissipated, he promptly withdrew. I saw no more of him about the committee.

So what I might have done in his absence he can not himself know, except as he gets it by second-hand information. I did not vote for the motion, and no roll call was taken to report this bill favorably. The junior Senator from Iowa and myself, I think, both audibly voted against reporting it. No roll call was asked; and the result, as I have heretofore said, would have been the same if there had been a roll call.

I have seen on some occasions some criticism of the chairman of the Commerce Committee growing out of the nature of this bill. It is wholly unjustified. I do not sympathize at all with such criticism as I have seen here and there in the press. The chairman could not prevent this bill from being reported if he wanted to. He acts only as chairman of the committee, and permits the majority of the committee to conduct its deliberations and to report favorably or unfavorably such bills as may be referred to his committee. He does not assume to be the committee.

His fairness in administering the duties of the chairmanship and uniform courtesy to all its members entitle him to better treatment than there has been sometimes accorded him. For my part, I do not think he was any more responsible for some features of this bill of which I do not approve than any other Member of the Senate, no more for that matter than I am myself, because he did not place those items to which I refer there.

So when it comes to the bill upon its merits it appears before the Senate with a minority report from the committee which the junior Senator from Iowa and myself signed. I do not understand that we lay ourselves open to any particular criticisms by doing so. It is exercised as a matter of right by many other Members of the Senate who are serving on various committees appointed by this body.

So I leave it in this way without further comment except to add that in certain parts of the Mississippi or Ohio Rivers country there have been improvements, so called, made by the Government in years past. One of them is several miles above Cairo. It is understood, of course, that the Ohio River empties into the Mississippi River at this point, Cairo lying on the narrow peninsula that is washed by the shores of both rivers. At this point several miles above in the Ohio River a levee was builded by the Government some years ago. The object of the alleged improvement was to improve the navigation of the Ohio River. It was thought that it would act partially as a sort of a jetty, and would throw the current of the Ohio River across from the shallows where the levee was built into a channel and concentrate the waters and thereby deepen it and improve it for the navigable channel used by the steamboats going that way. It succeeded in changing the current, especially during higher water than the normal stage. When the great floods up in the States above and at the headwaters of the river empty their contents into the upper river, it comes down and strikes this levee and is deflected to the opposite shore, causing the danger sought to be avoided. In the earlier time, before drainage was so complete and affected so rapidly as it is now, there was not such a manifest injury, but when it strikes the levee now, this great volume of flood water is thrown across on the opposite bank and has by erosion eaten away the bank, undermined the foundation of the levee, and has encroached upon the north shore of the river until it is threatening all that part of the country. The citizens in the Cairo levee district have levied and have paid either in current taxes or have issued bonds to raise money to the sum of $775,000. The Government several years ago appropriated and there was expended with the $775,000, $250,000 from the Public Treasury.

This improvement, costing over a million dollars, is in danger of being entirely destroyed with the city of Cairo. This alleged improvement has resulted especially during flood water in throwing it across to the opposite bank and eating away the land until now it is almost up to the foundations of the levee. The next flood water coming down the Ohio with the currents continuing as they are will undermine the foundation of this million-dollar levee and wash enough of it down the river to destroy the system.

The city of Cairo has about 18,000 population. It was safe up until recent years, until the aggregation of water above caused by the difference in drainage and by the concentration of surface water has made the problem of flood control different from that of previous years. So the city is now in imminent danger, unless some provision should be made. It is only by good fortune that a public calamity has been averted. It has so happened in the operation of the forces of nature up to this time that simultaneous high water has not occurred on the Ohio and Mississippi Rivers at the same time. If the flood water contained in both rivers came at the same time the levee under present conditions would be totally destroyed and the river would overwhelm the city.

Mr. KENYON. Mr. President, I should like to ask the Senator from Illinois if the railroad embankment at Cairo would be a protection to the city. As I remember, there is a very large railroad embankment there along the Ohio River. Is the levee on the Ohio River?

Mr. SHERMAN. The levee is on the Ohio River, the greater part of it.

Mr. KENYON. If the levee breaks would the embankment of the railroad protect the city?

Mr. SHERMAN. No, Mr. President, it would not be an adequate protection. The Illinois Central, the Mobile & Ohio, and other roads come down and converge at that point. In effect this levee that I am referring to, if it were broken, would destroy the railroads that have access to the city at that point.

It in former years was not a problem as it is now. As things are now, the river is higher than the city of Cairo. You can stand on the street in Cairo and look to the Mississippi River, and the level of the channel is higher than some of the streets, and it is only the embankment thrown up that keeps it from overflowing that part of the city. The part of the levee that I refer to when it was builded originally was sufficient. It gave all the protection the city needed.

Below there is another improvement that has not tended to make matters any better. I think it is down in the neighborhood of Columbus, Ky. There were levees built for a twofold purpose—to protect the adjacent country from high water and to deepen the channel, and to some degree wash the sediment that came from above, that had a tendency to collect, and especially as the shoal water increased had a tendency to destroy the navigable channel and to make more dredging necessary at that point. So these levees were built by the Government. I think if they were not entirely paid for by Government appropriation they were mostly so. Perhaps some local money was used by the immediate neighborhood that was benefited by the levee. But the increased flood water, as it is now, rushes down in an immense volume from both rivers after the Ohio River has joined it, being below between the levees, and this great volume of water, while it deepens the channel, often has a tendency, I am told, to back it up, and the concentrated, narrowed channel can not carry all the great quantity of water presented without raising the level above the levee. That increases the danger on both the Ohio and the Mississippi River to the city. During one high water about two or two and one-half years ago the level of the flood water at its highest point only lacked, as I remember, about 13 inches of reaching the top of the levee. Of course, if the top of the levee had been reached nothing but destruction awaited the entire city.

When the levee was built originally it was supposed to be far enough above the highest stage of water that had been presented on the river to be absolutely safe; but from the Mississippi River all along from Minnesota down, and from Pittsburgh all the way down on the Ohio River, most of us are familiar with the very great rapidity, with the concentration of surface water that falls either in the melting of snows or in continuous rains, so that such floods as at Dayton, Ohio, the Muskingum River at Shawneetown, the trouble on the Ohio and Wabash, and all the way down has resulted from this vastly increased flood of water that comes in at uncertain intervals either in winter or in summer.

So a part of the flood-control problem must necessarily take into account the changed conditions under which high waters are created in these two rivers. To some degree I suppose the same thing applies to the Missouri River.

This, I understand, was taken into consideration by the Committee on Commerce when an amendment was added that placed discretionary power in the hands of the Mississippi River Commission, of which Col. Townsend, I believe, is still the chair-

man. It gave discretion to that commission, if they wished, to use a certain portion of the general appropriation within the section referred to by this item for the strengthening of the levee that I have referred to near the city of Cairo.

I have already said, Mr. President, that this amendment, together with the one that I have offered referring to the Illinois River, are the only ones in which I was personally interested. They did not increase the sum of money provided by the bill. The item already provided for the Mississippi River Commission had been fixed, and it is only in the distribution of it at the points where emergencies exist that any part of it could be spent under the power conferred upon this commission.

On the other, if any complaint should be made that I ask permission for the expenditure by my own State of $5,000,000 to be paid out of the treasury of that State, I am willing to take such criticism as may come. It may be, as I suggested yesterday, that it is a breach of precedent. It may be such an unusual thing that it would be regarded as extremely dangerous for the future to ask the privilege of spending your own money instead of spending somebody else's money. I know that it is not the usual legislative precedent. It is very seldom that legislation assumes that form and it may be a very dangerous example. The spirit of the thing may lead to trouble if it should be regarded as a precedent, and, like the ghost that Hamlet saw, he fears it, because he says:

> The spirit that I have seen
> May be the devil; and the devil hath power
> To assume a pleasing shape; yea, and perhaps
> Out of my weakness and my melancholy,
> As he is very potent with such spirits,
> Abuses me to damn me.

That is the only menace I can see in it, that it may take advantage of our weakness and our melancholy, because I suppose we have the ups and downs that belong to legislative bodies like everybody else, and this would be a dangerous precedent, an evil spirit boding some strange eruption to the State that might be intruded here.

I have heard from time immemorial almost, Mr. President, about the control of rates. The junior Senator from Iowa asked particularly about it this morning, and he referred to it in a very cogent way himself. I have heard that ever since I opposed appropriations in the State legislature beginning back nearly 20 years ago. I opposed for many years the appropriation of money to the Illinois and Michigan Canal.

It had a sort of traffic stoppage. The channel had fallen in—decayed. You could not get over it unless you had a mud boat. I think at one time I christened it "Tadpole Ditch," which adhered to it for many years. It may have had something to do with ridiculing out some seven or eight hundred thousand dollars of an appropriation for its benefit at one time. But when I was doing that I was assailed as a friend of the steam railroads. Some newspapers along the Illinois Valley were disposed to see it that way. They wasted a good deal of printer's ink to no effect. It did not change anybody's opinion that I know of. All the friends of the appropriation were for it, anyhow, and those of us who were opposed to it were still against it. But the principal argument was that it controlled railroad rates and that we were bought by the railroads. I have been alleged to have been bought by so many things in my time that I suppose my epidermis has become somewhat hardened; it ceases to have the effect on me that it had in the earlier times when I used to lie awake nights and worry about a great many villainies charged against me. All I am solicitous about is that the allegations are not true.

So these charges that the control of rates rested with appropriations to keep waterways going are as old as the contest not merely in legislatures, but the contests between water carriers and railway carriers. That is a contest that began before legislatures considered it. That is a contest that began in the very nature of things in economics, not in law. It began when railroads first seized the commerce of the country and began to draw it away from the waterways. The earlier settlers of this country in pioneer days always settled along the waterways. That is the reason why in the history of the country especially the early settlements are found along the rivers. They were the avenues of communication. If a person was off the river it is now like being off the railroad, miles away from the outside world. They furnished the communication. At that time all the carriers traveled over their bosom. So when the railways came this contest began.

The railways of this country have fought their way through, until they have taken from the waterways their commerce. I do not believe that by any of the methods of human legislation will a single ton of commerce naturally falling to the railways be withdrawn from the steam railways of this country. I think, rather, that they will continue their encroachment.

I am willing to take the chance of this appropriation, as I have said, because it is an experimental move to see whether the barge commerce, with a self-propelled barge, with modern motors carrying from one to three thousand tons on a single boat and traveling over an 8-foot depth, will to some degree solve the question of cheaper rates, and whether they can take away from the railways some of the traffic that they have absorbed. That is the question, and I am willing to try it. But I want to be reasonably prudent. I do not want to spend the whole of the money—the whole of the $20,000,000—so that if it proves to be a failure it will all go together. I would spend 25 per cent of it and take a chance on it that way.

So when it comes to the control of rates it is an old argument and, I think, an ineffective one, because this small area of this immediate improvement does not concern the control of rates. It only affects the rate for such as were within a convenient distance of water points. Wherever the elevators were located at points where the grain barges could take their cargoes down the river, where they sought the market at St. Louis, the rates were affected. There were better rates at those points necessarily than where there was no water competition. But that was only for a comparatively thin ribbon of population that bordered each side of the waterway. At best it was only 20 miles; it seldom went beyond.

It must be kept in mind that no railway in the Illinois or Mississippi Valley ever loads grain into a box car and carries it to a water point on the river and there transships it into a grain barge. It is not profitable. There may be isolated cases here and there of shipments made in that way, but the universal rule is that when merchandise goes into a box car it stays there until it reaches its destination. So the comparatively small population that bordered each side of a navigable stream in that country were the only ones that received any benefits from the lower rates. Outside of that, the same rates prevailed as in other places.

The question arose then upon a consideration of all the freight carried on these navigable rivers, comparing it with the appropriations made by the legislature, whether they were not paying an excessive price to regulate the charges of the steam roads. The people, outside of the small area affected, insisted very strenuously that they were all taxed, some millions of them, to benefit a few thousands residing within the area of water competition. I think their complaint was just. It was upon that ground that we objected to further appropriations, running up into some millions of dollars, levied by direct taxes upon the assessed property of the State to further regulate rates in that way, and we made the same argument that the junior Senator from Iowa has well made.

We had our railroad and warehouse commission in that State, which has since been succeeded by a public-utilities commission, having the same and more extensive powers than had its predecessor. We asked, I think reasonably, why the railway and warehouse commission did not fix rates at a reasonable figure, as it was a poor way to attempt to create an expensive competitive carrier for the sole purpose of reducing rates by competition, performing a service we had created a commission to perform.

Now, we come to the same thing here. I remember in 1887, when Senator Cullom introduced the interstate commerce bill in this body. Of course, most of the carriers were against it. They questioned its constitutionality; they had some doubts about whether a common carrier of that character, built by private funds, although it was quasi public in its services, could be regulated by the Government, State, or national. So the litigation proceeded apace until it reached the court of last resort here in this Capitol, and they sustained such legislation. In the Ruggles case in Illinois, in the Bowman case from Iowa, and in many other cases of a like kind the question was fully litigated, both as it affected the warehouses and the common carriers; and the principle was firmly established that the Government, whether State or National, had a right to fix reasonable maximum charges. I think that, so far as transportation charges are concerned, we could well amend the act as suggested by the Senator from Iowa, and provide minimum rates under certain conditions below which the railroads could not carry merchandise. In that event, the waterways could be made more serviceable, if there is anything in competition, and I see no objection now to such a change in the law.

From 1887 the legislation proceeded. It will soon be 30 years since that bill was introduced. That marks more than the lifetime of an average generation. We have legislated; we have litigated; we have administered in a great variety of ways one of the most stupendous problems there is in this country, affecting more than 250,000 miles of common railway carriers, with an aggregate capital stock of many billions of

dollars, and with bond issues and various forms of indebtedness, amounting to very great sums; and still we have the Interstate Commerce Commission. It has continued; it is in operation to-day; it is one of the chosen instruments for the purpose of working out this great problem.

If the Interstate Commerce Commission, Mr. President, is for the purposes designed, why do we need, at the expense of many million dollars, to create some other form of regulation for the railways that are all under the jurisdiction of the Interstate Commerce Commission? It is proposed not to regulate them by law enacted by Congress, but to regulate them by species of economic competition; to create water carriers, to let the water carrier reduce the rates, and to make the railways meet the reduction. We do not need to maintain two such instruments.

I am reminded a good deal of a lawyer whom I one time heard in court. He had 11 objections filed, and the court asked him what he thought of them. He said, "There are 11 fatal objections." The court said: "State one fatal objection, and that will be enough; we will let the other 10 go over until some other time." If we have one instrument of regulation, and if it is effective, if it can accomplish anything, let us use it. If it is a failure, let us destroy the whole system. If the Interstate Commerce Commission, after we have tried it for 30 years, can not regulate, we ought to find that out. We ought to have found it out before; but if we have not done so, let us find it out now.

I believe the Interstate Commerce Commission has justified its existence; I believe it has accomplished the purposes designed by those who framed and enacted the measure which created it. I think it is an adequate mechanism for the regulation of rates, reasonably protecting the shipping public and the railways themselves. I believe we are working out those problems each year in detail, so that instruments of that kind become more effective in protecting both the carrier and the shipper and the investor.

If we have an effective instrument for the regulation of rates, what is the use of creating a system, the cost of which runs into the millions of dollars—$20,000,000 at the last session of the Sixty-third Congress, $42,000,000 here in this bill? And like most of such measures, unless they are restricted by the unpleasant duty which the Senator from Iowa and myself are trying to perform here, these bills never grow less. I never knew a bill on matters of this kind, in either State or National legislation, to grow less unless somebody took the scalpel and operated on it. In the very nature of things, like other evils, both in legislative bodies and outside of legislative bodies, they are always bound to increase; they never minimize, they always, like Oliver Twist, are crying "for more." Their appetite grows constantly by gratification.

One thing I wish particularly to allude to in connection with this bill, as a separate subject, is the tremendous governmental expenditures we are facing. I do not know how the tax rates run in the different States in the shape of direct taxation for local purposes, for State, county, school district purposes, and for boulevards and libraries and strictly municipal purposes; but they are high enough. They run something like 7 cents in many cities in our State; that is, direct taxation for all purposes, from the State tax through to the last local tax charge.

In addition to that, in many districts there are levee taxes, drainage taxes, and other local burdens. As I have stated, something near $80,000,000 has been spent for the Chicago sanitary district channel. It will reach $100,000,000 before it is completed. That is a distinct form of taxation, as such measures always are, because there are special districts created for a defined purpose. There is a constant increase of taxes within State lines; there is a constant increase in taxes levied by congressional action. I see no evidence, and less prospect, of economies here, so far as I can tell.

Expenditures are not to be charged alone to preparedness. The naval and military bills will carry ultimately many million dollars. They will be distributed through, say, a five-year period or through some stated interval, whatever it may be; but, at any rate, there is no prospect of a diminution in a solitary branch of public expenditure in this Capitol. I have alluded to some of these and I wish to take them up in their turn.

Under the bill for making more efficient the Military Establishment of the United States at this time, it is impossible to predict what sums will be required ultimately to care for that item of expenditure. The military department of this Government will cost more for a given number of men than probably in any other country in the world. That is inevitable. In time of peace we pay $15 a month to a private in the Regular Army during his first year of service. That is increased in his subsequent years of service. As I remember, the bill reported by the chairman of the Military Affairs Committee of the Senate [Mr. CHAMBERLAIN] increased—one bill did, at least—the compensation of a private in the Regular Army the first year of his service from $15 to $18 a month—an increase of 20 per cent.

I inserted in the CONGRESSIONAL RECORD some weeks ago a tabulated statement of the compensation paid both privates and officers in the armies of the principal civilized countries of the world. I did that in order to have some convenient standard by which to compare our appropriations. I will not undertake to quote from memory save to say that the compensation of the private soldier in many of the principal countries of Europe in time of peace serving in the army is from 1½ to 7 cents a day, while our privates are paid in the neighborhood of 60 cents a day. In time of war the amounts are increased; but, even then, the per diem pay is trifling, and that is true of the soldiers now serving in the titanic struggle in progress in the Old World.

Our officers are paid correspondingly larger sums. All of the officers in the European armies are underpaid, compared with our standard. Their methods of living are below the standard of our living. Both privates and officers in their mess are better cared for in this country than they are elsewhere. Their housing, whether in barracks or in camps, costs more money and is better than the housing of the soldiers of other countries. If better results are produced in Europe, it is because the military and the medical authorities in the Old World have learned to "sanitate" and safeguard and to economize and get more for an expenditure of money than we do in this country.

I think we are the most extravagant of all the countries of the world, both in public and in private expenditures. We have to a very large degree squandered the birthright that has been given to us by a bountiful Providence. We have cut down our forests; we have robbed our soil; we have wasted our minerals; we have destroyed millions of dollars by fire until our fire bill is greater than that of any other country of the world. It is an absolute loss. But still we are headed in the same general extravagant direction, and the most unpopular thing in the world is to talk economy in either public or private life.

We take a just pride in our savings banks. Certainly in manufacturing centers they show a most commendable increase in deposits. The building and loan associations show an increase in the number of homes and roofs which they have been instrumental in placing over the heads of members of the family; but after all, when we consider that our wealth is the greatest of any civilized country; when we consider our expenditures, our standards of living and kind of living, we are squandering our precious inheritance at a rate that ought to bring up with a sharp turn everybody who thinks about it for a moment.

We have just passed a rural-credit bill. It is not a rural-credit bill at all; it is a Government credit bill. There is not a farmer without means in all this country who will ever borrow a dollar any easier because of the rural-credits bill. A man has to have 50 per cent of assets to go on before he can borrow. That is the theory of the bill. I say the "theory of the bill," because if a man's assets are small, if his margin of security does not run 50 per cent, he will have to beat the Government by seeing the appraiser and have him raise the valuation on the land, and that is what will be done. All the free and easy ways in which Uncle Sam gets the worst of every transaction will manifest themselves inside of a five-year period on Government loans in a way that will return to plague and curse the very house that caused it.

I handled some millions of dollars a period of years without the loss of a single dollar of principal or interest, largely in the form of investment on first mortgages on corn-belt land, and to a considerable extent in the form of bonds of various kinds, and I know from my experience, Mr. President, that it is harder to invest money and keep it and get the principal back, with the contract rate of interest, than it is to make it.

When the rural-credits bill, which is a part of the reason why we ought to trim this bill under consideration, shall have become operative I know just how it will work, I think, in certain parts of the country. Where land has reached a settled value, where it is now selling for $200 or $250 an acre, it is not wanted—it will be of no use. No land banks will be organized in such a section of the country, unless when they are organized the Government becomes a subscriber, and in that event the Government will pay out of the Treasury its subscription. Nobody in that country will borrow in that way, and the inevitable result will be that that money raised in that way naturally will come out of the Treasury and be loaned elsewhere—not directly, but in an indirect way—because in parts of the country where land is of more unsettled value, where loans are more difficult to obtain, the rates are higher because the security is less and

more precarious in character. Rates do not obey laws made by men. They are made by the laws of business, and it will continue to be an irrepealable law long after the present membership of the Senate has passed away. So in such localities where loans are now difficult to make the mortgages will be deposited and the debenture bonds will be issued on them. The debentures will then be sold and will be taken up in localities where nobody is using the bank to borrow, and the money will be drawn out of the land banks to buy farm-loan bonds and sent down below, where they do not have the money to loan. It is a part and parcel of the same kind of a scheme that has been operated under another measure.

Look at the report of the Federal reserve bank. Where do they rediscount and where are their notes in circulation? In a few places. Richmond, Va., Dallas, Tex., and Atlanta, Ga., have a greater part of them all, and the rural-credits scheme will operate in exactly the same way, to take money from some parts of the Union and transmit it to other parts involuntarily, by the exercise of governmental power under the guise of taxation. Taxation means placing money ultimately into the Treasury, and out of the Treasury will be drawn $42,000,000 for the river and harbor bill. That is what this means.

If there is any politics in this I face it now; but those portions of the United States unfavorably affected by what I regard as an unjust operation of governmental power will realize before many months what these combined legislative results are, and they will understand that the power of government has been used involuntarily to exact money from them by the power of taxation and involuntarily to loan it to people where, by the laws of commerce or the rules of sound investment, it will not now go. You can attract money, but you can not drive it unless you employ the Government under the guise of confiscation so to do.

When we get through with that the Navy comes along. How much money it will take nobody knows. In airships, submarines, dreadnaughts, and the whole train of auxiliary equipment that sustains a symmetrical Navy we are to be equal, we are told in some sources, to any country in the world. The only real relief that I can see is that if the submarines keep blowing up the navies of the world it will not be so hard to catch up with them after a while, and it may be that we could be equal to any first-class naval power without very greatly burdening ourselves if we wait a year or two. That problem will be worked out in the fullness of time; but just now the naval bill is pending in the Naval Committee of the other House and soon will be out on the floor of that body, and in due time will make its appearance in this body, and again more money will be required. Nobody can tell how many millions will be appropriated, for we are no longer dealing with thousands and hundreds of thousands; we are dealing now with millions and hundreds of millions. It was said some years ago that ours was a billion dollar country, and I suppose we will be soon able to say that it is a two billion dollar country. That sounds large and it flatters the national vanity to think so. We are headed in that direction and traveling toward it with great rapidity, and everything here accelerates the movement. It is easy to spend, but it is hard to pay. Anybody can pass appropriation bills, but the test comes when we frame taxation and try to justify it.

There is nothing as dangerous as taxation. In the Hundred Years' War in the low countries, when the Duke of Alva had laid waste the Netherlands, they defended themselves. There was only a necessary resistance to him and to the manifold cruelties which King Philip enjoined upon him to inflict in order that he might destroy the Dutch people. They were imprisoned; they were scourged with many stripes; they were burnt at the stake; they were buried alive, and all the nameless cruelties that could be devised by a military tyrant of that age were practiced upon them. All that has been written in the eloquent language of a Motley conveys to us the horrors of their situation; but still there was no decisive resistance among the people. In an evil moment King Philip, being pressed for money, as he was a great part of his life, taxed the low countries the tenth penny of their income. He did not ask for the Stadtholders to levy the tax; he did not ask the consent of the Dutch people to pay the tax; he himself levied it arbitrarily by an edict of the Crown. Then they forgot all the other cruelties which they had endured, and on the question of unjust taxation Dutchmen who had for centuries fought the tides with the dike and conquered rose, and the Hundred Years' War came to an end, and they conquered the greatest military nation of that age. The Spanish invader was destroyed, not necessarily because of the nameless cruelties he had inflicted, but because he would not levy taxes according to the laws of the Netherlands.

It is in every northern race. It is in every Anglo-Saxon, in every person of north Europe or Germanic origin. Do not mistake it, Mr. President. You and I know what it means. We all know. The English stood it from the time of Charles I a long time. They were imprisoned in the tower; they were beheaded for treason unjustly; they were banished from the realm. They stood the horrors of an ancient law coming down from the feudal ages for many years, as the Hollanders did, without complaint; and finally Charles levied ship money, an unjust and arbitrary tax, without the consent of the Commons. What happened? They rose in revolt at this unspeakable outrage. That was as instinctive with the English people as the drawing of their breath or the beating of their hearts. They took arms in rebellion against the Crown, and at Naseby Field and Marston Moor they fought the taxpayers' battles against the King's troops. They made him prisoner. They indicted him for murder. Read the old writs. They proceeded with their capias, their mittimus, with their writs for execution, just as the forms are now, with but little change. They beheaded him on the streets of London in a struggle against unjust taxation. Our Revolutionary War that founded the American Republic duplicated their experience.

Our institutions are borrowed from those of England. Our traditions are their traditions. Our dislike for taxes is their dislike. And here we are voting away money as if millions were shillings and as if hundreds of millions were merely a few pounds or a few dollars. We are voting money to Raccoon Creek and to Oyster Creek. We pour some thousands into Black River. Bear Creek comes along, and with an almighty hug it takes from the Treasury its measure of tribute. The Osage River comes galloping down the ages as another great waterway that is to regulate the steam roads of the country, and keeping pace with it is the Gasconade; and it goes thundering down through the corridors of time until it hits the White River, I believe, down some place about Poplar Bluff.

Why, the only improvement, the only live thing there is there, is a snag boat. If you are going to vote for it as a matter of entertainment for the public, all right, but put it on the right ground. Do not call it a public improvement. Call it a public show. When the snag boat gets up steam and lifts its steam shovel in operation, or the clamshell, or whatever it is, the populace comes for miles. It is a curiosity. The Zoological Garden out here has nothing on a dredge down in some of these inland rivers, Heaven knows. But the thousands go on, and the dredge boat still digs out a few tons of sediment per annum.

I wish I had in one vast heap all the logs and trees and snags and sawyers and sediment that have ever been pulled out of the Mississippi River. You remember Mark Twain had some statistics on the Mississippi. He had figured out from the engineers' report how much sediment was carried down through the Delta each year, the number of cubic feet; and it kept piling up until it reached out into the Gulf of Mexico, and they had the number of feet steadily rising toward the surface—that was before the jetties were built—so he figured out from the annual deposit of sediment that in a certain number of years the mouth of the Mississippi River would be many hundred feet above the surface of the water in the Gulf of Mexico.

There is no more of an exaggeration in that than there is in the effort to improve some of these inland rivers. Along the Trinity and the Anahuac, down in Texas, it will be some 35 or 40 years before the project that was entered upon some years ago will be carried out or completed. Now, the Lone Star State is a law unto itself, very largely. It was once a sovereign State, and down near some of those rivers is the country where Sam Houston fought his battle with Santa Anna. Sam Houston was once a Member of the Senate. He used to sit over in the old Senate Chamber and whittle cypress shingles a good part of the time the Senate was in session, so his biographer says. We could afford to have bought Santa Anna, his whole army, including the cork leg that he lost in that fight, and have given it to him, let him go out of the country, and pay all the costs of the Texan War, if they could have taken the Trinity River with them. It runs up so that if you go down there you see more locks than you do river. When they get through with it all the way up to the head of navigation it will be mostly locks and dams. They will have to start a pipe line from the Gulf, with a pumping station, to get enough water into the headwaters of the river to keep the flow going down, and they will not have anything but a down-river traffic when it is done; it will not work both ways, and I am opposed to a rule that will not work both ways. [Laughter.]

I do not care a rap how many of my appropriations you kill around in my country. Vote them out if you want to. I will take the consequences. I have slaughtered so many appropriations in that country, anyhow, that I might as well have a

little more misery. I can likely stand a few more enemies. I am perfectly indifferent; but you will never get me to vote for any such double-barreled abomination as this bill. [Laughter.] Some parts of it, if they were separated, I would gladly vote for. It is not a question of the locality. It is the character of the improvement. There are proper appropriations in Florida; there are proper ones all around the coast, south and southeast; but there are some that the less said about the better.

This bill reminds me of a good many other things I have seen, Mr. President. Under its cloak, which conceals apparently a sound body on the inside, there is so much of the vermin of worthless appropriations that have fattened themselves on it that the parasites will sap the strength of the virtuous body.

It is going to be 4 o'clock pretty soon, and I vowed I would quit before that time. I wanted to read in conclusion here, as I come near it, the plank for economy. Did the junior Senator from Iowa insert that in his remarks—the Baltimore plank on economy?

Mr. KENYON. Not just as it appears there. I referred to it.

Mr. SHERMAN. I want to insert this, not with a view of any political effect, but as a warning to my Republican brethren that they do not go and do likewise—make fair promises, and then appropriate in utter forgetfulness of those promises.

I read from a historic document, penned by divers hands in the city of Baltimore in 1912.

There sat in that convention many eminent patriots, all the way from Bryan to Ryan. [Laughter.] In addition to other things there was a positive inhibition against second terms, the source of which I think I know. It was written, as the lawyers say, with malice aforethought. It was intended to be an antidote, in order that the author of that plank might possibly himself have a chance to run the fourth time.

The language is as follows:

> We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befits a democratic government, and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

Now think of it! I refrain from comment on it because that would be foreign to my purpose. I only insert it here in view of what I say about these items of expenditure, running up into some millions; and I understand there is on the way and will soon be along, a shipping bill. It will not be quite like the one that died of strangulation here at the end of the Sixty-third Congress. It is more like a subsidy. It has all the weaknesses, if there be any such, of a subsidy, without a particle of a subsidy's strength. It is proposed to limit the enterprise to five years' ownership by the Government. It is problematical how much money it will take, but perish any groveling thought that it will take anything less than fifty millions! We shall not deal with merely a few millions. If we can not have a fifty or forty million dollar bill, as it was before, at least, we will stamp ourselves as cheap and unworthy cheeseparers among the statesmen of the world. Let us have a fifty-million-dollar enterprise; and when it is all done, what will happen? Draw the money out of the Treasury, start a few shipyards, build a few boats, start a few lines, get terminal facilities, secure business. All that is to be done in five years. Well, I think I see five years speeding away into the great unknown, and a lot of us will pass through nature to eternity before that ship line is ever started.

I referred to the Plaza improvement. We have not done with the Plaza; it is a wilderness of weeds and hope deferred. It is a Government job, and it is more than three years old now. We are going to start a shipping line—not one, but many—all the way from the Atlantic coast to Europe, and from the Pacific coasts down through the Straits of Magellan to South American and oriental trade. If there is anything that sets a statesman's imagination aflame it is to talk about foreign commerce. We shall hear that spoken of until I almost fear I shall lose my wits, myself, under the stress of a fervid imagination. Foreign commerce! Well, what is the use of foreign commerce? If the Government does not protect us better than it has been protecting us in Mexico, I will stay at home. I will not advise any client of mine to engage in foreign commerce and be advised to flee for his life the first time trouble appears over the horizon.

The head of this administration wants our citizens to get out of Mexico. They have been in there a long time. They went in there during a period of 28 years of peace under Diaz. My colleagues, my friends here who voted to have people not already in to stay out of Europe were denounced as un-American. Our people who were already in Mexico are told to abandon their possessions and flee. I was only trying to keep other people from going in.

Foreign commerce and a shipping bill! Why, suppose the Government owns the ships, and by any mishap or miscalculation we get them completed before the five-year period has elapsed, and the ships go abroad. If some country seizes one of them or blows it up with a submarine, how would we act? It is a Government boat. What will we do? Lose it, of course, and say nothing about it; send them a few notes, and tell them not to do that any more; it is unseemly and unladylike to behave in that way. Our Chief Executive never wants to knock anybody down and sit on his neck except in his speeches.

Now, we get through with forty or fifty million dollars in a shipping bill. These things, some of them, we have done. These are not in the future. They are in the past, unhappily.

Nitrates! That is to make powder, in large part, and extract nitrogen from the air; and what we do not need for powder we will use for fertilizer. There we are, all the way from battleships and merchant ships to fertilizer; all the way from powder to Bear Creek. The nitrates will take about $18,000,000 more. If war occurs with any ordinary first-class power, if we wait for a Government nitrate plant to contribute to the manufacture of enough explosives to defend ourselves we will be relegated to the class of Nineveh and Tyre long before we ever defend ourselves by anything made by the Government in a nitrate plant.

You know what the history of almost all republics is. You know what the history of this Republic is, and the history of England. When we get into war you have to kill off about everybody there is in office before they can defend themselves and get ready for actual fighting. They destroyed nearly all the generals in the Civil War before they found anybody who was a real general. That is the bane and the weakness of republican government. It has been so since time began. The early republics exhausted themselves in their forums and market places talking about it. They died from governmental inertia and from a surplus of public conversation. [Laughter.] They had more tongue than they had fight; the republic failed and a monarchy succeeded it, because a king can make up his mind to do something and do it promptly. The more things the Government undertakes to do in this country, not only the more burdens we have the Treasury assume, but the more incompetent we are in the way of public defense. I will pit private resources at 66 cents on the dollar against 100 cents of every dollar of public undertaking, and I will beat you and pay dividends and conquer the world on that basis. That is the truth of it.

If this country ever is overcome by a foreign power it will be because the Government undertakes, by Government undertaking, to do these things that are necessary for public defense and trusts nothing to the private enterprise of her citizens. The individual initiative of the Anglo-Saxon race for hundreds of years has reached that point in our civilization when it has invented more, developed more, and done more, and reclaimed more wastes of the world than at any period in our history. Not from remote times have I seen a country that was dominated by government enterprises until but little was left for private enterprise ever succeed in the race with other civilized powers. We are having the Government undertake to do it all, and doing it in the name of "preparedness."

Nitrates, and then $85,000,000 for public highways! Well, if a public enemy comes, and we do not do better on this undertaking than we do on some others, it may be a blessing if the highways are not completed when war comes, because it would enable the enemy to reach the interior and chase us all the faster and reach us for destructive purposes more speedily. [Laughter.] I am not sure, unless we safeguard ourselves better, but that I would rather have bad roads if we get into war. Then, when the enemy reaches our shores he may decimate the coast towns a little, but by the time he reaches the interior, if the roads are as bad as they are in the corn belt, he will be exhausted. It will be a comparatively simple matter to wade in and dispatch him with a club. [Laughter.] This will be a reversion to the primitive form of combat, which will not take so much time to prepare.

There are some other things coming along—new offices, a number of them, and increases in salaries, a number of them. I have not had time so far to figure them up, but in due season I will take an accounting and find out just how the audit stands; I have no doubt but that many deserving patriots—and I am saying that in no invidious sense—will have received the reward that is due them for their laudable conduct.

How many more of these are coming down the way? Nearly all the great departmental bills are yet to come in. A few of them are passed—the Indian appropriation bill, the legislative bill—but a great number are yet to come, and not in a solitary one of these great supply bills for the departments will there be a reduction.

On top of that is a fixed charge proposed by Senate bill 706, for the retirement of judges. You go back to the appropriations and you find about $140,000 being paid out every year now for retired judges, and when this bill gets through nobody can tell what the amount will be. I think some Senator estimated that there would be some 37 eligible for retirement by March, 1917. I do not state that on my own responsibility. I only quote it; but it is evident, Mr. President, that it will add to the judicial item a very considerable expense before we have a chance to repeal it.

What is the excuse for this? This is not political. It is that judges 70 years of age and eligible to retirement under existing law, shall be involuntarily retired by the operations of this proposed measure, just because they are 70 years old. Well, how many Senators do you suppose there are in this body who are 70 years old? Eleven, and as I look them over truth compels me to say that I believe they are the most efficient and wisest of all the 96. They have the best balance wheel, and they can see further ahead, on either side of the Chamber—those that have passed the allotted Biblical age of threescore years and ten—of all the number here. Then from 67 to 69 there are eight, and I should say about the same thing for them. About us giddy young things I will not say anything. If, happily, our constituents permit us to survive and remain in this body, we will learn in time, and by the time we are 70 years of age we will be fit to be real Senators.

This bill is based on the idea that a man is not qualified to do anything after he is 70 years old. Life in the Senate is just about as strenuous as it is on the bench. There is at least one ex-Federal judge sitting in this Senate, and I anticipate that if he would give honest expression he would say that it was just as difficult to carry on a filibuster on a shipping bill as it was to hear a case. [Laughter.]

Still they say when a man is 70 years old he ought to be retired and we ought to add to the expense of the Government some hundreds of thousands of dollars, not for this year but for perpetuity. What for? I do not want to discuss that part of it. I will get to that some other time, if the bill ever comes up again. I have more material laid away on the coals cooking for that when it comes, and it would not be entirely fit to interpolate it at this stage of my comment on the river and harbor bill, because I promised myself I would close at 4 o'clock.

When all these things come marching home in the way of appropriations, see where we are getting to. The Army bill, the Navy bill, the increases that are normal and many increases that are abnormal or Democratic, whichever way you want to put it. They come along in due course, all these great bills; we have yet to hear from all these I have enumerated, one after the other. Not a few million but many million are here. Is anybody's voice ever raised to cut it down? Not until the junior Senator from Iowa raised his protest against this bill has anything ever been heard, not once against these expenditures of many millions of dollars. There is an old saying, "Tell the truth and shame the devil." We do not need to do that. We can tell the truth and let him go his evil way. The Senate ought to take care of these extraordinary expenditures. If I had anything to do with the majority party, instead of increasing I would be joining my voice in an attempt to execute this plank in the Baltimore platform which I have inserted in the RECORD. If I were a real Democratic economist, I would insist on it. I would insist from prudential motives. I would do that because there is an election coming in November, and the American people are a good deal like the Dutch and the English and all the races of north Europe—they are opposed to unnecessary taxation.

A large part of this river and harbor bill is utterly unjustifiable. These great undertakings, calling for millions of dollars, are enterprises which the Government ought not to undertake at its own expense to promote and operate. All the way from the railway in Alaska down to the nitrate plant that will be ultimately by these same considerate engineers, I think, located at Muscle Shoals, on a well-known river—all the way through, when they are aggregated, they will run up into hundreds of millions of dollars of additional expenditure. What will happen? You will have to pay the bill somehow, some time. You will not issue bonds. What else? Taxation. Your revenue bill will exceed anything ever seen in our history.

I will vote against all these appropriations. When it comes to paying the debt, I have been somewhat afflicted with a habit of paying my debts all my life, and I am likely to help you pay your debt, but I will vote against your contracting a large part of the debt. I do not know just what form I will vote to raise the money, but some form. If we contract the expenditures, we must pay them. So we may expect other emergency taxes like that of October 22, 1914. We may expect more taxes on conveyances, on promissory notes, on mortgages and bonds, and various evidences of indebtedness; an increase in income taxes, an excise tax on certain manufactures, inheritance taxes, which will only multiply the burdens saddled upon the States; and I do not regard any State that has grown wealthy as having caused some other State to grow poor. I do not believe in that system of economics. I believe the wealthy States—the men in them who have worked and saved and invested, engaged in commerce, have sailed the sea, have built railroads, have been the competent men to do the great things of the country—have profited accordingly, as they ought to do. I do not think they have subtracted in New York from the wealth of my part of the western country. I think they have only gathered to themselves by legitimate means the capital and merchandise from all over the world. I do not think Chicago has made New Orleans any poorer or that New Orleans has made Des Moines, Iowa, any poorer in that each city has gathered within its borders large banks, large investment establishments, large mercantile establishments, factories, and transportation lines of various kinds.

I go on the idea that the States that have incomes have by the ingenuity, the industry, the thrift, the enterprise, and the activity of their men legitimately made all the wealth that they have accumulated through the years, and they are not to be regarded as malefactors simply because they have incomes. A man of wealth is as necessary as anybody else. It is not the question as to the owner of the wealth, it is the question whether he accumulated it honestly. If he did, I believe in protecting the man with millions as much as I do in protecting the man who has only his homestead and his daily wage for his support.

These are some of the things we are considering here. All of these questions are inseparably connected with the river and harbor bill. It is only one of the many leaks in the Public Treasury, and the more we pass these measures the more taxation will inevitably follow. The tax gatherer will take his toll from us in the full measure of our appropriations. We who are serving our brief time on the stage of public affairs here ultimately will be called to account by those who pay finally these great sums that we are appropriating with scarcely a protest.

## A Protective Tariff Is Necessary for the Country's Prosperity.

### EXTENSION OF REMARKS

OF

### HON. ISAAC SIEGEL,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. SIEGEL. Mr. Speaker, I shall vote against this measure. I shall do so in order to register my most emphatic protest against a rule which forces the passage of a revenue bill designed to raise over $200,000,000 and yet prevents by the shortness of time allowed for amendments any Member not a member of the Ways and Means Committee offering any amendments. I am not going to describe at length the scene which occurred in the House on Monday afternoon, when numerous gentlemen, not members of the Ways and Means Committee, were unable to offer a single amendment, although standing on the floor and doing all in their power to get recognition. The presiding Chairman desired to and made every effort to be fair, as he always is, but he could do nothing except to recognize members of the Ways and Means Committee on account of lack of time. It is important, however, for the people of our country to know that although Congress will probably not adjourn for six weeks at least their Representatives had no opportunity to offer amendments to as important a bill as this.

I was exceedingly anxious to offer an amendment that would not tax our charities, including orphan asylums, hospitals, and religious schools, when they receive bequests or legacies. I propose to change the Federal inheritance-tax law, which is part of the bill, by inserting therein a section which is in the inheritance-tax law of the State of New York making such exemptions. The proposed amendment, which was sent by me to the Clerk's desk, which could not be reached or even put into the RECORD, was as follows:

Amendment offered by Mr. ISAAC SIEGEL:

On page 54, line 19, after the word administered, add the following: "and any property devised or bequeathed for religious ceremonies, observances, or commemorative services of or for the deceased donor, or to any person who is a bishop or to any religious, educational, charitable, missionary, benevolent, hospital or infirmary corporation, wherever incorporated, including corporations organized exclusively for Bible or tract purposes, shall be exempted from and not subject to the provisions of this article. There shall also be exempted from and not subject to the provisions of this article personal property other than money or

securities bequeathed to a corporation or association, wherever incorporated or located, organized exclusively for the moral or mental improvement of men or women or for scientific, literary, library, patriotic, cemetery, or historical purposes, or for the enforcement of laws relating to children or animals or for two or more of such purposes and used exclusively for carrying out one or more of such purposes. But no such corporation or association shall be entitled to such exemption if any officer, member, or employee thereof shall receive or may be lawfully entitled to receive any pecuniary profit from the operations thereof except reasonable compensation for services in effecting one or more of such purposes or as proper beneficiaries of its strictly charitable purposes; or if the organization thereof for any such avowed purpose be a guise or pretense for directly or indirectly making any other pecuniary profit for such corporation or association or for any of its members or employees, or if it be not in good faith organized or conducted exclusively for one or more of such purposes."

I am opposed to a Federal inheritance-tax law unless States shall receive back therefrom the amounts each State has been collecting under its own particular inheritance law, as otherwise they will be losing what they have been obtaining and at the same time such a law will tend to encroach upon and interfere with what has been deemed to be the field of each State for providing for its own necessities. As an example, the great State of New York has been collecting annually over $12,000,000 from such a tax, and if this measure becomes a law the people of the State of New York will have to obtain these $12,000,000 in some other manner and thus a new kind or form of taxation in the State of New York will have to be evolved in order to obtain such tax revenue.

It is useless to deny the fact, nor can it be concealed, that the State of New York is paying to-day the largest amount of revenue, whether it be by income tax, corporation tax, internal-revenue tax, or import tax, and yet, in return, the people of the State of New York are receiving less each year from the Federal Government than ever before. This bill strengthens the principle of the Democratic Party to tax the people of the State of New York more than ever before for the benefit of the rest of the country. One of the striking examples of the way the city of New York is treated is the very fact that for years it has been clamoring and asking for a presentable home for the United States court in the southern district of New York.

Articles in magazines, weeklies, and daily newspapers have been written by judges and others who are interested in the best welfare of the country urging the passage of a bill that would result in the building of a Federal courthouse in New York City that would house the various parts of the court, instead of having same scattered in different buildings and part of it in private office buildings, yet no affirmative favorable action can be had. Men have protested against the conditions that prevail when naturalization hearings are had in New York City, but the judges and clerks can do nothing if the room and space required are not provided by Congress. I have only to call attention to the fact that New York City has the hardest task of any community in the land to obtain appropriations for river and harbor improvements, and then they are niggardly when given, although half of the commerce of the country with Europe passes through that port. I might even call attention to the fact that when appropriations are made for the United States Public Health Service that very little, if any, is given for children's diseases, although millions of dollars are appropriated for good-road movements, flood control, nitrate plants, and numerous public buildings in other parts of the country.

Let me say at this time that the total income tax for the year ended June 30, 1916, was $56,909,941.78 from corporations, and that individuals paid $67,957,488, with New York City contributing one-fifth of the corporation levy and one-third of the individual tax. The following article is from the New York Times:

The figures show that one-fifth of the corporation tax was paid by the first and second New York districts, embracing New York City, and that more than one-third of the individual income tax was paid by residents of those two districts. These two districts paid more than $12,000,000 of the corporation income tax and more than $25,000,000 of the individual income tax, an aggregate of more than $37,000,000, which means that the net income on which the tax was paid in the two New York districts was more than a minimum of $3,700,000,000.

The receipts from corporations and individuals under the income-tax law paid into the Treasury during the fiscal year ended June 30, listed by internal-revenue districts and subject to revision upon analysis of complete returns, were announced to-night as follows:

| Districts. | Corporations. | Individuals. |
|---|---|---|

They tend to prove and establish beyond contradiction that the reasons actuating Representatives from certain sections of the country to favor a Federal inheritance tax and increased income tax are because the people of their States pay practically nothing under such a method of taxation, but, on the contrary, are always deriving tremendous benefits. It will also be found upon investigation and examination of the records of their votes that they favor tremendous expenditures of the money collected from the great States like New York, Pennsylvania, Ohio, and Illinois. They show their views by their acts, namely, voting in favor of every measure that calls for an expenditure of millions of money that directly benefits their particular section of the country, but when it comes to the question of making appropriations for New York immediately the effort is made to satiate us with the cries of economy.

I am also opposed to the amount of duties to be levied upon dyestuffs, as it will not be denied that the gentleman from Connecticut [Mr. HILL] has given the matter more thorough or equal study, as has any Member of the House, and he states most emphatically that this measure will not encourage the manufacture of dyestuffs in this country. I do not pretend to have any personal knowledge on the subject, but we must rely upon the men in the House who specialize upon a particular line of industry. The gentleman from Connecticut [Mr. HILL] has done so, as far as dyestuffs are concerned, and I shall take his views in this matter, namely, that the present measure is insufficient and, as he says, useless, as far as encouraging dyestuffs manufacture in this country.

Mr. Speaker, nothing that I can say can more emphasize the whole present situation regarding the country's views on the dyestuff duties proposed by the bill than what is contained in an editorial that appeared this day in the New York Sun. I read it at length:

IMPORTS IN DRIBLETS NOW—NEXT IN AVALANCHES.

While the central powers of Europe are locked within a ring of steel ashore and afloat, it takes a submarine merchantman to deliver a million

dollar cargo of German merchandise at one of our ports. There may be dozens, there may be scores of these undersea voyagers to follow the *Deutschland's* triumphant course and lay down in our markets dyestuffs and other products of German enterprise and genius. Yet, at the best, what this submarine transportation can put into our markets will be as a few drops of rain spilling out of the clouds into the sea.

But when the armies of the Old World have laid down their arms, when 20,000,000 warriors are 20,000,000 workmen again, when every blockade has been lifted from every port, when the highways of the seven seas are as open and as free as ever they were to all ships under all flags, of the great powers and of the small powers, of the victors and of the vanquished, we shall not have mere submarine marvels seeking our shores by stealthy and crooked voyages, with driblet cargoes of 800 tons. We shall have countless argosies coming from the Germans and the Austrians, as from the British and the French, as from every nation that trades in any craft that can float.

They will be coming from the peoples who are now at peace and from the peoples who are now at war, as they never came before. For with the markets of belligerents restored to the world, the nations that keep out of the war can find there no rich and prosperous buyers, as they found them before August, 1914; just as now they must seek them here.

And the belligerents of to-day, sending their soldiers back to work, must ask of them, after all they have done on the fields of battle, to find, at whatever pains, their livings on the fields of industry. All, as individuals and as nations, will work in whatever way they must work, will do whatever things they must do, will suffer whatever pinch they must suffer, to freight their fleets with products of the farm and the mine, of the mill and the factory, to get our gold—our gold which already is piled high in our public and private vaults as never gold was piled before, as perhaps never again it is to be in the history of the human race. That is what is due when the peace clock strikes, beyond our present imports. And see what they are already.

For the fiscal year ending with June they were, in round numbers, $2,000,000,000. But since the beginning of the calendar year they have been coming at the rate of more than $2,250,000,000. For several weeks they have been rushing in at the rate of more than $2,500,000,000.

Let the war go on and this calendar year will surpass in imports $3,000,000,000. Let the war go on and this fiscal year just begun will run hundreds of millions beyond $3,000,000,000.

And while the submarine merchantman *Deutschland*, bringing her cargo of precious dyestuffs, was feeling her way into the waters of Chesapeake Bay, the present control of the United States Congress was rejecting the Republican proposal to place on dyestuffs an import duty which would save the American industries established since the allied blockade of the central powers, to provide articles which are essential to the industrial existence of this country. And only a few days earlier a great American industry announced that it was scrapping its munition plants and turning out of employment in those plants hundreds of workmen, because the war-order dream of fabulous wealth and endless prosperity is already beginning to fade.

So shall all our war-order business collapse, not after the war, but even as the peace negotiations begin. So shall the cream of our present exports become sour milk. So shall American wage earners troop out of the pay line and into the bread line by the tens and hundreds of thousands. If while we lose the foreign war markets to the extent of hundreds of millions a year there are no peace industries to which they may turn for their bread and butter, because the fleets of all the world will be pouring their cargoes into our markets.

But at Washington, in this as in all other national dangers, there is nothing but "watchful waiting."

How our country views the measure passed on Monday is expressed in an editorial that appeared in the Washington Times, and is as follows:

A MEANINGLESS COMPROMISE.

It would seem that the House Democrats, having decided to adopt a protective policy as to dyestuffs, might well have "gone the whole hog" and placed their rates high enough to give real protection and be of some avail.

As it is, there is sound reason to believe that they have sacrificed their theory of tariff for revenue only, and gone over to the protection side, on the plea of emergency; and yet have not done the thing with the frankness and thoroughness that will produce results. The chemical authorities and financial interests concerned in development of a dyestuffs industry on this side insist that the rates fixed by the Kitchin bill are not high enough to make the proposition safe or attractive.

Having admitted, as they do, that there is necessity for departure into the field of protection, the Democrats ought to have done the thing right. As a matter of politics, they could not afford to admit the inadequacy of their tariff policy, unless they were going to create an industry to which they might point with pride. They will have neither a policy nor an industry, as a result of what they are now doing.

This case illustrates the impossibility of adjusting the program of the party now in power, to the needs of a country in the position that America now occupies. The dyestuffs industry is only one of many that will demand special consideration of a new sort because of war conditions. There is absolute necessity for a broad, liberal, and untrammeled policy of dealing with every industry according to its special needs. That sort of a policy can not be devised if efforts are to be hampered by academic theories which render it impossible to make legislation that shall meet particular emergencies. This dyestuffs provisions is neither fish, flesh, nor fowl; it is neither protection that will build, nor free trade. What is wanted now is a constructive program, all along the line; and that program will not be developed under Democratic ideals of tariff making.

I would have been glad to have voted for a real tariff commission if it had been a separate measure. Nothing that has been said on the floor of this House has convinced me in the slightest degree that the opinion which I have held and frequently expressed should be changed, namely, that a protective tariff that would be fair to American labor, the American consumer, and the American manufacturer would produce the necessary revenue to run this Government. We have at the present time a land that is apparently prosperous, but all of our thinking citizens know and have realized during the past two years that our temporary prosperity is based upon the sufferings and anguish of the wounded and dying in Europe and that words fail to describe the bitter feeling that has been created and must long survive in Europe; that instead of seeking to bring peace amongst the combatants and exerting every effort to obtain it we have shut our eyes and closed our ears to their appeals for peace as long as we could build up a delusive prosperity by selling the munitions of war and by such movement indirectly extending the length of the conflict. I still feel and I express the belief that when this war is ended and those of our people who have been engaged in the sale and manufacture of munitions of war are suddenly thrown out of employment, as they are bound to be, that we will find ourselves in the position which will necessitate the hasty assemblage of Congress, if not in session, in order that a protective tariff can be enacted. We have made our greatest progress when the country has been at peace with the world and when a protective tariff has been upon our statute books. Realization of it will come home to our people when this war is over and war-munition orders shall have been completed and none more to be had. At such a time the name of William McKinley, our lamented President, will come to mind and with it the demand for a protective tariff in such strong terms that Congress will not dare refuse it.

---

**Effects of Democratic Tariff Before War Were Disastrous.**

---

## EXTENSION OF REMARKS

OF

## HON. HENRY I. EMERSON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. EMERSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an article written by Thomas O. Marvin, which appears in the National Republican. The article is as follows:

[From the National Republican.]

EFFECTS OF DEMOCRATIC TARIFF BEFORE WAR WERE DISASTROUS.

[By Thomas O. Marvin.]

In the chief cities of the country the local authorities were appealed to to provide work for the unemployed during the period between the enactment of the Underwood law and the beginning of the European war. John H. Martin, president of the Massachusetts Real Estate Exchange, in a telegram to the Secretary of the Navy urging the granting of a supply ship contract to the Charlestown Navy Yard, said: "One-fifth of labor in this section now unemployed. Contract would assist in relieving some of this condition."

In St. Louis on February 8, 1914, 500 homeless men carrying a banner inscribed "We want work, not alms," and singing "Throw out the lifeline," marched to city hall and appealed to the mayor for appropriations for the relief of the poor. The parade was called the "pageant of the unemployed."

On February 24 Gov. Walsh, of Massachusetts, and Mayor Curley, of Boston, were asked by a committee selected at a meeting of the unemployed to throw open the armories and other public buildings for sleeping purposes, and the distribution of food for those out of work, and to provide work for the idle.

It was not surprising that the administration viewed with alarm the gathering storm and that its spokesmen tried to minimize the appalling evil of idleness and unemployment.

THE COUNTRY'S BROKEN BUSINESS.

As Thomas B. Reed, referring to an earlier epoch of Democratic control of national legislation, said, "They are simply earnest men standing by the broken business of a whole country and trying to tell who destroyed it."

The Democrats promised to "free" business, to strike the shackles from our commerce, and inaugurate an era of tremendous expansion in our foreign trade. The official figures of the Department of Commerce show that our total foreign trade for the first six months of the Wilson-Underwood tariff amounted to $2,267,783,000. For the same six months under the Payne-Aldrich tariff our foreign trade amounted to $2,845,251,000, a loss in six months of nearly $100,000,000.

Exports of leather from Leeds, England, to the United States under the new tariff amounted in three months to $211,000. For the corresponding months under the protective tariff leather exports to the United States from Leeds were only $47,507.

New England's great shoe and leather industry felt the effect of the prevailing depression. Shoe factories were working on short time and a large leather concern near Salem complained of the excessive competition of German tanners. For the first time since their business was incorporated in 1901 they ran at only 75 per cent of their capacity and on only five days a week. They claimed also that they could sell only 60 per cent of their reduced production.

Trade statistics from all directions told the same story of distress and depression. President Wilson said that the cause was "psychological." Mr. Wilson may be a good psychologist, but Vice President Vaucluin, of the Baldwin Locomotive Works, showed that he was a better logician when he declared at a convention in Philadelphia that the reduced tariff lies at the root of the stagnation of business. "If this stagnation continues," he said, "the manufacturers of the United States will have no alternative but to cut wages to European levels." He told the Master Boilers' Association tha tthe average weekly wage in the boiler works of France is $6.20, while in the Baldwin works the weekly average is $15.50. The French product is just as well made as

the American, he said. When the Underwood law was passed, Mr. Vauclain said, the Baldwin works had 18,500 men on its pay roll; six months later 12,000 of them were looking for jobs.

SUMMARY OF DEMOCRATIC EFFECTS.

Let me summarize some of the features which marked our industrial condition during the first year of the Underwood-Simmons law, features which President Wilson called "a state of mind." Among them are 18,280 failures during the year 1914, the worst record in history in number, and exceeded in amount of liabilities only by another fateful Democratic year, 1893. Bank clearings, a fair measure of the country's business, were nearly $20,000,000,000, or 11.1 per cent less than they were in 1912, the last year of Republican administration. Capital invested in new enterprises was less by over $600,000,000 in 1914 than in 1913, and over $700,000,000 less in 1912. Railroad gross earnings declined 4.4 per cent, iron production 25.3 per cent, and copper deliveries 15 per cent. Steel mills were reduced to 40 per cent of capacity 40 per cent of the looms of our woolen mills were idle on December 1, and capital amounting to $41,000,000, invested in cotton mills, was unproductive. The prices of cotton goods at the mills fell off nearly 30 per cent, and the dividends the last quarter of 1914 in 27 New Bedford mills averaged 0.98 per cent; in 38 Fall River mills, 0.96 per cent. The importation of boots and shoes, though still not alarmingly large in amount, more than doubled. The importation of cotton cloths increased 80 per cent. England's exports of woolens to the United States showed the phenomenal increase to 8,219,000 yards in 1914, as compared with 2,190,000 in 1913, while in worsteds England's shipments to the United States were 32,790,000 yards against only 9,218,000 in the preceding year.

The severity of the business depression of 1914 is emphasized by the annual reports of the great steel-manufacturing plants of the country of their operations during the year. The United States Steel Corporation reported for the last quarter of the year the smallest earnings of its career and was forced to pass the dividend on its common stock.

REDUCED EARNINGS.

The showings made by some of these companies in 1914 are an unanswerable argument against the present low-tariff system. Net results of several companies, as set forth by the Daily Iron Trade, were as follows:

The Cambria Steel Co. earned 4.36 per cent on its outstanding capital in 1914.

The Republic Iron & Steel Co. earned 4.12 per cent on its preferred stock, as compared with 12.4 per cent the previous year. It passed its September and December dividends.

The J. G. Brill Co., Philadelphia, car manufacturers, earned 3.47 per cent on its preferred, which compares with 19.63 per cent in 1913. Dividends were reduced in November and February from 1¾ per cent to 1 per cent.

Net earnings of the Republic Iron & Steel Co. for the fiscal year ended December 31, 1914, were equivalent to 4.12 per cent, as compared with $3,101,300, or 12.4 per cent, last year. The Republic Co. experienced its full share of the depression ruling in the iron and steel trade. Chairman John A. Topping, in his remarks to stockholders, stated that the year was decidedly the worst in the history of the company.

Hard as the blow was that fell upon the industries of the country, as manifested in curtailed production and decreased dividends, the most disiressing result of the Democratic tariff was the loss in wages to our workingmen and the appalling increase in unemployment.

The eighth annual report of the State free employment offices of Massachusetts, covering the year ending November 30, 1914, shows that for the first time since 1906, positions offered in the four offices fell off 27.32 per cent in 1914 from the preceding year; the number of positions reported filled fell off 15.13 per cent, the number of persons furnished employment fell off 18.95 per cent, and the number of persons applied for by employers fell off 19.53 per cent.

The offers of positions in the Boston office fell off 36.36 per cent in 1914 from 1913; the number of positions reported filled, 25.02 per cent; the number of persons furnished employment, 29.53 per cent; and the number of persons applied for by employers, 27.83 per cent. For the Springfield office the decrease in the number of offers of positions was 36.04 per cent; in the number of positions reported filled, 25.93 per cent; in the number of persons furnished employment, 31.47 per cent; and in the number of persons applied for by employers, 32.14 per cent. For the Fall River office the decrease in the number of offers of positions was 20.56 per cent; in the number of positions reported filled, 11.35 per cent; in the number of persons furnished employment, 23.90 per cent; and in the number of persons applied for by employers, 25.26 per cent.

The superintendent of the Springfield office reports as follows for the year 1914:

"The business of the Springfield office this year, for the first time since the office was opened, shows a decrease as compared with that of the preceding year."

PARTIAL LIST OF UNEMPLOYED IN GREATER NEW YORK.

From a census of the unemployed, by Samuel A. Stodel, from December 15, 1914, to January 9, 1915:

| | |
|---|---|
| Clothing workers (all branches garment industry) | 125,000 |
| General unskilled laborers | 100,000 |
| Building mechanics (32 trades) | 75,000 |
| Store and office workers (bookkeepers, clerical help, and stenographers | 75,000 |
| Machinists and general metal workers | 30,000 |
| Drivers and general help (wholesale food supply and dry goods distributors) | 25,000 |
| Hotel and restaurant workers | 25,000 |
| Longshoremen | 15,000 |
| Cigar and tobacco workers | 15,000 |
| Domestic help | 15,000 |
| Department store employees | 10,000 |
| Railroad workers (all grades) | 10,000 |
| Printing and allied trades (lithographers, etc.) | 10,000 |
| Shoe workers | 8,000 |
| Laundry workers | 7,500 |
| Millinery workers | 6,000 |
| City employees | 3,000 |
| Firemen (steamboat and stationary) | 3,000 |
| Engineers (steamboat and stationary) | 1,500 |
| Jewelry workers | 3,000 |
| Diamond workers | 700 |
| Total | 562,700 |

The most careful surveys showed that where there was one man unemployed in 1913–14 there were two unemployed during the winter of 1914–15. Without exaggeration, it was conceded by those familiar with conditions that one out of every five breadwinners was unemployed. This unemployment was concentrated in cities primarily, but the small towns and villages also felt the shock and found it necessary to organize relief measures.

An official canvass in Philadelphia showed 200,000 men unemployed; the house-to-house canvass of the Metropolitan Life Insurance Co. of its policyholders in New York, thrifty people ordinarily, gave the basis for an estimate of 357,000 men and women out of work in the entire city. The labor organizations in New York City estimated that 472,102 were either out of work or on part time. In Chicago in January the municipal markets commission estimated 189,866 out of work. A Cleveland survey in December showed 61,000 unemployed. The city charities in Philadelphia estimated that Philadelphia's unemployed numbered 175,000.

NEED OF PROTECTION WHEN WAR ENDS.

Such is the story of the havoc wrought up to the outbreak of the war by the Democratic tariff law which President Wilson signed on the evening of October 3, 1913, with so much complacency and with such great satisfaction.

It did not reduce the cost of living. It did not increase our export trade. It did not bring prosperity to business or employment to our workingmen. It did not yield sufficient revenue for the Government. It reduced a favorable trade balance and sent import figures to an alarming height.

Then came the great European war, which for a time put a stop to the increasing rush of imports. But the channels of ocean trade did not remain permanently closed. Competition from German mills and factories very largely ceased, but England continues to ship her surplus products here. And when the war closes, as close it will, a renewal of competition fiercer than any we have ever known will come upon us.

War orders to an enormous amount have given a temporary stimulus to business, but war munitions can not form a safe or lasting basis of American prosperity.

Before long we shall face a world seeking to recover the ground which has been lost; strained and ruined lands that will seek our markets for means to rebuild their shattered fortunes. To hold our own under the present tariff law will be impossible. National safety demands the reenactment of a protective tariff. Preparedness is as much needed for the economic and industrial safety of our country as it is for military and naval defense. We do not want to employ our Army in the stern business of war, but we do want to employ all of our wage earners in the pursuit of peace. This can not be done under the Democratic tariff policy. It can be done only under the Republican policy of protection, and all patriotic Americans should enroll under the Republican banner and march to the polls, an invincible army, to demand a return of protection and prosperity.

## Address of Hon. John J. Fitzgerald.

## EXTENSION OF REMARKS

OF

## HON. MICHAEL F. CONRY,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 12, 1916.*

Mr. CONRY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address of Hon. JOHN J. FITZGERALD at Madison Square Garden at the mass meeting of the Irish Relief Society on June 10, 1916.

The address is as follows:

ADDRESS OF HON. JOHN J. FITZGERALD AT THE MASS MEETING OF THE IRISH RELIEF SOCIETY, AT MADISON SQUARE GARDEN, JUNE 10, 1916.

Every true American should sympathize with the purpose of this meeting. It deserves the hearty indorsement of every man who makes claim to the faintest trace of Irish blood.

That the recent occurrences in Ireland have aroused the people of our liberty-consecrated country is manifested in innumerable meetings in every section of the land, culminating in this great gathering of the friends of Ireland.

The awakened conscience of the people of our imperial city will be given expression to-night. A message will go hence to gladden the hearts of Irishmen the world over. It will be in denunciation of tyranny and of oppression; it will be an irresistible demand to the nations for justice for the Emerald Isle; it will be in sympathy with the never deadened aspirations of the Irish people for freedom and for national independence.

The events of the past 20 months apparently have dulled our sensibilities. War—horrible in execution and unparalleled in destruction—has devastated such vast expanses of territory that death has seemed to have lost its terror. Because of almost incredible losses of life in unceasing conflict, calamities which heretofore would have shocked mankind now make but little impression.

The world is quickly reconciled to what must be. Unable to fathom the situation, it patiently awaits the end. But woe to the nation that under such conditions acts upon the belief that the pulse of civilization is ever so feeble as to fail to quicken when stimulated by the mighty appeal which the spirits of noble patriots, who have been ruthlessly butchered, make for vengeance and for justice.

A dispassionate consideration of the events which have led to this gathering, and to many similar ones, mystifies and shocks the impartial student. The situation can only be understood by those whose knowledge of Ireland's woes is comprehensive, and whose confidence in British cruelty and injustice can not be shaken.

Within two years Ireland has witnessed two revolutions. In the earlier one troops threatened to mutiny, high officers of the army gave up their commissions, civil officials counseled armed resistance when Parliament proposed to enact a law which in a slight degree only would gratify the yearnings of a people who for countless generations had been contending for the precious right to govern themselves.

Military forces were organized, equipped, and drilled. Their purpose was not to maintain the law and to sustain the Government in the hour of peril; the object of their efforts was to resist the law and to defy the Government.

For such acts of treason punishments were determined by the Imperial Government.

Meanwhile, however, the present world war had begun. The soldier who had defied his superiors and relinquished his commission was punished by being put in command of the British forces in the field; the civilian official who had openly advocated armed resistance to the duly constituted authorities was punished by being elevated to the cabinet to aid in preserving the Government whose authority he had defied; the soldiers who had armed and drilled to make rebellion effective were punished by being permitted to retain their arms and to remain at home, while an insistent demand was being reiterated that those of their countrymen against whom they had prepared to battle should supply England's needs on battle lines in foreign lands.

Such action seems incredible. Had the British Government sought to reward, rather than to punish, those threatening rebellion its conduct would be comprehendable. It can only be explained by the fact that, although ostensibly directed against the Government, the rebellion in reality was in hostility to the Irish people and tended to prevent any action beneficial to them and to their native land.

Subsequently, and quite recently, there was another revolt. Mayhaps doomed to partial failure from the beginning, its blood-drenched story has horrified the world. It adds another blackened page to Ireland's unhappy history. It swells the demand arising from every quarter of the globe, which inevitably will become irresistible, that the nations procure for Ireland the rights and prerogatives to which every liberty-loving and enlightened race are entitled by the dictates of justice, humanity, and of liberty.

In many respects this latter uprising was unlike the previous one. It was not widespread nor publicly agitated. It was projected by a comparatively small group of men of extraordinary culture and talent. Scholars, artists, poets, men of lofty ideals and ennobling motives overcome by uncontrollable emotion launched this latest revolt against British misrule. Unusually gifted, had their talents been utilized to their own enrichment, they could have attained ease and comfort and the plaudits that follow the achievement of distinction in the arts or in the literary field. But single minded in purpose, their ambitions were unselfish and of a noble character.

Scholars all, they were well versed in Ireland's sad story. They knew every page of the recital of over 700 years of unparalleled tyranny and of the bloody oppression to which their beloved land had been subjected. They were familiar with the long list of vicious laws which had been enacted to destroy Irish nationality, to still the patriotic beats of Irish hearts, to make servient and subordinate the Irish race. Their souls were embittered by the memory of their country's wrongs; their hopes were fatally encouraged by the justice of their cause. They saw their countrymen successful, prosperous, respected, and honored in every foreign land; while in their native isle they were constantly diminishing in numbers and being embroiled in ever-increasing difficulties.

The blight of misrule and of alien government had long cursed their country. Unrivalled harbors were empty. Mighty rivers upon which had been borne the commerce of an empire now flowed idly to the sea. Wooded hills had been denuded, fertile fields lay fallow, the hum of industry was hushed, and agriculture was but a pretense instead of a blossoming reality. But one harvest was desired by England. To feed alien cannon in foreign lands she sought the healthy progeny of the intrepid Irish race.

But the Bishop of Limerick checked that harvest. His clarion declaration that "this is England's not Ireland's war" echoed and reechoed throughout the isle, and Irishmen declined to squander their precious lives to perpetuate a Government that to their land signified misery and misrule.

With the knowledge of all of those facts crowding fast upon them, is it to be wondered that a revolt was launched by patriotic men of pure and lofty motives, who were idealists as well as practical men?

The end was speedy; the sacrifices were deplorable. Those who participated conducted themselves in so heroic and manly a manner as to win the admiration of all men.

Realizing the odds in the strife, the contest ended and the principals surrendered. Then came the shocking and horrifying feature of the revolt. It was not a time for bloody recrimination. England needed sympathy and material aid from every possible place in civilization. The very continuance of the empire was trembling in the balance, and it was an exceptional opportunity to win the gratitude rather than to accentuate the animosity of Irishmen both at home and abroad.

The leaders of the revolt were not desperate criminals nor evil men. They were among the most cultured of a gifted race, and their action was prompted by the loftiest motives of patriotism.

But the leopard can not change its spots, nor can England deviate from its historic policy in dealing with Ireland. Those men were denied the protection to which the usages of civilized nations entitled them. Without trial, or with secret and inadequate hearings, they were condemned and destroyed, sacrifices, perhaps, to misguided zeal and victims undoubtedly of incompetent government.

But those heroic men have not died in vain. Skeffington and the Pearses, Clark, MacDonagh, Plunkett, the Kents, and those other martyred patriots form a new constellation which will shine undimmed forever in the firmament of liberty. Their virtues will inspire generations yet unborn to noble deeds for their native land and their names will be inseparably linked with Emmett, Meagher, and Mitchel in the memories of a grateful and devoted people.

Their deaths have stirred mankind more deeply than the destruction of fleets and the decimation of armies. In their untimely taking off they may have rendered a most valuable service to Ireland. They will have done so if the movement resulting will promote the realization of national independence for their native land.

In palliation of their destruction it is asserted that their deaths were essential to maintain British authority in Ireland. If government can be maintained only by the slaughter of the most gifted of a heaven-kissed race, it is unworthy to exist. Resistance to such government is not only justifiable but may become mandatory. A whole people can not be expected to live happily, contentedly, and loyally under such authority, nor can such conditions much longer survive the indignation of civilized men.

As men of Irish birth, of Irish blood, or of Irish sympathies we join to-night in denouncing the British Government in the forum of enlightened Christian public opinion for its long-continued and ever-increasing misdeeds and misrule in Ireland. In the name of humanity we demand an immediate change. Existing conditions are intolerable; they are irreconcilable to the elements of Christian civilization. Ireland has too long endured burdens unjust, oppressive, and indefensible.

We appeal to history to justify our assertion that Great Britain's pretended protection of weak nations is a hypercritical mask to cover her selfish and aggrandizing purposes. Her heavy hand has never been placed upon any land or any people except for her own enrichment at the expense of her victim. Her imperial banner is symbolical of tyranny and of oppression. Wherever it floats in foreign lands subject and unhappy people exist.

It was driven from our own soil at the cost of many precious lives and after years of heroic effort. We insist that its blighting influence be withdrawn from Ireland, so that unrestrained by alien control the Irish people may assume that independent position among nations to which by the laws of nature and of nature's God they are entitled.

The close of the present war will result in many adjustments of the existing relations of peoples to one another. Neutral nations will not remain aloof while questions of momentous importance to every people are being determined. Ireland is entitled to be heard in her own behalf when the day of settlement arrives. We voice to-night a demand that she be given representation. It will not suffice to have her interests guarded by her inveterate enemy and oppressor. She does not wish to be represented by those who have profited by her miseries. Men of the spirit and with the ideals of her recently martyred sons must be her spokesmen. Not as a privilege, but as an unquestioned right, is this demand made. Ireland is entitled to determine her own destiny. England has tried to shape it and has failed. Distress and disaster have marked her over 700 years of misrule. It must not, it shall not, continue forever.

Voicing the manifest desire of Irishmen, our action to-night should be far-reaching in results.

We should send a message to the nations that will be heard above the thunder of battle and that will reecho in the hearts of men long after the guns of war are stilled, and, being based upon reason rather than force, be more potent than armed forces in bringing long-delayed justice and national independence to the Emerald Isle.

## River and Harbor Appropriations.

# SPEECH

OF

# HON. LAWRENCE Y. SHERMAN,

OF ILLINOIS,

IN THE SENATE OF THE UNITED STATES,

*Monday, May 22 (legislative day of Thursday, May 18), 1916.*

The Senate had under consideration the bill (H. R. 12193) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. SHERMAN. Mr. President, to this amendment, submitted by the committee on May 9, I offered an amendment to make more definite the act referred to of the general assembly of the State named. The first part of the amendment adds, in line 25, after the word "assembly," the words "approved June 18, 1915." This is done for the purpose of specifically naming the act, so that there can be no misapprehension about the law referred to. On line 2, page 32, after the word "act," I have offered the following amendment:

The Interstate Commerce Commission is hereby given power to fix reasonable charges and tolls for the use of and navigation upon the waterway created under said act of the general assembly of said State in all interstate transportation.

This latter amendment was for the purpose of meeting an objection made by Gen. Kingman, the Chief Engineer. At the time that the State applied for a permit for this improvement such proceedings were had that finally it reached the Chief Engineer. He refused the permit, alleging, among other reasons, the fact that this 65-mile improvement between the lower end of the Sanitary District Canal and the Illinois River or its headwaters, the lower end of which would terminate at La Salle, a point on the Illinois River, would give an undue advantage to the State over interstate commerce. He went on to elaborate it by showing that there was a 1,400-mile waterway reaching from Chicago to the Gulf of Mexico, with New Orleans as the terminal at that end. He further took occasion to say that in the case of traffic going from New York City by way of the Hudson River, the Erie Canal, and the Great Lakes, together with the Sanitary District Canal and by way of Chicago, this 65-mile stretch of improvement would constitute a connecting link between New York Harbor and the Gulf of Mexico. He argued in that opinion that the act of the general assembly which sought to impose reasonable tolls upon transportation for this 65-mile link was in effect a power that would be vested in the State, if granted by the War Department, to charge unreasonable tolls, to enable them to levy undue charges upon the 65-mile link of the carriage; that they might make it so intolerable that it would be unfair, and it would be a burden on interstate commerce passing that way.

To avoid any question of that objection made I have added this amendment, which places the control of the transportation through this 65-mile link in the hands of the Interstate Commerce Commission. There is no objection from any source, as I understand, to this amendment as far as the State authorities or the city of Chicago or the Drainage Canal people are connected with it. The governor of Illinois was here only a short time ago, and this amendment meets with his approval. I am sure that it furnishes a complete protection to all shippers who have occasion to use the proposed waterway. There can be no advantage taken, with the Interstate Commerce Commission having jurisdiction of every interstate shipment, with the specific power vested in it to regulate the rates. So I have offered this amendment for the purpose of obviating that portion of the Chief Engineer's objection.

The only other objection of any consequence in his opinion was the claim by the State, set out in this act of the General Assembly, that the water power to be developed should belong to the State, and that the income to be derived from it should pass into the State treasury. That, as I understand, is a question in regard to which there is some difference of opinion. The gentlemen here and in the House who supported the water-power bill were rather inclined to the opinion that the gravity fall of water generating power might belong to the General Government in all of the rivers where the Government has control. I do not care to argue that at any great length. Senators have expressed their opinions on it. In a river that lies wholly within a State, where it is connected, though artificially, with other bodies of water in such a way that it becomes a part of an interstate carriage, it is conceded that the War Department, acting on behalf of the Government, has the power to regulate, and does regulate navigation. When that is conceded, I think we have gone to the limit.

I do not understand that the Government has anything to do with a waterway of either character, either within a State or an interstate one, except to regulate navigation. It derives that from the power given in the Constitution to regulate commerce. When the power that is generated by the water in this proposed improvement is made available, it seems to me that it belongs to the local owner or authority. I know of no more reason for taking the power away from the State, if it has the riparian rights, than to take it away from a private owner. In all the older States the bank, especially where the common law prevails, is owned as a matter of riparian right as much as the dry land itself is owned. There is no exclusive right vested in the Government simply because it regulates navigation. Navigation uses water merely as a medium for floating vessels. It uses it for no other purpose. It could not be said that the Government has power to take water out of the Illinois River and convert it into steam, at least to the extent of materially decreasing the volume of water. It has, I think, nothing to do with the water power except to see that in the development of the water power there is no such obstruction placed within the navigable portions of the river as would impede the ordinary traffic going that way.

So it seems to me that this portion of the Chief Engineer's objection is one that is not well taken, in the first instance; and in the other the law department of the Secretary of War had passed on it adversely to the Chief Engineer. The legal question was not referred to the Chief Engineer; and, without seeking in any way to reflect upon his knowledge, I do not understand that he is a great legal authority, or that his opinions upon questions of that kind possess any expert or technical value. His opinions on that point would be entitled to no more weight than any other layman's opinions, however much weight would be attached to them on a question of engineering. So I offered this amendment to cover one objection made, and have referred to the other in a way that, while it is very brief, I think covers all that I care to say on that subject. The objection that is made—and I will anticipate that much of it—by certain shippers and manufacturers of Michigan and the upper Lake region is based upon the lowering of the level caused by the diversion of the water through the sanitary district channel. I will say now what I wish to say on that question, reserving whatever right I may have, if any argument should be offered by the Senator from Michigan [Mr. SMITH], to make additional observations later on.

The sanitary district channel, which was begun about 1889 or 1890, is practically completed. It has already expended, or will expend, raised by taxes upon the assessed value of the property within the district, about $100,000,000, in round figures, when the enterprise is completed. This includes some additional expenditures that are not yet actually made; but by the time the fiscal year shall have closed in 1916 about $100,000,000 will have passed into this improvement. That includes everything—not only the excavation of the channel, but the bridges and the improvements and all of the work that has been done to bring it into its present state. This improvement, therefore, is not one of a very few hundreds of dollars. It is more important than some of the larger improvements covered by the items in this bill. This bill in its amended form carries about $42,000,000 for the whole United States, and we have already expended nearly two and a half times as much for this single improvement.

In addition to that, we propose to expend $5,000,000 more for the purpose of completing the connection of the lower end of the sanitary district channel with the Illinois River by a 65-mile improvement that will carry it to the point where profitable traffic can be had over the Mississippi River, and in that way to the Gulf. About the time this improvement was begun, some question was raised about the diversion of water from Lake Michigan. That was taken up later, before the water was turned in through the Chicago River. The controlling works were completed. The sanitary district authorities came to the War Department and presented their petition. The records that are preserved here show the character of the petition, together with the permit that was granted at that time. Such

proceedings were had that finally about 10,000 cubic feet per second for a 24-hour day were permitted to be diverted from Lake Michigan and carried through the Chicago River and the district channel, finally reaching the Illinois. No objections were made at the time that seemed to possess much weight. Some protest was made by the Canadian authorities. Some protest came from the upper Lake country. Certain manufacturers, certain steamboat lines, and some shippers who had access to certain markets by way of the Great Lakes made their complaints. They were duly considered by the War Department.

Mr. CLAPP. Mr. President, will the Senator pardon an interruption?

The PRESIDING OFFICER (Mr. THOMPSON in the chair). Does the Senator from Illinois yield to the Senator from Minnesota?

Mr. SHERMAN. Yes, sir.

Mr. CLAPP. Has the Senator at hand a copy of the act of the Legislature of Illinois referred to in his proposed amendment?

Mr. SHERMAN. Yes, sir. I have a copy. I will get it to the Senator at my earliest convenience.

Mr. CLAPP. All right.

Mr. SHERMAN. The Canadian authorities, together with those of the upper Lake region, filed a very lengthy petition or protest. Considerable expert testimony was heard. A large part of that is preserved, or a synopsis of it, giving the material points. The War Department, after due consideration of these protests, overruled them, and permitted the diversion of the water. At the time the first protests were made, my recollection is that only about $42,000,000 had been expended by the sanitary district. After the water was permitted to be turned in, the sanitary district authorities gained confidence. They considered that their rights were secure. Additional taxes were levied. Some additional legislation for the enlarged taxes was had from the general assembly of that State, and they proceeded to the completion of these improvements in the way that was intended, which will result in the expenditure, as I have said, of about $100,000,000.

The people inhabiting the area concerned, all the property holders paying taxes, contributing this improvement, now aggregate three million, including all the population of the city of Chicago. There is a certain population outside, in that part of the district which is not embraced in the territory within the city limits.

To this great expenditure there are precisely the same objections that were made in the protests presented here a few days ago by the Senator from Michigan and found in the CONGRESSIONAL RECORD. After all that was done orders were had from the War Department and the improvement proceeded.

Now, here is the larger question. It is not the matter merely of a single improvement like the St. Clair River, and that is the reason why I referred to it a few moments ago. It is a series of improvements. It is the whole system of improvement connected with the Great Lakes.

It is supposed that the upper Lake region has different reaches and is affected in a different way by the proposed improvements than the lower Lake region. As a matter of fact, all of them are identical. The whole series of lakes and connecting waters are an entirety. It goes even farther than that. The Niagara River is the outlet into the last of the Great Lakes on the east or northeast, and the ultimate outlet of the Great Lake system through which its waters reach the Atlantic Ocean; the ultimate outlet of all their waters is the St. Lawrence River. This is largely a Canadian waterway. A great deal, it is true, of our water-borne traffic goes that way from the parts of the country immediately tributary to it; but the larger question, Mr. President, is merely one that is raised by the protest filed by the upper peninsula shippers and places interested in those harbors. It is a question as to which way this transportation will go.

Originally the St. Lawrence River had no such depth even where tidewater came up from the ocean to carry vessels that are now reaching as far above as Montreal, Canada. I have some of the improvements made here showing the increase in depth. Montreal is up the river, the last of what may be called the ocean ports. Quebec is another. These have commerce necessarily with the Lake system. Some of the Great Lakes carry their water-borne freight that way. They reach the Atlantic Ocean by going over the St. Lawrence River.

Commerce has no national boundaries. It does not make any difference as far as the people living within the United States and that part of the country are concerned, if they can have an advantageous water freight they are not concerned in the improvement down the Mississippi Valley way.

So it resolves itself into a question whether the Canadian authorities with their increased facilities for traffic in Montreal, Quebec, and Toronto and other points where their shipping might be diverted if the Mississippi Valley way were open, protest in order to protect their waterway system; it is not surprising that the Canadian Government has come to the War Department here. It is no wonder that they have filed their petition and that numerous hearings have been had, and that every effort made to open this waterway from Chicago to the Gulf has met with the objection of the kind filed by the gentleman of the upper lake region and by the Canadian authorities. The basis of their opposition is their effort to divert traffic that would naturally follow the Illinois and Mississippi Valleys south through Chicago and New Orleans. If they can block the Illinois waterway it sends trade their way. Their efforts, if successful, will be at the expense of Chicago, St. Louis, and the Mexican Gulf ports. This is the real question.

It is an old controversy. It began more than 20 years ago. They have heretofore been overruled when they sought to restrain the sanitary district authorities from diverting enough water through the channel to answer its purposes. In all those years these improvements have gone on.

Here we find that renewed. I would pay a little attention to the protest here in the CONGRESSIONAL RECORD in the last few days if I did not know that the Canadian authorities are joining with the ones who actually instigated these protests to be filed. It is much better to make the protest in the name of citizens of the United States than it is for the British-Americans to come here and do so themselves.

So the contest is not one merely, as it appears, of a few amendments or improvements of this kind. The contest is whether the great portion of water-borne freight shall continue to go east and northeast through the Great Lakes, and a large part of it through Canadian waters, through Canadian ports by way of the Lakes and the St. Lawrence River. The question is whether that system of transportation shall prevail or whether the improvements that are sought to be made here in this 65-mile link in the waterway from Chicago to the Gulf of Mexico shall be permitted, with the consequent change in traffic for the benefit of the Northwest country. That is the larger question. It is the vital one to the people of Chicago, not only to those people but to every section that is tributary in the Mississippi Valley to the waterway improvement.

I wish to repeat here what I said in connection with these matters raised by this protest, that, if there is anything in inland-waterway transportation, here is the most favorable plan in which to make the test. With 1,400 miles, with all of it completed except a 65-mile link, if there is anything in a waterway, here is the place to make the experiment. It is to be made not at the expense of the Government; it is to be made at the expense of the State that seeks to fill in the sole remaining link that joins the Great Lakes with the Gulf. Improvements that are covered by this amendment, as the St. Clair River, the Senator from Michigan [Mr. SMITH] is somewhat skeptical as to whether it has anything to do with the levels of the upper lakes. I do not want to read at great length. I shall ask later on to put such portions of it without reading in the CONGRESSIONAL RECORD as I think material. But I am quite anxious to consider here the lake level in connection with just such improvements as that contemplated by the St. Clair River appropriation of some $83,000.

All the connecting waters of the Great Lakes were just like other waterways. Their natural condition at times has been changed and required improvement. These improvements were made. These narrow straits between the lakes are changed very materially, both in depth and width. I want to call attention particularly to some of them:

The improvement of the St. Lawrence River for a depth of 27.5 feet produced a local lowering of water level of about 1 foot at Montreal. (Rept. United States Deep Waterways Commission, 1896, p. 28.) These channels are now broader and 30 feet deep, and are in process of deepening to 35 feet, and sensible lowering must follow.

A permanent lowering of the levels of Lake Michigan-Huron by about 1 foot, and occurring in the years 1886–1889, is stated by the Board of Engineers on Deep Waterways in the report of 1900. Some 0.20 foot of such lowering is attributed to the improved channels between the head of St. Clair Flats Canal and Lake Erie, and 0.7 foot to the enlargement of the channel into St. Clair River from Lake Huron, by which the steep declivity at this locality has been cut in two. The facts and conclusions in the premises are set forth on pages 37, 83, and 280.

The stages of water have been kept and tabulations preserved showing the effect of these improvements.

A trial examination has been made of the tabulation of volumes and stages of water, 1860–1907, in the report on the regulation of Lake Erie by the International Waterways Commission, 1910. No systematic relation of slope to volume is disclosed for St. Clair River. The months of October and November are assumed to represent most nearly all conditions entrain, and the average declivity for these two months

compared for similar volumes indicate a material change culminating about 1890. The average for these two months for nine years prior to 1891 gives a fall of 6 feet from Lake Huron to the head of St. Clair Flats Canal and a volume of 204,455 second-feet, while the average for 12 years subsequent to 1890 gives a fall of 5.32 feet and a volume of 197,666 second-feet. The difference is 0.68 foot and the volumes are sufficiently close to eliminate material variations due to such cause. The five years of lowest volumes—all since 1890—average 184,880 second-feet and a fall of 5.12 feet.

* * * * * * *

An actual interference with the levels of the Lakes has occurred through obstructions placed in the outlet of Lake Superior at the controlling point of the rapids of the St. Mary's River, by the International Bridge and the water-power companies, in 1888, 1892, and 1901, and the effect of such obstructions seems to have escaped notice for a number of years. The subject matter is discussed at length in the report of the International Waterways Commission, for 1910, on the regulation of Lake Erie.

There is much more of this that is material that I shall not take time to read.

Oscillations in lake surface are so variable and continual that changes in lake level are recorded by monthly means rather than by the actual daily and semidaily observations, as in the case of river stages. These oscillations are due to winds and barometric changes, and are frequently periodic, as seiches, with intervals of minutes or hours, but all diminish after the exciting cause. Such fluctuations sometimes attain a considerable range, they are irregularly persistent and unforeseen, and they are never quite absent.

Lake currents are due to winds and barometric changes and vary therewith in direction and amount, and there are counter currents in deep water.

* * * * * * *

Changes in lake level—

I am still reading from "Lake Diversion at Chicago," a volume published by the Sanitary and Ship Canal authorities, and I am reading now from page 67, having previously read from pages 63, 64, 65, and 66. I am now following on page 67:

Changes in lake level occur with the seasons, in the years and through a cycle of years, and are primarily due to differences in precipitation and evaporation, and these are conditioned by other meteorological causes, and by soil texture and vegetal cover as affecting amount and rate of run-off. The several Great Lakes are equalizers of the flow in their outlets and thus distribute the effects of water supply and evaporation in streams of more or less uniformity of flow. Changes of level are recorded by monthly means, as noted above, and some of the leading facts are exhibited in the following tabulation.

Here follows all those levels recorded during those years.

I now read from the same volume on page 47. It refers to the condition in the upper Lakes:

The volume of water stored in the upper Great Lakes would supply the average rate of flow at Niagara for about 150 years, or would provide for a flow of 15,000 second-feet at Chicago for over 2,000 years.

The normal precipitation for the several Lake basins was deduced in 1899 by the United States Weather Bureau from the records in the United States and Canada, and these determinations have since been used in the bulletins of the United States Lake Survey, and are as follows: Lake Superior, 28 inches; Lake Michigan-Huron (average), 32.5 inches; Lake Erie, 36 inches, and Lake Ontario, 33 inches.

This study disclosed the fact—

Here is the reason the Canadian authorities make complaint. It is a condition imposed upon them by nature:

This study disclosed the fact that the precipitation on the Canadian watersheds was generally less than that for the watersheds in the United States.

The relation of precipitation to water supply and outflow has not been comprehensively studied, but several partial investigations have shown their mutual dependence.

Another material fact, Mr. President, is the elevation of the Great Lakes above the sea level. It is very material, when this proposed deepening of channels like the St. Clair River and other connecting waters of the Great Lakes are concerned, to remember that the wider and deeper these channels are cut the greater the flow of water and reduction of the upper lake levels.

Lake Superior is 600.68 feet above the sea level; Lake Michigan and Lake Huron, 579.60; Lake Erie, 571.35; Lake Ontario, 244.53.

These figures indicate the drop of the water and the tremendous volume that, with a comparatively small enlarging of the width and depth, may be carried from the upper to the lower lake region. An improvement like that in St. Clair River will carry out a vast quantity of water, and with other improvements ultimately added will make the changes of the lake level that are complained of in the protest presented here some days ago.

On page 124 of the same report I read, concerning the effect of the diversion of water through Chicago into the sanitary district channel:

The levels of the several Great Lakes, from a variety of causes, change continually through limits measured by inches and by feet. Causes are so diverse and so complexly conditioned, and are so incapable of fore valuation that the order, time, and measure of phenomena can only be forecasted in the most general way, if at all.

And on page 125:

The record exhibits average and aggregate effects of prior causes. Lake levels are known as compared by monthly means which mask local or temporary effects. From the Niagara River discharge measurements, 1897-98, 72 in number, 28 were eliminated as too erratic for expert analysis in the determination of the discharge formula. Such illustrations caution against attaching to conclusions greater certainties than pertain to the underlying data.

After stating all the causes that contributed to the discharge of water from the upper lakes by the improvement made by connecting waters, they come to the conclusion that the discharge even of 10,000 cubic feet per second has not contributed to lower the level of any of the points complained of to exceed fifty-two one-hundredths of an inch.

The complaints made by the signers of this protest and in former years by most of the residents of the upper lakes and by the Canadian authorities are caused by improvements in navigation, with which the sanitary district enterprise has nothing whatever to do.

Another objection that has been made is that it diverts the water until eventually it will affect the flow of Niagara Falls. This has been provided for with other points and by treaty in 1909. I will not stop to read the portions of the treaty that refer to it, but ask leave to insert such parts in the RECORD as are material.

The PRESIDING OFFICER. Without objection, it will be so ordered.

The matter referred to is as follows:

TREATY RELATING TO BOUNDARY WATERS AND QUESTIONS ARISING ALONG THE BOUNDARY BETWEEN CANADA AND THE UNITED STATES, SIGNED AT WASHINGTON JANUARY 11, 1909.

His Majesty the King of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, Emperor of India, and the United States of America, being equally desirous to prevent disputes regarding the use of boundary waters and to settle all questions which are now pending between the United States and the Dominion of Canada involving the rights, obligations, or interests of either in relation to the other or to the inhabitants of the other, along their common frontier, and to make provision for the adjustment and settlement of all such questions as may hereafter arise, have resolved to conclude a treaty in furtherance of these ends, and for that purpose have appointed as their respective plenipotentiaries:

His Britannic Majesty, the right honorable James Bryce, O. M., his ambassador extraordinary and plenipotentiary at Washington; and

The President of the United States of America, Elihu Root, Secretary of State of the United States;

Who, after having communicated to one another their full powers, found in good and due form, have agreed upon the following articles:

PRELIMINARY ARTICLE.

For the purposes of this treaty, boundary waters are defined as the waters from main shore to main shore of the lakes and rivers and connecting waterways, or the portions thereof along which the international boundary between the United States and the Dominion of Canada passes, including all bays, arms, and inlets thereof, but not including tributary waters which in their natural channels would flow into such lakes, rivers, and waterways, or waters flowing from such lakes, rivers, and waterways, or the waters of rivers flowing across the boundary.

ARTICLE 1. The high contracting parties agree that the navigation of all navigable boundary waters shall forever continue free and open for the purposes of commerce to the inhabitants and to the ships, vessels, and boats of both countries equally, subject, however, to any laws and regulations of either country, within its own territory, not inconsistent with such privilege of free navigation, and applying equally and without discrimination to the inhabitants, ships, vessels, and boats of both countries.

It is further agreed that so long as this treaty shall remain in force this same right of navigation shall extend to the waters of Lake Michigan, and to all canals connecting boundary waters and now existing which may hereafter be constructed on either side of the line. Either of the high contracting parties may adopt rules and regulations governing the use of such canals within its own territory, and may charge tolls for the use thereof but all such rules and regulations and all tolls charged shall apply alike to the subjects or citizens of the high contracting parties, and the ships, vessels, and boats of both of the high contracting parties, and they shall be placed on terms of equality in the use thereof.

ART. 2. Each of the high contracting parties reserves to itself, or to the several State governments on the one side, and the Dominion or Provincial Governments on the other, as the case may be, subject to any treaty provisions now existing with respect thereto, the exclusive jurisdiction and control over the use and diversion, whether temporary or permanent, of all waters on its own side of the line which in their natural channels would flow across the boundary or into boundary waters; but it is agreed that any interference with or diversion from their natural channel of such waters on either side of the boundary, resulting in any injury on the other side of the boundary, shall give rise to the same rights and entitle the injured parties to the same legal remedies as if such injury took place in the country where such diversion or interference occurs; but this provision shall not apply to cases already existing or to cases expressly covered by special agreement between the parties hereto.

It is understood, however, that neither of the high contracting parties intends by the foregoing provision to surrender any right which it may have to object to any interference with or diversions of waters on the other side of the boundary the effect of which would be productive of material injury to the navigation interests on its own side of the boundary.

ART. 3. It is agreed that, in addition to the uses, obstructions, and diversions heretofore permitted or hereafter provided for by special agreement between the parties hereto, no further or other uses or obstructions or diversions, whether temporary or permanent, of boundary waters on either side of the line, affecting the natural level or flow of boundary waters on the other side of the line, shall be made except by authority of the United States or the Dominion of Canada within their respective jurisdictions and with the approval as hereinafter provided, of a joint commission, to be known as the International Joint Commission.

The foregoing provisions are not intended to limit or interfere with the existing rights of the Government of the United States on the one side and the Government of the Dominion of Canada on the other,

to undertake and carry on governmental works in boundary waters for the deepening of channels, the construction of breakwaters, the improvement of harbors, and other governmental works for the benefit of commerce and navigation, provided that such works are wholly on its own side of the line and do not materially affect the level or flow of the boundary waters on the other, nor are such provisions intended to interfere with the ordinary use of such waters for domestic and sanitary purposes.

Mr. SHERMAN. I make this general observation on the treaty between the United Kingdom of Great Britain for and on behalf of the Dominion of Canada and the United States, that it is expressly reserved, in the part relating to the diversion of water from the lakes that lie on the border line between the two countries, that it shall not affect any possible project or any improvement that has been made at the time. This treaty was entered into between the two countries in 1909. The Sanitary District Canal was created by the Illinois Legislature in 1889 and had been in existence 20 years before this treaty was concluded. In 1909 the sanitary district improvement was practically done. In the intervening seven years between then and now it has only been the completion of plans that were then formed or improvements that were then partially made. It was an existing improvement at the time the representatives of the two countries met, and it is idle to think for a moment that these authorities did not have in mind an improvement at that time that had over $40,000,000 expended and that since then carried out the identical plan, having expended the whole by the end of the fiscal year—$100,000,000 in round figures.

No specific mention is made, it is true, of the sanitary district improvement in the treaty of 1909, but there were a number of those improvements all along the lake region on the borders of the United States. They have been constantly made for nearly a hundred years. No attempt was made to enumerate in the treaty these different improvements. It would have led to an enumeration of detail and to a length of treaty that is not permissible. So in lieu of them there were certain sections in the treaty that related to the improvement or diversions of water in projects then existing, and by that general clause matters like the sanitary district were covered.

So, taking these matters altogether, Mr. President, I submit that this amendment ought to be adopted, and especially in view of the amendment to the committee amendment that I have offered on the floor of the Senate, placing it in the hands of the Interstate Commerce Commission to regulate these rates.

## A Low-Tariff Commission.

### EXTENSION OF REMARKS
OF
### HON. HENRY I. EMERSON,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,
*Monday, July 10, 1916.*

Mr. EMERSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an article from the American Economist.

The article is as follows:

A LOW-TARIFF COMMISSION—THAT'S WHAT IT WILL BE IF THE WILSON-RAINEY BILL IS PASSED.

[From the Textile World Journal.]

Although the Rainey tariff-commission bill has not yet passed either branch of Congress, politicians are busily engaged in selecting their candidates for the six $12,000 plums borne by the commission and in discussing the probable appointees. The business and quasi-business organizations which played such an important part in forcing this bill upon Congress, and which should be well aware that its personnel is quite as vital a matter as the character of the measure itself, are apparently indifferent, for the only candidate prominently mentioned who might be considered representative of business interests is John H. Fahey, of Boston, a former president of the United States Chamber of Commerce. According to Washington newspaper correspondents, the others "prominently mentioned" are all men identified with Government departments, including Dr. Edward E. Pratt, Chief of the Bureau of Foreign and Domestic Commerce, who is slated as chairman; Daniel C. Roper, Assistant Postmaster General; and Frank M. Halstead, Chief of the Customs Division of the Treasury Department.

Until the Rainey bill carries President Wilson's signature there can be no certainty that any of these men will be appointed, but it is safe to assume that the exigencies of Democratic politics will demand its early passage, so it is not presumptuous to consider the character of men political Washington is lining up for the commission. The board, by the way, is to be bipartisan, three members to be Democrats and three Republicans, the President being the final arbiter of their political and other qualifications. Messrs. Pratt, Roper, and Halstead are efficient officials of a Democratic administration, and, although they might rise in time to the inane height of nonpartisanship in their treatment of tariff problems, it is a safe guess that they qualify now as nonprotectionists. At least, Dr. Pratt has done his best to prevent the granting of slight additional protection to the dyestuff industry, and Mr. Roper, having been clerk of the Ways and Means Committee when the Underwood bill was framed, may be presumed to hold tariff views more in harmony with those of OSCAR UNDERWOOD and CLAUDE KITCHIN than those of JOSEPH FORDNEY and EBENEZER HILL.

The most significant candidate is Mr. Fahey, of Boston. So far as our knowledge goes, he has never taken an active part in politics. As a director of the Boston Chamber of Commerce and of the United States Chamber of Commerce, he has been prominent in initiating business legislation, is a deep student of business affairs, and a man of irreproachable character. These qualifications, and his advocacy of the idea of taking the tariff out of politics by the operation of a tariff commission, would seem to vouch for his nonpartisanship and make him an ideal seventh member of a board equally divided between Bourbon Democrats and standpat protectionists, but most assuredly he would not qualify as a stanch defender and advocate of adequate protection to domestic industry. And that is why his consideration by political Washington as one of the three non-Democratic members of the commission is significant. Political Washington expects the appointment of a nonprotectionist commission—one that President Wilson feels confident will make the Underwood tariff permanent. From his viewpoint the present tariff bill is nonpartisan, so why change it? If the United States Chamber of Commerce and other business organizations think differently, their only recourse is to put as much time and energy into a campaign for industrial preparedness as they did into their struggle for a nonpartisan, low-tariff commission.

## The Revenue Bill.

### EXTENSION OF REMARKS
OF
### HON. JAMES W. GOOD,
OF IOWA,
IN THE HOUSE OF REPRESENTATIVES,
*Monday, July 10, 1916.*

Mr. GOOD. Mr. Speaker, I can not agree with my friend from Washington [Mr. HUMPHREY] that there is no reason why Republicans should vote for this bill. In so far as it is political it contains so much of Republicanism and so little of Democracy that I am unable to see how a Democrat can consistently vote for it.

AMERICANISM.

This bill ought not to be a partisan measure. This Congress will appropriate many millions more for preparedness than was ever appropriated for such purposes by any preceding Congress. The liberality with which we pledged the people's money for this cause is unprecedented. The cooperation of Members of Congress, irrespective of political allegiance, in making these increased appropriations is without a parallel. There was no politics in contracting the bills for preparedness; they were authorized in the spirit of true Americanism. There ought to be no politics now in providing the money with which to pay these bills. That act, too, ought to be performed in the spirit of true Americanism.

COST OF PREPAREDNESS.

The fortifications law just enacted aggregates $19,687,833.10 in excess of the fortifications appropriation law of the preceding year. The sundry civil law just enacted carries an aggregate of $7,424,846.70 chargeable to preparedness in excess of the sums appropriated for such purposes for the preceding year. It is safe to assume that the Army and Navy acts as reported to the Senate will not be materially decreased. Guided by precedents, we would infer that the amounts will be increased. Yet the Army act as reported to the Senate carries an aggregate of $228,624,814.23 in excess of the Army appropriation act for the fiscal year ending June 30, 1916. So, too, the Navy act as reported to the Senate carries an aggregate of $166,164,978.67 in excess of the Navy appropriation act for the last fiscal year. These appropriations do not include more than $38,000,000 appropriated on account of our trouble with Mexico. In other words, when this Congress adjourns it will have appropriated for military purposes more than $420,000,000 in excess of the military appropriations for the last fiscal year. And one trouble with this bill by which it is sought to raise $210,000,000 annually, is that it does not provide sufficient additional revenue to pay for this enormous increase in the cost of military preparations alone, to say nothing of the many extravagant appropriations of this Congress.

And the end is not yet. The administration proposes that the preparedness program shall be completed in five annual increments. These appropriations, therefore, must be practically duplicated for the next four years, and when completed at the end of the five-year period the annual expense for the support, maintenance, and upkeep of the Army and the Navy can not fall much below the annual appropriations for such purposes for this year. We have struck a new level, we are traveling at a swifter pace, and we can not escape payment of the cost.

Can we reasonably hope that in the future the annual appropriations for military purposes will fall much, if any, below the appropriations made for preparedness this year?

HOW WILL WE PAY FOR PREPAREDNESS?

Naturally enough, we are not all of the same mind as to the source from which this greatly increased revenue must come. We on this side of the Chamber are a unit advocating that the first thing to do is to repeal the Underwood tariff for revenue measure, and enact a protective tariff law levying duties on all articles imported into this country, that will equal the difference in the cost of production here and abroad. If I understand the gentleman from Connecticut [Mr. HILL] correctly, and he is a recognized authority on this subject, by the enactment of such a law we could increase our revenue by $100,000,000 annually. From a Republican standpoint, this much of our problem is easy of solution. The difficulty arises when we seek the source for the balance of this enormous sum required to pay the cost of preparedness.

HOW WOULD WE HAVE PAID BILLS?

Let us assume that this demand for preparedness had struck the country in 1909, when our side of the House was in power. To what source would we have turned to secure additional revenue to pay for preparedness? At that time we were engaged in writing a protective tariff bill. We believe the Government was then economically administered, yet with comparatively small appropriations for the Army and Navy we were compelled to supplement the Payne law with a tax on corporations in order to secure sufficient funds to run the Government. Let us examine the figures as candid Americans and see whether or not there is or ought to be any politics in this question. The total revenues from all sources, including postal revenues, for the fiscal years 1909 to 1912, inclusive, by years, were as follows:

| | |
|---|---|
| 1909 | $837,882,881.12 |
| 1910 | 899,640,372.64 |
| 1911 | 962,610,083.63 |
| 1912 | 972,170,865.40 |
| Total for four years | 3,672,304,202.79 |

The total expenditures for all purposes, including postal services, for the fiscal years 1909 to 1912, inclusive, were as follows:

| | |
|---|---|
| 1909 | $956,678,800.75 |
| 1910 | 919,121,125.07 |
| 1911 | 929,108,715.05 |
| 1912 | 945,195,312.54 |
| Total for four years | 3,750,103,953.41 |

The expenditures above given include items totaling $137,722,001.77, paid out of ordinary receipts for the construction of the Panama Canal. Obviously, if during this period we were engaged in a big undertaking to enlarge our Army and Navy establishments, Panama expenditures would have been paid out of the sale of Panama bonds, and not from ordinary receipts.

A comparison of the appropriation bills for the Army, Navy, and fortifications for this year with the years 1909 to 1912, inclusive, shows that we would have paid during each of these years, if we had engaged in preparedness then instead of now, at least $420,000,000 a year in excess of the amounts actually appropriated for such purposes. In other words, during those years we would have paid out $1,680,000,000 more for preparedness than we actually expended.

A DEFICIT.

We have already seen that the receipts for those years from all sources were but $3,672,304,202.79. The expenditures were $3,750,103,953.41, and if from this we deduct the expenditures on Panama Canal, amounting to $137,722,001.77, we have a total of expenditures exclusive of Panama Canal of $3,612,381,951.64. If to this we had added the cost of preparedness for four years, estimated on the cost of this year, which a great many people still think is insufficient, we would have had a grand total of expenditures, including preparedness, of $5,292,381,951.64. If from this we deduct the total revenues from all sources of $3,672,304,202.79, we would have had a shortage under Republican tariff laws, supplemented by a tax on corporations, of $1,620,077,748.85 for the four years.

CAN NOT PAY FOR PREPAREDNESS BY TARIFF DUTIES ALONE.

Where would we have obtained the money to pay for this increased cost of preparedness? Certainly we would not have increased the tariff duties. The defeat of the Republican House in 1910 was so universally charged to excessive duties in The Payne law that in 1912 in our Republican platform we said: "Some of the existing import duties are too high, and should be reduced." But with the provisions of the Payne law in force to-day, it is estimated that we could not hope to collect under it more than $100,000,000 a year in excess of the annual collections under it, while it was in force. Where then shall we get the funds with which to pay the bills so freely contracted for preparedness?

The prudent business man does not consider his task completed when he contracts for extraordinary expenditures. With many the big task—that of raising the money to pay the bills—is just commenced. I have consistently voted against many of the increases made this year in the Army and the Navy Establishments. I thought then, and still think, many of these increases are unnecessary, but they are made, and I realize many of these increases were made by votes on our side of the House. I for one do not propose by my vote to impair the Government's credit by refusing to make provision for the payment of the bills which were so freely and patriotically contracted.

If this bill was offered to raise money to pay for the useless and extravagant appropriations of this Congress, a different question would arise. I could not by my vote approve of the rivers and harbors, flood control, nitrate plant, and other pure "pork" appropriations of this Congress. But the money raised by this bill, together with ordinary receipts, will not pay the ordinary expenses of the Government and the authorizations for preparedness alone, to say nothing of the useless "pork" appropriations. When I view the work of this administration I realize that it has plastered the resources of the Government with mortgages. The day of maturity is approaching. A Republican administration will have to carry the burden and finally pay the debt. Where will we get the money if we do not resort to the very subject of taxation provided for in this bill? We have seen that we can not hope to collect it through the customhouse by the imposition of protective duties, though that will greatly help. Are we to overturn the cardinal principle of protection and enact a tariff law imposing duties on those things we do not produce, such as a duty on tea and coffee? That would not be Republican doctrine, and the American people will never consent to a tax on the breakfast table, even to pay the cost of great military preparation, and the party that attempts it is headed for defeat.

A careful examination of this bill compels me to conclude that it recognizes the principle of protection, which is the corner stone of Republicanism. The bill contains seven substantive propositions.

TARIFF COMMISSION—A REPUBLICAN DOCTRINE.

First. It creates a tariff commission. Tariff-commission bills before this House have heretofore been introduced by Republicans only, supported by Republicans only, and voted for by Republicans. A tariff-commission bill passed the House in 1910 by almost a strict party vote, every Republican voting for it, and practically every Democrat voting against it.

Certainly it can not be claimed that this is Democratic doctrine. There is need for a tariff commission to ascertain the difference in the cost of production in this country and abroad, if Congress is to intelligently impose duties that will equal the difference in the cost of production here and abroad. But what need is there of a tariff commission if all tariff legislation is to be predicated on the Democratic doctrine of free trade or a tariff for revenue only? If tariff legislation is predicated on free trade, what fact could be ascertained by a tariff commission that would aid in the framing of the legislation or the administration of the law. If legislation is bottomed on a tariff for revenue only, what fact not now ascertainable could be adduced by a tariff commission that would aid in the enactment or administration of such a law? We have demanded this kind of legislation in our platform, and now that we have an opportunity to secure it shall we vote against it because it happens to be introduced by an administration that does not honestly believe in the principles of a tariff commission, but on account of public sentiment is practically forced to accept this legislation? Certainly not.

PROTECTIVE TARIFF ON DYESTUFFS—A REPUBLICAN DOCTRINE.

Second. This bill provides for protective duties on dyestuffs. Oh, what a surrender of the historic principles of Democracy! I never expected to live to see the day when the Democratic Party would bring in a bill providing for a protective tariff in the interests of American industry and American labor, and now, at such a time, when Democrats have reversed themselves and have repudiated every platform they have adopted in half a century and accepted the principles of protection, shall Republicans surrender their convictions and repudiate protection, the cardinal principle of Republicanism?

ANTIDUMPING LAW—A REPUBLICAN DOCTRINE.

Third. The bill contains an antidumping provision. The gentleman from Ohio [Mr. LONGWORTH], a member of the Ways and Means Committee of the House, who has made a study of the antidumping provisions in the laws of other countries, stated the other day that the antidumping provisions contained in this bill are the strongest he has ever read. An antidumping law is designed to restrict foreign importations. A Republican tariff law is in effect an antidumping law. There is no place in the Democratic creed of free trade or a tariff for revenue only for an antidumping law. Here again we find a Republican measure, and because it is favored by Democrats, is that a sufficient reason why it should be opposed by Republicans? We ought to welcome these recent converts to the cause of protection.

REPEAL OF WAR TAXES 1910—REPUDIATION OF DEMOCRACY, A REPUBLICAN DOCTRINE.

Fourth. This bill contains a provision repealing the odious and troublesome stamp tax, the so-called "war tax of 1910," enacted in times of profound peace, a tax to pay for Democratic extravagance and Democratic inefficiency. All of us on this side of the House voted against that odious measure; it was un-Republican; it was unnecessary. This bill is an admission by Democrats that their Democratic revenue law was odious, vexatious, ought never to have been enacted, and should now be repealed. We ought at this time to welcome the opportunity to vote for the repeal of this obnoxious legislation.

The bill has already been amended since introduced by striking out the additional tax on banking institutions, and the bill now levies no additional tax on banks not borne by other corporations.

TAX ON INHERITANCES—A REPUBLICAN DOCTRINE.

Fifth. The bill contains a provision for a tax on inheritances in estates where the total inheritance, after the payment of all debts of the deceased and the administration of his estate, aggregates $50,000 or over. When the Payne bill was before the House, we on this side with but a single exception voted for a tax on inheritances, and the Democratic side of the House without exception voted against an inheritance tax. The enactment of an inheritance tax was strongly recommended by Presidents Roosevelt and Taft.

I can not refrain from quoting a part of the remarks of Mr. Payne, author of the Payne bill. In support of his bill which contained an inheritance-tax provision he said:

> We have provided in this bill 1 per cent from $10,000 up to $100,000, 2 per cent from $100,000 to $500,000, and after that 3 per cent. That is, where it is a direct descent, but in case of collaterals in this bill we provide a tax of 5 per cent on all legacies and inheritances exceeding $500.
>
> The question is asked whether the States will give up the tax. I do not know. I think some of the States have contemplated making the tax greater than it is now. I think that if these people have to pay both the State and the national tax they are not overburdened with taxation if this bill should become a law. What easier tax to pay than this? A man gets a legacy, a stranger perhaps to the testator, a clear gain to him; why should not he pay a part of that to the support of the Government?
>
> What easier tax to pay? A father leaves a legacy to his children. When he leaves $10,000 the tax is 1 per cent from $10,000 up to $100,000; that is not a burdensome tax. From $100,000 to $500,000 he can afford to pay more, and this bill proposes to tax him 2 per cent. From $500,000 upward 3 per cent, and in the case of collaterals, in the case of a stranger the Government takes 5 per cent on all legacies exceeding $500.
>
> * * * * * * *
>
> But, after all, I do not believe there is, in the whole range of possibility, any tax by which you can raise $20,000,000 that will have less objection than this provision of this bill.

At the time that bill was reported 33 of the 45 then States of the Union had enacted a State tax on inheritances, and the year before the enactment of the Payne law the State represented by Mr. Payne collected from this source $5,600,000. But even this did not deter the patriotic and honored author of the Payne bill from including in that measure provisions for an inheritance tax. It certainly can not be said that an inheritance tax is not Republican doctrine.

INCOME TAX, MADE POSSIBLE BY REPUBLICAN LEGISLATION.

Sixth. The bill provides for an increase in the income tax. There are inequalities in the income-tax provision in this bill. I believe the limitation in this bill is too high, and that an income tax should be collected on incomes of less than $4,000. So too, the graduated scale of this proposed measure is imperfect. Obviously, the man with an income of $15,000 or $20,000 is better able and ought to pay a higher rate of taxation than the man with a small income of $4,000. And yet the bill makes no distinction in the rate on incomes between $4,000 and $20,000. But the principle of the income tax has come to stay. It is recognized by the legislation of every progressive country in the world. The right to tax incomes was made constitutional by the adoption of a resolution introduced by a Republican Senator, passed by a Republican House and a Republican Senate, and signed by a Republican President. I take it that nobody would ever be foolish enough to attempt to bring about the repeal of an equitable tax on incomes. Certainly no great political party will ever father such a proposition.

TAX ON MUNITIONS OF WAR—A JUSTIFIABLE TAX.

The bill contains a provision for a tax on munitions of war. It is estimated in the report that this provision for the first year will yield revenue aggregating $71,000,000. Certainly this tax will not be a burden on anyone. It will be paid out of earnings unequaled by any legitimate industry in this or any other country; earnings so large that if any Member of this House stated the actual facts here on the floor his statements would be questioned by many people.

I shall put in the RECORD, therefore, two articles, one taken from the Wall Street Journal of February 28, 1916, and the other taken from the same publication of February 29, 1916. The Wall Street Journal is, perhaps, the most conservative financial paper in the world, and the article is a compilation made from statements of the companies themselves.

The following is the headline of the article of February 28:

> Du Pont de Nemours earned 94.3 per cent on common—Amazing increase in business last year as result of this great European war—Net earnings of $57,840,758, compared with $5,603,153 in 1914.

The headlines of the article referred to of the 29th of February are as follows:

> Has the stock market discounted war orders?—Contracts for 2,000,000,000 gross have been reported by about two score companies—Twenty-six of these concerns account for $1,737,000,000, and their market price has appreciated $919,000,000.

Will it be a great hardship on the du Pont de Nemours Powder Co., with a net earning of 94.3 per cent on its common stock last year, to pay the slight tax provided for in this bill? Will a little tax be a great hardship on the stockholders in the 26 corporations which have war orders for 1916 delivery aggregating $1,737,000,000, when the market value of their stock increased in a single year from $1,287,658,000 to $2,212,986,000? The value of their holdings have doubled because of the war. Is it unjust to lay a little tax on concerns like the Bethlehem Steel Co. to help pay for the cost of a preparedness, for which it and similar concerns created a great public sentiment, when the market price of the $14,682,000 of its common stock advanced from $29.50 per share in 1914 to over $500 per share in 1915? This advance was because of its manufacture of munitions of war.

Shall we give these concerns all of the benefits growing out of war and preparation for war, and not place upon them any of the burdens? If we can not look to concerns such as these, who thrive and prosper, and the value of whose holdings double in a single year because of war and preparation for war, to help pay some of the expense of the preparedness for war, then indeed our Americanism is at low ebb.

In urging large appropriations for preparedness we have pointed to our great wealth, totaling more than the wealth of any nation in the world, and yet when we come to pay the cost, are we to look to poverty or to the wealth of the country to pay the bills? Shall we pay for preparedness by a tax on the breakfast table, or shall we lay a portion of it where it will be no burden to anyone? The tax on munitions will practically cease with the close of the European war. A Republican Congress and a Republican administration will find it necessary to enact a tariff law to secure revenue to take the place of the munitions tax, and I firmly believe that the corporation and inheritance tax provisions contained in the bill, possibly with some modifications, will remain the law of the United States for many years to come.

Viewed from a political standpoint, what a pitiable spectacle Democracy presents in offering and supporting this bill. It is contrary to every Democratic utterance on protection. It repudiates every Democratic platform. I can vote for it as a Republican, because it is bottomed on the principles of Republicanism. Standing separately, each of these seven substantive propositions contained in the bill command my support. Taken then in its entirety, can I vote against it simply because it is introduced by the Democratic side of this House? I can not bring myself to believe that this is a justifiable reason for opposing this measure.

PROTECTION.

The first duty of a Republican Congress and a Republican administration will be to enact a protective tariff law. The

principles of protection are stronger and better fortified to-day than ever before. In the beginning the fathers laid deep and broad the foundation of protection. The first law signed by George Washington as President of the United States was a statute providing for protection to American industry and American labor, and from that day to this protection has been our beacon light, illuminating the way to an industrial and commercial supremacy unapproached in all the history of the world.

The record of our achievements under this policy is the industrial history of the Republic, portraying a progress unrivaled and unchecked, except when the policy of protection was abandoned to make a temporary trial of free trade or a tariff for revenue only. Under this policy ours has become a Nation of individual prosperity, a land of opportunity, a country of such marvelous industrial and commercial achievement that it is the hope and inspiration of the world. When the great war that is now devastating Europe shall cease, manufacturer and laborer alike will in this country feel the need of this policy of protection as he has never felt it before, and I for one welcome the belated admission of democracy that protection is not only constitutional but correct in principle, and it only remains for the Republican Party to again put it into operation and start the wheels of legitimate industry.

---

## APPENDIX I.

DU PONT DE NEMOURS EARNED 94.3 PER CENT ON COMMON—AMAZING INCREASE IN BUSINESS LAST YEAR AS A RESULT OF THIS GREAT EUROPEAN WAR—NET EARNINGS OF $57,840,758, COMPARED WITH $5,603,153 IN 1914—STOCK INCREASE $29,955,799, TOTAL SURPLUS $8,968,217, AGAINST $2,518,413—COMMON STOCK DIVIDENDS $24,136,572 IN STOCK.

The E. I. du Pont de Nemours & Co. reports for the year ended December 31, 1915, surplus available for common dividends of $55,542,275, an increase of $51,513,912 against same figure of the E. I. du Pont de Nemours Powder Co. previous year.

The E. I. du Pont de Nemours & Co. reports for the year ended December 31, 1915, compared with the figures of the E. I. du Pont de Nemours Powder Co. (old company) for the previous year, follows:

| | 1915 | 1914 |
|---|---|---|
| Net earnings [1] | $57,840,758 | $5,603,153 |
| Bond interest | 583,450 | 771,360 |
| Balance | 57,257,308 | 4,831,793 |
| Preferred dividends [2] | 1,715,033 | 803,430 |
| Balance [3] | 55,542,275 | 4,028,363 |
| Common dividends [4] | 24,136,672 | |
| Balance | 31,405,603 | 4,028,363 |
| Adjustment credit | | 165,979 |
| Stock increases [5] | 29,955,799 | |
| Surplus | 1,449,804 | 4,194,342 |
| Previous surplus | 7,518,413 | 3,324,071 |
| Total surplus | 8,968,217 | 7,518,413 |

[1] After necessary adjustments, including amounts written off for construction work for military business.

[2] Paid on preferred stock of E. I. du Pont de Nemours Powder Co. and on debenture stock of E. I. du Pont de Nemours & Co.

[3] Equal to 94.3 per cent earned on $58,854,200 common stock compared with 13.6 per cent on $29,428,708 common stock previous year.

[4] Paid on common stock of E. I. du Pont Powder Co. and common stock of E. I. du Pont de Nemours & Co.

[5] Amount capitalized in reorganization, now represented by portion of stock of E. I. du Pont de Nemours & Co., issued in October.

The balance sheet of the E. I. du Pont de Nemours Powder Co. December 31, 1915, compares with previous year as follows:

| | 1915 | 1914 |
|---|---|---|
| **ASSETS.** | | |
| Cash and accounts, receivable | $155,533 | [1] $26,379,477 |
| Debenture stock of E. I. du Pont de Nemours & Co | 34,029,700 | |
| Investment securities | | 11,435,018 |
| Realty, not including plant real estate | | 530,999 |
| Investment in manufacturing property, patents, etc | | 45,086,950 |
| Total | 34,185,233 | 83,432,445 |
| **LIABILITIES.** | | |
| Bills payable | 1,500,000 | 2,681,760 |
| Deferred liabilities | | 291,629 |
| Funded debt | 2,471,000 | 17,046,000 |
| Preferred stock | 631,801 | 16,113,807 |
| Common stock | 29,427,283 | 29,328,707 |
| Profit and loss, surplus | 155,149 | 7,518,413 |
| Total | 34,185,233 | 83,432,445 |

[1] Includes materials and finished products.

The consolidated balance sheet of the E. I. du Pont de Nemours & Co., with subsidiary companies, December 31, 1915, follows:

| | |
|---|---|
| **ASSETS.** | |
| Cash, accounts receivable, materials, and finished product (includes advances and balances on open accounts with affiliated companies, amounting to $1,943,527) | $64,894,106 |
| Investments in short-term notes and quickly marketable securities | 49,332,874 |
| Securities held for permanent investment | 21,295,367 |
| Realty, not including plant real estate | 516,697 |
| Permanent investment in manufacturing, property, patents, etc | 122,224,176 |
| Total | 258,263,220 |
| **LIABILITIES.** | |
| Accounts payable | 9,108,627 |
| Miscellaneous deferred liabilities | 4,102,673 |
| Debenture stock issued | 60,774,033 |
| Debenture stock—held in reserve (the consolidated balance sheet, as given above, assumes that all shares of the subsidiary companies are owned by the E. I. du Pont de Nemours & Co., and the debenture and common stock shown as "held in reserve" on the balance sheet represents the estimated value of the few remaining shares not actually owned) | 45,067 |
| Common stock issued | 58,854,200 |
| Common stock—held in reserve (the consolidated balance sheet, as given above, assumes that all shares of the subsidiary companies are owned by E. I. du Pont de Nemours & Co., and the debenture and common stock shown as "held in reserve" on the balance sheet represents the estimated value of the few remaining shares not actually owned) | 31,425 |
| Contingent liabilities, including advance payments on contracts and reserves for depreciation, accidents, etc | 116,379,036 |
| Profit and loss surplus | 8,968,217 |
| Total | 258,263,220 |

Pierre S. du Pont, president of the E. I. du Pont de Nemours & Co., in his remarks to stockholders says:

"New world conditions found E. I. du Pont de Nemours Powder Co. in a unique position. In this country our company alone was possessed of a most complete organization and equipment for the filling of moderate orders, and for the rapid enlargement of factories for further production of materials suddenly required in enormous quantities. In consequence, the officers and employees of the company have been called upon to put forth their utmost efforts in order to meet extraordinary demands. Contracts undertaken have required the designing and building of immense plants whose construction and operation have necessitated an increase in men employed from 5,300 in October, 1914, to 62,168 on January 1, 1916. Due to the cooperation of men throughout the entire organization, the company has been able to deliver nearly every pound of explosives on contract time, and a great percentage of all contract deliveries have been anticipated by large margins.

"The record of the commercial business of the company for the year 1915 was satisfactory, and there are indications of a large volume of business during 1916. Some new lines of investment have begun to pay well and others have passed their trial stage and have added to the earnings of the company.

"It is hoped that new manufactures will be developed to take the place of the abnormal military business, but we can not expect to employ all of the large explosives plants recently built; we are therefore amortizing this investment by heavy charges against the profits of this temporary business."

The report also calls attention to the fact that the Arlington Co., manufacturers of high-grade celluloid, has been acquired, and that its business promises to add materially to the income of the du Pont Co.

In carrying out the change in the organization of the E. I. du Pont de Nemours Powder Co. into the E. I. du Pont de Nemours & Co. on October 1, 1915, in order to bring the capitalization more in accord with the magnitude of the company's business, the 5 per cent bonds of the E. I. du Pont de Nemours Powder Co. have been retired, as have also all but $2,066,000 of the 4½ per cent bonds. There have been exchanged 1,084 shares of the preferred stock for the 6 per cent debenture stock of the E. I. du Pont de Nemours & Co. There now remains with the E. I. du Pont de Nemours Powder Co. sufficient 6 per cent stock of the E. I. du Pont de Nemours & Co. to retire the preferred stock and bonds not yet exchanged, and in addition to liquidate share for share the common stock of the E. I. du Pont de Nemours Powder Co. now outstanding.

In connection with the profit-sharing plan with employees, the report shows that distributions equivalent to 12,626 shares of the common stock of the E. I. du Pont de Nemours Powder Co. and 25,452 shares of the common stock of the E. I. du Pont de Nemours & Co. have been made under the plan during the years 1905 to 1914, inclusive.

There have been distributed 5,037 shares of the common stock of the E. I. du Pont de Nemours Powder Co. and 14,444 shares of the common stock of the E. I. du Pont de Nemours & Co. on account of earnings for 1915.

Directors have offered for subscription this year 3,000 shares of debenture stock, making a total of 13,441 shares purchased by employees since 1909. (Wall Street Journal, Monday morning, Feb. 28, 1916.)

---

## APPENDIX II.

HAS THE STOCK MARKET DISCOUNTED WAR ORDERS?—CONTRACTS FOR $2,000,000,000 GROSS HAVE BEEN RECEIVED BY ABOUT TWO SCORE COMPANIES—TWENTY-SIX OF THOSE CONCERNS ACCOUNT FOR $1,737,000,000 AND THEIR MARKET PRICE HAS APPRECIATED $919,000,000, OR 53 PER CENT OF THE GROSS—COMPARISON, BY COMPANIES, IN REGARD TO GAIN PER SHARE AND TOTAL ORDERS.

Has the stock market discounted war orders placed with American manufacturers by European Governments? Will the price of certain stocks continue their advance of the past year or so? This has been a real bull market, but how much longer will it last? These are the interrogations in the back of everybody's mind, from the biggest financier down to the casual observer of the stock market.

War orders of $2,000,000,000 gross, at our lowest estimate, have been received by some 42 companies. War orders of 26 of these concerns amount to $1,737,000,000; the market price of the stocks of these 26 concerns has appreciated $919,000,000, or approximately 53 per cent of the gross war orders.

This war-order business is in terms of gross and not net profits. However, when net profits from war orders of 25 per cent to 50 per cent are not uncommon, the natural inquiry arises as to whether the full importance of this business has been realized marketwise, in view of the credit restorations and the possibilities of repeat orders.

THE MARVELOUS CHANGES.

Changes which have taken place in the value of the stocks of these 26 companies that are working on war orders are shown in the following table:

| | |
|---|---|
| War orders (26 companies) | $1,734,500,000 |
| Par value stock (26 companies) | 1,737,389,000 |
| Market value before war | 1,287,658,000 |
| Recent high price | 2,212,986,000 |
| Appreciation | 919,323,000 |
| Appreciation in market price—per cent | 71 |
| Appreciation in par value—do | 53 |
| Appreciation to war orders—do | 53 |

Although the average appreciation is 53 per cent of the gross war orders, variations from the average in the case of individual companies are worthy of consideration. The following tabulation gives in the first column the number of shares of stock (common and preferred); second column, dollars per share appreciation; third column, dollars of gross war orders per share of stock; fourth column, ratio between gross war orders and appreciation:

| | Number of shares of stock.[1] | Dollars per share. | | Ratio per cent appreciation to war orders. |
|---|---|---|---|---|
| | | Appreciation. | War orders. | |
| Allis-Chalmers | 416,190 | $32 | $19 | 168.4 |
| Aetna Explosives | 85,554 | 20 | 409 | 4.9 |
| American Can | 824,660 | 38 | 49 | 77.5 |
| American Car & Foundry | 600,000 | 35 | 12 | 291.7 |
| American Locomotive | 500,000 | 29 | 100 | 29.0 |
| American Woolen | 600,000 | 34 | 50 | 68.0 |
| Baldwin Locomotive | 400,000 | 69 | 357 | 19.3 |
| Bethlehem Steel | 297,700 | 333 | 839 | 39.6 |
| Cambria Steel | [2] 900,000 | 20 | 5 | 400.0 |
| Canadian Car | 109,750 | 39 | 1,330 | 22.9 |
| Chicago Pneumatic Tool | 64,850 | 39 | 108 | 36.1 |
| Crucible | 500,000 | 58 | 180 | 32.2 |
| Du Pont | 455,000 | 330 | 880 | 37.3 |
| Electric Boat | 76,660 | 387 | 1,304 | 29.6 |
| General Electric | 1,015,103 | 46 | 68 | 67.6 |
| Hercules | 125,000 | 187 | 200 | 93.5 |
| Steam Pump | 291,120 | 53 | 25 | 212.0 |
| Lackawanna Steel | 350,000 | 67 | 29 | 231.0 |
| New York Air Brake | 100,000 | 106 | 200 | 53.0 |
| Pettibone-Mulliken | 98,750 | 72 | 182 | 39.6 |
| Pressed Steel Car | 250,000 | 26 | 60 | 43.3 |
| Studebaker | 417,580 | 124 | 47 | 262.4 |
| United States Steel | 8,685,830 | 25 | 2 | 1,250.0 |
| Westinghouse Air Brake | [2] 393,700 | 29 | 46 | 50.0 |
| Westinghouse Electric | [2] 907,434 | 23 | 104 | 22.1 |
| Winchester Arms | 10,000 | 1,525 | 10,000 | 15.3 |

[1] Common and preferred, if more than one class of stock exists.
[2] Par value $50, allowance for which has been made.

As striking as are the deductions when the total capitalization is considered, the showing made by the corporations with regard to war orders is even more remarkable when the preferred stock outstanding is entirely disregarded. The deductions in the following tabulation are made upon the assumption that all profits from war orders are to go to common stockholders. Otherwise the compilation is identical with the preceding one, which treats of the total preferred and common capital.

| Company. | Number common shares. | Dollars per share. | | Ratio, per cent appreciation to war orders. |
|---|---|---|---|---|
| | | Appreciation. | War orders. | |
| Allis-Chalmers | 257,708 | $43 | $31 | 138.7 |
| Aetna Explosives | 53,561 | 25 | 653 | 3.9 |
| American Can | 412,333 | 49 | 99 | 49.4 |
| American Car & Foundry | 300,000 | 54 | 23 | 234.8 |
| American Locomotive | 250,000 | 54 | 200 | 27.0 |
| American Woolen | 200,000 | 45 | 150 | 30.0 |
| Baldwin Locomotive | 200,000 | 113 | 715 | 15.8 |
| Bethlehem Steel | 148,620 | 570 | 1,682 | 33.7 |
| Cambria Steel | [1] 900,000 | 60 | 5 | 1,200.0 |
| Canadian Car & Foundry | 39,750 | 70 | 3,673 | 1.9 |
| Chicago Pneumatic Tool | [3] 64,488 | 39 | 108 | 36.1 |
| Crucible Steel | 250,000 | 95 | 360 | 26.3 |
| du Pont | [1] 294,271 | 480 | 1,359 | 36.0 |
| Electric Boat | [3] 49,996 | 390 | 2,000 | 19.5 |
| General Electric | [2] 1,015,103 | 46 | 68 | 67.6 |
| Hercules Powder | 71,500 | 320 | 350 | 91.4 |
| Steam Pump | [1] 177,625 | 13 | 42 | 30.9 |
| Lackawanna Steel | [3] 350,000 | 68 | 29 | 234.4 |
| New York Air Brake | [3] 100,000 | 106 | 200 | 53.0 |
| Pettibone-Mulliken | 70,000 | 72 | 257 | 28.0 |
| Pressed Steel Car | 125,000 | 44 | 120 | 36.7 |
| Studebaker | 300,000 | 167 | 67 | 249.3 |
| United States Steel | 5,083,025 | 37 | 5 | 740.0 |
| Westinghouse Air Brake | [4] 392,769 | 24 | 46 | 52.1 |
| Westinghouse Electric | [4] 827,460 | 9 | 114 | 7.8 |
| Winchester Arms | [3] 10,000 | 1,525 | 10,000 | 15.3 |

[1] Old capitalization; not reorganization.
[2] No preferred outstanding.
[3] Old company; new company, Submarine Boat, has stock all one class, nonpar value.
[4] Par value $50.

WHAT THE PERCENTAGES IDICATE.

The more study devoted to the foregoing tables the more light is shed upon the stock-market movements of these war-order companies. It must not be lost sight of that the war orders per share are gross and not net profits available for dividends. The column of percentages would seem to indicate that the stocks of certain companies have not yet discounted war orders; also that in certain instances the appreciation in price has many times outstripped the possible profits which the company will derive from war orders, or else orders credited to these corporations are but an insignificant amount of the real total of such business. There is one thing the table does not show, and that is some companies are dependent for the maintenance of present market value on the credit of the allies in the United States and on the continuance of their war business. This, of course, involves the question of duration of the war.

AGGREGATE APPRECIATION.

In the accompanying tabulation is set forth the combined outstanding common and preferred stock of these 26 companies, combined market value before the war, approximate market value at the high at the end of 1915, and the appreciation.

| | Par value, common and preferred. | Approximate price. | | Appreciation. |
|---|---|---|---|---|
| | | Before war. | Recent high. | |
| Allis-Chalmers | $41,620,000 | $7,097,000 | $24,832,000 | $17,734,000 |
| Aetna Explosives | 8,555,600 | 8,795,000 | 11,170,000 | 2,375,000 |
| American Can | 82,467,000 | 41,027,000 | 72,571,000 | 31,543,000 |
| American Car & Foundry | 60,000,000 | 42,750,000 | 63,900,000 | 21,150,000 |
| American Locomotive | 50,000,000 | 29,063,000 | 43,500,000 | 14,438,000 |
| American Woolen | 60,000,000 | 30,800,000 | 51,400,000 | 20,600,000 |
| Baldwin Locomotive | 40,000,000 | 20,200,000 | 53,800,000 | 27,600,000 |
| Bethlehem Steel | 29,770,000 | 16,534,000 | 115,803,000 | 99,269,000 |
| Cambria Steel | 45,000,000 | 36,000,000 | 54,000,000 | 18,000,000 |
| Canadian Car & Foundry | 10,975,000 | 8,451,000 | 12,773,000 | 4,322,000 |
| Chicago Pneumatic Tool | 6,486,000 | 3,243,000 | 5,836,000 | 2,593,000 |
| Crucible Steel | 50,000,000 | 25,252,000 | 55,036,000 | 29,784,000 |
| Du Pont | 45,500,000 | 49,748,000 | 200,000,000 | 150,252,000 |
| Electric Boat | 7,667,000 | 1,283,000 | 31,052,000 | 29,768,000 |
| General Electric | 101,510,000 | 141,068,000 | 187,752,000 | 46,684,000 |
| Hercules Powder | 12,500,000 | 11,284,000 | 34,753,000 | 23,469,000 |
| International Steam Pump | 29,112,000 | 1,214,000 | 16,486,000 | 15,272,000 |
| Lackawanna Steel | 35,000,000 | 9,275,000 | 32,900,000 | 23,625,000 |
| New York Air Brake | 10,000,000 | 5,800,000 | 16,400,000 | 10,600,000 |
| Pettibone-Mulliken | 9,875,000 | 840,000 | 5,880,000 | 5,040,000 |
| Pressed Steel Car | 25,000,000 | 16,400,000 | 23,000,000 | 6,600,000 |
| Studebaker | 41,758,000 | 17,100,000 | 68,961,000 | 51,861,000 |
| United States Steel | 868,584,000 | 647,391,000 | 868,835,000 | 221,444,000 |
| Westinghouse Air Brake | 19,638,000 | 47,132,000 | 56,166,000 | 9,034,000 |
| Westinghouse Electric | 45,372,000 | 58,411,000 | 79,430,000 | 21,019,000 |
| Winchester Arms | 1,000,000 | 11,500,000 | 26,750,000 | 15,250,000 |
| Total | 1,737,389,000 | 1,287,658,000 | 2,212,986,000 | 919,323,000 |

No account has been taken of the appreciation which now has taken place in the bonds of the companies.

DETAILS OF WAR ORDERS.

The details of war contracts of the 26 companies under consideration, classified as "confirmed" or "unconfirmed," follows:

*Confirmed war orders.*

| Company. | Amount. | Materials ordered. |
|---|---|---|
| Ætna Explosives | $35,000,000 | Powder, etc. |
| American Can | 41,000,000 | Ammunition, etc. |
| American Car & Foundry | 7,000,000 | Shells, etc. |
| American Locomotive | 50,000,000 | Shrapnel. |
| American Woolen | 30,000,000 | Blankets and cloth. |
| Bethlehem Steel | 250,000,000 | Shrapnel and guns. |
| Canadian Car & Foundry | 146,000,000 | Miscellaneous. |
| Chicago Pneumatic Tool | 7,000,000 | Shells, etc. |
| Crucible Steel | 17,000,000 | Miscellaneous. |
| du Pont | 400,000,000 | Powder. |
| Electric Boat | 100,000,000 | Boats and submarines. |
| General Electric | 69,000,000 | Heavy material. |
| Hercules Powder | 25,000,000 | Cordite. |
| International Steam Pump | 7,500,000 | Shells. |
| Lackawanna Steel | 10,000,000 | Rails and steel. |
| New York Air Brake | 20,000,000 | Shrapnel. |
| Studebaker Corporation | 20,000,000 | Harness, vehicle. |
| United States Steel | 25,000,000 | Steel. |
| Westinghouse Air Brake | 18,000,000 | Shrapnel, etc. |
| Westinghouse Electric | 95,000,000 | Rifles and shells. |
| Total | 1,372,500,000 | |
| Unconfirmed war orders: | | |
| Allis-Chalmers | 8,000,000 | Shells, etc. |
| Baldwin Locomotive | 143,000,000 | Miscellaneous. |
| Cambria Steel | 5,000,000 | Rails, steel, etc. |
| Crucible Steel | 73,000,000 | Munitions. |
| Pettibone-Mulliken | 18,000,000 | Shells. |
| Pressed Steel Car | 15,000,000 | Cars. |
| Winchester Arms | 100,000,000 | Rifles, etc. |
| Total | 362,000,000 | |
| Grand total | 1,734,500,000 | |

Under the head of "confirmed" are included those concerns the amount of whose contracts has been announced, or can be estimated with comparative accuracy. Among the "unconfirmed" are placed companies which are known to have booked war business, the amount of which must be estimated from outside sources. In both parts of the table are companies which are known to have taken larger orders than are indicated, or to have others under negotiation, but which at this time can not be intelligently estimated.

THE MATTER OF DUPLICATION.

These orders, of course, contain a number of duplications arising from the practice of subletting parts of the work. So interwoven with one another are the contracts for munitions that it would be impossible to make accurate allowance for duplications. If these duplications could be determined, it would reduce somewhat the total of war orders; but it must not be lost sight of that the duplications do not affect the profits of the companies concerned, for each subcontract must carry with it a profit; therefore, in measuring up the appreciation in value of the securities against the war orders, it is perhaps not advisable to make allowance for duplication. (Wall Street Journal, Tuesday, Feb. 29, 1916.)

## The Revenue Bill.

### EXTENSION OF REMARKS
OF
### HON. DAVID A. HOLLINGSWORTH,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. HOLLINGSWORTH. Mr. Speaker, I desire only to make my position clear on the pending revenue measure. It has been said to be a sort of mongrel affair, a cross between the donkey and the elephant, and yet the report in its favor from the Ways and Means Committee is signed only by the Democratic members. The bill was introduced July 1 and was then referred to this, the greatest committee of the House, and ordered to be printed. After, presumably, considering it until July 5, the Democratic members of the committee reported it to the House, with their favorable recommendation containing 10 pages of printed explanations. The bill itself contains 101 pages. The minority members of the committee, although refraining from joining the majority, are as dumb as oysters so far as any minority report is concerned. The Republican Membership of the House, generally speaking, are therefore left without party guide or compass, each being expected without sufficient time for consideration to act intelligently for himself on perhaps the most important fiscal measure ever before an American Congress.

Its figures are colossal and startling; they contemplate an estimated expenditure for the current fiscal year ending June 30, 1917, of $1,579,000,000. Good reasons should be given for such a measure.

I have read the bill and the majority report and listened intently to the arguments of our so-called leaders of finance usually enlightening on the floor of the House, and I confess yet to some uncertainty in judgment.

The ranking member of the committee, perhaps the ablest tariff exponent in the House, or in Congress for that matter, Mr. FORDNEY, has argued with rare good judgment to convince his fellow Republicans that because the bill fails to embody the full position of the Republican Party on the subject of protection it should be repudiated.

I yield to no man in or out of Congress in devotion to the time-honored protective policy of the Republican Party. I represent a district in which this principle is paramount and all important. I was nominated and elected mainly because of my well-known position on this subject, and every card circulated or item of publicity distributed carried for me this individual plank:

> I favor adequate protection to American industries and labor wherever brought into unjust or unequal foreign competition, either through cheap labor or cheaper conditions of foreign production, to the extent at least of equalizing the difference in cost of production at home and abroad, and also a tariff board to furnish Congress with expert information for intelligent use in removing, if possible, from the arena of partisan politics, the troublesome tariff problems which have too long vexed and disturbed the legitimate business of the country.

Very little of this plank appears in this bill. There is just enough salt in the five-year experiment tariff on dyestuffs and the recognition of the Democratic platform as to a tariff commission to entice the unwary bird.

I can not excuse myself, therefore, for voting for it, like the distinguished leader of our Ohio delegation [Mr. LONGWORTH], if, as all admit, no amendments are to be allowed so as to conform its provisions more nearly to Republican ideas, more nearly to the elephant side of the hybrid combination. He suggests, and very properly, that inasmuch as he voted for all the increases in the expenses of the Government authorized by the Democratic majority, even insisting on larger increases being made than they were willing for, that it is only fair that he should now join them in voting for this bill, even though designed to destroy the Republican policies of raising public revenue. Some of us, however, did not vote with our eloquent colleague in support of the large appropriations for which this bill is intended to provide, and therefore occupy a somewhat different position. While not allowing ourselves to become mere obstructionists to the preparedness program mapped out, we steadily voted for the minimum instead of the maximum amounts sought, so that we are not now embarrassed by former voting. We are free to consider all features of this bill on their merits.

A serious condition confronts Congress and the country. Public revenues are as vital to the existence and welfare of the Government, more so, possibly, than the defense causes which are supposed to have made necessary these immense expenditures. A bankrupt United States Treasury can not be thought of for a moment by patriotic citizens. Manifestly, it is the duty of good citizenship to stand by the Government in financial stress as much as if attacked by an armed force. The Republicans believe in a protective tariff as the principal method of raising revenue; they believe that in the main it is least burdensome to the people. But the Republican Party is out of power, and will be until the 4th of March. The Democratic Party is in power and charged with responsibility for the conduct of the Government. Financially speaking, their methods are as wide apart as the poles.

Speaking for myself, I am free to say that if standing alone or presented separately there are some things in this bill that I should vote for, but they are so bound up and connected with objectionable features to be voted for without separation that, as a Republican, I am constrained to vote against the bill. It is the only way I can act consistently, leaving the Democratic majority to take all responsibility for the bill, or separate the provisions in it so as to be voted on separately. In separate bills I should be glad to vote for a tax on the manufacture of munitions of war, on estates amounting, after payment of all debts, to $50,000 or more, and on incomes of not less than $5,000 in case of single persons and $4,000 if married. Standing alone, I should be glad to vote to do away with the war stamp tax as proposed.

Possibly it may have some other meritorious features, but as a whole I look upon the bill as a crafty attempt, by a little sugar coating here and there, to bring about a total and permanent abandonment of the Republican policy of protection, and as such I think it only fair and patriotic to let the Democratic majority have sole responsibility for its passage. The Republican Party can afford to wait for the full triumph and vindication of its fiscal policies until after the inauguration of Hughes and Fairbanks in March, 1917.

## The Revenue Bill.

### EXTENSION OF REMARKS
OF
### HON. CHARLES H. SLOAN,
OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. SLOAN. Mr. Speaker, I submitted to the House, but without obtaining action, the following amendment:

> I move to amend section 602 by striking out, on line 24 of page 100, the period and inserting ": *Provided*, That when such article or articles shall be on the free list a duty of 20 per cent ad valorem shall be levied and collected thereon."

An examination of the so-called antidumping clause provided in this bill shows the following remedies:

First. A penal remedy where an importer receives cheap goods in large amounts from the exporter with view to unfair competition may be prosecuted in the criminal courts.

Second. Provision is made for civil action by any persons injured by such unfair competition, with punitive damages.

Third. There is provision for tariff punishment, that in case an offense is committed against the provisions of this act the rate of duty may be doubled. All the foregoing relates to the importation of goods where a duty is levied at our ports, but as nearly three-fourths of our goods now being imported is upon the free list these remedies would have no application whatever.

The Underwood tariff law places nearly all farm products upon the free list and a doubling of no rate of duty would have no terrors to either importer or exporter.

My amendment would have special application to goods now being entered free and would provide in case of unfair compe-

tition through importation a duty of 20 per cent to be placed on all goods now on the free list where unfair competition should arise.

The value of this antidumping clause is largely in its intention to protect, and the fact that those who have heretofore opposed the principle of protection now in this crude way admit the fallacy of their former beliefs in tariff for revenue or free trade, and offer to adopt a protective measure. They acknowledge the principle but do not seem to have the courage to place its application in those practiced hands where good effects might be wrought and inefficiency and blunders avoided. Further, it seems that in gradually working away from their tariff for revenue and free trade back to protection they desire to recognize the farmers' right last.

In this connection I desire to say that I had prepared two other amendments to the revenue part of this bill as applied to places of amusement, theaters, and so forth, but the limited time permitted for the presentation of these amendments prevented them, with perhaps hundreds of others in the hands of waiting Members, from receiving action, to say nothing about consideration by the House of Representatives. Some day the American people, feeling the heavy hand of taxation by its taxing power, will, upon investigation, not only note the effect and character of the burdens placed but the arbitrary and un-American method of laying their taxes. And when the American people discover how little the representatives of the real tax-paying portion of the country are permitted to exercise the laying of their taxes the offending organization will receive a well-merited rebuke.

## United States Grain Grades.

### EXTENSION OF REMARKS
OF
### HON. GUY T. HELVERING,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 12, 1916.*

Mr. HELVERING. Mr. Speaker, I would consider myself remiss if I did not say a word in favor of a most significant and practical measure, the United States Grain-Grades act, which the gentleman from Missouri has offered as an amendment to the Agricultural appropriation bill.

This so-called grain standardization bill is a measure of great importance in as much as it affects the entire agricultural interests of the country, and I am confident that great good will result from the enactment of this legislation.

Briefly defining this measure, it provides for the Federal investigation of the handling, grading, and transportation of grain and gives the Department of Agriculture authority to fix and establish the standards of quality and condition of corn, wheat, rye, oats, and other grain as the usages of trade may permit; this also empowers the Secretary of Agriculture to alter or modify such standards whenever the necessities of the trade may require such changes.

While the different States of the Union have from time to time endeavored to perfect some grain-inspection laws, and while in some States the laws pertaining to grain are quite fair, yet it is impossible to secure uniformity and adequate protection unless by Federal action. In the past grain, the most important product of the farmer, was the basis of speculation, and prices have been lowered and raised to meet the needs of the designing speculators. Some of our States have endeavored to do away with these abuses, and to some extent by their grain-inspection laws have safeguarded the farmer from the manipulator of grain grades in the big markets. But, Mr. Speaker, I believe that State management of grain inspection can never work out favorably and satisfactorily, as most of the grain is shipped out of the State, and every State has different laws. Under the State inspection system each market has some variation of the State standard established, and grain is liable to be graded differently in each State. Under national supervision, however, and under the provisions of the Rubey bill the work of unifying the system among the States will be perfected, and the Department of Agriculture will cooperate with the individual States in giving each of them a uniform standard, so that a grade of grain of one State will bear the same grade in other States.

The Department of Agriculture has made exhaustive and comprehensive investigations in promulgating standard grades for grain. It has been found that the grades established by the Department of Agriculture are equitable and satisfactory.

I have found few objections to this legislation except from large exporters, but, on the other hand, I have received many petitions and letters from farmers, as well as grain dealers, urging the passage of some measure that would safeguard the grain industry and eliminate local and political influence which so often has a tendency to injure the honest sale and trade in grain.

Now, gentlemen of the House, what is the exact practical consequence resulting from the enactment of this legislation? How will an adequate grain-grading act affect the prices to the producer? As everyone knows the price of wheat is based on Liverpool quotations.

Liverpool prices are based on seaboard grades which may be far below the grades of Kansas grain or any other of the various grain-producing States. Now, here is where the uniformity and benefit of this measure is evident: A Liverpool merchant buys seaboard grades of wheat and pays a price according to the article he receives, therefore if the seaboard grades are lower than the grades quoted in Kansas or any other grain States, and the price is, as everyone agrees, fixed by the Liverpool rates, then it is clear that the Liverpool prices fixed on an inferior grade of grain would give to the Kansas grain a lower price. In other words, if seaboard No. 2 is inferior to Kansas No. 2 under the Kansas grain-grades law, then it shows that the price for Kansas No. 2 is fixed in Liverpool by an inspection of the inferior No. 2 sent them from the seaboard. Thus, if a local dealer quotes Liverpool No. 2 as worth so much he adds the total cost of freight and insurance charges, deducts this from the Liverpool price and gives us the price of wheat for the interior States.

Basing this, as I have said, on seaboard grades, which are lower than our grades, naturally the local dealer in good faith makes an offer to the farmer of a price less than the same grade of wheat would sell for if delivered direct to the purchaser in Liverpool. If this law is enacted, No. 2 wheat quoted in Liverpool will be just the same as No. 2 grade of wheat in Kansas, Iowa, Missouri, or, in fact, any State in the Union.

Mr. Speaker, the grain-grades bill is a practical and significant measure, and one that will meet the demands of a large proportion of our people engaged in the growth, milling, and transportation of grain. I believe this act will benefit the farmer, because he will get nearer the actual value of his corn, wheat, or whatever the grain may be he has to sell, the dealer will have a more uniform grade of grain and the consumer a more uniform quality.

This bill having had the careful consideration of the subcommittee and the full committee, the approval of the House, and indorsed as it is by all the farmers' organizations, and, in fact, nearly everyone who is directly or indirectly connected with the grain industry. I hope the Senate will take favorable action on this legislation so that we may dispose of another meritorious and valuable measure tending to the betterment and safeguard of one of our greatest industries in this country.

## Compensation for Injuries to Federal Employees.

### EXTENSION OF REMARKS
OF
### HON. HARRY E. HULL,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 12, 1916.*

Mr. HULL of Iowa. Mr. Speaker, I am in favor of this bill. I believe in the principle involved, and I think it is a step in the right direction. It is time that the Government passed a law that will adequately compensate its employees who are injured and killed. If this bill passes, the Government will not be a leader, but a follower, in the principle involved. Already in a large number of States workmen's compensation laws are now in force, and when a man is injured while employed by a private corporation or even an individual he knows just exactly what he is to receive for his injury. It is entirely different with the Government. The haphazard method of introducing a special bill for every injured employee results in an unequal distribution of justice. Some are paid much more than their injuries should entitle them to, others who were injured through no fault of their own while in Government employ receive nothing. This condition is a detriment to the Govern-

ment in securing capable employees. Men are not going to take the hazard knowing that if an injury occurs there is little chance for them or their families to recover. Our committees in the House and the Senate are right now loaded down with claims filed by employees who have received injuries and are incapacitated for life by some accident while in the employ of the Government. This bill will bring order out of chaos. It will put the Government on the same status with its employees as are private employers. In a general way I think the schedule of remuneration for the different classes of injuries are fair. As I understand it, they have been worked out after due consideration has been given to similar laws relating to private manufactures and are based largely upon similar scales of compensation. If in the course of time it is ascertained that these schedules are not fair, it is a minor matter to readjust them. The point I am trying to make is that the principle involved in this bill is a just one. Providing for its injured employees is a responsibility that the Government has no right to shirk. It is a responsibility that Governments have placed on the private individuals. Why should the highest Government in this land be exempt?

## Patriotism and Preparedness.

# SPEECH

OF

# HON. JOHN W. ABERCROMBIE,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 2, 1916.*

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 15947) making appropriations for naval service for the fiscal year ending June 30, 1917, and for other purposes.

Mr. ABERCROMBIE. Mr. Chairman, during the consideration of the pending Army and Navy appropriation bills Members of Congress have spoken frequently and comprehensively on the twin subjects of patriotism and preparedness. Indeed, for many months those subjects have engrossed the attention of the entire country. Everywhere they have been and continue to be the chief topics of study and discussion.

And interest in those subjects is not confined to our own shores. Wherever throughout the world the awful consequences of the European war, the most destructive martial conflict of the ages, are felt or known this interest is manifest and active. Every newspaper we read, every gathering we attend, every person we meet is deeply concerned.

### THE LOVE OF COUNTRY.

From time immemorial love of country has been esteemed the chiefest of civic virtues, but until within a comparatively recent period the world's conception of patriotism has been very limited, very circumscribed. Even now the prevailing notion of duty to country reflects in large measure the ideals and customs of a remote and barbaric past. Except among the most enlightened patriotism and warfare are always closely associated in meaning. When we think of a great patriot most of us think also and in the same connection of a great soldier, a great warrior.

This old-time idea of patriotism grew out of the condition of universal strife which for so many centuries obtained among the nations. It held that a person's patriotic duty was fulfilled by a willingness to fight for his country in time of war. Between wars he was at liberty, without detriment to his reputation as a patriot, to indulge in unethical practices in most of the relations of life. Even when their Governments were honeycombed with graft and reeking with corruption, the citizens of ancient Greece and Rome idolized their heroes of war, by whom their Governments were administered.

In all ages and among all peoples this historic idea of patriotism has been stressed. It has been inculcated in home and school; it has been preached from pulpit and platform; it has been promoted in journalism and literature; it has been embalmed in song and story. As a natural consequence, the ideal patriotism came ultimately to be regarded as inseparably connected with warfare; the greatest glory, as invariably associated with the wholesale destruction of life and property. The world's warriors have been the world's heroes. To them have been accorded the highest places of honor and power.

### THE ORIGIN OF MILITARISM.

In this ancient conception of patriotism modern European militarism had its origin. And militarism exists in America as well as in Europe. Let us not be deceived about that matter. If it is less highly developed here than there, which is true, that fact is due to our form of government, to our national youthfulness, and to our geographical isolation rather than to the innate character of our people; for, after all, the people of America are very similar to those of European countries. In fact, we are bone of their bone, sinew of their sinew, blood of their blood.

Transfer to America the principles, policies, and practices that obtain in Europe, and soon will be found here the same systems, conditions, and tendencies. Indeed, in the development of militarism we seem to be following irresistibly in the footsteps of those countries. Already, of every hundred dollars raised annually by taxation for the support of the Federal Government the sum of approximately $70 is expended in preparation for future wars or in payment for past wars. Excluding appropriations for war pensions and for interest on war debts, which appropriations approximate $200,000,000 per year, we are now expending annually for war purposes—that is, upon the Army and Navy—the tremendous sum of $250,000,000, which is excelled by only one other nation.

On other words, we are now spending quadrennially the enormous sum of a billion dollars for the development and maintenance of our Army and Navy Establishments. Yet there are unmistakable indications that the people of the United States desire Congress forthwith to make largely increased appropriations for those purposes, which, as a matter of course, will result in greatly and permanently increased taxation burdens.

Judging the future by the past, since like causes produce like results, the time may come when militarism will dominate in America as it now dominates in Europe.

### THE EUROPEAN WAR AND ITS LESSONS.

And militarism does dominate there. The present European war, the mightiest, the costliest, the bloodiest, the deadliest, the most barbarous in many respects in all history, is a direct result of that domination there. Each nation denies responsibility for the war. Each claims to be fighting a defensive war. They are equally honest, equally correct. The peoples of those countries did not make the war. The rulers now declare that they did not, though in the beginning some, if not all of them, claimed a copartnership with the Almighty in the conduct of a holy war. It is significant that none now boasts such coalition.

The truth is the principles, the policies, and the practices obtaining throughout Europe for centuries past were responsible for that war. The trouble lies with the European system, which is one of highly armed States always expecting to be attacked, and therefore always ready and quick to anticipate attack. It is a system of alliances founded upon suspicion, jealousy, hatred, fear, and greed. Stupendous and burdensome armaments, secret and selfish diplomacy, hasty and unnecessary ultimatums are peculiar to the European system, and those things have ever been the most prolific causes of war. All history warns us to beware of those dangers. [Applause.]

The war in Europe has taught the world many lessons, chief among which is that relating to the settlement of international differences. If civilization is to be preserved and promoted, if humanity itself is not to perish from the face of the earth, it is obvious that new methods must be adopted. And new methods in international relations are not impossible.

In this age of invention, organization, and cooperation; in this time of transportation, communication, and visitation; in this day of the railroad, the steamboat, the automobile, the airship, the cable, the telegraph, the telephone, and the wireless, the remotest nations are not nearly so isolated, not nearly so widely separated, as were the subdivisions of even a small country a century ago. It is entirely feasible, therefore, for nations now to cooperate in a manner that would have been utterly impossible before the inventions and discoveries which have so completely annihilated time and distance.

### GOVERNMENT AN EVOLUTION.

Governmental development has been an evolutionary process, and like most other such processes has been slow. The enlargement of authority by consent or by compulsion and the expansion of territorial jurisdiction through conquest or through voluntary combination have characterized this development. In the remote past each man redressed his own and his family's wrongs. Within itself the family was a complete and independent government. Then followed the tribe, or group of related families; then the State, or combination of tribes; then the Nation, or union of States. The logical or evolutionary next step will be the internation, the omnination, or the confederation of nations, which might appropriately be called the United Nations of the World, and whose motto should be "peace on earth." [Applause.]

This logical next step in the evolution of government should be taken as soon as possible, and it ought to be possible after

the cessation of European hostilities. That it be taken is demanded by reason and conscience, by patriotism and religion. Both selfishness and altruism demand it. If this step be not taken, civilization and humanity may disappear in some world-enveloping cataclysm, of which there are those who fear that the pending European war is the precursor.

UNIVERSAL WAR POSSIBLE.

Indeed, the fear that the entire world may become involved in that war may not be founded in mere pessimism, for existing conditions, developing tendencies, and multiplying possibilities are such as to give alarm to the most optimistic. Already more than half of the inhabited area and more than 50 per cent of the population of the earth are involved directly. Indirectly and in varying degrees much larger portions of the earth's surface and population are implicated.

The combined population of the world is estimated to be approximately 1,600,000,000, while that of the countries at war is about 1,000,000,000. If our country and Mexico should resort to arms for the settlement of pending or developing differences, almost three-fourths of the earth's area and population would be involved. War between the United States and Mexico would probably involve both Governments in the European conflict. In that event every country on earth might be swept irresistibly into that hell of destruction.

A COURT OF NATIONS.

It is apparent that there must be a change, a universally accepted change, in the methods employed for the settlement of international misunderstandings. The time has come when nations must cooperate in the establishment and maintenance of a judicial tribunal for the adjustment of differences which can not be settled by diplomacy, and diplomacy itself must be reorganized, reorganized upon a basis of publicity and equity. As individuals, cities, counties, and States submit their disputes to arbitration in courts of justice, none sitting as judges in their own cases, so must nations settle their disputes. The judicial decree must be substituted for the diplomatic ultimatum.

Our own States voluntarily abandoned war as a method of settling their differences, and as a substitute established here at Washington a Supreme Court of States, where all of their disputes are settled by arbitration. I believe that the nations of earth should in a somewhat similar manner unite in the organization of a supreme court of nations, where all of their misunderstandings would be settled by arbitration. [Applause.]

SELF-DEFENSE A NECESSITY.

Until the leading nations join in the establishment of such a world court, agreeing individually and collectively to abide by and enforce its decrees, each of the nations will be compelled in self-defense to make provision for its own protection, and until such international court for the settlement of differences arising between nations is firmly and permanently established it will be necessary for our Government to pursue a policy of adequate military preparedness for defensive purposes.

Mr. MADDEN. Mr. Chairman, will the gentleman yield for a question?

The CHAIRMAN. Does the gentleman yield?

Mr. ABERCROMBIE. I prefer not to yield.

Mr. MADDEN. Just for a simple question?

Mr. ABERCROMBIE. I mean no discourtesy, but my time is so limited that I am compelled reluctantly to decline to yield. When I have finished, if granted sufficient time, I shall be pleased to answer such questions as may be propounded.

Mr. Chairman, what constitutes a state of adequate military preparedness for defensive purposes is the question now under consideration. I am persuaded that by the passage of the pending Army, Navy, and fortifications bills as recommended by the committees of the House we will meet the present needs of the country for such purposes, though prior to the outbreak of the European war and the development of the perplexing Mexican situation I confess that I found myself in agreement with many others in the opinion that with a continuance of the present quadrennial billion-dollar expenditure for Army and Navy equipment and maintenance we would satisfy the demands of reasonable preparedness.

THE POWER TO DECLARE WAR.

I have thought during the past year a great deal about war and its awful consequences, and I have come to the conclusion that rulers and their cabinets should not have the full power to declare war. Fortunately for us in this country our President and Cabinet can not declare war. Only Congress can do that. The fact remains, however, that in crises like those with which we have been and now are confronted our President and Cabinet, if so disposed, could bring about such a situation as would compel Congress to declare war. I have no doubt that if President Wilson desired to do so, he could within a few days, possibly within a few hours, develop such a condition as would involve our country in the European conflict or in war with Mexico. Let us thank God that he is not so disposed. [Applause.]

The truth is, I have about come to the conclusion that not even Congresses should possess the absolute power to declare war, except possibly in cases of actual and continued aggression resulting in a flagrant violation of sovereignty or in the destruction of human lives. Who bears the burdens of war? Who sacrifices life in time of war? Who pays for war? The people. Why not therefore permit the people of a nation, as far as possible, to say when that nation shall go to war? [Applause.] And when I say the people, I mean what I say—I mean women as well as men. I thank God that women are coming to be regarded as people. [Applause.]

FAITH IN PRESIDENT WILSON.

While it is not my purpose to make a partisan speech, I feel confident that, regardless of political affiliations, I will be pardoned for saying in this connection that our country is exceedingly fortunate in these critical times to have in the presidential chair a man like Woodrow Wilson. [Applause.] I have never known a man more calm, more calculating, more courageous, more determined, or more patriotic. He has filled, and is filling, his high office with matchless statesmanship, and if there is any honorable way by which our country can be kept out of this world-threatening conflict, President Wilson will find and follow it. The country is safe in his keeping. [Applause.]

MODERN CONCEPTION OF PATRIOTISM.

The past century has been characterized by several world-wide movements, notably those looking toward universal education and universal democracy. While these movements are the natural fruits of the germs of aspiration and growth implanted in the human soul by Almighty God, they have been nurtured and accelerated by that other and greater movement, all-comprehensive in scope, which was inaugurated some 2,000 years ago when the angels sang, "Peace on earth, good will toward men."

One of the most encouraging results of this spread of education and democracy is that which is manifesting itself in a changing and enlarging conception of patriotic duty. The world, the thinking world, notwithstanding the present awful carnage in Europe, is coming more and more to realize that people are under no greater obligation to die for their country in time of war than to live for it in time of peace; that real patriotism is not a virtue to be assumed when one's country is struggling with a foreign foe, and to be discarded between wars when one's country may be contending with internal enemies no less destructive; that the most patriotic citizen is not the one whose devotion to country manifests itself only spasmodically in his country's wars, but the one who so lives day by day as to render it unnecessary for his country to go to war; that the true patriot demands nothing for his own country which he is not willing to concede to humanity in general; that war between civilized nations is unnecessary, foolish, wicked, destructive, damnable; that he who serves fellow man best, best serves self, home, country, and God. [Applause.]

This growing view of patriotic duty is coming none too soon, for there has never been a time when there was greater need for the application of high ethical principles to the solution of life's problems, whether those problems relate to home, business, society, government, or religion; or whether they be local, State, National, or international. [Applause.]

## Salaries of United States Employees.

## EXTENSION OF REMARKS

OF

## HON. CHARLES H. SLOAN,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 11, 1916.*

Mr. SLOAN. Mr. Speaker, I presented the following amendment to the House of Representatives on the 10th day of July, 1916, when H. R. 16763 was up for consideration.

I move to amend H. R. 16763 by adding a title to be numbered 7½, and to be inserted after line 3, on page 101, as follows:

TITLE 7½.

That for the period of the fiscal year of 1917 all Senators, Representatives, Cabinet officers, and servants of the United States Government receiving salaries of more than $4,000 per year from the United States Government shall receive, first, the sum of $4,000; second, in addition thereto, they shall receive 90 per cent of the excess over $4,000 of such salaries as now provided by law: *Provided*, That this

shall in no wise affect the salaries of the President, Vice President, or Members of the Supreme Court or inferior courts of the United States, and the amounts hereinbefore stated shall constitute all the salaries to be in any wise paid the persons herein designated for the period stated.

From the time when the first legislative organizations were established in the early colonies down through the Confederation and under the Constitution legislation has taken a general course. The legislative body, whether a committee or a house, in determining legislation would have the bill or resolution read at large and then by clerk or presiding officer. A reading would be had substantially in the following manner: Paragraph would be read, when, at its close, there would be given opportunity for the proposal of amendment and debate. In that way the strong as well as the weak and the favorable as well as the unfavorable features would challenge attention. Moreover, ordinary defects not in themselves important or substantial, and yet proper to be considered, would receive attention.

In this great bill, providing over $200,000,000 for taxes, this method was distinctly denied, both in the standing committee—Ways and Means—and afterwards in the Committee of the Whole and in the House. So the American people will understand that this burden is placed upon them, so far as the House of Representatives is concerned, the constitutional body having jurisdiction to originate legislation of this character, without the well-settled form of procedure being observed.

I wondered if those who made haste to lay these heavy burdens upon the people were willing to be treated themselves, they having the power, as they treated others.

In all the varying paragraphs of this legislation I sought some feature suggesting economy. I did not find it, and for that reason I prepared the foregoing amendment.

The ancient saw that "a penny saved is twopence gained" seems to have found no place in the summary action of the authors of this measure. The foregoing amendment would fairly test first these hasty tax leviers as affecting themselves and demonstrating their patriotism, and also indicate their special care for their many partisan friends who draw munificent salaries from the Government. I hold that it would be a fit and proper method of demonstrating the disinterestedness of the membership of this House. But the rule, which specially limited time for amendment and debate, prevented consideration of this amendment. It will be here of record, however, as a suggestion to be used should later opportunity here or elsewhere along the line of legislation be presented.

## Taxing War Munitions.

### EXTENSION OF REMARKS
OF
### HON. CHARLES H. SLOAN,
OF NEBRASKA,
IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. SLOAN. Mr. Speaker, it is proposed to raise $71,000,000 by taxing war munitions. The period within which these are to be taxed is limited to the period following January 1, 1916. It is generally agreed that the period within which the United States munition makers have been most busy making munitions of war for foreign Governments was from August, 1914, up to early in 1916, more particularly in 1915. During that time the European belligerents who had been in the lowest state of preparedness drew heavily on the American product. This was while they were building and equipping their own munition plants.

So the important period was rather in the calendar year of 1915 than in 1916. If the theory of taxing munitions can relate back to any extent, as it does in this bill, it should have been begun at least January 1, 1915. Because, beginning with 1916, and assuming that the head of our Government as well as those in charge of our military and naval affairs in consonance with their public speeches were undoubtedly arranging for a large purchase of American munition products. A relative decrease has occurred in the contracts made with foreign powers for supply of munitions. So that the effect of establishing January 1, 1916, as the date upon which taxes should be levied on munitions would have the appearance and effect of encouraging the manufacture of munitions for foreign use and discouraging their manufacture for our own use when trouble begins to appear.

I am not opposed to a special tax upon munitions of war, but in this as in all other matters I do not believe in penalizing America in the interest of the foreigner. That seems to be a characteristic running through this legislation. A distinct favor to foreign belligerents and a burden upon our people.

Already the great accessible nations announce their complete ability to produce in abundance their needed munitions. Already large munition plants in this country are closing up while others are reducing their output. It appears as if we are simply taxing the shell of the revenue nut, leaving the kernel entire to the thrifty stock handlers and holders of munitions corporations. I am ready to have this voted upon without further debate.

## The Revenue Bill.

### EXTENSION OF REMARKS
OF
### HON. L. C. DYER,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916,*

On the bill (H. R. 16763) to increase the revenue, and for other purposes.

Mr. DYER. Mr. Speaker, this bill is for the purpose of raising more money for a wasteful, extravagant, and incompetent Democratic administration to spend. It is admitted even by the Democrats that since the purse strings of the Government have been in the hands of the Democrats more money has been spent, and much uselessly, than under any preceding administrations. This Congress has been the most extravagant of all, and this even before the question of increasing the Army and the Navy was considered. Back in December, 1914, we have leading Democrats of the House criticizing extravagance in appropriation. No less a personage than the distinguished gentleman from Mississippi [Mr. SISSON] gave utterance to this proof then. He said:

> Principle has gone to the four winds of the earth, and we are writing ourselves down in the history of the country as being the most outrageously and most criminally extravagant Congress that ever sat on the American Continent. * * * I said that in a speech before, in the last session, and when I made that speech Members of the Democratic House came to me and asked me not to put it into the RECORD, because it would be used by the Republicans in their campaign book. Let them use it. * * * You may use the statement now, gentlemen, because when Democrats get to be so violently extravagant that it makes its own record look bad as compared to the very marked record of the Republicans, I must apologize to you Republicans for having ever used the words "criminally extravagant" in criticizing the appropriations that you made, for if that expression "criminally extravagant" was proper to apply to you, my God! the English language has never found an adjective strong enough to apply to Democratic extravagance.

This bill has many things in it, some of which are there for the purpose of fooling the people and the Republican Members in this House. For instance, there is the protective duty on dyestuffs, borrowed from the Republican principle of protection; then there is the tariff commission, which only a short time ago the Democrats claimed to be useless, and killed the one established when the Republicans were in power by failing to appropriate money for it; then there is the antidumping clause. This is another admission by the Democrats that the Republican policy of protection is the only one for this country. This provision, in effect, says that many of our industries would not be able without protection to withstand competition of foreign-made goods, where cheap labor can be had, as opposed to our high-wage scale. This is an admission that the Democratic Party realizes that when the war is over there will be an invasion of our markets by European manufacturers, and that there must be a law to prevent the dumping of these cheap-made goods in this country to be sold in competition with those manufactured with our high-price labor. Is there any better proof needed of the efficacy of the Republican doctrine—the protective tariff? This bill also provides for raising money by what is known as the inheritance or estate tax. For a long time this has been a source of revenue to the States. In some States it has been used to further education and has gone to the State universities. This is particularly so in my State. Now the Government must have that also. Then there is a provision for increasing the income-tax rates. This is a direct tax, of course, and puts the great burden of it upon a few sections of the country. This bill also proposes to reenact into law certain of those obnoxious special taxes provided in the so-called emergency revenue war-tax act of October 22, 1914. This was the most inexcusable act of them all—putting war taxes upon the people in times of peace.

These various matters are combined in this bill by the Democrats with the hope that it will get them support from the Republicans, so that the measure will not receive the criticism it warrants in the coming campaign.

The gentleman from Ohio [Mr. FESS] well expressed my view as to this when he said:

Last Saturday the Speaker of this House made a very earnest plea, not on behalf of the bill, but for votes; not for votes on that side of the House, because he has them, but for votes on this side of the House; not because he needs them, because this bill will pass, if necessary, without a single Republican vote cast for it.

You have already enough votes, and it is a pertinent question to be asked now, Why the concern of the leader of the majority and the distinguished Speaker of this House to get Republican votes on this measure? It is not to pass the bill, but it is to estop argument against the direct-tax system in the days preceding November. And in order to win the votes on this side they have thrown out sops. The first is the tariff commission, that you opposed, and are now willing to swallow in the hope that we will vote for it. Our support of the tariff commission does not depend upon the action to-day. We will write it after March 4. The second sop is an antidumping clause, that you ridiculed in the discussion of the Underwood tariff bill, when we Republicans urged it upon you, and now you swallow it in the hope that you will get votes from this side of the House, not to carry it; you have the votes to do that, but you want this side to surrender to your scheme. We will write an antidumping clause that will be a revision of the Underwood tariff law, and write it in a protective measure. The dyestuff proposition is another effort of estoppel. You say it is protective, and my distinguished friend from North Carolina [Mr. KITCHIN] literally holds his nose, because it is hard to swallow. Why do you swallow it? To get Republican votes. Why? To use as arguments against us when the discussion is on in the days between now and next November against your method of raising the tax totally by the direct method in opposition to and suppression of the protective-tariff system.

I, for one, will not be led into this trap. I have favored a tariff commission in the past. I am in favor of one now, but not such a one as would be created by the present administration. The members of the tariff commission appointed by the present Democratic President would not be one that would work to get the facts as to show the difference between the cost of production at home and abroad, so as to change the present tariff law along the lines of the too well known policy of the Republican Party as to a protective tariff. The sudden change of heart of the Democratic Party with reference to the tariff board, the protective duty upon dyestuffs, and the antidumping clause does not warrant the belief, in view of their past record, that they are sincere. While in the words of the gentleman from Wyoming—

We welcome this tardy Democratic recognition of the virtue of Republican policies, but we decline to desert the altars of the true faith to participate in the acts and incantations of those who, though unable to longer entirely resist the penetrating power of truths they have long spurned and denied, still in the main adhere to their idols of free trade and their fetishes of burdensome direct taxation.

Even as the ancient Israelites in the very shadow of the mountain of the law set up an altar to the worship of the golden calf, so Democrats in this day of their proclaimed enlightenment as to the wisdom of Republican principles of protection still set up their altars to and worship their discredited idols of free trade and of direct and burdensome taxation upon the people and their industries.

We still have in mind the ancient warning, long since crystallized into a proverb, "Beware of the Greeks bearing gifts."

Yet we know this party of old. We know that it has been false to every pledge and promise. We recall their promises regarding the tariff law they enacted.

The Democratic Party has made a failure with its Underwood tariff bill. The leader of their party, President Woodrow Wilson, substantially admits same when he urges Congress to continue the protective duty on sugar, put one on dyestuffs, enact an antidumping law, and the creation of a tariff commission. The time is not long until the Republican Party will be in control of the affairs of this Government, and I prefer to wait for that time when a real Republican protective tariff can be again put upon the statute books. The Democratic Party has demonstrated its inability to manage the affairs of this Government. It has waivered, changed its position many times, and, in fact, has completely reversed its position upon many important matters. Its inconsistency has been the most potent thing since it has been in power. Even Members of this House have become so used to the changing of the mind of the President that even the most intense of the Democrat Members no longer pay any attention to the matter. They no longer preach that "The principles of the Democratic Party are eternal." Most of them now quietly admit that the Democratic Party has no lasting principles.

During this administration it has changed from everything it has heretofore claimed to stand for. Its Baltimore platform has been torn completely to pieces by the President it nominated at that convention. The country knows now that the Democratic Party stands for one thing only, and that is to get into office and to stay in office, regardless of what they are compelled to do in order to do so. The Democratic Party, in order to do this, is willing to accept the Republican doctrine of protection, the creation of a tariff commission, the putting of a duty on dyestuffs, and so forth. They no longer consider consistency a virtue. The following apparently now represents their thoughts:

Tush, tush, my lassie! Such thoughts resigne.
Comparisons are cruel;
Fine pictures suit in frames as fine;
Consistencie's a jewell.

The Republican Party is in favor of a protective tariff. It believes now, and has since the party was organized, that a tax upon imports should be levied and collected at the custom-houses in this country to meet the ordinary expenses of the Government. They have always believed that these taxes should be the difference between the cost of producing like goods here and those abroad that seek markets in this country. This policy has been tried out upon the statute books for many years, and it has always proven a success. Under its administration we have always had all necessary money to support the Government and to maintain a large balance in the Treasury. When the Democratic Party came into power they changed this and enacted into law a revenue free-trade tariff. It failed in every respect, as claimed by its author, Mr. UNDERWOOD. One day after his bill had become a law Mr. UNDERWOOD made the following statement:

This bill will do four things: First, it will reduce the cost of living; second, it will not disturb the business of the country; third, it will increase our foreign trade; and fourth, it will collect revenues sufficient to meet the necessary expenses of the Government.

We note now that everything claimed by Mr. UNDERWOOD has failed. As soon as this law went into effect imports began to greatly increase. This law was in force about 10 months when the European war broke out, and during that period imports increased over the previous time by $101,977,779. During the same period our exports decreased by more than $150,000,000. The European war caused all industries in Europe to practically shut down. We have had no competition from those sources since that time. We have therefore been able to keep all of our mills and factories busy and offer employment and labor in the munition plants, and so forth, to supply the armies in Europe with everything they need. We furnish them not only munitions of war, but we furnish them shoes and all other necessary clothing, foodstuffs, saddles, harness, horses, mules, and so forth. Had it not been for the European war, the Democratic free-trade tariff law would have ruined our industries and brought us to the greatest panic this country has ever witnessed. Our prosperity is due entirely to the European war. The Democratic Party is claiming credit for it, but every intelligent man and woman in America knows that our prosperity is due to the war alone. They also know that our prosperity has been bought with many lives in Europe. They know that our prosperity in selling munitions of war, and so forth, to Europe has directly caused hundreds of thousands of deaths and made many widows and orphans. Such prosperity I would not consider it an honor to brag about. The Democratic Party, however, in its eagerness to remain in office and to fool the people, are laying claims to this bloodstained and widow and orphan prosperity. My judgment is that there are not many people in this country who will be fooled by them in this regard when the elections in November come around. The Democratic Party knows that it is to-day a minority party, and that it is in control of the Government by accident. This bill is an effort by that party to divide with the Republicans its responsibilities. I hope that no Republicans in this House will be fooled by them and vote for this bill.

This bill is, in effect, to increase direct taxes upon the people, as opposed to the protective-tariff policy of the Republican Party, which proposes to collect the taxes on imports from foreigners. I do not have to vote for this bill to show that I am in favor of a tariff commission. I voted for that in the previous Congresses. I want a tariff commission that will work along the lines of the Republican policy of protection. I do not have to vote for this bill because I believe in a tax on munitions of war. I have stated many times I was in favor of such tax. I do not have to vote for this bill to let it be known that I am against what is known as a war-revenue and emergency tax that was enacted into law on October 22, 1914. I voted against that then, and I still think it was an outrage upon the American people. Since the Democratic Party has been in power it has continually and extravagantly spent the people's money in many useless ways, and to make up for this extravagance they have levied special and direct taxes upon the people, until to-day the people are overburdened with these taxes. To-day they are paying taxes to the Government in many ways and without receiving ample returns for the expenditure.

A direct tax is never an equitable tax. Some few people have to pay most all of it. It is never equitably distributed, and

especially is this so with reference to the present bill. Take, for instance, the income tax paid by corporations and individuals. We find that of the first Missouri (St. Louis) district for the fiscal year ending June 30, 1916, in income corporation tax was $1,031,501.65, and that in individual income tax it was $818,411.74, a total of $1,849,913.39. During that same period some of the States represented on this floor by a solid Democratic membership paid little in comparison. For instance, we find that during that same period Alabama and Mississippi combined paid only $279,665, as against $1,849,913.39 as paid by the first Missouri, or St. Louis, district. We also find that during the same period Arkansas paid $112,074, Georgia $367,291, Florida $108,664, and North Carolina $324,532, and so forth. During this same period the entire State of Missouri paid $2,789,605.28. During this same period the four States of Missouri, New York, Pennsylvania, and Illinois paid a total income and corporation tax of $71,868,586.28, while the other 45 States paid a total of $55,788,488. These figures show how unjust are special taxes in any case.

For instance, here are four States that pay more of the income and corporation tax than all of the other States of the Union combined, yet the representation of these four States in this House is very small in comparison with that of the other States combined. The result is that we are helpless, and are compelled to submit to these drastic and unjust special taxes without means to prevent it.

Commenting upon this part of the bill, the great minority leader of this House [Mr. MANN] said:

> The present bill proposes to raise the additional money asked for by putting all the burdens upon a few. It proposes that all the people shall enjoy the benefits of government and the preparation which is made but that the few shall bear all the burdens of taxation. We raise now a considerable sum of money by income taxes and a considerable sum by customs duties. If the present method is at all equitable, then in your increase of taxes the burdens should be distributed among the different ways now used in collecting money, and the large proportion of the additional revenue might well be exacted at the customhouses, equally distributing the burden and at the same time guaranteeing the American industrial independence of the world.

Those of us who are acquainted with the history of the Democratic Party and of its administration in the affairs of this Government when it has been in power and out of power justify us in paying little heed to their manifestations of changing of heart and of their willingness to accept in part that which the Republican Party has been in favor of since its formation. I can not put any confidence in the Democratic Party, and I know their only object and purpose is to maintain office. This is so with reference to the tariff commission. Upon this proposition we have not only the President changing his mind but Members of this House doing likewise. When the Republican Party was in power in this House an effort was made to provide a tariff commission. A filibuster was carried on near the closing days of Congress and throughout March 4, 1911, in order to prevent a bill passing to create such a commission. A number of the leaders of the Democratic Party then and now of the House spoke against a tariff commission. Among them was the gentleman from Alabama [Mr. HEFLIN], who was one of the great orators at the recent Democratic convention in St. Louis. Here is what Mr. HEFLIN said then:

> No wonder you demand a tariff board or tariff commission. The interests back of you have always demanded that power be placed in the smallest number of men possible, for it would be easier for them to influence a board of five members or a commission of five members than it would be to influence a House of Representatives of over 400 men coming up from all sections of the country. They favor a tariff board or a tariff commission, and, in my judgment, the American people will never submit to a tariff board or tariff commission, which is one and the same thing, the insurgents favoring one and the standpatters favoring the other.

Now, Mr. HEFLIN will vote for a tariff board.

Here is what the gentleman from Indiana [Mr. CULLOP], one of the loudest-voiced Democrats, had to say:

> I am opposed to this bill and every provision in it, because it violates a well established and venerated principle in the doctrine of the Democratic Party.
>
> Sir, if I voted for this bill I should consider it my imperative duty to go back to the legislature of that State, now in session, and petition it to rescind the action taken by it just two weeks ago, when it elected the Hon. JOHN W. KERN United States Senator, and in lieu thereof elect his opponent, the Hon. Albert J. Beveridge.

Now, Mr. CULLOP will vote for a tariff board.

Here is what the distinguished leader of the Democratic Party in this House, Mr. KITCHIN, said during a speech being delivered at that time against the tariff commission by the present Governor General of the Philippine Islands, Mr. Harrison:

> Have you ever known a Democratic district convention, a Democratic State convention, or a Democratic national convention that ever declared in favor of a tariff board or tariff commission of any kind?
>
> Mr. HARRISON. Not only that, but I believe it is absolutely opposed to all Democratic tariff principles.

Now, Mr. KITCHIN asks me to vote for a tariff board.

Another great Democrat, the gentleman from Mississippi [Mr. SISSON], delivered himself at this time as follows:

> I can not, as a Democrat, subscribe to this bill to create a tariff commission. It is a concession to the Republican idea of protection. It admits that the doctrine of protection is proper.

Mr. SISSON will now vote for a tariff commission.

But why mention lesser lights of the Democratic Party to show this change of front? Have we not the President, Woodrow Wilson, himself doing it? On this tariff commission proposition we find him on January 26, writing to Mr. KITCHIN, as follows:

> MY DEAR MR. KITCHIN: Our conversation yesterday made me realize that in my letter of the 24th I had not set forth as I should have set them forth my reasons for changing my mind upon the question of creating a tariff board, for I must frankly admit that I have changed my mind since I last spoke on that subject.

How can the people trust a party to manage its affairs that does not know one day what it will stand for to-morrow? The Democratic leader, the President, has shown his changing of opinions on the running of the Government so often that no one ought to be so foolish as to want to give that party another lease of power. Here are some of the few things Mr. Wilson has been upon both sides of:

The Garrison army plan; increasing the Navy; labor unions; Mexico; military training; preparedness; initiative and referendum; free trade; intervention in Mexico; Panama Canal tolls; woman suffrage; presidential primaries; publicity of campaign contributions; economy in expenditures; civil-service reform; free sugar; a single presidential term; neutrality; an adequate army; tax on automobiles, bank checks, and so forth; foreign merchant vessels; Wall Street; special rules in legislation; the tariff.

On this question he has been a protectionist, a revenue-tariff advocate, and a free trader, and has also claimed it unconstitutional to levy a tax for the purpose of protecting our industries; he has been against a tariff commission, is now for it, and so forth. The above are only some of the important questions that the President has been on both sides of. He has been for and against all of them. There are many others that could be mentioned, but these are sufficient to demonstrate his inconsistency and to furnish real and fundamental proof why the Democratic Party and Woodrow Wilson are not qualified and capable of managing the affairs of this great Republic. We must have the real friends of the American people at the head of our affairs when the European war is over and our temporary prosperity ends, as it will then.

All this will vanish when the war is over, unless we put the Republican Party back in power and reenact the laws that the Democrats have repealed. Let no one be fooled about this great matter. The present Democratic administration is moving heaven and earth to stay in power. It is doing everything it can to mislead and fool the people. This is so as to Mexico and all other important matters. The policy of the administration as regards Mexico has been and is to-day that which is not intended for the best interest of the people of that country or our own people. The policy is based upon nothing less than a desire and effort to deceive the people in the belief that the President of the United States is doing great things and is keeping his country out of war. Our conduct of affairs with regard to Mexico has been most disgraceful to our people and to our Government. This policy and this method will go on until after the election with the hope that it will persuade the American electorate to vote for the retention in power of the present administration. I am glad to state, however, that the American people are well informed upon the Mexican situation. They also are so informed as to our weak, vascillating, and unneutral policy as regards European affairs. To-day the United States Government has no friend in any foreign power. That we are despised and disliked is due entirely to the way that our foreign affairs have been handled. The American people are disgusted with both the way our foreign and domestic affairs have been handled. We want an American administration for the American people. In these trying times we want those to handle the affairs of our Government who have ever been loyal and true to the United States first, last, and all the time. The American people want those that they can trust. They want the Republican Party put back in power. They know the history of our country and who made it great. They know what masters builded the Republican Party and what that party accomplished for humanity and the Nation. They are unwilling to again place this great responsibility in the hands of that weak, wavering, and office-seeking party—the Democratic. The Republican Party now stands together for the country and to rid it of the extravagant and incompetent administration of its affairs by the "Know Nothing"—the Democratic Party.

**Fourth of July Oration of Hon. S. D. Fess, of Ohio, at Independence Hall, Philadelphia, Pa., July 4, 1916.**

## EXTENSION OF REMARKS

OF

# HON. GEORGE W. EDMONDS,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 11, 1916.*

Mr. EDMONDS. Mr. Speaker, I ask unanimous consent to print in the CONGRESSIONAL RECORD the oration of Hon. S. D. FESS at Independence Hall, Philadelphia, Pa., July 4, 1916.

The oration is as follows:

"Mr. Chairman and fellow citizens, I know of no more impressive scene than to witness these thousands of our citizens doing honor to this day, in this place, the city of Philadelphia. Our city of brotherly love, for we all have a claim upon her, as a possession of the Nation, has the unique honor of being the birthplace not only of the immortal Declaration of Independence but also that other equally important document, the Constitution of the United States. The first was an announcement of fundamental governmental principles; the second was a performance in a practical application of those principles in the science and art of civil government. Either one would have been sufficient to immortalize any city, but when we note that both belong to the same city, then the title 'our city' is easily interpreted.

"I desire to commend the practice you have inaugurated. One hundred and forty years ago, as related by Daniel Webster in his famous speech in 1826, on the occasion of the death of John Adams and Thomas Jefferson, John Adams declared that future generations would celebrate this event of the signing of the Declaration of Independence by bonfires and illuminations. That prophecy has been and is being fulfilled in every portion of the Nation. While no one would refuse to make it a joyous day, there is a well-defined determination on the part of our people to compel what is well termed a safe and sane Fourth of July. I wish to commend that feature so prominent here, not only on Independence Square but throughout the city as well as country.

"The reading of the document to which we have just listened is splendid. Too many of our citizens of to-day would never know what is in it unless it was so read. I say it with some degree of humiliation. It is easily the greatest document of human liberty ever penned in ancient or modern history, and ought to be posted on the very doorposts of all seeking a democratic form where the right to govern comes from the consent of the governed.

"It would be well for me to emphasize one feature which is almost entirely overlooked, but which is plainly written in the document. The Declaration of Independence is an indictment composed of at least 28 counts, every one of which, save one, begins with the personal pronoun 'he.' It declares 'he' did so-and-so; 'he' refused to do so-and-so, etc. My fellow citizens, it will not be out of order to here remind you that this document, world-wide in significance, is not an indictment of a people but of the head of a Government. The personal pronoun singles out George III, then as now known to be a narrow-minded, thick-headed ruler, temperamentally as well as mentally and morally incapacitated to think in the terms of the rights of the Colonies. The English people as well as Government have generally agreed to mention the American Revolution, and especially George III, just as infrequently as the exigencies of history will permit.

"This instrument was wonderfully significant 140 years ago, when first announced. It is no less so to-day. It deals in fundamentals. All men are created equal. That does not mean the same height or the same weight. It does not mean equal mental ability or moral equipment or physical skill. It means equal rights under the law; equal in opportunity to make the most out of our talent of mind, of heart, and of hand. It means no discrimination as between man and man. I might as well say here and now that this right extends to woman, a fact rapidly gaining recognition.

"The real spirit of this great principle is antagonistic to many demagogic tendencies in modern legislation, as all of you must have observed, where we are asked to enact laws which will declare an act if done by one man or one corporation is a crime, but if done by another man or another association is exempt from such terminology.

"My friends, I am persuaded that the reading of this famous document should be required in our modern halls of legislation. Its lessons of wisdom should be conned by those of us who essay to write our laws. We must not forget that the men who insist upon laws discriminating in their favor may see the day when laws will be demanded discriminating against them. This is a blade that cuts both ways. If we ever open the gates to such dangerous dogmas that under our law we can legislate for one class as against another, the controlling dictum which we have ever hoped to maintain that all men are equal under the law has passed and no man can say what its end will be.

"This instrument declares the purpose of all government to secure to the people certain inalienable rights, and it specifies three—life, liberty, and the pursuit of happiness.

"I am here reminded of a story of the teacher's effort to impress upon Charlie the three items in the Declaration of Independence. After many failures she resorted to a device. One morning she said, 'Charlie, here are three buttons, the red stands for life, the blue for liberty, and the black button for pursuit of happiness. To-morrow I shall call on you to recite.' On the morrow she called on Charlie. 'How many rights does the Declaration of Independence demand?' 'Three,' piped out Charlie. 'What are they?' inquired the teacher. They were gone again, as usual, and Charlie hung his head. 'Well, where are your buttons?' demanded the teacher. In the boy's frustration to find them he replied, 'Here is life and here is liberty, but the pursuit of happiness mother sewed upon my trousers.'

"I am warranted in relating this story, for it is a Philadelphia story. I read it in the Ladies' Home Journal.

"But, my fellow citizens, not in levity, I mean to say that these fundamentals are just as much, if not more, to be demanded to-day than they were 140 years ago.

"This year of 1916 we must restate the principle. Government is a means to secure specified ends. It is instituted to secure rights among which is life. Life in the city, life in the country, life throughout the Nation, life in Mexico, life upon the high seas; in fact, life wherever that flag, the symbol of dignity, of honor and of power, is unfurled.

"Government is instituted to secure liberty; not the liberty of the jungle that knows neither order nor society; not the liberty of the bandit whose blood-stained dagger defies all law; not the liberty of the armed submarine which refuses to discriminate between the armed war vessel and the defenseless merchant ship, nor the liberty of the haughty prize court that recognizes no commercial rights of neutrals upon the high seas. The Declaration of Independence sharply distinguishes liberty from license. It is the liberty to pursue legitimate processes to make the largest use of one's talents. It is the liberty of opportunity in the rivalry of life's activities. It is the liberty that prevents class, that spells order, that insures the right to live the largest and fullest life. Such liberty as here defined will never extend beyond the right of others. No man has the legal liberty to interfere with another's right. Such is not liberty, but quite the opposite.

"In these days of so much legislation we often hear the utterly vicious demagogic statement that the time of opportunity for the individual to pursue his legitimate happiness is gone. Individual initiative and responsibility are giving way to collective bargaining. In my mind the most serious tendency, noticeable in America, is this note of excusing the individual for failure and fixing the blame upon the community or government, which is strikingly un-American as well as unpatriotic. It frequently breaks out in the halls of legislation and states the form of suggested law where attempts are made to restrict achievement of individuals, upon the basis that it is directly connected with the failure of others. If you succeed and I do not, although we have the same opportunity, it is not my fault but yours. Such agitation creates the impression that ills of life are due to laws of legislation or else the lack of them. Efforts are made by would-be leaders to make men succeed by law. The viciousness of such efforts lies in the general attitude of mind such doctrine creates, which generally displays itself in charges against the Government. We are already in the stage where many never think of the Government save as a debtor—an institution where something is to be gotten rather than to be given. I desire here and now to say to this assembled multitude that this Government, under the freedom and possibilities of the Declaration of Independence and the Constitution of the United States, reveals to-day the greatest opportunity for the individual who is willing to use his brain, his heart, and his hand in real achievement for himself and humanity. Those who constantly complain of it should think of a country without government, such as Mexico. There never was a time in the past when such success could be achieved by the youth who is willing to pay the price of devotion to duty, of industry, of reasonable frugality, and of application to the task at hand as to-day. These practices pursued by any youth in any city or county in the land will insure good results.

"But the youth who is taught that he can safely substitute indolence for industry, the habits of the spendthrift for those of frugality, will be disappointed and will soon be attacking society and the Government. His failure will be laid at the door of the Government that did not protect him from himself. The youth that insists upon spending each week a little more than he makes will not only soon be without income, but will be a pauper—a public charge in time. The youth who allows the idle rich or even the well to do to fix his standard of expenditure and insists upon indulgences that forbid the regulation of the outgo by the size of the income will see but one end. On the other hand, he who will lay by but a mere pittance each day or each week will end a well-to-do man, capable of looking the entire world in the face, if for no other cause than the self-respect that comes from a success achieved by simple prudence.

"Need I enumerate examples? Philadelphia is full of them. They tell the commonest story in American life to-day. Everywhere can be found examples. The country abounds in both classes. The triumphs of our National life are but a detailed statement of the one class, while much of the failure among us can be as definitely pointed out and is as distinctively well known, both in cause and effect. My message to the youth of the land is, 'Take your work, stand by it, success will be yours.'

"But, my fellow citizens, upon this day you expect me to say a word about the theme that absorbs all our minds. When I left my Ohio home yesterday I saw the troops detrain for a short march for rest. It was an inspiring sight. They had the air of the Nation's defenders. They were Pennsylvania boys on their way to the border. It was an inspiring suggestion of what this Nation may be willing to pay for the honor and dignity of our country.

"The present situation is serious. When the Carrizal attack was made upon our boys who wore the uniform, and it was learned many were killed and others taken prisoners, the country was stirred to its depths, which found expression in every circle of the Nation. Our patience has been tried for more than three years. Destruction of American lives and property as well as the destruction of property of England, France, and Germany in Mexico has caused deep concern in this country. The latter because it involves the Monroe doctrine, which will be severely tested. The frequent incursions along the border, the stray shots from the Mexican side constantly endangering American life on our side, called loudly for action. Finally the crossing over in Columbus, N. Mex., by an armed band led by Villa, and the murder of our own citizens, some of them serving the colors, thrilled this country from ocean to ocean, as did the sinking of the *Maine* in the afternoon of February 15, 1898, when 266 of our brave boys went down into the muddy waters of Habana Bay.

"The President sent a punitive expedition to capture the bandits, with the permission of the de facto government and upon the representation that it was friendly to Mexico. This expedition is now in Mexico. The bandits are still at large, but our soldiers have been ordered by Carranza not to move in any direction except the north. This order was plainly an offeuse to the Nation, which expected cooperation from Carranza. The clash at Carrizal came and many of our boys were killed and others captured and imprisoned.

"Whether it was wise or not to send the expedition I am not saying. However, I rather think if the President had said '$100,000 for Villa, dead or alive,' we would not have waited long, and we would not have depended upon American soldiers. The bandit would have been delivered and American lives would not have been sacrificed. Some might think this on the part of a great Nation would not have been dignified. But Villa proved himself a murderer, and on American soil, and the world would have justified treating him as any other murderer. It was but one more added to the frightful list attached to his career, which is not yet ended.

"But, my fellow citizens, we took another course. Our troops crossed the border. We are now in Mexico, whether wisely or not; we can not come out under fire, nor by the orders of a totally irresponsible head, even though we had recognized him as responsible. We should come out when our mission is complete, and then upon our option, not Carranza's. We must be the judge as to further movements.

But, ladies and gentlemen, this is not the only serious phase of this Mexican trouble. There is an international angle quite acute. The European property owners in Mexico went into that country as Americans did, by invitation. They were welcomed, as capital for development was the chief need of the country. This capital and development, so rapidly growing under President Diaz, have been mostly destroyed. The war in Europe will close some time, we sincerely pray it will be soon.

"When it is over an adjustment in Mexico will most certainly be demanded by the governments interested and a settlement ordered.

"There is not the slightest thought that Mexico will be able to pay an indemnity. That is simply impossible. All stability is gone; no capital can be attracted in the light of the last three years. These countries will most likely demand in lieu of an indemnity in money, coaling stations, or portions of territory, or both. In that case what will be our attitude? Are we ready to abandon the Monroe doctrine? Will we guarantee to these countries their rights in Mexico?

"If we maintain the Monroe doctrine, we in justice could not say to these countries, 'You stay out of Mexico,' unless we assure them we will protect their interests. But we have neither protected their interests nor our own property rights. What representation are we ready to make?

"My fellow citizens, speaking as an individual, I give it as my opinion that we will not abandon the Monroe doctrine. Neither do I think we will take the position with these countries that we will not allow them to go into Mexico to take care of their property, unless we agree to protect it for them. I do not believe that we will say they had no right in there, as some seem to think, and must therefore suffer the loss of an adventitious venture that should not have been undertaken. Then what will be our position?

"This, in my judgment, is the real problem in Mexico that this Nation will be called upon to solve. I am convinced that the Monroe doctrine is to have its chief test growing out of present conditions. It was with that conviction that I joined the splendid representation of your city to ask for a stronger defense.

"When our troops were killed and many were taken prisoners, I said to Mr. KITCHIN, the Democratic floor leader, 'Mr. KITCHIN, I expected when I learned of what had taken place at Carrizal to hear the administration say to Carranza, "Deliver those prisoners in 48 hours or the Army of the United States will be sent to get them." That would have brought him at once.' To which Mr. KITCHIN replied, 'Can you be sure of that? When we send such an order as that we must be sure we can make good.' We did not have the Army to send.

"This means that our troops will continue to mobilize on the border. We all hope they may not be compelled to cross it. War must be the very last resort. However, we are now in a state of war, only we have not so named it. While we all stand by the efforts to prevent war, yet I have no doubt that another attack upon our soldiers by Carranzistas will see our troops landed at Vera Cruz, not to compel a salute, not to capture a bandit, but to move in force to Mexico City with the demand that further banditti crimes will mean an American protectorate over the country to be continued until such time as in the judgment of this country we can withdraw with honor to ourselves and safety of life and property to all concerned.

"This is the real meaning of the Declaration of Independence to-day. We ask nothing of any people that we would not be willing to grant to them. But patience too long continued may produce a spirit of defiance that will not only lead to insecurity but to national dishonor. If war is to be averted it will be done, not by vacillation, but by a clear understanding that this Nation will not tolerate further crimes upon American soil. If Mexico can not prevent them, a stronger hand may be compelled to take hold of the helm."

## The Revenue Bill.

### EXTENSION OF REMARKS

OF

### HON. LUTHER W. MOTT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. MOTT. Mr. Speaker, this bill, enormously to increase taxation, is excused as a result of the effort to prepare the country for war. This is a sham apology. Had not the Democratic Party inexcusably reduced appropriations for preparedness at the beginning of their administration, with the approval of President Wilson, and vastly increased expenditures for other and often unnecessary purposes, while greatly reducing the revenue from imports, this legislation would be unnecessary. This is assuming that the Government had otherwise been wisely administered, which is far from the case.

Mexico offers a fair illustration. Bonds are to be issued for $125,000,000 to meet the extraordinary expenses incurred because of the trouble with that country. That $125,000,000 is in addition to the $400,000,000 of taxation imposed by the pending measure. Had President Wilson done his duty in regard to Mexico from the start and defended American lives and property, there would be no trouble there now. But he did nothing of the kind. He employed secret agents, often incompetent persons, to do the work of the regularly appointed officials; and, guided by these agents, he ordered Americans to leave Mexico, sacrifice their property there, amounting to hundreds of millions of dollars in value, and in many cases to become dependent on charity. This was done, he said, to avoid war. But he sent soldiers and sailors to take Vera Cruz, which was accomplished by a sacrifice of American lives and at a cost of millions of dollars—for what purpose? To compel Mexico to salute the American flag, which had been insulted.

The flag was not saluted, the American forces were withdrawn, and nothing tangible was accomplished. Villa, the bandit, was furnished with arms and ammunition and encouraged in every way, and then abandoned, and, as a result, there came his bandit invasion of towns on the American side of the boundary line. Carranza was treated in much the same way. We sent an army to capture Villa, and after a large expenditure and another sacrifice in American lives we have accomplished nothing. We are now assembling an army on the border and, according to estimates, this will cost $125,000,000, to be met by a bond issue, and what will be the result? More notes concerning negotiations, with little prospect of anything else. American investors in Mexico have suffered enormous losses; hundreds of American lives have been lost needlessly; foreign property and lives have gone in the same way through relying on the United States for protection; friendliness to the United States has vanished and hatred has taken its place, while the chaotic condition of Mexico increases rather than diminishes. The Democratic policy of so-called "watchful waiting" has been a shameful failure in Mexico and everywhere else where tried. But in the case of the little Reublic of Santo Domingo or that of Haiti that policy has not been followed and the beneficial results are apparent.

TAXATION THE RESULT OF INCOMPETENCY.

The Democratic Party is floundering in a maze of indecision, ignorance, and extravagance, and this bill to impose $400,000,000 of taxes, with the $125,000,000 bond issue to come, is what the Nation must pay as a small part of the cost of an incompetent Government. We had a like experience under the last Cleveland administration. Part of the $400,000,000 tax bill is made up of some tax items already imposed, but they were inexcusable. Many of us favor an income tax when such a tax is necessary, but we do not believe in relieving foreigners from paying duties on their goods sold in this country, in order to collect the amount from home producers. But this is what has been done under the Underwood tariff law. And President Wilson said not long ago that his belief in the wisdom of that law had not changed in the least, while the Democratic Party, in its recent national convention, warmly approved that law, which means if the Democrats are continued in power, we will have four years more of such distress as we experienced in the 10 months after the bill became a law and before the European war that caused such a demand for American products and brought relief. It is unnecessary to tell of the decrease in exports, the enormous increase in imports, the 3,000,000 workmen thrown out of employment, the vanishing surplus the Republicans left in the Treasury, and the distress that prevailed generally as a result of that legislation.

WAR A RELIEF TO THE DEMOCRATS.

The war brought relief, through the wholesale slaughter of human lives in Europe. In the same way the Crimean War, the discovery of gold in California, and other events helped out, during the period the free-trade Walker law was in force before the Civil War; but when those things failed to help further, dire distress followed—President Buchanan, a free trader, in a message to Congress, declaring that the situation was the worst in the history of the Nation. In 1896, under the Cleveland administration, there was a similar situation, and a worse one will follow as soon as the European war ends, if the Underwood law remains in the statutes. Already the allied powers in Europe, with the aid of Japan, are beginning to supply their needs for war munitions and have canceled a number of American orders, with a result of closing several munitions factories. There have been large profits and large outlays, but this appears to be an inopportune time to impose special taxes on this industry, with an expectation of raising $71,000,000. The attempt to raise $227,000,000 from the income tax makes it almost confiscatory. The tax on inheritances is a serious interference with the taxes imposed for like purposes by 42 States.

A SECTIONAL MEASURE.

Now, why are these particular methods of taxation followed instead of imposing duties on products competing with similar products in the United States? The answer is self-evident—nearly all of these taxes fall almost exclusively on the inhabitants of Northern States. The 12 Southern States of Virginia, North Carolina, South Carolina, Florida, Georgia, Alabama, Kentucky, Tennessee, Louisiana, Arkansas, Missouri, and Texas, with 27 per cent of the population of the country, paid only 6.4 per cent of the income tax last year and they paid only 10.9 per cent of the corporation tax. New York State alone paid more than twice as much as the entire South. That is why the Democrats increase the income tax. The 12 Southern States have a majority of the Democratic caucus. All business is done by that party in caucuses; thus the South dictates all legislation. Then, too, the most important committees, with one exception, are in the hands of southern men, many of whom are from rural districts, without any wide business experience or knowledge.

DEMOCRATS IMPOSE ALLEGED PROTECTIVE RATES.

Much has been said of the need of protective duties on coal-tar dyes. When the war began we produced 3,300 short tons annually of coal-tar colors and imported 25,700 short tons, valued at some $12,000,000. We made or assembled semimanufactured products. Seventy-five per cent of the imported dyes came from Germany. All cotton, silk, wool, paint, and wall-paper manufacturers must have these colors, while many other industries require them. These dye plants are valuable for manufacturing war munitions. That is why Germany has been so independent in the European war, for, not producing dyes to any extent, the other powers could not manufacture sufficient munitions until after expending much time and money. It is doubly important for the United States to produce all of its own dyes. The Democratic Party has admitted the value of protective rates by imposing, in this revenue measure, from 40 to 53 per cent duties in the case of coal-tar dyes.

They have made rates one-third less than the General Chemical Society requested levied, and have added a clause to the effect that if a substantial quantity of the dyestuffs is not produced within five years, a gradual reduction in duties shall take place until they have been all removed. This clause, with the insufficient rates and the fierce competition that may be expected from Germany will retard development of our dye industry. The Democrats will then assert the correctness of their original free-trade view of this case. Their free-trade views are admittedly wrong in this dye matter. But it is only one case of many where they have changed their views because of the admitted failure of their experimental legislation.

A DEMOCRATIC TARIFF COMMISSION FOR DELAY.

The creation of a tariff commission by incorporating a provision for one in the pending bill is another experimental case. The Democratic national convention of 1912 opposed such a commission, and the Democrats repudiated the efficient bipartisan commission in existence when they came into power and paid no attention to the facts the commission reported in reference to costs of production and other essentials of trade and manufacture. A year ago the President rather gloated over having obtained such powers for the trade commission without, as he alleged, the knowledge of the Republicans in Congress. That was not true, but it demonstrates his cunning partisan bent. Now he wants a tariff commission, and the Democrats provide for one to be appointed by him. The object is—as Representative HEFLIN has admitted in a speech on the subject—the postponement of tariff revision. The Republicans, if they carry the coming elections, as I believe they will by an enormous majority, will not delay tariff revision because of any bipartisan board the President may appoint. Practically all of his commissions have been made up without recognition of the Republican Party, even when the law required such appointments and when a sense of ordinary justice and fairness would dictate that Republicans be given representation. His predecessors followed a different course.

THE DUMPING CLAUSE.

Another sugar coating for this $400,000,000 tax bill is the dumping clause. When goods are imported intentionally at prices less than their value or wholesale price at home at the time of exportation, punishment is to be inflicted. It is not easy to prove "intent" in such a case, while, at the same time, prices at home may be made intentionally low for the purpose of evading this provision of the measure. Take dyes, for instance. Germany consumes a small percentage only of her production. She could sacrifice profit on that percentage to kill the industry in the United States. However, while remembering the foregoing, it is well to consider that something of an achieve-

ment has been brought about by having the Democrats change so quickly and admit the advantage of a tariff commission to gather facts for future use and reference, and to have them advocate as a party measure a dumping clause as one of the provisions of their administration revenue bill. Chairman KITCHIN admitted that until two months ago the Democrats were opposed to a tariff commission. Their enormous losses in the last congressional election probably helped to bring about a conviction that all was not well with their policies as regards the thinking people of the country.

NO CHANGE IN TARIFF RATES IN GENERAL—FOR BRITISH FREE TRADE.

It is the evident intention to make no material change in the Underwood-law rates, which will leave our markets open to the world, while European and other countries have been increasing their tariff rates, and in many cases prohibiting imports altogether. The Democrats want the British free-trade system. They admit as much. In the pending measure they "point with pride" to the fact that the United Kingdom obtains 58 per cent of her taxes from incomes and inheritances, and constantly hold up that country as an illustration of how to impose taxes. A British royal commission which not very long ago made an investigation into the causes of pauperism in that country reported that it was impossible to ascertain the exact facts, but that there were over twice as many paupers as the British Government reports show. These reports give the number of paupers in poorhouses on a certain day only, taking no account of those there on other days and those maintained at home, and so forth. But the Government report shows 1 pauper to every 45 of the population, as compared with 1 to every 1,081 of population in the United States. Then, too, a very large percentage of the British population is on the threshold of pauperism all of the time. The system that leads to that condition the Democrats want to copy for the United States. Over 5,000,000 acres of land in England have ceased to be cultivated since free trade was adopted as governmental policy there. Many industries have ceased to exist. The dye and other industries in which England was in the lead are now located in other countries, on which England has been dependent. That is the condition the Democrats want to put into being in the United States. They will never succeed in that shameful effort.

FINANCIAL EXTRAVAGANCES AND BLUNDERS.

This Democratic administration has made a woeful failure in the administration of the Government business. It has used $12,000,000 obtained by the sale of two battleships, $5,855,780 by postal savings deposits, and $29,325,934 of the money deposited to retire bank notes, which have not been retired. It used up nearly $150,000,000 that the Republicans left in the general fund. It had an advantage in the fiscal year of 1914 of $36,859,000 excess duties from the Payne law, aside from the sugar duty. Then in 1915–16 it had $135,569,126 from stamp and excise taxes, $157,842,529 from sugar duties repudiated by the party in its platform of 1912 and now reenacted in violation of promises, and gathered $275,000,000 from corporation, internal-revenue, and income taxes, and yet the national debt has been increased over $32,000,000. What a record!

IMPORTS VASTLY INCREASED—HIGHER PRICES.

Over $563,664 in value of cotton goods were imported in a single week recently. In the same week $491,191 of cotton laces and embroideries were imported, as compared with $336,774 in the corresponding week last year. The Democrats deliberately misrepresent the facts by asserting that the war has decreased imports and thus reduced the revenue. The war has retarded imports, but they were $368,000,000 greater for the fiscal year 1916 than for 1913, the last under the protective tariff, while in 1916 the customs revenues was $106,276,122 less than in 1913. Enormous increase in imports and $106,000,000 less revenue, and not a thing cheaper, but everything very much higher in price. The average rate of duty last year was 9.7 per cent as compared with 17.6 per cent in 1913. This is where the trouble arises in part. Had the Payne duties been imposed on last year's imports, the revenue would have been $189,400,000 greater. The imports for May were, in value, $229,300,000, or $95,410,384 more than in May, 1913, under the Payne law. The highest in any month before the Underwood law became operative was $177,987,000 in October, 1912. That shows the hollow mockery of trying to excuse taxes because of a decline in imports.

INCREASE IN EXPORTS DUE TO THE EUROPEAN WAR.

The exports of domestic breadstuffs, cottonseed oil, food animals, meat and dairy products, cotton and mineral oils for the fiscal year 1916 were many millions of dollars less in value, though prices were higher than in 1915, but there was a large increase in exports, due to the demand for war purposes. The export of 31 classes of articles necessary to modern warfare made up 52 per cent of all exports, and those classes do not include all war exports. Exports, excluding war materials, were $153,660,000 less in 10 months of the last fiscal year than in the previous one. This demonstrates conclusively what the war has done for our foreign trade, and what a dark shadow, so far as that trade is concerned, will be cast on this country when the war ends.

DEMOCRATIC WASTE AND EXTRAVAGANCE.

What are the Democrats going to do with the money they are raising by this tremendous increase in direct taxes? For a nitrate plant to compete with private ownership, $20,000,000 has been appropriated, chiefly for the benefit of the South; for an armor-plate plant, wholly unnecessary except to make places for Democratic officeholders, $11,000,000; to build roads, a work that belongs to the States, $35,000,000; two flood-control projects for the South, $50,000,000, and so forth. Outside of the rivers and harbors bill and the public buildings bill, $216,000,000 is called for in these projects alone. Then, $50,000,000 is wanted to buy ships to put the Government in the mercantile shipping trade, something no Government ever before attempted. The President, who has been the greatest boss Congress has ever had, says the shipping bill must be passed, though it was defeated at the last session. Possibly he may be able to force it through, but there is serious opposition in the Senate to such inexcusable expenditure.

A COMMERCE REPORT ON SHIPPING.

A report published by Secretary Redfield states: "For many years no country of importance other than the United States has required that ships flying the national flag shall be of domestic construction, although practically every country has made this requirement in the case of steamships receiving postal subventions." It is related that all practically pay such subventions. Germany gives lower railroad rates—she controls 95 per cent of her railroads and her favoritism has enabled German manufacturers to sell their products at lower prices in countries reached by German steamship lines and thus increase German trade. France also does the same thing to a limited extent. Countries pay bounties on construction and thus induce home building. Austria granted loans to shipowners at low rates of interest, or without interest. Britain loaned nearly $13,000,000 to the Cunard Line at 2 per cent, lower rate of interest than the company could have secured it elsewhere, and for much less than the Government paid, and then paid the line a subsidy. Postal subvention antedates the bounty or subsidy system and is in more general use throughout the world than the latter system. Great Britain began that system in 1838. The purpose has been to encourage the maintenance of fast mail service on regular routes and schedules, and to foster the domestic shipbuilding industry by limiting payments to domestic-built ships. With two important exceptions, all financial aid extended to shipping by Great Britain has been in the form of postal and admiralty subventions. France pays direct bounties or subsidies. Italy, Austria-Hungary, Spain, and Japan do likewise.

And yet, without any such Government aid, and with the payment of wages two or more times as great, and under laws regulating food, hours of labor, and so forth, American shipowners are expected to compete with foreign owners! They are even compelled by the Democratic Party to pay tolls in the Panama Canal while foreign Governments reimburse their shipowners for such expenses. The expenditure of $50,000,000 by the Government in the purchase and operation of ships would not help, but would greatly injure American vessel owners, as they could not compete with the Government operating at a loss. It is amazing that President Wilson should advocate so strenously, such a proposition.

AN UNJUST TAX ON COPPER PRODUCTION.

The revenue bill imposes a special tax on copper products as alleged munitions of war. Nothing more unfair could well be imposed. A mine doing its own smelting or refining is subject to a tax on the gross value of the entire product. A mine not smelting or refining will not be subject to the tax. Most copper mines of this country refine their own copper, therefore the tax is practically direct on copper mining. Only a small part of the product enters into munitions. A great portion of the smelting and refining of foreign copper ore is done in this country.

The proposed tax will drive out this industry and will also drive out the refining of a part of the domestic production. The proposed tax is therefore class legislation, as applying to copper production and not to the production of other metals entering into munitions manufacture. The exports of aluminum, furs and manufactures, rubber goods, tools and machinery,

woolen goods, and other things for war purposes have increased to a much greater extent than copper, but no alleged war tax was imposed on them. Such discrimination is inexcusable.

FAILURES INCREASE—IDLE CARS.

Commercial failures under the Democratic tariff law have been greatly increased. The American Railroad Association reported 67,588 idle freight cars on June 1. Ex-Gov. Glynn, in addressing the St. Louis Democratic convention, said: "There is not an idle car on our railroads." That was perhaps as near the truth as the average Democratic orator gets, and is illustrative of Democratic campaign methods. The Government must return $30,000,000 for excess duties collected on imports coming in foreign vessels, according to a recent court decision. This may be added to the blunders of the Democratic legislators.

CIVIL-SERVICE HYPOCRISY.

While there was great profession of reducing the alleged number of useless officeholders by the President and his party, they have increased the number of said officeholders by 30,000 and placed the greater number of them into the civil service without examination. What a comment on the civil-service professions of the President and his party! No wonder a Democratic Representative—Mr. SISSON, of Mississippi—said: "Principle has gone to the four winds of the earth, and we are writing ourselves down in the history of the country as being the most outrageous and the most criminally extravagant Congress that ever sat on the American Continent."

Fortunately the Republicans have chosen in Justice Hughes a most admirable candidate for President, in whose success at the polls there is no room for doubt. A man of higher character and greater ability could not have been chosen, and his election, with that of a Republican Congress, will soon remove all the black spots on our national escutcheon, put there by the incompetence of the Democratic Party. And in carrying forward this good work we will have the efficient aid of former President Roosevelt and his progressive followers.

## The Revenue Bill.

## EXTENSION OF REMARKS
OF
## HON. HENRY W. WATSON,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. WATSON of Pennsylvania. Mr. Speaker, a system of taxation to meet the favor of all classes of men in their private, industrial, and commercial pursuits is an end which has not been attained by any nation. Theories upon theories have been advanced, tried, and abandoned. The growing extravagance of public legislation is making the question of revenue as perplexing to-day as in the ancient times. Man is not born to ease, for he can not live in luxury and indolence, save under the law of neutralization, thus every citizen, as a unit of his government, must bear his proportional tax in accordance with the value of his property and the increased strength and efficiency of his country. A nation's wealth depends upon its resources, the virtue of its citizens, and the skill of its workmen. The first and highest motive of a government is to protect its citizens in their social, industrial, and commercial lives. Labor is the ultimate source from which rises all forms of taxation, therefore it is of great consequence that a government should enact legislation to develop and guard its industries from foreign competition. Luxuries and those things enjoyed by the rich should be moderately taxed, that the necessities of life may be purchased by the poor.

A community is taxed in accordance with the value of its land, its industries, and the wealth of its residents, in order to meet the fixed taxes and those levied for specific purposes. In both instances the law wisely protects the poor by limiting the rate of taxation, although a precinct may be willing to be assessed a higher rate for a public improvement, that might inure to the benefit of its inhabitants.

While I am convinced that the Democratic Party is sincere in its policies of free trade, yet I am almost persuaded that this great party is being enlightened by the experience of time. It not only asked Congress to retain the duty on sugar, in order to meet the greatly increased expenses of the Government under its administration, but to protect the sugar industries of Louisiana. This revenue measure framed by the Democratic Party bears marked evidence of the failure of the Underwood tariff act. The present administration seems to have been born in a favorable House as to the positions of the stars and planets, for commerce in munitions and other necessities of war and the limited importations of foreign goods, caused by the continued hostilities, have prevented a great financial and commercial depression which otherwise would have occurred, if we can prophesy, by the free-trade policies of the past. The inheritance tax and the increased tax on incomes, tobacco, wines, and beers under this bill, which the Democratic Party prays the people to accept as evidence of its statesmanship, strongly exemplifies what would have been the result if there had not been an abnormal foreign demand for our goods, a short list of which is exhibited in the following table:

*Domestic merchandise exported.*

| Articles. | For the fiscal year ending June 30, 1914. | For the 11 months from July 1, 1915, to May 31, 1916. |
|---|---|---|
| Explosives | $6,272,197 | $404,655,383 |
| Woolen goods | 4,790,087 | 50,883,822 |
| Copper | 146,222,556 | 149,566,700 |
| Cotton | 610,475,301 | 336,682,127 |
| Breadstuffs | 165,302,385 | 407,998,746 |
| Zinc | 405,208 | 40,563,710 |
| Iron and steel | 251,480,677 | 545,018,533 |
| Horses | 3,388,819 | 69,008,116 |
| Mules | 690,974 | 21,121,410 |
| Total | 1,189,029,204 | 2,025,498,547 |

The unparalleled exportations that have brought prosperity to us can not be attributed to the Underwood Tariff Act and the administration of the Democratic Party. The universal war has forced England, Germany, France, and other countries to seek our markets, as is shown by the increased exportations of explosives and breadstuffs.

A nation, whether young or old, can not afford to throw open its commercial doors and permit foreign manufactured goods to pass through into its markets without regulations that will protect its workmen and its industries. Wages paid in our country are higher than those of any other, and in no part of the world are the people as well fed and clothed and as many own their homes as in the United States. These conditions were evolved by the protective policies of the Republican Party.

The measure purposes to raise a large part of its revenue from inheritance and income taxes, a system whereby but four of our States pay two-thirds of this revenue, as is shown in the following table:

*Individual income tax of States.*

| | |
|---|---|
| Alabama | $177,440.48 |
| Arkansas | 44,278.79 |
| Florida | 133,560.85 |
| Georgia | 199,546.46 |
| Kentucky | 165,112.82 |
| Louisiana | 296,341.35 |
| New Mexico and Arizona | 94,523.23 |
| North Carolina | 175,922.67 |
| South Carolina | 76,250.01 |
| Tennessee | 207,316.37 |
| Texas | 672,456.10 |
| Virginia | 289,632.12 |
| Total | 2,532,381.23 |
| Illinois | 5,166,689.91 |
| Pennsylvania | 6,312,204.29 |
| New York | 30,286,607.61 |
| Massachusetts | 4,193,873.08 |
| Total | 45,959,374.89 |

The total individual income tax paid into the United States Treasury during the fiscal year ended June 30, 1916, amounted to $67,957,488.50; of this the State of Pennsylvania paid nearly three times the tax that was collected from the above-mentioned 13 Southern States. Pennsylvania and New York paid over one-half of the income tax collected for the past year. These figures will serve also to indicate that the inheritance tax, a new provision under this bill, will be distributed amongst the States in about the same ratio as the income tax.

A protective-tariff policy is the only one that will develop the great cotton and sugar fields of the South and bring into value the millions of acres of grazing lands in the mountain ranges of the West. It is the only policy that will unite the interests of the citizens of our Nation and bury the provincial differences.

As the growth of industries and the accumulation of individual wealth expands and a higher and more general education extends to the children of the workmen, as well as to those of the magnates, then all classes will unconsciously depend upon each other, and these conditions must be brought about before any nation can claim it is truly great.

## The Revenue Bill.

### EXTENSION OF REMARKS
OF

# HON. EDWARD E. DENISON,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. DENISON. Mr. Speaker, I desire to briefly extend my remarks on this bill because I have not had an opportunity to express my views as fully as I desired on the floor of the House, on account of the limited time allowed for discussion of the bill and for amendments thereto by the Rules Committee.

I think the four principal amendments that have already been made to-day have greatly improved the bill. I am glad we have been able to amend the bill, reducing the salary of the tariff commissioners from $10,000 to $7,500 per year and of the secretary of the commission from $6,000 to $5,000 per year. I heartily approve of the amendment proposed by the gentleman from New York [Mr. FITZGERALD], changing the manner of making the appropriations to pay the expenses and the salary of the tariff commission. The provision in the bill disqualifying gentlemen who have served in the House of Representatives and the Senate from eligibility as members of the tariff commission should never have been incorporated in the bill, and I am glad that with the solid vote of the Republican side of the House we have succeeded in amending the bill by striking out that provision.

A special tax of $1 per thousand on the capital stock and surplus of all the banks of the country was an unfair and unjust provision in the bill. The banks are already compelled to pay a heavy tax on their capital and surplus to the State and local governments. They are also under this bill required to pay a heavy tax upon their incomes. A further special tax upon their capital and surplus, which would amount to a double Federal tax, in addition to the usual State taxes imposed upon the banks, could only be justified under circumstances of most urgent necessity, such as an unexpected war, which certainly does not exist at this time. If the banks of the country are taxed too heavily they will naturally recoup by charging a higher rate of interest to their borrowers or by paying a lower rate of interest to their depositors, and in either case the burden of the tax would fall where it should not be; and I think that provision was very properly stricken from the bill by amendment.

But even after the improvements of the bill which these amendments have made, I can not give it my support. I am opposed to the bill partly for what it does contain, but mostly for what it does not contain.

In preparing this bill the majority on the Ways and Means Committee have been willing apparently to abandon one of the time-honored principles of the Democratic Party and resort to what I think is a political trick in order to gain support for their revenue measure from among the Republican Members of Congress, and thereby embarrass the Republicans in the coming campaign. I do not think there should be any playing of politics in such important and serious matters as revenue legislation, and I will not approve such practice by supporting the bill.

It is well known over the country, but especially here in Congress, that the Underwood tariff law has been a disappointment in failing to produce sufficient revenue to run the Government. The logical and wise thing to do is to pass a new revenue law which will better protect American industries and labor and turn into the Treasury a greater amount of revenue from the customhouses; and I believe that the country will be disappointed at the failure of the majority party to bring in a bill that will at least increase to some extent the tariff revenues of the Government.

But the Democrats, following their traditional policy, refuse to disturb the Underwood law and choose to resort to direct taxation not only to meet the deficit in the ordinary expenses of the Government, but also to meet the extraordinary expenditures that have been made by this Congress in its effort to meet the demand of the people for a stronger Army and Navy and for other much-needed internal improvements.

The present Congress has passed some very large appropriation bills. Responding to the demand for greater preparedness, which has seemed to come from all parts of the country, we have made unusual appropriations for the Army and Navy and for the improvement of our industrial conditions, and I have supported all of these increased appropriations. But Congress has gone further than this and has unnecessarily and, I think, unwisely appropriated many millions for other purposes which should have been at least postponed, if not entirely rejected. The appropriations for a nitrate plant, for a Government armor-plate plant, and a Federal venture into the shipping business, as well as a greatly increased number of Federal jobs with salaries amounting to many millions of dollars, have been wholly unjustifiable and have been crowded through Congress over the objections and protests of the Republicans.

To these unusual appropriations for the increase of the agencies for national defense and for other important internal improvements, however, we have given our support; and I am willing to join with the majority in any fair and reasonable method of raising revenue to pay the bills.

But under the circumstances I think the majority party should have laid aside for a time all political considerations and brought in a revenue bill that would stand or fall upon its own merits. I do not think that simply because they could do so with the aid of their majority and a stringent special rule, they should have included in the revenue bill a number of other independent propositions which Congress should have thoroughly considered and had an opportunity to support or reject separately. Several of these provisions represent Republican, rather than Democratic, principles, but are inserted in the revenue bill purely for political purposes. I wish to speak briefly of but three or four of them.

At the beginning of this session a bill was introduced by the gentleman from Connecticut [Mr. HILL] to provide a protective tariff on dyestuffs, in order that the investment of American capital in that industry might be encouraged and the economic independence of this country promoted. Before the European war practically all dyes used in this country were obtained from Germany. With the complete blockading of the German ports we were entirely deprived of all dyestuffs, and there was a universal demand for the enactment of such protective legislation as would encourage American capital to invest in the business and establish the industry on a firm footing in this country, so that after the close of the war our investments would not be destroyed by competition from abroad and we would be independent of the German monopoly.

The Ways and Means Committee, after a full hearing, approved of the purpose of the bill, but instead of reporting it to the House as a separate measure, where the Members could have had an opportunity to express their approval or disapproval of this plain Republican principle of protection to an industry which circumstances demanded should be encouraged and protected, the committee have incorporated this provision for a protective tariff on dyestuffs in the revenue bill.

Mr. Speaker, the Democratic Party has always been opposed to the principle of protection. All of their national platforms down to and including the platform of 1912 have declared that there is no authority under the Constitution for levying a protective tariff. And I am unwilling to believe that they have been suddenly converted at heart to believe in the principle. It is quite apparent to my mind that they have included this provision for a protective tariff on dyestuffs in the revenue bill for three reasons: First, because they did not want to submit the proposition to Congress for a separate vote upon its own merits; second, because by doing so they hoped to give the semblance of nonpartisanship to their revenue bill, and thereby lead some misguided Republicans to support it; third, by gaining the support of Republicans for their revenue bill they hoped to go before the country in the coming campaign and claim that their method of raising revenues, as well as their appropriation measures, had been approved by the Republican Members.

I believe in the policy of protection. If we had been given an opportunity to do so I would have voted for the Hill bill, which would have provided an ample protective tariff on dyestuffs, not only to enable American capital to invest in the industry and successfully operate after the close of the European war, but it would have placed this country in a position of economic independence in the future. But I do not think the protective schedule provided for in this bill will be sufficient to secure American capital invested in the industry from competition that will follow the close of the European war, and I will not support their revenue bill simply because it contains this protective-tariff provision which, under other circumstances, I might approve.

This bill further proposes to meet the increased expenditures of the Government by doubling the tax on incomes. I am in favor of the principle of an income tax. When properly distributed and administered I think it is a fair and equitable source of Federal revenue; but I do not believe that our Gov-

ernment should resort to a tax on incomes, or to any other direct tax, to meet the larger part of the ordinary expenditures nor the extraordinary appropriations which the present Congress has made for the future defense of the country.

In the very nature of things an income tax can not be fairly apportioned among the different States. It is bound to fall largely upon three or four States where the greatest wealth is accumulated and the largest incomes are earned. This fact was made plain to the House by the figures which were to-day presented by my colleague from Illinois [Mr. MANN]. Since the burden of an income tax will fall most heavily upon four or five States, whose representation in the House and particularly in the Senate is small in comparison with the representation of all the other States who do not pay so much of the tax, an income tax can never be entirely fairly distributed under our form of Government. So far as the individual who pays the tax is concerned I think an income tax is as fair as any that could be imposed. But when considered in connection with the right of representation in the legislative branch of the Government where revenue laws are made, it is necessarily unfair, because those States which pay the largest part of the income tax can never have a proportionate representation in Congress.

For this reason I believe that the Government should resort to a tax on incomes as a supplementary rather than a principal source of its revenues. I believe the principal source of revenue for this Government should be a tariff on imports, which would not only produce revenue but afford protection as well. But when a reasonable tariff law does not produce sufficient revenue to meet the increase in the expenditures of the Government, and especially when war or other emergency would require additional expenditures, I believe the Government should levy a fairly graduated tax upon incomes. But the amount of such tax should never be greater than necessity would dictate.

At this time imports into our country are increasing enormously; they will be even greater after the war in Europe closes. If the Ways and Means Committee had been willing to increase the duties on imports, the increase in the tax on individual incomes provided for in this bill would have been wholly unnecessary. I am ready to support any measure increasing the tax on individual incomes, whenever it can be shown that the Government can not fairly raise sufficient revenues to meet its expenditures by an increase of tariff duties on imports, or whenever an emergency arises which will justify the use of such a means of raising revenues. But at this time when our country is at peace with the world, when there is no danger threatening us from abroad, and when the ports of our country are thrown wide open to the enormous imports free of duty from foreign countries, I do not approve of the increase in income taxes provided for in this bill. I disapprove of it not because I disapprove of the principle of a tax on incomes but because I think that such an increase of the tax on incomes is unnecessary, unwise, and unfair at this time.

Moreover, an analysis of this bill will show that it increases the tax on small incomes by a greater percentage than it increases the tax on large incomes. I can not see any fairness or justice in this discrimination, and this is another reason why I disapprove of that provision of the bill.

As another means of securing support for this bill from among the Republican Members, the majority of the committee have incorporated in it a provision for a special tax on the manufacturers of munitions of war. Of course, there is a popular prejudice against those concerns who are engaged in the manufacture of munitions of war. They have made enormous profits for the past two years. The materials which they are furnishing to the belligerents abroad increase their fortunes about in the same proportion as they increase death and destruction on the fields of battle. Nobody cares particularly how much of their ill-gotten gains are taken from them, by taxation or otherwise, for the average American has a prejudice against incomes derived from such a source. The Democrats are always ready to seize upon any scheme that they think will prove popular. So they have incorporated in this revenue bill a special tax on the manufacturers of munitions of war, because they believe that Members on the Republican side of the House will vote for the entire bill rather than vote against this tax on munitions of war.

Mr. Speaker, I believe the Government has a perfect right to resort to special taxes on the manufacture of munitions of war where there is an emergency or other necessity such as will justify the resort to that method of taxation. But there is just one justification of such a tax; and that is, that the manufacturers of munitions of war are making such enormous profits out of their business they can easily pay the tax without feeling the burden. There are a great many other industries in this country that are to-day making enormous war profits out of materials which they are furnishing belligerents in Europe, and which could, with equal justice and fairness, be specially taxed. Why these should have been overlooked by the Ways and Means Committee I do not know unless it be that their earnings have been more fabulous, perhaps, and that popular prejudice is more generally focused upon the manufacturers of munitions.

I suppose I share, to some extent, the popular sentiment that the manufacturers of munitions of war have been earning more than fair profits from their business and that they can pay a special tax of this kind without feeling the burden, and if we were given an opportunity to vote for this proposition in a separate bill I would give it my approval. But because I might approve a special tax on the manufacturers of munitions of war if I had an opportunity to vote for it separately, I will not, for that reason, vote for this revenue bill rather than vote against the provision for a tax on war munitions.

There are a great many good people in this country who do not believe that American citizens should be allowed to ship munitions of war to the belligerents in Europe; that an embargo should be placed upon all such traffic. There are a great many more who, at least, do not believe that such business should be encouraged by the Government. There is no doubt great fortunes are being made by those who are helping to prolong the struggle in Europe by the shipment of arms and munitions of war. So far as I am concerned, I do not have much sympathy for any of these war-profit concerns. But the Democratic Party seems to be willing to treat them as continuing industries; and they now say that the Government itself should have its share of the war profits by levying a tax upon the business. When I remember that the enormous profits which the manufacturers of munitions of war are now making is largely a tribute paid by the belligerents of Europe to continue the struggle that is bleeding Europe to death, I confess I can not grow enthusiastic over the proposition advanced by the majority here that our Government should by its taxing power demand a share of these ill-gotten gains in order to meet either its ordinary or extraordinary expenses.

But be that as it may, I do not doubt the legal right of the Government to do so, nor its propriety in doing so under circumstances of great emergency which would justify it.

Mr. Speaker, there is something amusing about the thought of a Democratic tariff commission. I am in favor of the appointment of a commission of experts to investigate the relations between the rates of duty on raw materials and finished or partly finished products, the effects of ad valorem and specific duties, and all questions relating to the arrangement of schedules and classifications of articles in the several schedules of the customs laws, and the relative cost of production and of manufacture in this and foreign countries, for the purpose of enabling Congress to act wisely in the enactment of protective legislation. But I am not to be misled by the action of the Democratic Party in including this provision for a tariff commission in their revenue bill. They have been too suddenly converted to the tariff-commission idea to suit me. When the creation of a tariff commission has been up for discussion in Congress heretofore the Democrats, with possibly one or two exceptions, have consistently opposed it as undemocratic. They ridiculed it. They legislated out of existence the tariff commission appointed by a Republican administration. They do not believe in the fundamental principle of a protective tariff. Not believing in a protective tariff, why should they want to appoint a commission of experts and maintain it at a great expense to the Government, when the services they would render would be useless except for the purpose of framing a proper protective-tariff law.

The very idea of a tariff commission is inconsistent and irreconcilable with the fundamental principle of the Democratic Party, and this provision in the revenue bill is for political purposes purely. The business interests of the country have for a number of years been demanding a more scientific and economical adjustment of tariff schedules and have been urging the appointment of a tariff commission. The Republican Party has favored the appointment of such a commission; but the Democratic Party, bidding for the support of the business interests of the country in the approaching national campaign, have suddenly become converted, apparently, to the tariff-commission idea; and this provision in the revenue bill is one of the present administration's baits thrown out to get the support of business men in the industrial centers of the country.

I do not believe for a moment that the Democratic Party will ever support protective-tariff legislation. They have always claimed that it was unconstitutional. I do not believe there is any sincerity in their advocacy of the appointment of a tariff commission, nor do I believe very many people will be deceived

or misled by it. The tariff question is one of policy as well as economics. I believe that the Government should have a commission of experts empowered to study and investigate all questions pertaining to tariff duties and the cost of production at home and abroad. But I think such a commission should be appointed by a President who believes in the policy of protection and who would respect the findings of such a commission if their findings should be such as to justify the enactment of protective-tariff legislation. If the Democratic Party believes now as they have always believed—that a protective tariff is unconstitutional—then this so-called tariff commission should be called what it, in fact, will be—a "revenue commission" with powers to investigate tariff questions only so far as they might pertain to Federal revenues.

My colleague from Illinois [Mr. RAINEY], at the beginning of this session, introduced a separate bill for the appointment of a nonpartisan tariff commission. The provisions of that bill were substantially the same as those that are incorporated in this bill. Why did not the Ways and Means Committee report out the Rainey bill and give Congress an opportunity to vote upon that question separately? Why should they have chosen to incorporate this provision for a tariff commission in a revenue bill which does not raise revenue by means of tariff duties?

The answer is plain. The tariff-commission provision, which is a Republican measure, has been incorporated in the revenue bill for exactly the same reason that the provision for a tariff on dyestuffs and for a tax on the manufacturers of munitions of war were inserted in the bill—in order to gain Republican support for their revenue bill. It is their hope, apparently, that by gaining support for this bill from the Republican Members of Congress they will place the Republican Party in a position where they can not criticize the Democratic method of raising revenues. This method of playing politics may accomplish its purpose with some of the Members, but I will not support their bill even if they have included in it these Republican policies which I might otherwise support.

Mr. Speaker, I consider as childish that provision of this bill prohibiting what is called "unfair competition"; it is commonly referred to as "antidumping," and pretends to protect American industries by making it unlawful for any person importing or assisting in importing any articles from any foreign country into the United States to commonly and systematically sell or cause to be sold such articles at a price substantially less than the actual market value or wholesale price of such articles in the principal markets of the country of their production or of other foreign countries to which they are commonly exported after adding to such market value freight, duty, and other charges or expenses necessarily incident to the transportation thereof in the United States.

It would be interesting to know just what wise man gave birth to this wonderful idea of preventing unfair competition in our markets by the imposition of legislative penalties. I am informed that we are indebted to our ingenious Secretary of Commerce for the discovery and first expression of this most remarkable economic principle.

The Democratic leader, Mr. KITCHIN, in making his statement to the House, said that the Republicans should support this bill because this provision against unfair competition is a protective measure and is a Republican policy. My suspicions are again aroused when a shrewd and partisan Democrat like the majority leader asks the Republican Members to support his bill because it contains Republican provisions. I have been wondering what the people will think when it is made known to them that the Democratic Party has offered to the country a law making unlawful foreign competition that will hurt American industry, a law that will allow the American producers to charge the people more for their products than they otherwise could charge. Like Cicero of old, may we not say "O tempora! O mores!" when the party of free trade will offer to the country a law that makes competition unlawful and that protects American manufacturers by allowing them to charge the people higher prices for their products?

In 1912 the Democratic Party declared it to be a fundamental principle of their party that the Federal Government had no right under the Constitution to impose or collect tariff duties except for revenue purposes, and that the high cost of living was due to the Republican policy of protection and high tariff. They promised the people to reduce the cost of living. The way this has been done has been frightful. And now, in the face of another approaching campaign, that party would enact a law not only providing for a protective tariff on dyestuffs but also providing a legislative penalty for unfair competition by foreign importers.

This proposed law against unfair competition is either a complete reversal of its principle of free trade by the Democratic Party or it is a political fraud pure and simple. If the Democratic Party has in fact abandoned its policy of free trade and is ready to accept the Republican policy of protection, there should be presented here a revenue bill which will provide real protection to American industry and afford sufficient revenue to pay the current expenses of the Government. If this bill becomes a law, and if there be any virtue in the provision against so-called unfair competition, then the result will be that Congress will by law compel foreign importers to raise the prices of their products and increase their own profits, whether they want to or not, and charge higher prices for the articles they sell to the American people. Briefly stated, the difference between this Democratic "unfair-competition" law and a Republican tariff protection law is that under the former the foreign importer would be compelled to raise the price of his imported articles before selling them to the American consumers and place the profit in his own pocket, whereas a Republican tariff protection law would compel the foreign importer to pay the protective tariff into the Treasury of the Government and allow him to charge the American consumer more for his article, if he wished to do so. Under the former law the foreign importer will get the benefit of the increased prices charged to the American consumer; under the latter the Government will get the benefit through its customs revenues. I can see neither wisdom nor sound policy in our Government compelling foreign importers to charge a higher price for their goods than they otherwise would before they can sell them to the American people, and allow them to put these increased profits in their own pockets, rather than compel them to pay import duties into the United States Treasury. Such a policy seems to me childish and absurd, and I will not give it my approval.

But, Mr. Speaker, I do not think many of us will be lulled into the belief that our Democratic friends have for one moment been converted to the Republican principle of protection. There is a general belief that when the struggle in Europe ends and the millions of men that are now under arms return to the fields and the factories there will be an enormous increase of imports into this country, and our markets will be flooded with foreign imports to such an extent that our industries will be paralyzed unless some sort of protection is afforded. None is given by the Underwood tariff law. Our ports are thrown open to the world, and it seems that the Democratic Party is unwilling to provide proper tariff protection. Realizing the effect that this prevailing fear of a trade war after the end of hostilities in Europe will have in the approaching election, the Democratic Party has offered to the country as a sort of decoy this so-called antidumping provision in the revenue bill. I consider it a mere sham for campaign purposes only, and I predict that there will never be a single prosecution under its provisions. A mere superficial scrutiny of the bill leads to this conclusion.

The bill provides that before the so-called unfair competition can be found to be unlawful it must appear that such act or acts were done with the intention of destroying or injuring any industry in the United States or of preventing the establishment of any industry in the United States or of restraining or monopolizing any part of trade and commerce in any article in the United States. This proviso, for all practical purposes, completely nullifies the entire law. It would make no difference how far the competition of foreign importers might go; it would be impossible to prove that it was done with the intention of destroying or injuring any industry in the United States. How could such intention be proven? It will not be sufficient under this law to show that an industry in the United States has been destroyed or injured. Before there could be a conviction the Government would have to prove that the foreign importer intended to injure or destroy the industry, which in the very nature of things would be almost impossible. And this shows more clearly than all else the object or purpose back of this provision of the bill. It is put there for political purposes as a bid for the support of the large business interests of the country in the coming campaign and to gain support of this bill from the Republican Members of Congress. It is believed, no doubt, that many will accept this as a real protection measure and vote for the bill rather than be placed in the attitude of voting against a protective measure.

Mr. Speaker, if this so-called unfair-competition bill had been brought before Congress as a separate measure, and if time had been allowed for a full discussion of the measure on its merits, it would not have received the support of 50 Members of the House. The Democrats would not have voted for it, because it is un-Democratic; the Republicans would not have voted for it, because it is a mere sham and will not accom-

plish what its authors pretend. And I do not believe that the people will be misled by it.

Section 305 of the bill repeals the act of October 22, 1914, known as the stamp act, and the joint resolution approved December 17, 1915, extending the provisions of the so-called stamp act for another year.

It is unnecessary for me to say that I am heartily in favor of that section of the bill. If I were given an opportunity to vote to repeal this obnoxious stamp tax law by a separate act I would not hesitate to do so, and I feel sure there is no one on the Republican side who would. I voted against the resolution extending the provisions of that act in December, 1915, and had I been a member in October, 1914, when the original stamp tax law was enacted, I would have voted against it then. It is a Democratic and not a Republican method of raising money to run the Government. No Republican administration would impose such a method of raising revenues on the country except at a time when our own country would be involved in war and immediate additional revenues would be necessary. While the President in his address to Congress suggested the continuation of these stamp taxes, the able leader of the majority, Mr. KITCHIN, and those working with him have learned the public sentiment and have wisely provided in this bill for the repeal of the law. And the majority of the committee, knowing the sentiment of the country as well as the sentiment of most of the Members of Congress to be opposed to this obnoxious revenue law, have put this provision for its repeal in the bill to raise revenues for the Government. Thus again the Republican Members of Congress are placed by the majority in the embarrassing position of either having to vote in favor of the Democratic revenue bill, to which we are opposed, or, by voting against it, to thereby have to vote against repealing the obnoxious stamp tax law which we as a party have opposed. While I want to see that law repealed, I will not allow myself to be driven into voting for this revenue bill in order to secure that result.

In conclusion I wish to say that I am in favor of a fair and equitably distributed tax upon incomes as an auxiliary source of revenue for the Federal Government. But I do not approve of the increase nor the method of distribution of the income tax as provided in this bill, for there is no national emergency or danger threatening us which justifies it. Ordinarily I believe that direct taxes upon inheritances should be left to the different States. But if emergencies should arise which would justify it I would approve of a direct Federal tax upon inheritances as a means of raising revenues to meet extraordinary expenditures.

I am opposed to the "unfair-competition" provision of this bill because I believe it is an economic absurdity inserted in the bill for political purposes and will not accomplish what it is claimed it will accomplish, because it is nullified by its own proviso requiring that the "unfair competition" to be unlawful must be done with the intention of injuring or destroying American industries.

But, Mr. Speaker, I am opposed to this bill principally because of what it does not contain. In view of the conditions which are almost certain to prevail in this country after the close of the European war I think the Ways and Means Committee should have reported a bill providing such protective import duties as would protect American labor and American industries when American labor and industries will be in such great need of protection and that would provide revenue with which to pay the expenses of the Government.

---

## Naval Appropriation Bill.

# SPEECH

OF

# HON. CHARLES H. SLOAN,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, May 30, 1916.*

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 15947) making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes.

Mr. SLOAN. Mr. Chairman, on this Decoration Day, sacred to the memory of America's heroic dead, I, in common, I believe, with every other man on the floor of this House, regret that in considering this essentially patriotic bill the words "Republican" or "Democrat," the words "the Republican Party" or "the Democratic Party," "the Republican record" or "the Democratic record," should be bandied from one side to the other.

I want to discuss this bill from the standpoint of increased battleship power. I am for the addition of two dreadnaughts, not because I have always voted when opportunity presented for at least two battleships but because I believe the exigencies and the occasion, as well as the future of the Nation, demand that we furnish these two additional battleships. We should furnish them not, as the gentleman from Missouri [Mr. BORLAND] suggests, as a matter of buncombe. I do not believe that a man on the committee, majority or minority, or a man on the floor of this House, either opposes or favors two battleships as a mere matter of buncombe.

I prefer to pay a higher tribute to every man on either side of the House. I believe that the man who sees in a small Navy the best policy for this country is a patriot, just as much as the man who would want us to have an overpowering monster Navy for the United States. I believe that in 1898, when the Spaniards, fleeing with Cervera down in Cuban waters, looked at their speeding captors they did not know the difference between Republican boys and Democratic boys, but each of them looked larger than my distinguished friend from Texas, DAVIS, and as big as SULLOWAY, of New Hampshire. [Applause.]

I am in favor of two battleships, and I desire to give reasons for my position. I have listened with a good deal of interest to the debate by men of learning on both sides of the House, and I believe that the force of the logic as it has been presented up to this time favors an addition to the real fighting force of our Navy. I think the experts who came before the committee practically agreed upon that. But I desire to cite to you gentlemen what I believe the best authority in the world as to the efficiency and necessity of a real increased fighting force in the Navy.

It is not the experts who have studied their books or watched records, but they are to be found over in the chancelleries of Europe, especially of Britain and Germany. What has taken place during the last nearly two years, while the battles have been going on in Europe? There has been fighting upon the land at enormous expense of blood and treasure; fighting on the sea practically little; fighting on the land with a resulting deadlock; fighting on the sea with a complete victory. And why? The commerce of the allies covers the seas of the world. The commerce of the central powers has been driven from the waters of the earth. Half of the great world battle is on the land, measured in expense; measured in importance, half of it is on the sea. What is the difference, and what has caused it? It is not in the clash of great vessels thus far, but it is in the confidence of the naval authorities of Great Britain in her real fighting force, combined with the conviction of the naval authorities of the central powers that after the aeroplanes have scouted over the fleets, after the submarines have made their dashes and destroyed commerce to some extent here and there, after the cruisers have coursed over the waters of the earth and returned, ultimately, if anything is to be settled, it will be in the death grapple of the real fighting forces, the battleships of the two great powers engaged.

The confidence of the one side and the reluctant conviction of the other caused the commerce of the allies to cover the ocean, while it withdrew from the waters of the earth the commerce of the central powers. It was the great dreadnaught system of Great Britain that has determined half of the great war now going on. And if that is true it seems to me that with the cruiser additions we are making, with the other auxiliary forces we are providing, the one thing that we ought not now to neglect is to furnish a large addition to the great, real fighting force, the battleships of the United States. [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. SLOAN. The foregoing speech was delivered upon the floor of the House in support of an amendment adding two battleships to the fighting machinery, presented in the naval appropriation bill from the Committee on Naval Affairs. Now, under the leave to extend I desire to say further that the presentation of the foregoing reasons did not convince a majority of the House of Representatives that we should have at least two real fighting machines involved in a bill which appropriated $270,000,000 of the people's money for national defense.

I can see how men might differ as to appropriating or not appropriating such a large sum of money. But why such enormous appropriations should be made without adding a real fighting machine which would add real punch and shock in a naval conflict and at the same time would be able to resist shock and blow, it is difficult to understand.

In the time which has elapsed between delivering that speech and the presentation of it for the RECORD two important events

have occurred. First, the North Sea great naval battle between the fleets of Germany and the British Empire took place and the world is now familiar with the details and result.

That great sea battle was creditable to each of the great contending powers. But the large outstanding result is that the commerce of the British Empire still covers the sea and that of Germany is suppressed. The reason for it, as agreed by practically all naval critics, is in that great battle the British had the preponderance of great battleships. The light cruisers did excellent scout service. The submarines and torpedo-boat destroyers inflicted damage here and there. The battle cruisers with their high speed, light armament, and heavy guns did much damage in offensive, but themselves they could not save. The real, determining shock, crash, and result were effected by the heavily armored, heavy gunned, intelligently handled, modern sea monster known as the dreadnaught.

That is why the allies can command the flocks, granaries, mines, and factories of the world; while the central powers with an army, the most powerful and effective land fighting machine ever organized in the world, must depend for food and munitions upon a limited area. A fact which may be the ultimate determining factor in this the world's greatest conflict.

It was for two of these that I contended on the floor of the House. It seemed to me that in these warring times in presenting such an enormous appropriation bill and omitting battleships was like a great banquet, with soup and wine in plenty, salad and dessert in abundance, with meat omitted from the menu.

Second. The Senate, which acquired possession of this bill, has apparently taken home the lesson of the North Sea battle and is now proposing four great dreadnaughts to be added to the bill, evidently convinced that if hundreds of millions are to be expended for fighting machinery there should be some real battling units.

The following is an interesting editorial taken from the Nebraska State Journal, giving a clear midcontinent view of the battleship controversy at this time:

MORE DREADNAUGHTS.

The effort of President Wilson to have the navy-building program include three or four dreadnaughts is without doubt influenced in some degree by the naval engagement off Jutland. The loss of three battle cruisers of the first class from the British fleet is enough to make the advocates of this type of vessel thoughtful. The battle cruiser is a swift, lightly armored, and heavily armed ship which under normal conditions is able to keep out of the way of enemy guns while pouring a destructive fire upon him from its tremendous batteries.

But conditions are not always "normal." When the great fleets came together on the last day of May in the North Sea a haze prevented the battle cruisers from picking up the enemy at the long distances that are needed to give the cruisers immunity from attack and effectiveness with their own guns. Slipping in out of the fog the German battleships poured salvos at short range at the British fleet. The heavily armored dreadnaughts were able to resist these shots. The lightly armored battle cruisers were pierced in vital places before they could maneuver out of range, and three of the finest and most modern specimens in the British Navy went to the bottom with all on board. These "eggshells armed with hammers," as Winston Churchill calls them, failed because conditions were not favorable for their use. They were caught in a trap and destroyed before their speed and their guns could save them.

The Jutland battle does not condemn the battle cruiser. What it does is to give more confidence than ever in the superdreadnaught, the big ship with fair speed and heavy guns and heavy armor which must make up the fighting line and bear the brunt of the combat when two fleets meet in real earnest on the high seas. Without doubt the President has been advised by the naval experts that the latest naval battle makes the construction of more dreadnaughts advisable if the American Fleet is to be rounded out for effective duty. Senator TILLMAN'S request for a 60,000-ton battleship is an extravagant but not illogical deduction from the lessons of Jutland.

The following excerpt from an article by Admiral George Dewey, retired, shows what the best naval authority on this subject is:

[Taken from the Scientific American of July 1, 1916.]

There is a constant tendency on the part of the public to go off at a tangent in its enthusiasm for the class of ship that at a given time is attracting wide attention. Last fall, for instance, the public clamored for many submarines and favored disregarding appropriations for dreadnaughts or battle cruisers. Later the battle cruiser has been attracting much attention to itself because the incidental clashes of the present war have been battles between scout ships. So the clamor this spring has been very largely for battle cruisers.

The dreadnaught has attracted very little attention because she has not heretofore been in the fighting. The public did not see that the very existence of British dreadnaughts in the North Sea resulted in the bottling up of all Germany. It did not generally realize that the battleship was performing its purpose without the necessity of fighting. The present clash, however, demonstrates that in the final issue it is the dreadnaught which means victory or defeat.

Expenditures for preparedness in this country, neglected for the last two or three years, while current events should have been effective warnings, now burst forth in staggering figures and bewildering amounts.

My study has convinced me that as our large competitor nations are separated from us by wide seas, that our large preparation should be upon the sea. This not only for our relation with the world, but on account of its effect upon ourselves.

History teaches that the tendency of great standing armies is to consume the substance of the people, dominate their councils, subvert their liberties, and finally overthrow their Governments. This has not been true of great navies. Navies, as a rule, have been used as battling instruments with other nations and peoples. They have never become instruments of oppression or means of governmental destruction at home.

It would probably not be out of place at this time to refer to some legislative history closely related to our present naval policy. For some time prior to the Sixty-second Congress in the upbuilding of our Navy two battleships per year were favored. With the incoming of a Democratic majority in the House of Representatives that policy was changed, and a one-battleship policy of the House of Representatives was set over against a two-battleship policy of a Republican Senate.

Late on the night of March 3, 1913, within a few hours of the inauguration of President Wilson and the complete taking over of all the branches of this Government by the party now in power, a contest was on in this Chamber on the conference report on the naval appropriation bill, which had long been considered by the conferees representing the two legislative bodies. The Senate conferees had finally yielded to a one-battleship appropriation. The adoption or the rejection of the report was before the House. Hon. GEORGE E. FOSS, of Illinois, then ranking Republican member on the Naval Committee, yielded me time to favor two battleships.

In addition to my statement there at that time, I might observe that had two battleships been provided at that time they could now have been completed. The cost of the extra battleship would have been at least 25 per cent less than its cost at this time. There would have been a saving of from four to five million dollars. But the prestige of the incoming administration forecasting its naval policy as one of retrenchment prevailed in the vote at that time taken, and but one battleship was provided.

In discussing the two-battleship program, I spoke as follows:

[Sixty-second Congress, third session, March 3, 1913, page 4809.]

Mr. SLOAN. Mr. Speaker, at this late hour, I should not have trespassed upon the time of this House to favor two battleships if, in the various debates concerning this question, the reason for my vote had been given. The controlling consideration of whether or not the ruling power of this country, or that which will be the ruling power of this Government to-morrow, shall live up to the responsibility it has assumed. I, in common with perhaps every man on the floor of this House, would be pleased to see the necessity for battleships absolutely removed. The hammers and forges of the world, busy in the construction of battleships, know no sunrise, sunset, or midnight. It is a sound or preparation in every quarter of the globe. It was thought that America would take the lead in disarmament. The President of the United States, whose term expires to-morrow, negotiated treaties with the great powers of the earth looking toward this precise end; that is, the removal of the necessity for the construction of battleships. The treaty-ratifying power is at the other end of this Capitol Building, and as that body was constituted during the last year neither party was in control, because it took two-thirds to adopt or ratify a treaty.

Those treaties, which if put into effect by the Senate of the United States would give the other side of this House an excuse for opposing the construction of battleships, were emasculated and their effectiveness absolutely averted and destroyed, and the other high contracting powers would not agree to the emasculated agreement. These amendments were not made by those who supported the President of the United States, but by the votes of the side of the House which upon to-morrow will assume control of this Government.

Two important amendments were used for the purpose of defeating those treaties. One was known as the Bacon amendment. The amendment is as follows:

"*Provided*, That the Senate advises and consents to the ratification of the said treaty, with the understanding, to be made a part of such ratification, that the treaty does not authorize the submission of arbitration of any question which affects the admission of aliens into the United States or the admission of aliens to the educational institutions of the several States, or the territorial integrity of the several States of the United States, or concerning the question of the alleged indebedness or moneyed obligation of any State of the United States, or any question which depends upon or involves the maintenance of the traditional attitude of the United States concerning American questions, commonly described as the Monroe doctrine, or other purely governmental policy."

For the Bacon amendment 7 Republicans voted and 39 Democrats, while 36 Republicans and no Democrats voted against the Bacon amendment. The committee amendment, which proposed to strike out the third paragraph of article 3, is as follows:

"It is further agreed, however, that in cases in which the parties disagree as to whether or not a difference is subject to arbitration under article 1 of this treaty that question shall be submitted to the joint high commission of inquiry; and if all or all but one of the members of the commission agree and report that such difference is within the scope of article 1 it shall be referred to arbitration in accordance with the provision of this treaty."—

For this amendment, 36 Democrats and 6 Republicans; against the amendment, 3 Democrats and 37 Republicans. So that from the members of the party which to-morrow will assume the control of the affairs of this Government, when the President of the United States said, "We desire to remove the necessity for the construction of battleships by entering into treaties of peace with the great battleship-making powers of the earth," came the vote that emasculated those treaties

and prevented their effective adoption. It came as a challenge to the world, "We are ready to fight." You gave the "defi" to the battleship countries of the world, and you would better not bluff. You would better prepare to make good.

That is the reason why I vote for two battleships, and because we, through your action, gave the "defi." If we have not a substantial Navy when the "defi" is accepted, by whatever power on earth sees fit to accept it, then our Navy will be passed, our shores will be reached, and our battles must be fought by our young men, the volunteer soldiery of the United States; and when foreign enemies approach us, however superior we may be, our loss in land battle will be great. If our battles be fought on the sea, it will be largely by professional warriors; the result will be swift and decisive; while if we fight on land fighting will be done by our sons, drawn from our homes. I want to say, Mr. Speaker, you will find that battleships are cheaper than boys. [Applause.]

## The Revenue Bill.

## EXTENSION OF REMARKS
OF
# HON. WILLIAM H. CARTER,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. CARTER of Massachusetts. Mr. Speaker and gentlemen, we have not yet reached the crisis where our very existence depends upon taxes. If such were the case, we would all gladly give all that we have.

Under our present system we raise money by customs duties, by internal revenue taxes, and by income and corporation taxes.

INCOME TAX.

I first want to take up that section of the bill which refers to the income tax. I do not believe that the people of this country want to put the burden of all taxes upon a few. It makes thrift only the object of taxes, and I do not believe that we should single out a few because they have acquired wealth and make them bear all the burdens of the Government.

I want to insert in my remarks a table of figures which have just been made public by Secretary of the Treasury McAdoo:

| Districts. | Corporation income tax. | Individual income tax. |
|---|---|---|
| Alabama (Alabama and Mississippi) | $279,665.43 | $177,440.48 |
| Arkansas | 112,074.11 | 44,278.79 |
| First California (includes Nevada) | 1,477,773.84 | 952,576.28 |
| Sixth California | 460,992.73 | 540,813.24 |
| Colorado (Colorado and Wyoming) | 573,503.74 | 364,102.37 |
| Connecticut (Connecticut and Rhode Island) | 1,692,183.45 | 2,132,866.89 |
| Florida | 108,664.80 | 133,560.83 |
| Georgia | 367,291.95 | 199,546.46 |
| Hawaii | 341,938.37 | 112,144.95 |
| First Illinois | 5,109,164.99 | 4,848,593.96 |
| Fifth Illinois | 172,301.65 | 90,362.39 |
| Eighth Illinois | 160,753.98 | 178,740.36 |
| Thirteenth Illinois | 127,931.37 | 48,993.20 |
| Sixth Indiana | 666,812.66 | 347,875.56 |
| Seventh Indiana | 147,395.32 | 62,444.50 |
| Third Iowa | 517,887.96 | 277,098.45 |
| Kansas | 377,189.51 | 139,393.47 |
| Second Kentucky | 34,195.83 | 8,734.57 |
| Fifth Kentucky | 277,159.06 | 103,183.91 |
| Sixth Kentucky | 28,252.37 | 12,985.61 |
| Seventh Kentucky | 45,717.31 | 33,991.88 |
| Eighth Kentucky | 26,520.97 | 6,216.78 |
| Louisiana | 406,416.45 | 296,341.35 |
| Maryland, (Maryland, Delaware, District of Columbia, and Accomac and Northampton Counties of Virginia) | 1,787,680.69 | 2,741,761.76 |
| Third Massachusetts | 2,668,144.82 | 4,193,873.08 |
| First Michigan | 1,680,447.64 | 1,730,859.95 |
| Fourth Michigan | 340,025.52 | 145,885.67 |
| Minnesota | 1,854,447.24 | 866,557.90 |
| First Missouri | 1,031,501.65 | 818,411.74 |
| Sixth Missouri | 551,734.96 | 388,316.93 |
| Montana (Montana, Idaho, and Utah) | 735,927.04 | 225,728.01 |
| Nebraska | 332,705.69 | 160,206.31 |
| New Hampshire (New Hampshire, Maine, and Vermont) | 507,536.98 | 556,570.31 |
| First New Jersey | 357,474.11 | 697,997.95 |
| Fifth New Jersey | 1,180,259.69 | 2,230,302.18 |
| New Mexico (New Mexico and Arizona) | 321,563.21 | 94,524.23 |
| First New York | 648,514.10 | 1,751,547.57 |
| Second New York | 9,237,778.23 | 14,713,305.36 |
| Third New York | 2,869,293.42 | 10,618,663.03 |
| Fourteenth New York | 646,389.73 | 1,500,339.99 |
| Twenty-first New York | 443,589.64 | 472,456.77 |
| Twenty-eighth New York | 1,098,512.44 | 1,230,294.89 |
| Fourth North Carolina | 116,802.67 | 52,439.44 |
| Fifth North Carolina | 207,730.69 | 123,483.23 |
| North and South Dakota | 176,141.82 | 58,594.39 |
| First Ohio | 727,979.96 | 515,339.32 |
| Tenth Ohio | 765,438.82 | 282,010.74 |
| Eleventh Ohio | 286,080.86 | 229,258.43 |
| Eighteenth Ohio | 1,868,139.25 | 1,389,672.34 |
| Oklahoma | 404,600.80 | 480,415.08 |
| Oregon | 197,795.61 | 118,437.49 |
| First Pennsylvania | $3,153,890.79 | $3,756,186.27 |
| Ninth Pennsylvania | 202,329.16 | 170,615.55 |
| Twelfth Pennsylvania | 428,480.90 | 461,048.11 |
| Twenty-third Pennsylvania | 3,005,529.16 | 1,924,354.36 |
| South Carolina | 173,188.91 | 76,250.01 |
| Tennessee | 329,015.11 | 207,316.37 |
| Third Texas | 897,670.97 | 672,456.10 |
| Second Virginia | 367,234.40 | 239,984.88 |
| Sixth Virignia | 279,554.76 | 49,647.24 |
| Washington (Washington and Alaska) | 398,638.64 | 219,167.13 |
| West Virginia | 331,947.96 | 132,064.13 |
| First Wisconsin | 597,898.64 | 503,143.74 |
| Second Wisconsin | 180,437.27 | 56,805.24 |
| Total | 56,909,941.78 | 67,957,488.50 |

Under this bill the taxes are nearly doubled and the people of the North have got to stand the burden of Federal taxation for the benefit of the Southern States.

Four States—New York, Pennsylvania, Illinois, and Massachusetts—have to pay nearly three-fourths of the entire revenue to be raised under the provisions of this bill.

And what do we get in return for the money paid into the National Treasury?

A few weeks ago there was a provision to widen Boston Harbor, one of the greatest ports in America.

This project was immediately voted down, and the very same day these same Democratic Congressmen who voted against this measure appropriated millions of dollars for unnavigable streams of the South.

I had hoped that the necessity for revenue at this time would cause the Democratic members of the Ways and Means Committee to put on an adequate tariff, which would not only protect the manufacturers, laborers, and farmers, but would bring in a great revenue to our Treasury.

TARIFF.

The Underwood tariff has been a dismal failure. The majority of the people of this country are in favor of a protective tariff. In order to mislead the voters at the coming election there is a provision in this bill for a tariff commission.

The Democratic Party does not protect our American industries, and their attempt to create a tariff board does not give any assurances that the policy of protection will be recognized. It does not give any assurances that an adequate tariff will be enacted.

Before this European war commenced there were more than 4,000,000 idle workers in this country. In the chief cities of the country the local authorities were appealed to to provide work for the unemployed during the period between the enactment of the Underwood law and the beginning of the European war. John H. Martin, president of the Massachusetts Real Estate Exchange, in a telegram to the Secretary of the Navy urging the granting of a supply-ship contract to the Charlestown Navy Yard, said:

> One-fifth of labor in this section now unemployed. Contract would assist in relieving some of this condition.

In St. Louis on February 8, 1914, 500 homeless men, carrying a banner inscribed "We want work, not alms," and singing "Throw Out the Life Line," marched to the city hall and appealed to the mayor for appropriations for the relief of the poor. The parade was called the "pageant of the unemployed."

On February 24 Gov. Walsh, of Massachusetts, and Mayor Curley, of Boston, were asked by a committee selected at a meeting of the unemployed to throw open the armories and other public buildings for sleeping purposes and the distribution of food for those out of work, and to provide work for the idle.

The eighth annual report of the State free employment offices of Massachusetts, covering the year ending November 30, 1914, shows that for the first time since 1906 positions offered in the four offices fell off 27.32 per cent in 1914 from the preceding year, the number of positions reported filled fell off 15.13 per cent, the number of persons furnished employment fell off 13.95 per cent, and the number of persons applied for by employers fell off 19.53 per cent.

The offers of positions in the Boston office fell off 36.36 per cent in 1914 from 1913; the number of positions reported filled, 25.02 per cent; the number of persons furnished employement, 29.53 per cent; and the number of persons applied for by employers, 27.83 per cent. For the Springfield office the decrease in the number of offers of positions was 36.04 per cent; in the number of positions reported filled, 25.93 per cent; in the number of persons furnished employment, 31.47 per cent; and in the number of persons applied for by employers, 32.14 per cent. For the Fall River office, the decrease in the number of offers of positions

was 20.56 per cent; in the number of positions reported filled, 11.35 per cent; in the number of persons furnished employment, 23.90 per cent; and in the number of persons applied for by employers, 25.26 per cent.

Such is the story of the havoc wrought up to the outbreak of the war by the Democratic tariff law which President Wilson signed on the evening of October 3, 1913, with so much complacency and with such great satisfaction.

It did not reduce the cost of living. It did not increase our export trade. It did not bring prosperity to business or employment to our workingmen. It did not yield sufficient revenue for the Government. It reduced a favorable trade balance and sent import figures to an alarming height.

Then came the great European war, which for a time put a stop to the increasing rush of imports. But the channels of ocean trade did not remain permanently closed. Competition from German mills and factories very largely ceased, but England continues to ship her surplus products here. And when the war closes, as close it will, a renewal of competition, fiercer than any we have ever known, will come upon us.

War orders to an enormous amount have given a temporary stimulus to business, but war munitions can not form a safe or lasting basis of American prosperity.

I want at this time to call your attention to a number of reports, which I believe will prove to you that the prosperity of the country is due to the European war.

I will give these figures for the last 10 months of the fiscal year, as they are the last available figures. I will also compare these same 10 months with the same 10 months of the last year before the war.

In the shipment of mules and horses prior to the war the exports amounted to $3,533,000, and now, in the 10 months of the fiscal year just closed, they amount to $84,293,000. Were they sent over there for any purpose other than the war? Now, let us take the manufacture of brass, going into munitions of war chiefly. I shall leave off the odd hundred thousand dollars and give you the millions. Prior to the war it was $6,000,000, since the war began, $366,000,000; aeroplanes, before the war, $194,000, and after the war, $6,270,000; automobiles and parts thereof, prior to the war, $20,000,000, subsequent to the war, $116,000,000.

Railway cars, chiefly sent to Russia, $10,000,000 prior to the war, $21,000,000 now; motorcycles, $911,000 prior to the war, $2,771,000 now; chemicals used in making explosives across the sea, $22,000,000 before the war, $93,000,000 after the war; cotton manufactures, articles used by the soldiers chiefly, $43,000,000 prior to the war, and now $88,000,000; explosives—and is there any doubt that they are used for any other purpose than the war?—$5,000,000 before the war, after the war started, $336,000,000; iron and steel, used extensively in the manufacture of munitions over there, $212,000,000 prior to the war, now $472,000,000; leather and manufactures thereof, saddles, harness, boots, shoes, going in large quantities to the men on the battle fields, $47,000,000 prior to the war, now $120,000,000; ment and dairy products, chiefly canned goods, $124,000,000 prior to the war, $231,000,000 after the war; beans and dry peas, absolutely for the soldiers, $741,000 before the war, now $4,500,000; wool and manufactures of wool—and we never exported any wool to amount to anything prior to the war—prior to the war, $3,900,000, now $47,500,000; zinc and manufactures thereof, before the war, $328,000, now $36,800,000. Is not this convincing that our increased exports are largely due to the war in Europe?

It now appears that the Democrats will mistake the present again. They fail to recognize the fact that our gain in export trade is due to war orders; that war orders have caused a revival of business; and last, and most important of all, they fail to heed what is being demonstrated by this war and prepare for trade conditions when the war is ended. Imports, retarded when the war was commenced in Europe, are now coming to our shores in ever-increasing volumes. Right at this time if it were not for the enormous war orders imports would greatly exceed our exports. On 16 classes of products, all of which are used in large quantities by the armies in Europe, exports have increased during the 10 months ending April 31, 1916, no less than $1,480,001,000 compared with the corresponding 10 months two years ago, which was prior to the war. On 16 classes of products our exports increased from $650,855,000 to $2,130,856,000, or an increase of 227 per cent. During the same 10-month period all other exports decreased from $1,367,231,000 in 1914 to $1,213,571,000 in 1916, a decrease of $153,660,000. Do not make the fatal blunder of "mistaking the present." It is a matter of vital importance to American prosperity. The war can not last forever; how about industrial preparedness?

Prior to the war in Europe 52.7 per cent of Russia's imports came from Germany, 20 per cent of England's imports came from Germany, 18 per cent of France's imports came from Germany, and 15 per cent of Italy's imports came from Germany.

The nations named are at war with Germany, and if reports are true, after the war all of these nations will exclude German goods from their shores. Germany has left nothing undone to foster German industries and has been the most aggressive nation in the world in seeking foreign markets for exports.

Germany after the war will invade this Nation's markets with German-made goods, and they will displace American-made goods and labor.

DYE SITUATION.

As a manufacturer and one whose district has suffered as the result of the lack of dyes, I want to call your attention to the inadequate provisions which have been made in this bill.

It is absolutely necessary for us, in order to encourage the American investor and manufacturer, to build up a dye industry in this country, to insure him proper protection against foreign-made goods.

The bill that we have before us only adds a specific duty of 2 cents per pound. If the gentlemen who claim to know the facts are correct, this added duty will have but little or no effect in encouraging investment in the manufacture of dyes.

DEMOCRATIC EXTRAVAGANCE.

The Democratic Party has proved that it is not qualified to run a great business like our Government.

It does not understand the needs of our Government, neither does it understand the industrial side of our life. Through its majority in Congress it managed to pass appropriations which should cause every fair-minded voter to rebuke the party at the polls next November.

Let me just point out a few instances where this Democratic Congress has thrown away the people's money. I voted with my Republican brethren against these measures, but I was in the minority.

They appropriated $20,000,000 for a nitrate plant which could have been saved.

They appropriated $75,000,000 for Federal road building. In spite of the fact that the people of the North pay a large per cent of this appropriation, the Northern States receive very little benefit from it. This money should never have been appropriated.

Of the river and harbor bill, I believe that at least $25,000,000 is wasted. The Democrats appropriated $44,000,000 to pay for the salaries of 30,000 useless clerks. Fifty millions of dollars was appropriated for flood control, and I believe that this money will not control the floods. Fifty millions of dollars was appropriated to buy ships. Eleven millions of dollars was wasted on an armor-plate plant.

Here is at least $255,000,000 that could have been saved to this Government. The reductions in the tariff have caused the Treasury to lose approximately $110,000,000 this year.

This would make a difference of $365,000,000 which the people in my section of the country are compelled to pay in additional taxes.

In spite of this extravagance, our Democratic friends will endeavor to tell the voters this fall that these additional taxes are due to our preparedness program.

The Democrats promised to reduce the cost of living. Have they done it? Is it not a fact that the cost of living has increased under the Democratic administration?

I am against war with Mexico and pray that it may be prevented. At the same time it should be remembered that President Wilson's flopping and vacillation spread over three years must eventually lead to war unless we are to accept all manner of indignities, offense, and insult without retaliation. President Wilson's wavering invited just this sort of thing. We must swallow it or in the end we must act.

On the other hand, a firm hand and intelligent and well-conceived policy with respect to Mexico would have, by this time, brought us out of the woods and Mexico under some measure of stable government.

We are also told that there is a dearth of ammunition for our troops. But what have we done for Mexico in the meantime? On March 14, 1912, President Taft placed an embargo on ammunition and guns going into Mexico from the United States. On February 3, 1914, this embargo was taken off by President Wilson. On April 21, 1914, at the time of the Vera Cruz occupation, Mr. Wilson restored the embargo, and on September 9, 1914, he "changed his mind," and again lifted it. On October 21, 1915, when the A. B. C. conference was in session, or soon thereafter, he again restored the embargo on ammunition and guns consigned to everyone in Mexico but Carranza and his followers. This was done to aid the irreconcilable Carranza against Wilson's old ally, Villa.

During the fiscal year 1914, Mexico secured from us $750,000 worth of gunpowder, $488,000 worth of firearms, and $69,000

worth of other explosives. During the fiscal year 1915 the Mexicans were supplied with $3,000,000 worth of American cartridges, 2,400,000 pounds of dynamite, 36,000 pounds of gunpowder, $1,280,000 worth of firearms, and $116,250 worth of other explosives. On April 11, at a time when the Mexican situation was most acute, 332,000 rounds of ammunition left Laredo, Tex., consigned to Carranza, and on April 14 a dispatch from Douglas, Ariz., stated:

The State Department has issued a permit to the de facto government of Mexico to pass 1,000,000 rounds of small-arm ammunition across the line to Agua Prieta during the next few days. The ammunition is now en route to the border.

These are two instances which were reported by the press, and there is no telling how many escaped notice.

In conclusion, the Democratic Party has been guilty of wasteful extravagance of the people's money.

It has refused to protect the lives and property of Americans in foreign lands.

It has taken away from the States the revenue which belongs to them by application of the principle involved in the inheritance-tax section of the bill.

It has levied taxes on the people without limit.

The people of the country do not forget, and on November 7 next will register their protest against this administration by electing a Republican President, a Republican Senate, and a Republican House.

## Dagley Supports Wilson and Moon.

### EXTENSION OF REMARKS
OF
### HON. THETUS W. SIMS,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 12, 1916.*

Mr. SIMS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an article from the Chattanooga News of July 8, a paper published at Chattanooga, Tenn., giving a letter of Mr. C. A. Dagley, secretary of the Progressive Party committee of Tennessee, to my colleague, Hon. JOHN A. MOON.

The article is as follows:

[From the Chattanooga News, Saturday, July 8, 1916.]

DAGLEY SUPPORTS WILSON AND MOON—SECRETARY OF PROGRESSIVE COMMITTEE NOW DEMOCRAT—FINDS MORE IN THAT PARTY THAT APPEALS TO PROGRESSIVES—WRITES LETTER TO JUDGE JOHN A. MOON AND WILL ACTIVELY SUPPORT HIM FOR CONGRESS.

C. A. Dagley, secretary of the Tennessee Progressive committee, can not stand Hughes for President, and will support Woodrow Wilson. He makes this announcement in a letter to Hon. JOHN A. MOON, Democratic candidate to succeed himself in the third district, who Mr. Dagley also will support. The prominent Progressive in this letter gives his reasons why he will from henceforth be a Democrat. He reviews the Wilson administration approvingly, and finds in the record of the Democratic Party, in its platform in this campaign, grounds for throwing the Progressive support to its candidates. Many other Progressives are making a similar decision to Mr. Dagley. His letter to Judge MOON is as follows:

Hon JOHN A. MOON, M. C.,
*Washington, D. C.*

DEAR SIR: Please permit me to state that as a sincere Progressive, I desire to offer you my hearty support in your campaign to be returned next November to the Congress of the United States for another term of two years. I will further state that I have decided, should the Progressive Party not have a candidate for President, that I will support Woodrow Wilson for reelection in the present campaign to the full limit of my ability. I believe that the Democratic Party has, in the past four years, done much to commend it as a political party to all independent and Progressive voters. As a party in power, it has actually given the people considerable constructive, progressive legislation. It was the party in power to reform the banking and currency system, and, instead, to give the people stable, satisfactory currency legislation which had been a crying need for many years, and which was considered by all Progressive leaders one of the most needful reforms contained in the Progressive Party platform of 1912.

As a party to-day, standing as it does for a nonpartisan tariff commission, the eight-hour day law, and indorsing the principle of woman's suffrage and other progressive measures, and with a leadership far more progressive than the Republican Party, I have slowly and conscientiously come to the conclusion that as a Progressive, without a party organization, that I can more harmoniously affiliate with the Democratic Party in the present political campaign than I can with the Republican Party, whose most powerful and dominant leaders in the organization to-day are, I believe, opposed to progressive principles that it seems to me should be properly recognized in party candidates, organization, and platform.

I appreciate the fact that the Democratic leaders upon recognizing the action of Theodore Roosevelt in declining the nomination for President on the Progressive ticket, and the action of the Progressive national committee in indorsing the Republican candidates, must have believed that there were thousands of honest Progressive voters left, at least temporarily, without a party of their own, and that the Democratic leaders have sought to make it possible for Progressives to affiliate with a party that was not controlled through its organization by standpat leadership and men whose whole life work in politics has been in opposition to progressive principles and a square deal for the common people and the plain everyday voters.

I am pleased to see that Mr. Wilson has chosen as the chairman of the Democratic national committee a clean, forward-looking, progressive Democratic leader. In 1914, when the people of Pennsylvania were smarting under the power of the Penrose Republican machine, thousands of decent Republicans and Progressive voters supported Mr. Vance C. McCormick for governor on the Democratic ticket in preference to the Republican candidate nominated and backed by the Penrose Republican political organization. It is a fact that the man chosen as the Democratic national chairman was Progressive enough for the regularly nominated Progressive Party candidate, William Draper Lewis, to withdraw in favor of Mr. McCormick and for Theodore Roosevelt to stump the State for him as a Progressive-Democratic candidate for governor in 1914, along with Gifford Pinchot, a radical Progressive, for United States Senator.

With kindest regards, I beg to remain,
Sincerely, yours,

C. A. DAGLEY,
*Secretary Tennessee Progressive State Committee.*

## Address of President Wilson.

### EXTENSION OF REMARKS
OF
### HON. SAMUEL W. BEAKES,
OF MICHIGAN,
IN THE HOUSE OF REPRESENTATIVES,

*Thursday, July 13, 1916.*

Mr. BEAKES. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address by the President of the United States at Salesmanship Congress, Detroit, Mich., July 10, 1916.

The address is as follows:

THE PRESIDENT, AT SALESMANSHIP CONGRESS, DETROIT, MICH., JULY 10, 1916.

Mr. Chairman, ladies and gentlemen, it is with a great deal of gratification that I find myself facing so interesting and important a company as this. You will readily understand that I have not come here to make an elaborate address, but I have come here to express my interest in the objects of this great association and to congratulate you on the opportunities which are immediately ahead of you in handling the business of this country.

These are days of incalculable change, my fellow citizens. It is impossible for anybody to predict anything that is certain in detail with regard to the future either of this country or of the world in the large movements of business; but one thing is perfectly clear, and that is that the United States will play a new part, and that it will be a part of unprecedented opportunity and of greatly increased responsibilities. The United States has had a very singular history in respect of its business relationships with the rest of the world. I have always believed—and I think you have always believed—that there is more business genius in the United States than anywhere else in the world, and yet America has apparently been afraid of touching too intimately the great processes of international exchange. America of all countries in the world has been timid; has not until recently—has not until within the last two or three years—provided itself with the fundamental instrumentalities for playing a large part in the trade of the world. America, which ought to have had the broadest vision of any nation, has raised up an extraordinary number of provincial thinkers, men who thought provincially about business, men who thought that the United States was not ready to take her competitive part in the struggle for peaceful conquest of the world. For anybody who reflects philosophically upon the history of this country, that is the most amazing fact about it.

But the time for provincial thinkers has gone by. We must play a great part in the world whether we choose it or not. Do you know the significance of this single fact that within the last year or two we have, speaking in large terms, ceased to be a debtor Nation and become a creditor Nation; that we have more of the surplus gold of the world than we ever had before, and that our business hereafter is to be to lend and to help and to promote the great peaceful enterprises of the world? We have got to finance the world in some important degree, and those who finance the world must understand it and rule it with their spirits and with their minds. We can not cabin and confine ourselves any longer, and so I said that I came here to congratulate you upon the great rôle that lies ahead of you to play. This is a salesmanship congress, and hereafter salesmanship will have

to be closely related in its outlook and scope to statesmanship, to international statesmanship. It will have to be touched with an intimate comprehension of the conditions of business and enterprise throughout the round globe, because America will have to place her goods by running her intelligence ahead of her goods. No amount of mere push, no amount of mere hustling, or, to speak in the western language, no amount of mere rustling, no amount of mere active enterprise will suffice.

There have been two ways of doing business in the world outside of the lands in which the great manufactures have been made. One has been to try to force the tastes of the manufacturing country on the country in which the markets were being sought, and the other way has been to study the tastes and needs of the countries where the markets were being sought and suit your goods to those tastes and needs, and the latter method has beaten the former method. If you are going to sell carpets, for example, in India, you have got to have as good taste as the Indians in the patterns of the carpets, and that is going some. If you are going to sell things in tropical countries, they must, rather obviously, be different from those which you sell in cold and arctic countries. You can not assume that the rest of the world is going to wear or use or manufacture what you wear and use and manufacture. Your raw materials must be the raw materials that they need, not the raw materials that you need. Your manufactured goods must be the manufactured goods which they desire, not those which other markets have desired. So your business will keep pace with your knowledge, not of yourself and of your manufacturing processes but of them and of their commercial needs. That is statesmanship because that is relating your international activities to the conditions which exist in other countries.

If we can once get what some gentlemen are so loth to give us, a merchant marine—the trouble with some men is that they are slow in their minds; they do not see; they do not know the need and they will not allow you to point it out to them—if we can once get in a position to deliver our own goods, then the goods that we have to deliver will be adjusted to the desires of those to whom we deliver them, and all the world will welcome America in the great field of commerce and manufacture. There is a great deal of cant talked, my fellow citizens, about service. I wish the word had not been surrounded with so much sickly sentimentality, because it is a good, robust, red-blooded word, and it is the key to everything that concerns the peace and prosperity of the world. You can not force yourself upon anybody who is not obliged to take you. The only way in which you can be sure of being accepted is by being sure that you have got something to offer that is worth taking, and the only way you can be sure of that is by being sure that you wish to adapt it to the use and the service of the people to whom you are trying to sell.

I was trying to expound in another place the other day the long way and the short way to get together. The long way is to fight. I hear some gentlemen say that they want to help Mexico, and the way they propose to help her is to overwhelm her with force. That is the long way to help Mexico, as well as the wrong way, because after the fighting you have a nation full of justified suspicion and animated by well-founded hostility and hatred, and then will you help them? Then will you establish cordial business relationships with them? Then will you go in as neighbors and enjoy their confidence? On the contrary, you will have shut every door as if it were of steel against you. What makes Mexico suspicious of us is that she does not believe as yet that we want to serve her. She believes that we want to possess her, and she has justification for the belief in the way in which some of our fellow citizens have tried to exploit her privileges and possessions. For my part, I will not serve the ambitions of these gentlemen, but I will try to serve all America, so far as intercourse with Mexico is concerned, by trying to serve Mexico herself. There are some things that are not debatable. Of course, we have to defend our border. That goes without saying. Of course, we must make good our own sovereignty, but we must respect the sovereignty of Mexico. I am one of those—I have sometimes suspected that there were not many of them—who believes, absolutely believes, the Virginia Bill of Rights, which was the model of the old Bill of Rights, which says that a people has a right to do anything they please with their own country and their own government. I am old-fashioned enough to believe that, and I am going to stand by that belief. That is for the benefit of those gentlemen who wish to butt in.

Now, I use that as an illustration, my fellow citizens. What do we all most desire when the present tragical confusion of the world's affairs is over? We desire permanent peace, do we not? Permanent peace can grow in only one soil. That is the soil of actual good will, and good will can not exist without mutual comprehension. Charles Lamb, the English writer, made a very delightful remark that I have long treasured in my memory. He stuttered a little bit, and he said of some one who was not present, "I h-h-hate that m-man"; and some one said, "Why, Charles, I didn't know you knew him." "Oh," he said, "I-I-I don't; I-I can't h-hate a m-man I know." That is a profound human remark. You can not hate a man you know. I know some rascals that I have tried to hate.

I have tried to head them off as rascals, but I have been unable to hate them. I have liked them. And so, not to compare like with unlike in the relationship of nations with each other, many of our antagonisms are based upon misunderstandings; and as long as you do not understand a country you can not trade with it. As long as you can not take its point of view you can not commend your goods to its purchase. As long as you go to it with a supercilious air, for example, and patronize it, as we have tried to do in some less developed countries, and tell them that this is what they ought to want, whether they want it or not, you can not do business with them. You have got to approach them just as you really ought to approach all matters of human relationship. These people who give their money to philanthropy, for example, but can not for the life of them see from the point of view of those for whose benefit they are giving the money, are not philanthropists. They endow and promote philanthropy, but you can not be a philanthropist unless you love all sorts and conditions of men. The great barrier in this world, I have sometimes thought, is not the barrier of principle, but the barrier of taste. Certain classes of society find certain other classes of society distasteful to them. They do not like the way they dress; they do not like the infrequency with which they bathe; they do not like to consort with them under the conditions under which they live; and, therefore, they stand at a distance from them and it is impossible for them to serve them, because they do not understand them and do not feel that common pulse of humanity and that common school of experience which is the only thing that binds us together and educates us in the same fashion.

This, then, my friends, is the simple message that I bring you: Lift your eyes to the horizons of business; do not look too close at the little processes with which you are concerned, but let your thoughts and your imaginations run abroad throughout the whole world and with the inspiration of the thought that you are Americans and are meant to carry liberty and justice and the principles of humanity wherever you go. Go out and sell goods that will make the world more comfortable and more happy and convert them to the principles of America.

## Compensation Bill.

### EXTENSION OF REMARKS
OF
### HON. JOHN M. EVANS,
OF MONTANA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, July 14, 1916.*

Mr. EVANS. Mr. Speaker, I am in favor of this bill because it is a humane measure and marks a new step in the humanitarianism of our Government. No man need apologize for his vote for this bill, nor do I believe it should be necessary for anyone to make an argument to secure its passage. The time has long since gone by when the wisdom of a compensation law can be questioned, even if put upon an economic basis, and a bold man he would be to ignore the humanitarian side of the question.

For many years workmen of the private employer were left to resort to the courts to secure compensation for an injury occurring without fault of their own. The method was fraught with so much red tape, so much injustice, and proved so expensive that nearly every State in the Union has remedied the matter by enactment of compensation laws. But the situation with the Federal employees is different, the injured employee is even deprived of the right of a hearing in the courts in case of injury through no fault of his own.

This bill provides for compensation for every employee of the Government who is so unfortunate as to be injured while in the performance of duty, unless, of course, the injury is the result of the voluntary act of the injured party. Men may differ about the details of such a measure, but the fundamental principle that the Government should do what it compels the private employer to do can admit of no dispute.

Our civilization is so complex and life is so constituted that in the every-day routine of our affairs accidents will happen that place upon the individual a burden that is impossible for him to bear, and in such cases this burden should be borne by society at large, and it is now being recognized that this is one of the burdens that society at large should bear. It is for this reason that everybody has come to recognize the wisdom of compensation laws.

Many of the States have such compensation laws which are working with most excellent results, and now it is proposed that the United States shall have a compensation law for the protection of all its employees, and thus give relief from the cumbrous and inefficient system of presenting private claims to Congress for its action, and to give its sanction to this great principle of humanity.

This bill H. R. 15316 seeks to supplant the existing inadequate Federal compensation law of May 30, 1908, with a new law providing adequate compensation for all civilian employees of the United States suffering injuries received in the course of their employment.

As the existing law applies only to specified branches of the service deemed to be especially hazardous, it covers only about 100,000 of the Government's 400,000 employees. The bill here reported will cover all civil employees of the United States and the Panama Railroad Co., about 400,000 in all. It seemed to me that if an employee is injured in the performance of his duty he is entitled to compensation regardless of his occupation. This is the law in 21 of the 32 States having compensation laws. The present law, in denying compensation to an injured employee, if his occupation was not "hazardous," goes counter to the theory on which all compensation acts are based, viz, that the industry shall bear the burden of injuries caused by it.

In this connection it should be borne in mind that the extension of the existing law in this particular will not increase the cost in proportion, for although the number of employees covered is four times as great as under the existing law, the number of accidents will not be proportionately increased, since the accident risk in the added employments is considerably less than in the branches of service already covered.

In addition to the confusion caused by having three distinct systems of compensation in operation in different branches of the service, valuable legislative time is taken by the private-claim bills which are presented to Congress when injuries occur in branches of the service not covered by the present law. Nearly 300 claims for injuries in the Government service have already been presented to this Congress. This bill will provide one uniform system of compensation throughout the Federal service, doing away with the great delay and uncertainty in congressional action on meritorious cases.

The bill provides compensation for disability or death of an employee resulting from personal injury sustained in the performance of his duty. No compensation is allowed if the injury is caused by the willful misconduct of the employee, by the employee's intention to bring about the injury or death of himself or of another, or if intoxication of the injured employee is the proximate cause of the injury or death.

The bill establishes a separate fund in the Treasury to be known as the "employees' compensation fund." The bill appropriates $500,000 to establish this fund and provides that there shall be added to it such sums as Congress may from time to time appropriate. The commission is to submit annually to the Secretary of the Treasury estimates of appropriations needed for the maintenance of the fund.

The amount here appropriated is deemed ample for the first year. It is thought that the expense will be somewhat less. The committee has secured an estimate of the cost under this bill prepared by the Bureau of Labor Statistics on the basis of the cost under the existing law and of the probable number of accidents which will occur in the future. (Hearings, Jan. 28, pp. 48–52.)

This careful official statement shows there were 2,467 claims made during the year ending June 30, 1913, under the present law. It is estimated that under the proposed bill there might have been 2,316 cases added, but of those 1,464 were for a period varying from 3 to 15 days.

With a reduction of the rate of compensation to two-thirds of the pay, and the limitation of $66⅔ as the monthly maximum amount that any workman could receive as compensation, regardless of the amount that he may be receiving as earnings when employed, there would be afforded a degree of stimulus to return to work, while the opportunity of continuing unemployed without loss of pay would be withdrawn. It is believed, therefore, that the proposed bill would involve an expense for the first year not exceeding the amount named, namely, $500,000, and in all probability falling below it, by reason of the fact that in the $482,000 paid out in the year 1910–11, for instance, there were many cases in which the amount of compensation paid was to persons receiving in excess of $66⅔ per month as benefits.

Referring now to the fact that the Government is at the present time paying out between four and five hundred thousand dollars under existing laws, which provide for full payment of wages during the term of disability, not exceeding one year, it is evident that the substitution of a law providing two-thirds pay during the term of disability would reduce the expense for the first year by one-third, in so far as the law applies to persons receiving benefits under existing laws. Inasmuch as at least one-half the additions would be for short-term disabilities, it seems probable that the extension of the law to cover all classes of employees would result in no actual increase in the amount expended.

The State of Montana, which I have the honor, in part, to represent adopted a compensation law two years ago, and though we have had only that brief experience under it, both employer and employee are satisfied and my advices are that should that question be again submitted to our people scarcely a vote in that State would be cast against it. So I conclude that if the several States are sufficiently progressive to adopt this sort of legislation, the Federal Congress can not afford to be less progressive and humane in dealing with its half a million faithful employees. For these, and other reasons, Mr. Speaker, I favor the immediate enactment of this legislation.

---

**Speech of President Wilson at Detroit, Mich.**

---

## EXTENSION OF REMARKS

OF

## HON. MARTIN D. FOSTER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, July 14, 1916.*

Mr. FOSTER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address at luncheon tendered by Salesmanship Congress, Detroit Athletic Club, July 10, 1916.

The address is as follows:

THE PRESIDENT AT LUNCHEON TENDERED BY SALESMANSHIP CONGRESS, DETROIT ATHLETIC CLUB, JULY 10, 1916.

Mr. Chairman, Judge Murphy, ladies and gentlemen, I am glad to find myself as popular as Judge Murphy, and I must say in his behalf that you know him better than you know me. I am glad to find myself in Detroit and face to face with the men who have played the principal part in giving it distinction throughout the country and throughout the world. Looking about among you, I see that it is true in this matter, as in others, that the only men fit for such a job are young men and men who never grow old. There is the liveliness of youth in the eyes even of those of you who have shared with me the painful parting with the hirsute appendage.

I have been interested in some things that Mr. Denby has said to me to-day. He has shamefacedly admitted that he has found himself enjoying the companionship of Democrats. Now, I have long enjoyed the friendship and companionship of Republicans, because I am by instinct a teacher, and I would like to teach them something. We have been trying, some of us, for a good many years to teach in politics, as well as elsewhere, this lesson, that we are all in the same boat; we have common interests, and it is our business to understand and serve those common interests. The great difficulty that has confronted us, gentlemen, has often been that we have deliberately looked at these common interests from self-chosen angles which made them look as if some of us were separated from others and as if some of us wanted to depress business, for example, and others of us wanted to exalt business. I dare say that you have noticed that the same necessity to make a living is imposed upon Democrats as Republicans, and I dare say you are ready to believe that Democrats are just as willing to make a good living as Republicans. Therefore it seems to me logically to follow, though I have been quoted as having no regard for logic, that Democrats are naturally as much interested in the business prosperity of the United States as anybody else. So that if you believe that they are not as fitted to guide it as other persons you can not be doubting their interest; you are only impugning their intelligence. And some Democrats had noticed that the inclination to suppose that only some persons

understood the business of America had a tendency to run into the assumption that the number of persons who understood that business was very small and that there were only certain groups and associations of gentlemen who were entitled to be trustees of that business for the rest of us.

I have never subscribed in any walk of life to the trustee theory. I have always been inclined to believe that the business of the world was best understood by those men who were in the struggle for maintenance not only, but for success. The man who knows the strength of the tide is the man who is swimming against it, not the man who is floating with it. The man who is immersed in the beginnings of business, who is trying to get his foothold, who is trying to get other men to believe in him and lend him money and trust him to make profitable use of that money, is the man who knows what the business conditions in the United States are; and I would rather take his counsel as to what ought to be done for business than the counsel of any established captain of industry. The captain of industry is looking backward and the other man is looking forward. The conditions of business change with every generation, change with every decade, are now changing at an almost breathless pace; and the men who have made good are not feeling the tides as the other men are feeling them. The men who have got into the position of captaincy, unless they are of unusual fiber, unless they are of unusually catholic sympathy, unless they have continued to touch shoulder with the ranks, unless they have continued to keep close communion with the men they are employing and the young men they are bringing up as their assistants, do not belong to the struggle in which we should see that every unreasonable obstacle is removed and every reasonable help afforded that public policy can afford.

So I invite your thoughts, in what I sincerely believe to be an entirely nonpartisan spirit, to the democracy of business. An act was recently passed in Congress that some of the most intelligent business men of this country earnestly opposed—men whom I knew, men whose character I trusted, men whose integrity I absolutely believed in. I refer to the Federal reserve act, by which we intended, and succeeded in, taking credit out of the control of a small number of men and making it available to everybody who had real commercial assets; and the very men who opposed that act, and opposed it conscientiously, now admit that it saved the country from a ruinous panic when the stress of war came on, and that it is the salvation of every average business man who is in the midst of the tides that I have been trying to describe. What does that mean, gentlemen? It means that you can get a settled point of view and can conscientiously oppose progress if you do not need progress yourself. That is what it means. I am not impugning the intelligence even of the men who opposed things, because the same thing happens to every man if he is not of extraordinary makeup, if he can not see the necessity for a thing that he does not himself need. When you have abundant credit and control of credit you, of course, do not need that the area of credit should be broadened.

The suspicion is beginning to dawn in many quarters that the average man knows the business necessities of the country just as well as the extraordinary man does. I believe in the ordinary man. If I did not believe in the ordinary man, I would move out of a democracy, and if I could find a decent monarchy I would live in it. The very conception of America is based upon the validity of the judgments of the average man, and I call you to witness that there have not been many catastrophes in American history. I call you to witness that the average judgments of the voters of the United States have been sound judgments. I call you to witness that this great impulse of the common opinion has been a lifting impulse, and not a depressing impulse. What is the object of associations like that which is gathered here to-day, this salesmanship congress? The moral of it is that a few men can not determine the interests of a large body of men, and that the only way to determine them and advance them is to have a representative assembly chosen by themselves get together and take common counsel regarding them. And do you not notice that in every great occupation in the United States there is beginning to be more and more of this common counsel? And have you not noticed that the more common counsel you have, the higher the standards are that are insisted upon?

I attended the other day the congress of the advertising men, and their motto is, "Truth and fair dealing in what you represent your business to be and your goods to be." I have no doubt that in every association like this the prevailing sentiment is that only by the highest standards—I mean the highest moral standards—can you achieve the most permanent and satisfactory business results. Was that the prevalent conception before these associations were drawn together? Have you not found the moral judgment of the average man steady up the whole process and clarify it? Do you not know more after every conference with your fellows than you did before? I never went into a committee of any kind upon any important public matter, or private matter, so far as that is concerned, that I did not come out with an altered judgment and knowing much more about the matter than when I went in; and not only knowing much more, but knowing that the common judgment arrived at was better than I could have suggested when I went in. That is the universal experience of candid men. If it were not so, there would be no object in congresses like this. Yet whenever we attempt legislation we find ourselves in this case: We are not in the presence of the many who can counsel wisely, but we are in the presence of the few who counsel too narrowly, and the thing that we have been trying to break away from is not that these gentlemen who constituted the narrow circles of advice should be excluded from the advice, but that they should be associated with hundreds of thousands of their fellow citizens.

I have had some say that I was not accessible to them, and when I inquired into it I found they meant that I did not personally invite them. They did not know how to come without being invited, and they did not care to come if they came upon the same terms with everybody else, knowing that everybody else was welcome whom I had the time to confer with.

Am I telling you things unobserved by you? Do you not know that these things are true? And do you not believe with me that the affairs of the Nation can be better conducted upon the basis of general counsel than upon the basis of special counsel? Men are colored and governed by their occupations and their surroundings and their habits. If I wanted to change the law radically I would not consult a lawyer. If I wanted to change business methods radically I would not consult a man who had made a conspicuous success by using the present methods that I wanted to change. Not because I would distrust these men, but because I would know that they would not change their thinking over night; that they would have to go through a long process of reacquaintance with the circumstances of the time—the new circumstances of the time—before they could be converted to my point of view. You get a good deal more light on the street than you do in the closet. You get a good deal more light by keeping your ears open among the rank and file of your fellow citizens than you do in any private conference whatever. I would rather hear what the men are talking about on the trains and in the shops and by the fireside than hear anything else, because I want guidance, and I know I could get it there, and what I am constantly asking is that men should bring me that counsel, because I am not privileged to determine things independently of this counsel. I am your servant, not your ruler.

One thing that we are now trying to convert the small circles to that the big circles are already converted to is that this country needs a merchant marine and ought to get one. I have found that I had a great deal more resistance when I tried to help business than when I tried to interfere with it. I have had a great deal more resistance of counsel, of special counsel, when I tried to alter the things that are established than when I tried to do anything else. We call ourselves a liberal Nation, whereas, as a matter of fact, we are one of the most conservative nations in the world. If you want to make enemies, try to change something. You know why it is. To do things to-day exactly the way you did them yesterday saves thinking.

It does not cost you anything. You have acquired the habit; you know the routine; you do not have to plan anything, and it frightens you with a hint of exertion to learn that you will have to do it a different way to-morrow. Until I became a college teacher, I used to think that the young men were radical, but college boys are the greatest conservatives I ever tackled in my life, largely because they have associated too much with their fathers. What you have to do with them is to take them up upon some visionary height and show them the map of the world as it is. Do not let them see their father's factory. Do not let them see their father's countinghouse. Let them see the great valleys, teeming with laborious people. Let them see the great struggle of men in realms they never dreamed of. Let them see the great emotional power that is in the world, the great ambitions, the great hopes, the great fears. Give them some picture of mankind, and then their father's business, and every other man's business, will begin to fall into place. They will see that it is an item and not the whole thing; and they will sometimes see that the item is not properly related to the whole, and what they will get interested in will be to relate the item to the whole, so that it will form part of the force and not part of the impediment.

This country, above every country in the world, gentlemen, is meant to lift; it is meant to add to the forces that improve. It is meant to add to everything that betters the world;

that gives it better thinking, more honest endeavor, a closer grapple of men with men, so that we will all be pulling together like one irresistible team in a single harness. That is the reason why it seemed wise to substitute for the harsh processes of the law, which merely lays its hand on your shoulder after you have sinned and threatens you with punishment, some of the milder and more helpful processes of counsel. That is the reason the Federal Trade Commission was established, so that men would have some place where they could take counsel as to what the law was, and what the law permitted, and also take counsel as to whether the law itself was right, and advice had not better be taken as to its alteration. The processes of counsel are the only processes of accommodation, not the processes of punishment. Punishment retards, but it does not lift up. Punishment impedes, but it does not improve. And so we ought to substitute for the harsh processes of the law, wherever we can, the milder and gentler and more helpful processes of counsel.

It has been a very great grief to some of us year after year, year after year, to see a fundamental thing like the fiscal policy of the Government with regard to duties on imports made a football of politics. Why, gentlemen, party politics ought to have nothing to do with the question of what is for the benefit of the business of the United States, and that is the reason we ought to have a tariff commission and, I may add, are going to have a tariff commission. But, then, gentlemen, the trouble will be with me. The provision as it stands makes it obligatory upon me not to choose more than half the commission from any one political party. The bill does not undertake to say how many political parties there are. That just now is a delicate question. But I am forbidden to take more than two of the same variety, and yet the trouble about that is I would like to find men for that commission who were of no one of the varieties. I would like to find men who would find out the circumstances of American business, particularly as it changes and is going to change with perplexing rapidity in the years immediately ahead of us, without any regard whatever to the interest of any party whatever, so that we should be able to legislate upon the facts and upon the large economic aspects of those facts without stopping to think which party it was going to hurt and which party it was going to benefit. But almost everybody in this country wears a label of some kind, and under the law I suppose I will have to turn them around and see how they are labeled, how they are branded, and that is going to be a very great blow to my spirit and a very great test of my judgment. I hope after the results are achieved you will judge me leniently, because my desire would be not to have a bipartisan but an absolutely nonpartisan commission of men who really applied the tests of scientific analysis of the facts and no other tests whatever to the conclusions that they arrived at.

Did you ever think how absolutely supreme and sovereign facts are? You can make laws all the year through contrary to the facts and the facts will overrun the laws. Do not let a fact catch you napping, because you will get the worst of it if you do, and the object of the tariff commission is that we should see the facts coming first, so that they could not get us. I remember a cynical politician saying to me once when I was thanking him for having voted the way I hoped he would vote, knowing that that had not been his initial inclination, "Well, Governor, they never get me if I see them coming first." He had heard from home, and he saw them coming. Now, I have that attitude toward facts. I never let them get me if I see them first, and it is because I want to see them that I want commissions of this sort and the spirit of this sort that I have tried to describe in the commission as it is constituted.

Because, as I was saying this morning, there is a task ahead of us of most colossal difficulty. We have not been accustomed to the large world of international business, and we have got to get accustomed to it right away. All provincials have got to take a back seat. All men who are afraid of competition have got to take a back seat. All men who depend upon anything except their intelligence and their efficiency have got to take a back seat. It will be interesting to see the sifting process go on. I have some men in mind to nominate for back seats, and I will not draw all of them from the same party. It will not need an act of Congress for that purpose. And some men are going to be surprised at the keenness of the air into which they are thrust out. They are going to be thrust out, and we are either going to make conquest, peaceful conquest, of the markets of the world or we are going to be prevented forevermore of boasting of the business ability of America. I have never been afraid of trusting an American business man out in the air, but some men have. They have said, "Give us a wall to crouch behind for fear those fellows should get us," and when it has come to finding out who was crouching behind the wall it was found that all sorts were crouching behind the wall—the capable and the incapable—and that the main object of the wall was to shelter the incapable. As an American, I am too proud to submit to anything like that. I believe that Americans can manufacture goods better than anybody else; that they can sell goods as honestly as anybody else; that they can find out the conditions and meet the conditions of foreign business better than anybody else, and I want to see them given a chance right away, and they will be whether I want them to be or not. We have been trying to get ready for it. The national banks of the United States, until the recent currency act, were held back by the very terms of the law under which they operated from some of the most important international transactions. To my mind that is one of the most amazing facts of our commercial history. The Congress of the United States was not willing that the national banks should have a latchkey and go away from home. They were afraid they would not know how to get back under cover, and banks from other countries had to establish branches where American bankers were doing business, to take care of some of the most important processes of international exchange. That is nothing less than amazing, but it is not necessary any longer. It never was necessary; it was only thought to be necessary by some eminently provincial statesmen. We are done with provincialism in the statesmanship of the United States, and we have got to have a view now and a horizon as wide as the world itself. And when I look around upon an alert company like this it seems to me in my imagination they are always straining at the leash. They are waiting to be let loose upon this great race that is now going to challenge our abilities. For my part I shall look forward to the result with absolute and serene confidence, because the spirit of the United States is an international spirit if we conceive it right. This is not the home of any particular race of men. This is not the home of any particular set of political traditions. This is a home the doors of which have been opened from the first to mankind, to everybody who loved liberty, to everybody whose ideal was equality of opportunity, to everybody whose heart was moved by the fundamental instincts and sympathies of humanity. That is America, and now it is as if the nations of the world, sampled and united here, were in their new union and new common understanding turning about to serve the world with all the honest processes of business and of enterprise. I am happy that I should be witnessing the dawn of the day when America is indeed to come into her own.

---

## The Business Outlook After the War.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM S. GREENE,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

*Thursday, July 13, 1916.*

Mr. GREENE of Massachusetts. Mr. Speaker, under the leave granted by the House, I insert in the RECORD an article by Hon. WALTER R. STINESS, of Rhode Island, a Member of the House, on the subject of "The business outlook after the war," which appeared in the Providence (R. I.) Magazine for June, 1916, published by the Providence Chamber of Commerce, as follows:

[From the Providence (R. I.) Magazine for June, 1916, published by the Providence Chamber of Commerce.]

THE BUSINESS OUTLOOK AFTER THE WAR—CONGRESSMAN STINESS SAYS THE EUROPEAN CONFLICT HAS BEEN NO BAR TO FOREIGN COMMERCIAL INVASION—WHEN PEACE PREVAILS A PROTECTIVE TARIFF MUST PREVENT AMERICA FROM BECOMING A DUMPING GROUND FOR OVER-SEA MANUFACTURES.

IS OUR PROSPERITY SUBSTANTIAL?—NO CHASING AFTER SHADOWS—PROTECTION ONLY WILL CONSERVE OUR GREAT INDUSTRIES.

[By Congressman WALTER R. STINESS.]

"Undoubtedly this country is enjoying a certain kind of prosperity. Is it substantial? Is it built upon a sure foundation? Without pessimism, both of these questions admit of but one answer, and that in the negative. For admittedly the present expansion of business is chiefly if not wholly due to the European war, which has abnormally swollen our exports of foodstuffs and created a favorable trade balance, converting us from a debtor into a creditor nation. But these conditions are, as we must humanely hope, but temporary, evanescent; what we now call prosperity is only the veneer of prosperity.

"There is prosperity and prosperity. That which we are now experiencing is one kind; that which we have experienced in times past is another kind; the one fleeting and unstable, because dependent upon a horrible war, the other permanent, because dependent on a peaceful and sound business policy—that of a protective tariff. The present brand of prosperity, such as it is, is welcome while it lasts, and, despite its cause, is preferable to the terrible industrial depression during the first year of President Wilson's administration preceding the commencement of the European war. The balance of trade for the five months before the war ran against us. Men and money and mills were idle. These adverse conditions continued until the war was well under way.

"Under the impetus of tremendous exports of food and of firearms to the belligerents labor and capital in this country again found not only remunerative but superabundant employment.

"At the war's end, what then?

"Bearing in mind business conditions just before the war and that the then economic policies—especially the tariff policy—still obtain to-day, it ought to be clear to thoughtful men that we should prepare now for the inevitable consequences to follow cessation of war.

WAR NO BAR TO IMPORTATION.

"It was said when the war commenced that the war in itself operated to protect us from foreign commercial invasion. And for a time this was true. But it is no longer true. February of this year saw $193,000,000 of foreign goods enter our ports, the high-water mark in all of our history, and March, 1916, went $20,000,000 better (or worse) than February, with $214,000,000 of imports.

"This represents a free list of nearly 80 per cent, practically placing us on a free-trade basis. This, despite the war and the fact that ships are scarce and freights high. So that the war has not checked imports, but apparently has stimulated them. If this can be done in the green tree, what may we expect in the dry, unless we change our tariff policy? Already the warring nations, especially Germany, are preparing for the titantic commercial struggle to ensue. Foreign manufacturers of every description, according to reliable trade reports, are preparing to use this country, under present tariff conditions favorable to them, as a dumping ground for all sorts of wares.

"How do we purpose preventing this being done? An antidumping law such as is proposed, nor any so-called antidumping law, will not, in my judgment, meet the situation adequately; because these foreign countries when ready to dump will sell here at their own domestic wholesale market price, and we can not prevent it by any method other than a protective tariff that will either keep out such goods altogether or else admit them upon terms of equality with our own that protective rates of duty will insure.

JAPAN AND THE SEAMEN'S ACT.

"Our legitimate export trade, our normal foreign business, may be resumed after the war, and may and ought to be augmented. It suffered by comparison with imports when the war commenced, and if we are to judge by the Japan trade, for instance, we may expect a decrease of exports to Japan, for notwithstanding the fact that her usual source of supply has been curtailed by the war, we have not increased our exports over the 1913 figures; but, on the other hand, Japan has greatly increased her exports to us. Japan, thanks to the Underwood tariff law and the seamen's act, is now mistress of the Pacific, having driven our ships out of business, and the carrying trade of the Orient is now done in Japanese bottoms.

"What is true of the Pacific is true in a more marked degree of the Atlantic. We can not hope for improved or extended foreign trade unless we have our own ships. I do not mean Government-owned ships. I am opposed to Government ownership and voted against the shipping bill for this reason, and for the reason that the purchase of interned ships would invite international complications, of which we already have enough. In my judgment it is not a legitimate governmental function. I am in favor of encouraging private shipbuilding and shipowning, and in favor of removing the harassing restrictions that now govern the few ships flying our flag. Until this be done, and we have an adequate merchant marine that can compete with foreign-owned ships, we can not hope to get either the South American trade, which by every token should be ours, nor the near nor the far eastern trade, our share of which we can secure only by commercial conquest.

NO CHASING AFTER SHADOWS.

"But while an enlarged foreign trade is desirable, we should not seek it at the expense of our own vast home market. We should not lose the substance in chasing the shadow while we are crossing the difficult stream that lies in our pathway. Our supremacy does not lie beyond the seas now any more than in the past. Our supremacy now, as in the past, lies here in our own wonderful home market, to neglect which in our endeavor to reach out for foreign trade would be suicidal. It is now time, in my judgment, to inaugurate a policy of reciprocity, not the kind of reciprocity we attempted to negotiate with Canada, which Canada had the wisdom to reject and which proved politically disastrous to President Taft, but reciprocity of the Blaine sort—Pan American reciprocity—that would encourage the free interchange of strictly noncompetitive articles and products between this country and South American Republics. This policy might be made universal. We now admit free of duty, without a quid pro quo, certain products of South American countries which we do not produce. In the case of hides, we reduced the duty and Argentina at once absorbed the reduction by an export duty; we lost the revenue, Argentina got it, and the price of leather, instead of going down, went up.

"The present tariff law also whipsaws the manufacturer in many instances, placing a duty on his raw material and admitting free his finished product.

"All this could and should be corrected by reasonable rates of duty and by reciprocal arrangements.

"Put up the gates against the oncoming products of European cheap labor, not too high, but just high enough to protect our own people, and thus prepare industrially against an invasion of foreign-made goods, the blighting effect of whose competition would be as disastrous as would the shot and shell of an aggressive foreign enemy.

PROTECTIVE DUTY ESSENTIAL.

"It has been demonstrated that the high cost of living is due to economic causes other than the protective tariff. The fallacy of free trade as a remedy for the high cost of living is equally proven. Therefore the American policy of protection must first of all again be restored if we are to keep our home market and be in a position ourselves to invade the markets of the world with our surplus products. That there will be a surplus of products, both of foodstuffs and of manufactures, when the war is over there is little doubt. This, however, is not to be apprehended with fear. Prices have been abnormal. Producers, because of the foreign demand, have received toll at home as well as abroad, to their own great profit, and it will be time that our own people enjoy reduced prices by the operation of the law of supply and demand.

"The need of a protective duty on dyestuffs is apparent, even to low-tariff advocates. The textile industries in this country sorely need a source of domestic supply, so as to be independent of the foreign products. The war has brought this home to us vividly. And I indulge the hope, even though vain, that when this Congress provides for a tariff on dyestuffs, as seems imminent, it will also frame a protective-tariff law, one that will effectually prevent dumping and at the same time provide indirect and sufficient revenue, so that our people will be relieved of the onerous and, to a great extent, unnecessary direct taxes now imposed upon them, to say nothing of the harassing features attending their collection.

"In our efforts for industrial preparedness we should not forget the old story of the house built upon the sands and the house built upon the rock. Which shall it be for us? The shifting sands of untried economic policies, or those proven to be fallacious, the sands of socialism, and of a placid patriotism? Or shall it be upon the solid rock foundation of true and tried principles of business and of government, industrially honest and fair, and constitutionally sound and just? If upon the latter, neither the storms of European war aftermath, nor of domestic social unrest, will or can disturb its tranquillity or its progress and real prosperity."

I also append an editorial published in the Washington Post of July 13, 1916, entitled "The great American market":

THE GREAT AMERICAN MARKET.

The nations at war in Europe which can obtain supplies from abroad are a hungry market for war munitions and foodstuffs, as the huge exports from the United States show, but the best market in the world is the United States. Here there is a demand for everything under the sun, and money in abundance to pay for it.

It is not surprising, therefore, to find enterprising foreign nations rushing goods to America, in spite of the war. The total imports for the fiscal year ended last month were valued at $2,000,000,000, but since the calendar year began the imports have been increasing rapidly. They are now running at the rate of $3,000,000,000 a year. Unless conditions change on account of cessation of the war, or legislation by Congress, the producers of the United States will see competition from foreign producers in this market grow more and more severe. The foreigners are cutting into domestic producers at the rate of $1,000,000,000 a year.

For the 11 months ended last May the United Kingdom jumped its exports to the United States $42,000,000 over the same period of last year. Canada's exports to us were $41,000,000 more. The British East Indies increased their exports to us $79,000,000. Japan exported

$40,000,000 more than before. Australia and New Zealand's increase was $36,000,000. France sold $30,000,000 more to us than before, and Egypt's exports to America increased $17,000,000.

This is during war times, when the nations and possessions mentioned have been busy fighting or feeding their fighters. What will the shipments to us amount to when these nations turn from war and get down to business?

No account is taken of the flood of goods that will be sent from Germany, Austria, Italy, and other big producing nations.

There is no barrier now against admitting cheap foreign goods into the American market, to take away the gold that has been piled up. The American manufacturer and laborer have no means of competing with the foreigner unless the United States Government steps in and protects them. With American labor getting higher wages, the only thing the manufacturer can do is to cut wages or shut up shop.

The greatest pile of gold ever accumulated in the history of the world is in the United States. This gold has come here in payment for American goods and foodstuffs. Europe and Asia want this gold again, and they will get it by selling goods to us if they can. They will not be worried because the United States produces most of the goods offered by them. They will take advantage of the difference in wages and other costs of production, and will swamp the American market with cheap goods unless the tariff is raised against them.

The question that now confronts Americans is whether they will buy foreign goods because they are cheap, regardless of the fate of American industry and labor, or whether they will place foreigners on a level with American producers by raising the tariff rates, thus giving Americans a chance to sell in their own market, in spite of the fact that they pay higher wages.

When a foreign nation builds merchant submarines and sends them through a gantlet of warships to deliver goods to the American market it is evident that when peace comes there will be a tremendous effort to develop business here at the expense of American producers.

The administration and Congress should immediately take steps to guard against this threatened flood of cheap foreign goods. The prosperity of the country depends upon the activity of its industries. Capital must be enterprising and labor must be employed in production or the country will soon feel hard times. The American market is big enough to keep Americans busy meeting its demands, and this market is absolutely in control of the Government. But foreign markets are not under American control, competition in them is keener, and conditions are subject to change without notice.

The first duty of the United States is to preserve its own great market for its own people. After having done that, it can afford to make deals for extending American business in foreign markets.

## Patriotism—Pennsylvania Still the Keystone State—Grandmother Bierer's Patriotism.

### EXTENSION OF REMARKS
OF
### HON. ROBERT F. HOPWOOD,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, July 14, 1916.*

Mr. HOPWOOD. Mr. Speaker, from time to time we hear men, sometimes in high station, express doubts as to the patriotism of our citizens, or some particular section thereof.

As I looked out of my window this morning I saw a funeral procession passing by. It was a military pageant, the caskets being carried on gun carriages, and cavalrymen rode silently on either side. These that were being carried to their last resting place at beautiful Arlington were the boys who went singing to their death at Carrizal a few weeks ago. They were men of the black skin, but braver hearts never offered their all for their country's honor. May they not have died in vain.

Some classification of our citizens has been made at times, on account of their place of birth, and doubts cast upon the loyalty of men born in other lands.

I believe that in the day of our need 99 per cent of those who have sworn allegiance to our flag will be found true to the Stars and Stripes.

I live in a State and county where more foreign-born men make their homes than in any other section of our Union, and I can say that they are good citizens of Pennsylvania and of the Nation.

Mr. Speaker, I noticed yesterday that Gen. Wood announced that 38,189 National Guardsmen from the Eastern Department had arrived at the Mexican border, and that 12,779 men and 662 officers were from Pennsylvania, more than one-third of the entire number.

Pennsylvania is still the Keystone State.

From that birthday of the Republic, July 4, 1776, when the old bell rang out in jubilant acclaim the glad tidings that had been so prophetically inscribed on it years before, "Proclaim liberty throughout the land to all the inhabitants thereof," down to this one hundred and fortieth year of our independence, Pennsylvania's sons and daughters have always led the way in every struggle for liberty.

Those who dwell in this great Commonwealth, with its glorious mountains, its sparkling rivers, its fertile valleys, and its splendid citizenship, have imbibed a love for the Old Flag that floats as the symbol of all our forefathers fought for and bequeathed to us, that this generation is as ready as were the signers of the great charter of our liberties to pledge their lives, their fortunes, and their sacred honor to perpetuate and hand down to succeeding generations the liberties we enjoy. As an illustration of the patriotism that dwells yonder in the grand old State, and with the hope that the younger States that sometimes like to criticize Pennsylvania may rather ponder upon and strive to emulate her virtues, let me read to you a clipping from one of my home papers:

MILITANT GRANDMOTHER HAS SWORD FOR SOLDIER GRANDSON WHO WINS IT.

The old sword which was presented to Capt. John Bierer in 1865 and with which his son, Maj. Everard Bierer, helped carve out the name of "The Fighting Tenth" for the boys of 1898, is hanging on the wall of Mrs. Julia Bierer's home, in Pittsburgh Street, ready for its patriotic owner to hand it over to the first of her grandsons who is entitled to wield it. Edward Bierer, a son of that Maj. Bierer, and a grandson of Capt. John Bierer, is now mobilized with the National Guard of West Virginia to which he belongs, and from all indications the old sword will receive its third baptism of fire on the Texas border.

Meanwhile the gentle, pink-cheeked, snowy-haired old lady, who has seen four generations go off to war, is not worrying in the least about the future. Almost a year ago, on the eve of her ninetieth birthday, Mrs. Bierer said: "I don't want war; but if they are needed I have eight grandsons whom I will give for the defense of our country. I would rather have them shot down when fighting for their country than be slaves."

War has no terror for Grandmother Bierer. The daughter of Henry Wathen, who served in the War of 1812; the wife of Capt. John Bierer, of the Eighth Pennsylvania Volunteers; the mother of Maj. Bierer, of the famous Tenth Regiment, and of Capt. Daniel M. Bierer, of Company C, of the same regiment, she is ready and willing to be the grandmother of soldier boys who may serve in the present conflict.

May the women of our country emulate the example of this noble American "grand" mother.

The long day of Grandmother Bierer's life is drawing to a close. May the closing day be as peaceful as that portrayed by Tennyson:

Sunset and evening star,
And one clear call for me!
And may there be no moaning of the bar,
When I put out to sea,

But such a tide as moving seems asleep,
Too full for sound and foam,
When that which drew from out the boundless deep
Turns again home.

Twilight and evening bell,
And after that the dark!
And may there be no sadness of farewell,
When I embark;

For tho' from out our bourne of Time and Place
The flood may bear me far,
I hope to see my Pilot face to face
When I have crost the bar.

## Speech of President Wilson at Toledo, Ohio.

### EXTENSION OF REMARKS
OF
### HON. MARTIN D. FOSTER,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, July 14, 1916.*

Mr. FOSTER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address by the President at Toledo, Ohio, on July 10, 1916.

The address is as follows:

THE PRESIDENT, AT TOLEDO, OHIO, JULY 10, 1916.

My fellow citizens, this is an entire surprise party to me. I did not know I was going to have the pleasure of stopping long enough to address any number of you, but I am very glad, indeed, to give you my very cordial greetings and to express my very great interest in this interesting city.

I think you will bear me witness, fellow citizens, that in advocating preparedness I have not been advocating hostility. You will bear me witness that I have been a persistent friend of peace, and that nothing but unmistakable necessity will drive me from that position. I think it is a matter of sincere congratulation to us that our neighbor Republic to the south shows evidences of at last believing in our friendly intentions; that while we must protect our border and see to it that our sovereignty is not impugned, we are ready to respect their sovereignty also, and to be their friends and not their enemies.

The real uses of intelligence, my fellow citizens, are the uses of peace. Any body of men can get up a row, but only an intelligent body of men can get together and cooperate. Peace is not

only a test of a nation's patience, it is also a test of whether the nation knows how to conduct its relations or not. It takes time to do intelligent things, and it does not take any time to do unintelligent things. I can lose my temper in a minute, but it takes me a long time to keep it; and I think that if you were to subject my Scotch-Irish blood to the proper kind of analysis you would find that it was fighting blood, and that it is pretty hard for a man born that way to keep quiet and do things in the way in which his intelligence tells him he ought to do them. I know just as well as that I am standing here that I represent and am the servant of a Nation that loves peace, and that loves it upon the proper basis; loves it not because it is afraid of anybody, loves it not because it does not understand and mean to maintain its rights, but because it knows that humanity is something in which we are all linked together, and that it behooves the United States, just as long as it is possible, to hold off from becoming involved in a strife which makes it all the more necessary that some part of the world should keep cool while all the rest of it is hot. Here in America, for the time being, are the spaces, the cool spaces of thoughtfulness, and so long as we are allowed to do so we will serve and not contend with the rest of our fellow men. We are the more inclined to do this because the very principles upon which our Government is based are principles of common counsel and not of contest.

So, my fellow citizens, I congratulate myself upon this opportunity, brief as it is, to give you my greetings and to convey to you my congratulations that the signs that surround us are all signs of peace.

## Rivers and Harbors Conference Report.

### EXTENSION OF REMARKS
OF
### HON. ALLEN T. TREADWAY,
OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 11, 1916.*

Mr. TREADWAY. Mr. Speaker, having already expressed my views in some detail when the rivers and harbors bill was before the House, I will only briefly refer to the conference report under consideration to-day. This report increases the bill from $39,608,410, as it passed the House, to $42,886,065. Having opposed the original bill, calling for the smaller sum, I am naturally opposed to the conference report carrying the larger amount.

The increase of over three millions certainly can not be justified by the nature of the items where the increases are made. There are, however, three items in the conference report which are well worthy of the support of Congress, namely, the appropriations for New London Harbor, Conn.; San Diego Harbor, Cal., and Weymouth Fore River, Mass. These three items total $590,000.

Let me call attention to a few of the items we are accepting. For instance, the amount for the Altamaha, Oconee, and Ocmulgee Rivers, in Georgia, was not only left in the bill, but was increased. The absolute lack of water and necessarily the lack of navigation on these streams was clearly shown when the bill was under discussion. The advocates of the appropriation were even obliged to secure a foreign-built engine for the one boat on one of the streams in order to have it draw a small enough amount of water to be used at all.

Pascagoula Harbor, Miss., has a liberal increase in the amount of its appropriation. The item for the Passes at the mouth of the Mississippi is increased $400,000. The item for the Red River, Ark., is materially increased. The item for the Arkansas River, which has received an adverse report from the Board of Engineers, is not only left in the bill, but is increased by $25,000.

These are examples of the extra slices of "pork" put into the conference report. It has been clearly shown that "pork" abounds in the original bill, and the slices are larger and more palatable in the bill before us to-day. It has been frequently said that in certain sections it was necessary to secure all the appropriations possible, as this would be the best rivers and harbors bill. I hope that is not the case, but nevertheless a change in the method of making the allotments must come about in the near future or the great rivers and harbors work of the country will be seriously hampered.

We should not permit of unmeritorious projects being mixed with good projects and thereby destroying the entire work of rivers and harbors improvements. In these days of active effort to secure additional revenue to meet the unexpected expenditures of Government, those in whose hands the responsibility rests at the present time should not forget that old adage, "A dollar saved is a dollar gained." We could gain many millions by saving them from this "pork" barrel rivers and harbors bill.

I am heartily in favor of a continuation of rivers and harbors improvement, but I am just as strongly opposed to securing money from the Federal Treasury under the guise of rivers and harbors work which absolutely comes within the accepted definition of "pork."

## The Revenue Bill.

### EXTENSION OF REMARKS
OF
### HON. C. C. DILL,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, July 14, 1916.*

Mr. DILL. Mr. Speaker, under leave to extend my remarks on the subject of the revenue bill just passed by the House, I desire to insert in the RECORD a copy of a speech delivered by Mr. John F. McCarron, of Farmington, Ill., before the National Democratic Women's Club of America at the Ebbitt House, Washington, D. C., March 31, 1916.

The address is as follows:

For the past three years the Democratic Party has been in control of the Government, and shortly that party will be called upon by the American people for an account of its stewardship. It seems to me to be the duty of every loyal Democrat to assist in rendering that account. With that object in view it is necessary to review the work of the administration since it took control of the Government in all its departments on March 4, 1913, in order to be able to show how the party's pledges have been redeemed.

With your kind indulgence I shall call to your attention to-night seven of the large achievements of the Wilson administration. They are the tariff, currency act, Clayton antitrust law, Federal Trade Commission act, seamen's act, the building of a Government railroad in Alaska, and the foreign policy of the administration. I shall briefly point out the important features of each.

UNDERWOOD TARIFF.

Realizing the important and paramount duty resting upon him our great President on April 8, 1913, called the Congress together in extraordinary session to enact into law at the earliest possible moment a revision of the tariff. With dispatch and thoroughness a Democratic tariff law was placed upon the statute books that produced in 1914, $23,796,313 more revenue than was produced under the Payne-Aldrich Republican protective-tariff law in 1912.

It will be said that the 1914 receipts were aided by the retention of the Payne rates on wool until December 1, 1913, and on woolens till January 1, 1914, and on sugar until March 1, 1914. In order, therefore, to consider a period, when the Payne wool and woolen rates were not in effect, we will compare the customs and income-tax receipts from January 1 to August 1, 1913, with those from January 1 to August 1, 1914. This comparison will show that the receipts under the present tariff law during the aforementioned period exceeded those for the same period under the act of 1909 by $17,000,000.

Customs receipts, January 1 to August 1, 1913, compared with those from January 1 to August 1, 1914:

*Payne-Aldrich law, 1913.*

| | |
|---|---|
| January | $29,334,124.09 |
| February | 27,605,115.83 |
| March | 27,457,489.20 |
| April | 23,693,966.36 |
| May | 20,434,749.21 |
| June | 24,417,650.12 |
| July | 27,806,654.54 |
| Total | 180,749,749.35 |

*Underwood law, 1914.*

| | |
|---|---|
| January | $23,528,079.83 |
| February | 17,609,603.70 |
| March | 25,927,212.90 |
| April | 22,232,766.57 |
| May | 20,800,573.25 |
| June | 23,863,859.82 |
| July | 22,988,465.04 |
| Total | 156,950,561.11 |

Corporation-tax receipts, January 1 to August 1, 1913, compared with income and corporation-tax receipts from January 1 to August 1, 1914:

*Payne-Aldrich law, 1913.*

| | |
|---|---|
| January | $306,683.84 |
| February | 519,234.28 |
| March | 992,642.62 |
| April | 773,581.83 |
| May | 1,235,394.37 |
| June | 28,860,275.29 |
| July | 1,853,298.88 |
| Total | 34,481,111.12 |
| Total customs and corporation-tax receipts | 215,230,860.47 |

*Underwood law, 1914.*

| | |
|---|---|
| January | $384,016.03 |
| February | 778,762.88 |
| March | 1,008,432.94 |
| April | 1,497,626.39 |
| May | 3,955,785.70 |
| June | 60,948,044.10 |
| July | 7,133,640.62 |
| Total | 75,706,308.66 |
| Total customs, corporation, and income-tax receipts | 232,656,869.77 |

The Underwood law brought into existence the income-tax law which places the burden of taxation upon those who are able to bear it, and is a just and equitable tax upon wealth. This provision of the tariff law in all probability will produce this year $100,000,000. Recently Senator UNDERWOOD showed conclusively upon the floor of the Senate that the Democratic tariff law is superior to the Payne-Aldrich Republican tariff as a revenue-producing measure. It has not been shown how much this law is capable of earning under normal conditions as it has never had a fair chance, due to the war in Europe. All fair-minded people concede this. Of course the Republicans do not agree as to this, for they are seeking an issue, as they find it hard in these fruitful Democratic times to find one, and they rant and howl about the Democratic tariff and endeavor to show that it is a failure. So far they have been unable to present a bill of particulars that will stand the test of public opinion. A demurrer can always be filed, and when the record is opened the old Republican bogy of calamity stands up, but he is almost dead and not even a Republican protective-tariff pulmotor can revive him. When the roll was called on final passage of the bill in the Senate, 42 Democrats, 1 Republican, and 1 Progressive voted for it. In the House, 274 Democrats, 2 Republicans, 4 Progressives, and 1 Independent were recorded in favor of it.

FEDERAL RESERVE ACT.

Probably the most important act of the administration has been the enactment of the Federal reserve act. I read just the other day in one of the leading and widely read publications of the country that the Federal reserve act is probably the most important act of the last 20 years. I think it is safe to say that it is one of the greatest legislative acts of the last 50 years.

From the very beginning it established confidence in the banking system of the country and gave to the United States sound financial legislation, beneficial alike to the banker and depositor. By providing an expansible, elastic currency based on commercial paper, with the credit of the United States behind the reserve currency issued by the Federal Reserve Board, it insures a safe protection to the finances of the country. So well did the Democrats perform the work in perfecting this act that on the final passage in the House the bill received the votes of 248 Democrats, 29 Republicans, 9 Progressives, and 1 Independent. In the Senate 47 Democrats, 6 Republicans, and 1 Independent voted for it.

CLAYTON ANTITRUST LAW.

It was found necessary to amend the Sherman antitrust law, and the Democratic Party, with effective dispatch, enacted into law certain amendments that seek to prevent the creation of illegal trusts, conspiracies, and monopolies. Discrimination in prices for the purpose of wrongfully injuring or destroying the business of competition is prohibited. Various monopoly promoting contracts, holding companies, and interlocking directorates are made illegal. Labor is exempted from prosecution under it as a commodity class. Organized labor had been fighting for years for this just legislation, and it was the Democratic Party who placed it upon the statute books. On final passage in the Senate 38 Democrats, 7 Republicans, and 1 Progressive voted for the bill. In the House the vote is recorded, as favoring—233 Democrats, 40 Republicans, and 14 Progressives.

FEDERAL TRADE-COMMISSION BILL.

The purpose of this commission is clearly set forth in the majority report of the House Committee on Interstate and Foreign Commerce. I give it in part:

"The bill provides for an interstate-trade commission in accordance with the views of the President expressed in his message to Congress on the subject of trusts and monopolies. The recommendation of the President in that message was for the creation of such a commission as an instrument of information and publicity and as a clearing house for the fact by which both the public mind and the managers of great business undertakings should be guided. Moreover, he suggested in that message that the commission ought to be made capable of assisting the courts in the shaping of corrective processes."

The vote in favor of this bill in the Senate was 41 Democrats and 12 Republicans. In the House it passed without a yea-and-nay vote being taken.

THE SEAMEN'S ACT.

Another important act is the seamen's bill, which provides for the safety at sea of passengers and crew, and it is in line with the other great humanitarian acts of the administration. Its importance is summed up in the words of Secretary Wilson, of the Department of Labor:

"In the struggle of the centuries gone by, step by step all classes of labor save one have achieved a measure of freedom, until in this country workmen are no longer compelled to work against their will or by physical force to fulfill a civic contract of labor. The single exception is the seamen of the world, including those of the United States. After a legislative struggle of more 20 years the seamen's bill was enacted into law by the Sixty-third Congress, and the last vestige of serfdom by legal requirement was thereby wiped from our statute books. The seamen are free men now and are able to stand erect before the world, the owners of themselves and their own labor power.

"This act not only says to the American shipowner that American seamen shall be free to leave their vessel when the vessel is in a port in this country, but it says to the foreign shipowner, 'When your seamen come into American ports, the very fact that they are in our waters and under our jurisdiction makes them free men.'"

This bid passed both Houses without a yea-and-nay vote being taken.

ALASKAN RAILROAD.

The appropriation of $35,000,000 for the building of a railroad in Alaska will go down in history as one of the great acts of the administration. The necessity of this legislation is seen in the well-chosen and timely words of President Wilson to the Congress in December, 1913. He said, in part:

"Alaska as a storehouse should be unlocked. One key to it is a system of railways. These the Government should itself build and administer, and the ports and terminals it should itself control in the interest of all who wish to use them for the service and development of the country and its people."

On final passage in the House 148 Democrats, 66 Republicans, 12 Progressives, 5 Progressive Republicans, and 1 independent voted for it. In the Senate 30 Democrats and 16 Republicans are recorded in favor of it.

I have pointed out the most important legislation that has been enacted up to this time. And I have shown by the record that quite a number of Republicans in both Houses thought so well of Democratic legislation that they voted for it. Those Republicans were men who saw the light and voted their convictions. In view of the splendid example shown by those gentlemen it is earnestly believed that thousands of other Republicans have seen the light and will cast their votes at the polls this fall in support of the Democratic Party in approval of the splendid legislation placed upon the statute books in behalf of the interests of the whole people.

FOREIGN POLICY.

Let me call your attention to another important feature of the Democratic administration, and it is a thought that is constantly in the minds of the people, "President Wilson has kept our country out of war."

Criticism may be hurled at the President, but the fact remains that the diplomacy of Woodrow Wilson has maintained the honor of the United States and kept our country out of the terrible cataclysm of the European Continent. This is the time when every true American stands behind the President and backs him to the limit as he informs the world:

"America asks nothing for herself but what she has a right to ask for humanity itself."

God grant that our able and patriotic President shall be given the power to continue to guide safely the ship of state in its stormy and turbulent voyage. It is the duty of every citizen in these trying days to heed the call of our great President which he uttered in those eloquent words:

"I summon all honest men, all patriotic, all forward-looking men, to my side. God helping me, I will not fail them, if they will but counsel and sustain me."

A SUGGESTION.

My friends, before I close, I desire to call your attention to a very important matter. It is distressing to observe that little or nothing has been done to place before the public the splendid achievements of this administration. We owe it to the people to inform them of the splendid character of legislation that has been enacted and the efficient and economical policies that have been worked out and placed in operation. The other day a certain official told me of the actual saving of $1,000,000 to his bureau last year without detriment to the service, and yet, I dare say, very few people know of it.

If we adopt a systematic method of getting information of the work of this administration to the public you may be quite sure that there will be an overwhelming Democratic sentiment in the country when election day comes around.

The press of the country outside of the large cities is eager and anxious to lay the news of Democratic achievement before the public. Give them the copy and they'll print it.

Back in the country where the real sentiment of America is made there are alert citizens watching for the news. They are the people who not alone read but digest the doings of the administration.

A way is open to you to proceed to bring this about. I'll tell you how to do it. Get your Members and your friends to write to the national Democratic committee and the national congressional committee and ask them to get busy. Let those two organizations be the pivot around which the work shall be centered. Start now and keep writing and interviewing them until they begin in earnest. This work is, in my opinion, one of the most important things you can do at this time. I hope you will act on my suggestion.

In conclusion, let me say that it is the duty of every Democrat to put forth his or her best effort in the great cause of Democracy which has for its underlying principles equal and exact justice to all, in order that the grand old flag may be always the symbol of right and justice.

## Compensation to Certain Families of the Drafted Forces of the United States.

### EXTENSION OF REMARKS

OF

### HON. WILLIAM H. CARTER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, July 13, 1916.*

Mr. CARTER of Massachusetts. Mr. Speaker, I am heartily in favor of legislation providing compensation for certain families of the drafted forces of the United States. This is a meritorious measure, which surely must appeal to the patriotism of every Member of this House, and it was with much real pleasure that I voted in favor of this bill.

I voted for this measure not only from the standpoint of duty but because I know personally many of these men who are now down on our border, and I know what their families will suffer unless we pass a measure of this sort.

I was very proud of the fact that my native State demonstrated her patriotism, as she has always done in the past.

It is up to us right here in this Chamber to pass this bill and therefore assure the brave boys who are at the front that they need not fear for the welfare of their families during their absence.

A great many of the boys of my district, members of the National Guard, are laboring men, and their only source of income was from their salaries. These men who left their families, gave up their business, and went to the front to uphold the dignity and honor of our flag display a courage and patriotism that should be an inspiration to every citizen living under our flag.

Not only does this great sacrifice on their part call forth our commendation, but it demands substantive recognition. This great country of ours, the richest in the world, is well able to finance this legislation.

If we fail to pass this legislation, it would show ingratitude on our part.

This Nation has never in the past hesitated with generosity toward its defenders.

I have voted for every pension bill that has come before me for consideration this session. I have voted for the bill to pension widows of veterans of the War with Spain, the bill providing pensions for the Indian War veterans, and also voted to increase the pensions of the widows of Civil War veterans from $12 to $20 a month.

I have always endeavored to help deserving and needy constituents of my district in endeavoring to secure pensions for them or to assist in having their pensions increased by a special act.

---

**The La Follette Amendment Limiting the Flow of the Sanitary District of Chicago to 250,000 Cubic Feet Flow per Minute. The Health and Safety of the People of Chicago Involved.**

---

## EXTENSION OF REMARKS

OF

# HON. BURNETT M. CHIPERFIELD,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 12, 1916.*

Mr. CHIPERFIELD. Mr. Speaker, the amendment to the rivers and harbors bill, known as the La Follette amendment, vitally affects the lives and health of the people of the State of Illinois. It directly affects the people of the city of Chicago and its environs—half the population of the State, two million and a half of people—who depend upon Lake Michigan for their domestic water supply. The amendment, among other things, provides:

*Provided further*, That the amount of water to be diverted from Lake Michigan through this system of waterways shall never exceed the rate of 250,000 cubic feet per minute.

This amendment was adopted by the Senate with but little consideration. The far-reaching effect of the amendment requires the fullest consideration by Congress, everyone approaching the proposition with an open mind. Untrue statements, designed to create prejudices, are everywhere current. This matter is one which affects not only all the people of Illinois, but the people of the entire country. The health of the people of a great metropolitan city like Chicago is a matter about which all must be concerned.

During a single year people from all parts of the United States and the world visit the city of Chicago on business or for pleasure. If the health conditions in that city are bad, those persons who come to the city are liable to be infected with disease, not only injuring their own lives and health but endangering the lives and health of those with whom they may come in contact upon leaving the city. The death rate from typhoid fever for 100,000 of people is a sort of a thermometer or gauge by which the general health of all the people within a particular locality may be determined. It is well established that for each increase in the death rate from typhoid fever it may be presumed that there is an increase in the death rate from other diseases, in the ratio of one for typhoid to three or four for other disease. This relation was worked out by Allen Hazen and is known as "Hazen's Theorem." This is well recognized by sanitarians.

Prior to the opening of the drainage channel, which diverts from Lake Michigan a certain amount of water for each 100,000 of the population of Chicago and its immediate environs—20,000 cubic feet per minute for each 100,000 of the population—there were great epidemics of typhoid fever, and at times the death rate per 100,000 reached as high as 175 per year, and for the 10-year period immediately preceding the opening of the drainage channel the death rate was approximately 65 per 100,000 per year. Since the opening of the drainage channel the death rate from typhoid fever has steadily diminished, so that for the 10 years following the rate was approximately 18 per 100,000 of population per year, and for the last three years it has been below 7 per year per 100,000—less than that of any city within the United States.

Permit me now to go back and trace the history of the creation of the works necessary to protect the water supply of the people of Chicago, to show you with what deliberation, caution, and intelligence the people of that city went about it in order to protect their health and lives from the ravages of typhoid and other water-borne diseases.

In building the drainage channel and diverting the water from Lake Michigan the State of Illinois was merely exercising the rights granted it by the act of Congress of March 2, 1827, under which the United States granted to the State of Illinois a certain amount of land for the purpose of aiding the State "in opening a canal to unite the waters of the Illinois River with those of Lake Michigan."

Under that act the State constructed the Illinois & Michigan Canal, extending from the Chicago River to the Desplaines River and from thence to Utica. The topography of the earth in this locality is such that the building of this canal to draw water from Lake Michigan for drainage and navigation purposes is ideal, for the Continental Divide, separating the great basin of the Mississippi from that of the St. Lawrence, whose summit is only 6 or 8 feet above the normal surface elevation of the water of Lake Michigan, is distant from the mouth of the Chicago River westerly only a few miles. To cut through this divide with a canal was an easy matter.

In 1889, when the general assembly adopted the act under which the sanitary district of Chicago has constructed the works by which the water is diverted from Lake Michigan, provision was made for the replacement of that portion of the Illinois & Michigan Canal between Joliet and Chicago with the main drainage channel of the sanitary district thereafter constructed, so that in building the channel the State assumed to act, as it had a right to do, under and pursuant to the provisions of the act of Congress of March 2, 1827, and the Supreme Court of the United States, in the famous case of State of Missouri *v.* State of Illinois (200 U. S., 496, 526), in which case the State of Missouri sought to enjoin the sanitary district from operating the main drainage channel, has put the same construction upon the act in the following language:

> Some stress was laid on the proposition that Chicago is not on the natural watershed of the Mississippi because of a rise of a few feet between the Desplaines and the Chicago Rivers. We perceive no reason for a distinction on this ground. And if under any circumstances they could affect the case, it is enough to say that Illinois brought Chicago into the Mississippi watershed in pursuance not only of its own statutes, but also of the acts of Congress of March 30, 1822 (ch. 14, 3 Stat., 659), and March 2, 1827 (ch. 51, 4 Stat., 234), the validity of which is not disputed.

Aside from the question as to whether Congress has directly authorized the construction of these works, the acquiescence of the Government in the course pursued estops it now from objecting to the withdrawal of the water to the extent of the capacity of the drainage channel—12,000 cubic feet of water per second.

In section 16 of the act of 1836 of the General Assembly of the State of Illinois, which provided for the construction of the Illinois & Michigan Canal, there is the following language:

> The said canal shall not be less than 45 feet wide at the surface, 30 feet at the base, and of sufficient depth to insure navigation of at least 4 feet, to be suitable for ordinary canal-boat navigation, and to be supplied with water from Lake Michigan and such other sources as the canal commissioners may think proper.

At the time Illinois was providing for the construction of this canal there were two plans considered for that portion of the canal between Joliet and Chicago known as the "summit level." One was known as the "deep-cut plan" and the other the "shallow-cut plan." By the "deep-cut plan" water to feed the canal was to be drawn entirely from Lake Michigan by gravity flow, and by the "shallow-cut plan" it was to be drawn from the Desplaines River and the Little Calumet River. The "deep-cut plan" was originally adopted, and the State entered upon the construction of the canal upon that plan, but about 1846 it was found that the State could not raise sufficient money to construct the canal on that plan, and it adopted the "shallow-cut plan," by which the water to feed the canal was obtained

by means of the Calumet feeder, which extended from the canal at or near Sag, Ill., to the Little Calumet River near what is now Blue Island, Ill. But almost immediately after the completion of the canal, in 1848, because of the filthy condition of the Chicago River, agitation was initiated to draw water from Lake Michigan through the canal for the purpose of cleansing the Chicago River, and pumps were installed at Bridgeport, where the canal connects with the Chicago River, for this purpose. In 1871 the canal was deepened and completed on the "deep-cut plan" by the city of Chicago at an expense of $3,000,000, in order that a greater amount of water might be withdrawn from Lake Michigan to cleanse the Chicago River and to keep the sewage of the city from discharging through it into Lake Michigan, and to prevent to some extent sewage from polluting the water supply. This condition existed until approximately 1881, when, pursuant to an act of the general assembly there was constructed, at the expense of the city of Chicago, pumps at Bridgeport by which a great deal more water was to be and was afterwards withdrawn through the canal from Lake Michigan for the purpose of keeping more sewage out of Lake Michigan, reaching it by way of the Chicago River. In the meantime the city of Chicago had been making phenomenal increase in its population.

Typhoid epidemics were frequent, and the condition of the Lake Michigan water supply, produced by sewage flowing into it, was unbearable. The Chicago River was a seething mass of septic sludge, giving forth most unspeakable odors, and upon its surface it was stated one could walk. In the middle of the eighties every one reached the conclusion that some comprehensive method must be devised to protect the lives and health of the people. So in 1887, pursuant to ordinance of the city council of the city of Chicago, there was established the drainage and sewerage commission "to report on the whole matter committed to it in the most full and comprehensive manner, with maps, plans, and diagrams complete, and accompanying the report with estimates of the first costs and annual requirements for the maintenance of the system proposed." Upon this commission there were the most eminent engineers of that time—Messrs. Rudolph Hering, Benezette Williams, and Samuel G. Artingstall. The commission made its report in January, 1887, and recommended the construction of works now practically completed and operated by the sanitary district. Pursuant to the recommendation of the commission the General Assembly of the State of Illinois, on May 29, 1889, passed the act under which the sanitary district of Chicago was created, and it has constructed and placed in operation the works involved in this so-called La Follette amendment. Immediately after the passage of the act the entire matter was considered by the Chief of Engineers of the United States Army, and reports with reference to same and the effect of the act and the construction of the works provided for thereunder were published in the Chief of Engineer's reports for the year 1890, and in each year subsequently in the Chief of Engineer's reports the progress of the construction work and the effect of such work were reported to Congress. In 1895 a commission of United States Army Engineers, of which Gen. O. M. Poe was chairman, made a report to the Secretary of War and the Chief of Engineers, which report was sent to Congress stating the effects upon the levels of the Great Lakes of the proposed withdrawal of water by means of the works to be constructed. In order that the works might be of any use to the people of Chicago it was necessary that the amount of water provided by the statutes of Illinois—20,000 cubic feet of water per minute for each 100,000 of population—should be withdrawn from Lake Michigan.

During the years of construction from 1890 to 1900, and subsequently until approximately 1907, no objection was ever raised to the withdrawal of the water because of its supposed effect upon the levels of the Great Lakes. On the contrary, the Secretary of War, beginning with the year 1896, granted numerous permits for the construction of part of the works, the operation of which is now sought to be limited; and finally on May 8, 1899, the Secretary of War, pursuant to the recommendation not only of the Chief of Engineers, but also of the resident engineer at Chicago, gave to the sanitary district a permit to open and place in operation the sanitary district channel, which was in these words:

> Now, therefore, the Chief of Engineers having consented thereto, this is to certify that the Secretary of War hereby gives permission to the said sanitary district of Chicago to open the channel constructed, and cause the waters of Chicago River to flow into the same, subject to the following conditions:
>
> 1. That it be distinctly understood that it is the intention of the Secretary of War to submit the questions connected with the work of the sanitary district of Chicago to Congress for consideration and final action, and that this permit shall be subject to such action as may be taken by Congress.
>
> 2. That if, at any time, it become apparent that the current created by such drainage works in the south and main branches of the Chicago River be unreasonably obstructed to navigation or injurious to property, the Secretary of War reserves the right to close said discharge through said channel, or to modify it to such an extent as may be demanded by navigation and property interests along said Chicago River and its south branch.
>
> 3. That the sanitary district of Chicago must assume all responsibility for damages to property and navigation interests by reason of the introduction of a current in Chicago River.

The enumeration of specific conditions upon which the flow of water through the drainage canal might be limited by the Secretary of War excludes, according to well-known rules of construction, the injection of any other condition, such as the effect of the flow upon the levels of the Great Lakes, the only objection now being raised. The condition as to the effect upon the lake levels was not considered important and must be treated as waived, for the effect which the withdrawal of the water might have upon the lake levels was a subject of discussion, not only among engineers of the United States Army, and, as before stated, the commission of which Gen. O. M. Poe was chairman, who made specific report, but it was a subject of discussion by a number of eminent engineers of the country, as appears by the Transactions of the Western Society of Engineers for the year 1890.

The reason for the injection of the condition with reference to the effect upon navigation in the Chicago River arose because of the fact that at that time the Chicago River was narrow, tortuous, and only 17 feet deep; and it was recognized that in order to carry the required amount of water through the Chicago River without injury to navigation it would be necessary to widen and deepen that river, and the Secretary of War wisely desired to control the flow until such time as the river would be placed in condition to form a feed channel for the main channel of the sanitary district, without injury to navigation. Accordingly in 1900 the sanitary district of Chicago adopted a project for deepening and widening the Chicago River from its mouth to its junction with the drainage channel, and on July 11, 1900, the Secretary of War approved the plans presented by the sanitary district for such improvement. And again in 1902 detailed and more specific plans for such improvement were approved by the Secretary of War. The purpose of the improvement was stated. Pursuant to the plans so approved by the Secretary of War the sanitary district has practically completed the improvement, whereby the Chicago River has been widened to 200 feet at all points and deepened from 17 to 26 feet; so that now it has sufficient cross-sectional capacity for the flow of water, and the current in the Chicago River with the water required by the sanitary district law flowing through it does not and will not injure navigation and will not exceed one mile and a quarter per hour. The sanitary district has expended approximately $12,000,000 in this improvement, and it was all done for the purpose of removing the objection made to the flow because of injury to navigation in the Chicago River.

Prior to the time the sanitary district completed the improvement of the Chicago River the Secretary of War, upon objections being made by navigation interests upon the Chicago River, limited the flow of water from time to time, and finally the last limitation was made December 5, 1901; but at that time the river had not been improved.

Now, it so happens that after the people of Chicago have expended, with the knowledge, acquiescence, and cooperation of the United States Government, not only the money necessary to construct the various channels and works, but also the money necessary to improve the Chicago River, all aggregating over $80,000,000, it is sought to limit the flow upon a ground not considered by the Government important and which was waived while this money was being expended. One can not conceive of anything more unfair than the position which the United States is now taking with reference to the operation of these works. Such action by any individual in his dealings between himself and his neighbor or his business associates would entitle him to ostracism by his fellow men.

The sanitary district of Chicago has always considered that it has the legal right to flow for the people of Chicago water required by the sanitary-district act, notwithstanding the supposed limitation upon the flow of water by the Secretary of War on December 5, 1901, because—

1. The reason for such limitation has been entirely removed, as before pointed out.

2. The United States has acquiesced in the construction and operation of the canal.

3. The safety of the people of the State demands the use of the water, which use does not unreasonably, if at all, affect navigation interests.

Nevertheless it sought in 1912 to obtain the removal by the Secretary of War of the limitation of 1901 upon the flow. The Secretary of War, however, refused. Finally the Chief of Engineers in February, 1913, wrote a letter to the sanitary district stating that measurements had been made of the flow of water, which measurements indicated that the sanitary district was withdrawing from Lake Michigan more than 250,000 cubic feet of water per minute—approximately 450,000 cubic feet per minute—and the Chief of Engineers asked the sanitary district what it proposed to do about it. Thereupon and almost immediately thereafter the attorney for the sanitary district had a conference with the Chief of Engineers regarding the matter, at which conference the position of the sanitary district was stated—that as a matter of law and equity the district was entitled to flow for the people of Chicago the water required by the sanitary-district law.

There was also discussed an injunction suit then pending, United States *v.* Sanitary District, district court of the United States, northern district of Illinois, instituted in 1908, involving a channel which is an adjunct to the main channel of the district, in which suit a great deal of expert and other evidence had been presented. All this evidence would be useful and material in a suit which might be instituted by the United States to enjoin the sanitary district from flowing more water than 250,000 cubic feet per minute. The sanitary district, through its attorney, then offered to stipulate that such evidence might be used in any new proceedings instituted by the Government involving that question, and that it would cooperate with the Government to try both cases involving both questions to the end that an early decision might be had. The position of the sanitary district and its offer in connection with the new suit instituted was set forth in a letter dated March 24, 1913, to Maj. Bromwell, which letter was thereafter transmitted to the Chief of Engineers, the Secretary of War, and the Attorney General of the United States. In accordance with said conference and letter the United States in October following filed its bill for an injunction in the district court of the United States, northern district of Illinois, eastern division, to enjon the sanitary district "from diverting or abstracting any waters from Lake Michigan over and above or in excess of 250,000 cubic feet of water per minute, as already authorized by said Secretary of War" The sanitary district and the Government then immediately proceeded to take testimony in the cause, and the entire matter is now submitted to the court and is awaiting decision. The record contains approximately 6,000 printed pages, and the printed record of the testimony and evidence taken, index to same, and briefs, is contained in approximately 10 volumes. The Government and the sanitary district have expended upwards of $100,000 in the trial of the suit since the arrangement was made to submit the questions involved to the court. I ask you again, is it fair for the Government now while this matter is on hearing in one of the courts of the United States, and is being taken care of by the Attorney General, to do anything which would prejudice or affect the rights of either party to the litigation.

Some statements have emanated from those opposing the diversion of water through the Chicago Drainage Channel, to the effect that the allowance of such diversion violates treaty obligations between the United States and Great Britain. I believe that the facts show the contrary, and that a fair construction of the treaty of 1909 with reference to boundary waters, under which the International Joint Commission was established, clearly shows that the treaty expressly recognized the validity of this diversion.

On June 13, 1902, Congress passed an act, section 4 of which is, in part, as follows:

That the President of the United States is hereby requested to invite the Government of Great Britain to join in the formation of an international commission, to be composed of three members of the United States and three who shall represent the interests of the Dominion of Canada, whose duty it shall be to investigate and report upon the conditions and uses of the waters adjacent to the boundary lines between the United States and Canada, including all of the waters of the lakes and rivers whose natural outlet is by the St. Lawrence River to the Atlantic Ocean.

Great Britain acted and accepted the invitation extended by the President pursuant to said act, and there was established in or about the year 1902 what is known as the "International Waterway Commission." This commission made investigations and reports upon numerous and various matters relating to the uses of, obstructions in, and diversions of boundary waters. Each year the commission issued a report known as the "progress report," and from time to time special printed reports were issued upon important matters.

The treaty of 1909 involves only matters investigated and under the jurisdiction of the International Waterways Commission. The basis of the treaty was composed of facts established and recommendations made by the International Waterways Commission. In case of any ambiguity in the meaning of the treaty, it must be construed in connection with the reports of this commission.

On January 4, 1907, the International Waterways Commission made an exhaustive report entitled "Report upon the Chicago Drainage Canal by the commission." The report was signed by all the members of the commission from Canada, as well as by the United States commissioners. The history of the creation of the drainage channel, its operation and effects, were thoroughly discussed. Among other things, it is stated in the report:

(G) The Illinois law, which authorized the canal, required a flow of 333 cubic feet per second for each 100,000 of population in order to render the sewage inoffensive. This amount of dilution is probably not excessive. * * *

(N) The diversion of large bodies of water from Lake Michigan for supplying the drainage canal has not been authorized by Congress, but there appears to be a tacit general agreement that no objection will be made to the diversion of 10,000 cubic feet per second as originally planned. * * *

43. * * * We therefore recommend that the Government of the United States prohibit the diversion of more than 10,000 cubic feet per second through the Chicago Drainage Canal.

This commission of representative men, the personnel of which is made up of three members representing the United States and three members representing the Dominion of Canada, did not recommend a limitation of below 10,000 second-feet. Canada can not now gracefully make objection to this diversion.

Moreover, the treaty of 1909 provided for the equal diversion of waters of international rivers, and in only one instance was the diversion unequally divided, namely, the waters of the Niagara River for power purposes. With reference to that matter, article 5 of the treaty provided as follows:

The United States may authorize and permit the diversion within the State of New York of the waters of the said river—Niagara River—above the Falls of Niagara for power purposes not exceeding in the aggregate a daily diversion at the rate of 20,000 cubic feet of water per second.

The United Kingdom, by the Dominion of Canada or the Province of Ontario, may authorize and permit the diversion within the Province of Ontario of the waters of said river above the Falls of Niagara for power purposes not exceeding in the aggregate a daily diversion at the rate of 36,000 cubic feet of water per second.

There has never been one single reason advanced why the United States should have been limited by this treaty to 20,000 cubic feet per second and Canada given 36,000 cubic feet, except because of the diversion at Chicago for sanitary purposes; and it must be assumed that the difference in favor of Canada was provided for in the treaty for that reason alone, particularly because the diversion of other international river waters was made equal.

Article 6 of the treaty provided:

The following order of precedence shall be observed among the various uses enumerated hereinafter for these waters, and no use shall be permitted which tends materially to conflict with or restrain any other use which is given preference over it in this order of precedence.

1. Uses for domestic and sanitary purposes;
2. Uses for navigation, including the service of canals for the purposes of navigation;
3. Uses for power and for irrigation purposes.

The foregoing provisions shall not apply to or disturb any existing uses of boundary waters on either side of the boundary.

Article 2 of the treaty provided:

* * * but it is agreed that any interference with or diversion from their natural channel of such waters on either side of the boundary, resulting in any injury on the other side of the boundary, shall give rise to the same rights and entitle the injured parties to the same legal remedies as if such injury took place in the country where such diversion or interference occurs; but this provision shall not apply to cases already existing or to cases expressly covered by special agreement between the parties hereto."

The International Waterways Commission has made a complete report, as heretofore stated, upon this subject and treated the diversion to at least 10,000 cubic feet per second as established and existing. Besides, in 1909 the main channel of the sanitary district was entirely completed and had been in operation for nine years. The sanitary district law required the withdrawal of water from time to time to the capacity of the channel as the population increased. The population of the district then was approximately 2,300,000, requiring a flow of 460,000 c. f. m. Fourteen thousand cubic feet per second is the capacity of the main channel.

The diversion of 1,000 cubic feet per second through the Illinois and Michigan Canal had long existed, and the pumpage of Chicago through intakes for domestic supply amounting to approximately 1,000 cubic feet per second, making 16,000 cubic feet per second, which equals the difference between the diversion allowed for Canada and that allowed for the United States under the treaty.

In 1906 the General Assembly of Illinois in special session by joint resolution memorialized Congress and the President of the

United States, protesting against any limitation of the amount of water to be withdrawn from Lake Michigan through the Sanitary District Canal by treaty between the United States and Canada or by any act of Congress. The treaty was then under consideration. The resolution, among other things, provided:

Whereas the amount of water to be diverted for domestic and sanitary purposes should under no circumstances be limited by a treaty with a foreign power, or by any legislation to be enacted by Congress, thus placing the sanitary district of Chicago—organized to preserve the health of the people—upon the same plane as commercial enterprises organized for private gain: Now, therefore, be it

*Resolved by the Senate of the Forty-fourth General Assembly of the State of Illinois convened in extraordinary session (the house of representatives concurring therein)*, That in any treaty to be hereafter entered into no statement whatever binding the trustees of the sanitary district of Chicago shall be made, and the local conditions of such canal and the volume of water to be accommodated therein should be left wholly and solely to the regulation of the Federal Government, as the conditions of the canal's drainage may require.

It was further provided that copies of the joint resolution should be sent to the Congress of the United States, the President of the United States, and the Secretary of State. It must be presumed that, in view of the solemn action taken by the General Assembly of the sovereign State of Illinois in regard to a matter particularly under negotiation with a foreign government, the wish of the people of the State as expressed by the resolution would be carried out, unless there are some expressed provisions in the treaty to the contrary.

In view of the International Waterways Commission report, providing for a diversion by the Dominion of Canada of the waters of the Niagara River to an amount in excess of that provided for the United States, which excess is equal to the diversion required by the sanitary district and the people of Chicago, and in view of the provisions of the treaty that it should not affect in any way existing diversions, and in view of the protest by the representatives of the people of the State of Illinois, it must follow that the treaty itself contemplated and recognized a diversion of water from Lake Michigan to the extent of the maximum capacity of the drainage channel. I believe no other conclusion can be drawn from the treaty itself and the surrounding circumstances.

Considerable has been said as to the effect upon the levels of the Lakes of the diversion of water through the drainage channel and as to injury to navigation. No Lake captain or other practical lay person interested in the commerce of the Lakes or in navigation has ever noticed any injury to navigation from this source. The claimed injury is arrived at by the most subtle expert analysis made by technical engineers from measurements of the discharge of various of the outlets of the Great Lakes referring such discharges to various elevations of the Lakes. Whether these calculations are correct or not is a matter of conjecture. Suffice it to say that the engineers who have been engaged in this work have never agreed upon the exact theoretical effect. Some of them place it at 4 inches; others as high as 6½ for 10,000 cubic feet per second diversion for Michigan and Huron. It is most probable that this small theoretical effect can cause no material injury to navigation, for the oscillations of the Lakes constantly exceed this small amount, and no boat can be loaded for a trip within such a small margin. Furthermore, since the opening of the drainage channel all the great boats upon the Great Lakes, carrying ore, grain, and coal, have been constructed. They were placed in service by the owners with full knowledge of the diversion of water and the possible effect upon the levels of the Lakes.

All of the connecting channels, harbors, and critical points of navigation, where any lowering of the lake levels would injure navigation, have been improved since 1900, when the drainage channel was opened. The cost of making these harbors and channels deeper by virtue of the diversion at Chicago would have been inconsiderable and so small that the matter of expense could not form a basis for failure to dig the channels deeper to compensate for this diversion. It must be presumed that the Government engineers in providing for the reference plane of improvements for the connecting channels of the lake and its harbors since 1900 have taken this matter into consideration and made the reference plane lower. If they did not, they were derelict in their duties, for the extra expense would be nothing. So, I say that compensation has already been made for any injury to navigation, and the owners of boats constructed them with full knowledge of the diversion and its possible effect.

Maj. Keller in his report of August 13, 1913, with reference to the diversion at Chicago, said:

* * * but the flow into each lake is, as has been explained, constantly varying, and while the discharge from the Lakes is also ever changing, so as in the long run to tend to counterbalance changes and supply, yet these adjustments of supply and discharge are not simultaneous, and the surface levels of the Lakes are therefore constantly fluctuating, as is readily seen from the plates attached.

7. These regular but uncontrollable changes in lake level mask the effect produced by an artificial diversion.

Pursuant to the rivers and harbors act of June 25, 1910, a special board of engineers on waterways from Lockport, Ill., to the mouth of the Illinois River was appointed. The president of the board was Brig. Gen. William H. Bixby, of the United States Army. The report of this special commission was approved by the Board of Engineers for Rivers and Harbors, of which Gen. William M. Black was senior member.

It was approved by the then acting Chief of Engineers. The report was presented by the Secretary of War to Congress on February 18, 1914. The special board was to report—

Upon such measures as may be required to properly preserve the levels of the Great Lakes and to compensate, so far as practicable, for the diminished levels in said lakes and the connecting waters thereof by reason of any diversion of water from Lake Michigan for the maintenance of the proposed waterway herein described, or diversion for any other purpose. * * *

The special board in its report to the Chief of Engineers, dated August 15, 1913, said:

Compensation for the loss of elevation on Lakes Michigan, Huron, and Erie, and their connecting waters, due to an assumed diversion from Lake Michigan of 10,000 second-feet, will by the plan above outlined involve an expenditure of about $475,000, to which should be added an amount for the maintenance of the weirs, estimated at about $15,000 per year, the total cost being much less than the cost of restoration of depths by dredging. It is the opinion of the board that while other plans have been proposed, compensation by fixed contraction works similar in general to those above described affords the cheapest and most satisfactory method of preserving the levels of the Great Lakes.

The senior member of the Board of Engineers on Rivers and Harbors, Gen. William M. Black, now Chief of Engineers, in transmitting a report of the special board to the Secretary of War on December 16, 1913, said:

It is the distinct recommendation of the Board of Engineers for Rivers and Harbors that the term "control of the new waterway thus created, so far as needed for navigation," shall be interpreted to include such control of the use of water for power purposes as shall be necessary to insure the conditions of flow required for navigation. Further, the board believes that the total volume of water to be diverted from the natural discharge channels of the lakes should be definitely fixed by Congress; that a project, with estimate of cost, for works necessary to compensate for such diversion should be prepared to the satisfaction of the Chief of Engineers and the Secretary of War; that before any diversion is made beyond that at present existing, the State of Illinois shall transfer to the Secretary of War the funds necessary for such works as given by the approved estimate of cost; that the works shall be built by the United States with the funds so provided, and that the control and maintenance of such works shall be in and at the cost of the United States.

The expenditure of $475,000 to compensate for the claimed effect of the diversion of the waters of Lake Michigan through the Chicago Drainage Canal is, indeed, small compared with the probable injury to the lives and health of the people of Chicago and its environs, and the expense that might be required to construct sewage purification works in place of the works already constructed. Should the Congress act hastily upon this matter and cast such an immense burden upon almost half the people of the State when a remedy may be provided at a very small expense? The limitation of the flow to 250,000 cubic feet per minute will not keep the Chicago River at all times reversed, and the sewage of Chicago will be discharged into Lake Michigan, directly polluting its water supply, from which there is no escape. The typhoid death rate and the death rate from other water-borne diseases will increase. To partially remedy this effect with works, which no one can say will operate properly, would cost at least $100,000,000, with an expense of operation of from $5,000,000 to $7,000,000 per year more than the cost of operation of the present works of the sanitary district. Taking the construction cost and capitalizing the yearly operation and depreciation expense the burden upon the people of Chicago and its environs will exceed $200,000,000, and then they will have installed works which have never been found effective or practicable for a great metropolitan area with such an immense population. There is no city in the United States with a population in excess of 250,000 that has been able to or has installed artificial sewage purification works. The sewage works must be placed near the origination of the sewage, in order that they may be at all effective. The works themselves give forth odors which are intollerable to the people living in the vicinity thereof, and it is impossible, the way the population of Chicago lies, to convey the sewage to sparsely populated districts and there treat it effectively.

Furthermore, and I say this without fear of contradiction, no sanitary engineer can now recommend works for the artificial purification of sewage of Chicago which may prove entirely effective.

The claim of damage to commerce arises from a calculation as to the loss in carrying capacity of large boats upon the Lakes, and it is calculated that for each inch loss of draft there is a loss of 100 tons for each trip; and that the loss in draft

is 6 inches, and therefore on each trip there is a loss of 600 tons in capacity. Then, it is determined how many boats there are that lose this tonnage, and in order to get the dollars and cents loss each year to navigation interests they multiply the freight rate of 55 cents per ton by the loss in tonnage. Obviously, this is an entirely improper method, for the bottoms exceed largely the amount of freight to be carried each year. The true method is to determine the number of extra trips that would be required and the capital and cost of operation and maintenance cost for these extra trips to take care of the loss in tonnage. When this is done, and I say it without fear of contradiction, it will be found that the loss per year does not exceed $200,000; and this is based upon the proposition that the claimed lowering of the lake levels is directly transferred to the loss in draft of the boats and a decrease in tonnage capacity.

This so-called La Follette amendment, above mentioned, to the rivers and harbors bill has no connection whatever with the plans for the construction of the Illinois waterway, pursuant to the act of the General Assembly of the State of Illinois, approved June 18, 1915; in force July 1, 1915. The amount of water flowing through the Sanitary District Canal does not affect the project. Neither the Illinois Waterway Commission nor the State of Illinois have control over the operation of the sanitary district works or the amount of the flow of water. The southern terminus of the drainage channel is at or near Lockport, Ill., where the water flowing through the channel is discharged into the Desplaines River. The Illinois Waterway Commission, organized under the act, proposes to improve the Illinois and Michigan Canal from Joliet to Dresden Heights, a distance of about 19 miles; from thence to Starved Rock the Illinois River is improved by means of dredging locks and dams, so that it will have a minimum depth of 8 feet suitable for navigation purposes.

The water power to be developed by the Illinois Waterway Commission is at Starved Rock and is merely incidental to the construction of a navigable waterway. The revenue to be derived from the water power does not affect in any way its success, as the general assembly has provided for a tax levy to take care of the principal and interest on the bonds to be sold to defray the expense of construction.

The corporate authorities of the sanitary district of Chicago, the trustees thereof, are elected by the people within the territorial limits of the district, which is within the county of Cook. The trustees are responsible only to the people within the limits of the district.

The La Follette amendment, having to do with the limitation of the flow of water of the sanitary district, was dragged into the Illinois waterway proposition by the heels.

This waterway and the development of water power along it does not require the diversion of any more water from Lake Michigan than is diverted by the drainage canal. The two projects are in no points related. This amendment would operate to nullify the great works now in operation, protecting the health of the people of Chicago and its environs, and would destroy the effect of the immense expenditure of money which has been made in constructing those works. They were constructed for two purposes:

First. For sanitary purposes; and second, for navigation purposes.

I therefore say that the House should not concur in this amendment passed by the Senate. It was passed without due consideration. It was never considered in any committee. It will undoubtedly create a material and far-reaching injury to one thirty-fifth of the entire population of the United States.

## New Freight Traffic on the Mississippi.

### EXTENSION OF REMARKS

OF

### HON. JACOB E. MEEKER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, July 14, 1916.*

Mr. MEEKER. Mr. Speaker, under the permission granted me to extend my remarks in the RECORD in regard to the new barge line now operating between St. Louis and New Orleans, I wish to insert for the information of Congress the following news item which appeared in the St. Louis Republic of July 11. The evidence not only of the desire of shippers to again use the river as they did of old, but also the material savings to the waterway shippers is brought out in this brief note. I trust that every friend of restoring the Mississippi River trade and every opponent of appropriations for this great waterway will file this bit of information away for future reference:

SHIPPERS SAVED $5,600 IN THREE TRIPS OF BARGE "INCO 1."

The first three round trips of the barge *Inco* of the Inland Navigation Co. saved St. Louis shippers $5,600, as compared to the rail freight rates charged for the same shipments, according to a formal report for the first three months of the barge service submitted yesterday to Mayor Kiel.

The company informed the mayor that it now is constructing two additional barges, and that before September 1 it expects to install a weekly barge service between St. Louis and New Orleans.

This service, based on the proven saving to date, will amount to a saving of about $2,000 a week to shippers in the St. Louis district, or about $90,000 a year, the report says. This lowering of cost to the community would amount to about five times the cost of the temporary municipal dock, and would entirely repay the cost of the dock in less than three months.

## The Crosser Colonization Bill.

### EXTENSION OF REMARKS

OF

### HON. EDWARD KEATING,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 12, 1916.*

Mr. KEATING. Mr. Speaker, a few days ago the House was good enough to grant me the privilege of extending my remarks in the RECORD on the bill introduced by the distinguished gentleman from Ohio [Mr. CROSSER] providing for the colonizing by the Government of unemployed workers on the public lands.

Mr. CROSSER's bill has attracted nation-wide attention. Newspapers from Maine to California have devoted a great deal of space to it. I am submitting two editorials from leading newspapers as examples of this editorial comment.

The first is from the Cleveland Press of February 17, 1916. The Press is probably the most influential paper in the State of Ohio. The editorial follows:

[From the Cleveland Press, Feb. 17, 1916.]

LANDLORD UNCLE SAM.

That bill of Representative CROSSER's, providing for the colonizing of unemployed workers by the Government on public lands—agricultural, grazing, and forest—still remaining under Government ownership, is mighty interesting. No doubt it would solve in a large measure the problem of unemployment, but just for the moment our interest is in the following paragraph from our Washington correspondence on the subject:

Title to the lands is to remain forever in the Government. The land is to be theirs and their heirs so long as they use and occupy it.

In effect, isn't the title of all our land—our farms, our home lots, our business sites—already in the Government?

Doesn't the Government really own all our land, and aren't we owners of acres and lots in reality only renters?

When we pay our taxes we are paying the Government our rent. When we don't pay our taxes the Government takes our lot or our farm away from us.

It is true that the Government allows a lot of speculation and changing hands with the lots and acres it owns and rents to us. After we have established a home by hard work on some of the land Uncle Sam rents to us for a certain price, called taxes, he lets a lot of sharks take advantage of our urgent needs in the task of making a living, and it is of no interest to him if we are forced off this land for which we pay rent to him. The shark will pay him rent just the same after we have gone to the debtors' junk heap.

But if CROSSER's bill goes through "the land is to be the settlers' as long as they use or occupy it." That is, Uncle Sam will assert his ownership to the extent of not letting bankers, land monopolists, and sharks generally force occupants off the lots and acres where they are toiling for a living. And in order to keep the sharks away he'll be the banker who will loan the money to the hard-working tenant who needs the cash to improve the land and make a living for himself, his wife, and his children.

That's fine! That plan appeals to us. It will mean a real blow at the growing landlordism in this country. It will mean more crops, less unemployment, more liberty, more homes, lower cost of living—and—ah, pshaw! there isn't room here to tell all the important things it will mean to the common people of America.

The second editorial is from the Johnstown Democrat, of which the gentleman from Pennsylvania [Mr. BAILEY] is the brilliant and well-loved editor:

[From the Johnstown Democrat, Thursday, June 22, 1916.]

CROSSER'S BIG IDEA.

One of the most vital measures which has been brought before the Sixty-fourth Congress is that of Representative ROBERT CROSSER, of Ohio, known as the Crosser colonization bill. It is understood to have the full indorsement of the Department of Labor and the support of many influential members of the administration. It is certain to command strong consideration in Congress.

Under the terms of the Crosser colonization bill, unemployed workers are to be given access to lands in the public domain. It is believed that this would solve one of the gravest problems of the day. It is not our purpose here to go into the details of the measure. These have been carefully worked out and are thought to be entirely adequate. It is sufficient to say that a colonization board, consisting of the Secretaries of Labor, Agriculture, and the Interior, is empowered to set apart from the public domain as farm-colony reserves areas or locations suitable for colonization projects, and to make all necessary plans for colonizing and developing such reserves. The plans are to provide for necessary clearing of land and for roads, ditches, and other reclamation work. The title to all such lands shall remain forever in the Government of the United States, the cost of improvements to be assessed against each parcel of land, the board to collect each year an amount equal to 4 per cent of the cost of improvements assessed against the parcel in question, plus a fraction of the cost assessed against the lands, so as to reimburse the Government within 50 years. A tax on the value of the land is likewise to be collected annually.

Out of the revenues thus derived it is provided that the colonization board shall pay the expenses of local governments within the areas reserved for colonization purposes to an amount not exceeding 3 per cent of the assessed value, the balance to go into the colonization fund.

It is further provided that the colonization board may assess colonists to build upon and otherwise improve their holdings, and the interest of a colonist in such improvements may be assigned.

The benefits which would flow from this measure are almost obvious. Mr. CROSSER reveals in it an understanding of the problem with which he is dealing that is all too rare. He is not only a lawyer of ability; he is also a student of the more vital questions of government and society. Not only is his heart right, but he has the knowledge in addition which is so essential to actual achievement. There are many men whose hearts are right and whose sympathies are with the people who have not the faintest conception of the causes underlying social unrest or any plan whatever for giving permanent relief. It is the high merit of Congressman CROSSER that he has both the ability and the training which are so necessary in dealing with great constructive propositions.

It is hardly to be thought of that the people of Cleveland will fail to keep him in a place he is filling so admirably, and which has given and is giving that city a new distinction. He ought to be retained at the National Capital at least until he shall have worked out the large plans to which he has been so sedulously devoting himself for the last four years.

## Improvement of Missouri River.

### EXTENSION OF REMARKS

OF

### HON. WILLIAM P. BORLAND,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 12, 1916.*

Mr. BORLAND. Mr. Speaker, the adoption of the conference report of the pending rivers and harbors bill marks another victory for the Missouri River, and assures its continued improvement for the season of 1917.

The merchants of Kansas City have reason to feel proud of the successful fight which they have made to keep their project from being killed by the powerful interests which were united against it, and I feel a pardonable degree of pride in the personal part which I was able to take as their Representative.

We had just escaped a deliberate attempt to wreck the entire project when it was advancing with assured success toward the solution of the transportation problem of the Missouri Valley. Only the splendid vigilance and fighting spirit of Kansas City prevented the success of this attack and turned what was meant to be a fatal blow into a victory for the river as a legitimate and necessary factor in the commercial development of the West.

The groundwork for the permanent improvement of the Missouri River as a channel of commerce was laid by my predecessor in Congress, Hon. E. C. Ellis, during the two terms he represented the fifth district. The Missouri had been put off the map, and all attempts at permanent improvement had been abandoned. Mr. Ellis secured a resurvey of the project and a report by Capt. Schultz, the district engineer, outlining a feasible engineering plan for securing a permanent 6-foot channel. I succeeded Mr. Ellis before the final adoption of the project, and it became my duty to urge Congress to approve the Schultz report and begin the work of permanent improvement.

The first success in that direction was the appropriation in 1910 of $1,000,000 for construction work, but it was coupled with a condition for the reexamination of the project by a new board of engineers to secure accurate data as to its cost and possibilities. The business men of Kansas City left their employment and journeyed to Washington at their own expense to lay the facts before the committee of Congress, making every sacrifice necessary to secure the growth and prosperity of their city. They believed, and still believe, that the destiny of Kansas City depends upon our securing water rates with a successful method of water transportation; that we had reached the limit of our growth as a purely inland city; and that we must be connected up with the seaboard, the Panama Canal, and the great foreign trade of the world.

The reexamination of the project was favorable, and in 1912 Congress formally adopted it and entered upon the work of carrying out the engineering plan. Meanwhile, the Kansas City men, in pursuance of their promise to Congress to restore navigation, even upon the unimproved channel, organized a boat line, which has been an assured success. It is now carrying freight for 80 per cent of the rail rates, absorbing switching and marine insurance, and has grown in public confidence by the reliability of its service and the safety and good order in which it delivers freight.

The work under the engineering plan has progressed favorably, although not as rapidly as Congress had at first intended, and the boat line has had to contend with all the difficulties of navigating an unimproved channel. The banks have been revetted for a portion of the way to St. Louis. The channel has been improved; much valuable agricultural land has been saved from destruction; Kansas City has provided itself with a municipal wharf; and the amount of freight carried by river has steadily increased with each season.

As the river became a factor in transportation problems, the opposition to it increased. Each year we had a fight for a renewal of the appropriation, in face of the fact that every reason which actuated the original adoption of the project had been justified by the progress of events. The Missouri River stands to-day as the one inland waterway proposition which has more than realized the expectations of its advocates. The opposition to it has resulted in a continual holding back of portions of the appropriation, but each time the business men of Kansas City have enthusiastically responded to the call and rushed to the firing line at the first sign of danger.

In the rivers and harbors bill of 1915 there was added in the Senate an amendment providing for the reexamination of certain projects, including the Missouri River. Although the act was not approved until March 3, very shortly thereafter, on April 22, 1915, the then district officer made a report advising the abandonment of the improvement. His report was not based upon any engineering difficulties, as he expressly stated that the project could be carried out for the original estimated cost, but he condemned it on commercial grounds. This report was not made public until August 4, 1915.

On August 17 there assembled at Kansas City several hundred delegates from all the Western States and all the river cities from Minneapolis to New Orleans to protest against the abandonment of the Missouri River. The district officer's report was based on the commerce of 1913, the first year after the act was adopted by Congress, and the commerce had steadily increased in 1914 and 1915. The matter was so grave that the Board of Engineers for Rivers and Harbors decided that instead of taking the matter up at Washington they would come to Kansas City for a special hearing, and they so advised me. This hearing was held on October 19 and 20, 1915, and the commercial interests of the entire Missouri Valley placed the matter before the board from every standpoint in the clearest possible manner.

They reviewed the growth of the river navigation, the work of the boat line in perfecting river craft, the development of terminals and interchange of traffic, the rulings of the Interstate Commerce Commission giving the boat line the advantage of rail connections to the seaboard, the tremendous growth of tonnage in the Western States moving to the East through the gateway of Kansas City, the increase of manufacturing and jobbing business at Kansas City and other river points, the development of the grain, lumber, live stock, and kindred markets, and the eastward movement of the raw material and manufactured products from the producing sections of the West. The record of this hearing at Kansas City, which is found in House Document 463, of the Sixty-fourth Congress, first session, is the most complete and remarkable history of transportation and inland waterway navigation which has ever been published.

The evidence was so overwhelming that the Board of Engineers reversed the decision of the district officer and recommended Missouri River in the highest terms. We feel that if the Missouri River had been a mere pork barrel, designed to absorb public money for political purposes, no powerful interest in the United States would have stood in its way, but when it became a real factor in the transportation problem and was cutting the rate on commodities moving from the producing regions of the Mississippi Valley to the industrial centers of the East and to foreign ports, then the alarm went out that the Missouri River was no joke and must be crippled or killed in Congress.

The real secret of this victory is preparedness. The business men of Kansas City have been on hand with the facts. Having taken hold of the idea that the transportation problem of Kansas City must be put upon a competitive basis, they are ready to sacrifice their time, money, and energy to win the fight. No call has ever gone out from Washington that has not been instantly responded to by strong, active, and well-informed committees of business men. These business men were fighting, not their own battle alone but the battle of Kansas City and the battle of the great empire which constitutes its trade territory. For eight years they have been constantly on the firing line, and each time a clash has occurred they have come off victorious.

The end is not yet; for, as the river further demonstrates its ability to serve the commercial interests of the West the attacks upon it will become more determined. But each fight has strengthened the confidence of Kansas City in its project, and each fight will, I trust, result—as this last has done—in strengthening the position of the river and in justifying those who advocated its being among the great channels of commerce.

## The Revenue Bill.

### EXTENSION OF REMARKS
OF
### HON. CHARLES H. DILLON,
OF SOUTH DAKOTA,
IN THE HOUSE OF REPRESENTATIVES,
*Monday, July 10, 1916.*

Mr. DILLON. Mr. Speaker, I wish to call the attention of the House to the inheritance tax features of this bill.

The authority conferred upon Congress by section 8 of Article I of the Constitution, namely, "To lay and collect taxes, duties, imposts, and excises," is a sufficient grant of power for levying a tax on succession to property of a decedent. Uniformity is required by the following provision: "That all duties, imposts, and excises shall be uniform throughout the United States." The Constitution further provides, "Direct taxes shall be apportioned among the several States."

If this tax is on the property, it would be a direct tax and would be unconstitutional because there is no apportionment provision in the bill. In 1894 an act was passed laying a tax on incomes from all classes of property, but no apportionment was made. Its validity rested upon the assumption that it came within the classification of taxes, duties, excises, and imposts which was subject to the rule of uniformity but not subject to the rule of apportionment. The act was held unconstitutional on the ground that it was a direct tax on property.

The Supreme Court, in Pollock *v.* Farmer's Loan & Trust Co. (158 U. S., 161) held that the income tax provided for a direct tax and was void for want of apportionment. To get away from this effect the sixteenth amendment to the Constitution was adopted, which provides, "the Congress shall have power to lay and collect taxes on incomes from whatever source derived without apportionment among the several States and without regard to any census or enumeration." It is evident that the sixteenth amendment applies only to incomes and takes incomes out of the apportionment rule.

The tax on inheritance is a tax upon succession, a tax on the right to succeed to property. It is not a tax on property. There being no natural right to inherit the legislative department of Government has the right to fix the conditions upon which the succession may be permitted.

The framers of this bill have overlooked the basic principles on which this character of tax is made. Section 101 provides, "that a tax equal to the following percentages of the value of the net estate * * * is hereby imposed upon the transfer of the net estate of every decedent." The percentages imposed are upon the amount of the net estate. Section 102 provides, "that the value of the gross estate of the decedent shall be determined by including the value at the time of his death of all property, real or personal." Section 103 provides, "that for the purpose of the tax the value of the net estate shall be determined." The gross value is taken and funeral expenses, cost of administration, debts, mortgages, and an exemption of $50,000 are deducted. Returns must show the value of the gross estate with the deductions.

It will be observed that no provision is made for levying the tax on legacies or distributive shares, nor upon the right of the heirs or legatees to succeed to the same. The tax is levied upon the aggregate amount of the decedent's property and not upon the amount of each distributive share.

Inheritance taxes were levied under the old Roman law. France, Germany, and other European countries enforce these laws by way of stamp taxes. These taxes have never been regarded as direct taxes on property, but have always been levied against the beneficiary who receives the property.

Congress passed the first legacy tax by the act of July 6, 1797, which remained in force until June 30, 1802. This tax was a charge against the distributive share going to the heir or legatee. By the act of June 30, 1864, Congress again exercised the right to impose a legacy tax. The tax was on legacies or distributive shares of personal property. By the act of June 13, 1898, Congress again levied an inheritance tax.

In Knowlton *v.* Moore (178 U. S., 41), the court in passing upon this statute used this language:

> An inheritance tax is not one on property but one on the succession. The right to take property by devise or descent is a creature of the law and not a matter of right, a privilege, and therefore the authority which permits it may impose conditions upon it.

The court further says:

> The statute clearly imposes the duties on legacies or distributive shares and not upon the whole personal estate.

In United States *v.* Perkins (163 U. S., 625), is is said:

> The tax is not a tax upon the property itself but upon its transmission by will or descent.

In Snyder *v.* Bettman (190 U. S., 249), it is held:

> The taxes are not imposed upon the property itself but on the right to succeed thereto.

Under the terms of this bill the tax is imposed upon the mass of the estate. It does not impose a tax upon each legatee or beneficiary. The exemption provision of $50,000 is likewise an exemption on the whole estate. It makes no provision for an exemption for an heir or legatee.

Under the provisions of the bill it is a tax against the property held temporarily by the executor or administrator, and is therefore a direct tax because it does not levy the tax upon the right of succession. No one would claim that this tax could be imposed upon the decedent if living. The right of the administrator or executor in the property is that of trustee for the beneficiaries. If he pays the tax no provision is made for a charge against the beneficiaries. How is he to settle the rights between numerous beneficiaries where the tax is increased in proportion to the value of the estate? If it be argued that the administrator or executor would be required to pay the tax in the first instance and then collect it from the heirs or legatees then it becomes pertinent to know in what ratio he is to assess the heirs and legatees.

All legatees and heirs would be jointly assessed regardless of the amount of their shares. If there be but one legatee he would be entitled to $50,000 exemption, while if there are 100 legatees and heirs they would be jointly entitled to but one exemption.

There would be no difficulty if the tax was levied on each legatee or distributive share, but when the rate each is to pay is increased by the value of the property received by other legatees, you have all kinds of confusion. We would tax separate legatees regardless of the value of property received. The taxation would be measured by the value of all property received by the numerous legatees or heirs. For instance, the tax on A's

house, valued at $1,000, would be determined by the value of numerous other houses, and the tax on A's house would be increased in proportion to the increase of the value of the property of the other legatees.

Suppose that a decedent willed all of his property of the value of $60,000 to a hospital. Deducting the exemption, the hospital would pay $100 inheritance tax. If a millionaire across the street willed the same hospital $60,000 and distributed among numerous legatees the balance of his estate, valued at $4,940,000, the hospital would pay an inheritance tax of $2,862. To obtain these bequests the hospital would be required to pay over twenty-eight times as much tax for the second bequest as for the first of the same amount. In the first instance the rate of tax on the amount received would be one-sixth of 1 per cent, while in the second it would be 4.77 per cent.

Again, the exemption of $50,000 should apply equally to those succeeding to the estate or be a classification to each person similarly situated. It may be conceded that Congress can make classifications, but every issue of a decedent who may receive property should be entitled to the same amount of exemption because the property he is to receive is to bear a share of the tax.

In Black against State, One hundred and thirteenth Wisconsin, page 205, and Ninetieth American State Reports, page 853, it was held that a statute authorizing an inheritance tax where the whole estate was of a specified amount or more, but not authorizing such tax where the estate was less than that amount in value, the beneficiaries being in the same class and the tax being levied without regard to the amount received by the individual beneficiary, was unconstitutional as being arbitrary and unlawful discrimination between beneficiaries of the same class.

If the tax can be taken from the distributive share of the heir, then the heir ought to be entitled to a definite fixed amount of exemption; yet under the provisions of this bill, if the decedent left his entire estate to one son, the son would have an exemption of $50,000. If, on the other hand, the decedent left surviving him 10 sons they would have to join in an exemption and each son would have only $5,000 exemption; yet who could claim that this exemption was uniform in its operation?

It seems to me that the framers of this bill have overlooked all the congressional acts heretofore passed imposing a tax upon the right of succession to property and have overlooked the fact that the tax must rest against the legatee or heir who received the distributive share of the estate. The tax not being levied on the succession to property of the decedent but on the property itself becomes a direct tax which must be apportioned among the several States.

This Congress has outstripped every other Congress in making wasteful and extravagant appropriations. It is evident that we must continue many of the special taxes provided in the emergency act of October 22, 1914. It has usually been only in war times that we have been compelled to levy these special taxes to obtain revenue for running the Government. This revenue bill, however, largely shifts the burden of the taxes upon the wealthy classes of our people. The increase in tax on incomes, the inheritance tax, the tax upon the manufacturers of munitions of war, the repeal of many objectionable features of the stamp tax act, the creation of a tariff commission, the antidumping clause, and the placing of a duty on certain specified articles are features which call for support of this bill.

---

## The Prosperity of the United States.

### EXTENSION OF REMARKS

OF

### HON. HARRY E. HULL,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 15, 1916.*

Mr. HULL of Iowa. Mr. Speaker, I am opposed to this measure because it has eliminated the principle on which, I believe, the prosperity of the United States is founded, namely, that we should rely principally on the protective tariff for securing the necessary revenue with which to run this Government. Just now we are in the throes of temporary prosperity, but my Democratic brethren who are trying to delude the Nation with the idea that our present prosperous condition is due to the Underwood tariff bill are like the ostrich that hides its head in the sand. The people of the United States are not so short-sighted that they are going to forget the intolerable conditions that existed before the terrible holocaust in Europe broke out and brought with its bloody carnage a demand for weapons of death that has kept our factories busy, our men employed, and our prices abnormal. It has been estimated that 2,000,000 men in the United States are now employed in making arms and ammunition to supply the demand of the allies. The war will soon be over, and already the papers are telling of an immense ammunition plant being dismantled. This is only the forerunner of what is soon to come, and then we will have these millions of men seeking employment.

The real test of the practical abolition of the tariff as promulgated by the Underwood tariff law, for which this administration stands sponsor, came in the first two years of the administration. In 1914, or just before this war broke out, the United States was in the throes of a business depression the like of which has never been exceeded in this country. Millions of men were unable to secure employment, failures were frequent, banks refused to loan money, business was stagnant, and we were on the eve of a panic. It is my belief, and I believe it is the belief of a large majority of the thinking people of the United States, that this condition was brought about by the abolition of the tariff law that existed prior to the time the present administration succeeded to office. The protective tariff has been tried and found sufficient. Look back over the long years in which this country has prospered and you will find that it was during those years that our industry and our products were protected by an adequate tariff. It has become an axiom that the Democratic Party has broken into our national halls and hard times have broken out at one and the same time. The Democratic Party has, as far as it has been in its power, dethroned the idea of a protective tariff. The principle of the protective tariff is that those who seek to do business within our borders must pay for the privilege the same as our citizens.

The principle of the Underwood tariff bill is that the foreigner should be given preference over the citizen of the United States. It is a long-proven fact that an industrial depression is preceded by a depression in price of agricultural product. When corn, wheat, oats, cotton, and those things that come from the soil are in big demand and the prices are high, it is a sure sign that the men are working and business is good. When, however, grains are low and the market is poor, you will find that men are unemployed, manufacturing plants are closed, and money is hard to get. I call your attention also to the fact that it is the Republican protective tariff that has maintained our high standard of prices on the cereal. Whenever we have had a protective tariff, the farmer has been able to obtain good values for his products. Whenever the Democrats have been in power, the farmers' products have been low in value. We are prosperous right now, due to the terrible conditions that exist in Europe, due to the fact that our men are busy making weapons of death for foreign countries. Let us not forget, however, that during the first two years of this administration things were different. Let us not forget that prices were low, and the industrial depression as usual was preceded by a depression in prices. Lest a few of our Democratic friends might forget, I quote you articles from some of the leading commercial journals of the United States:

First, let me give you a market quotation from the highest known authority there is in this country. Howard Bartel's Official Trade Bulletin of June 20, 1914, of the Chicago market, says:

> Corn closings for the week were one-fourth to 1 cent lower. Conditions in the Argentine Republic have had more or less to do with the lowering of the price of this article in the United States during this week than anything else to come to the front as a potent factor. The weather in Argentina has changed and is now favorable for the handling of the crop that is offering at lower prices. It is expected that buyers of corn, not only in the United States but in the Old World as well, will be placed in a position to name the price of the cash grain to come, out of the Southern Hemisphere. In addition to the increased offerings of Argentina, the Danubian supply is larger, and that country is pressing its grain for sale. The fact that the corn in the Argentine Republic is of better quality than a few weeks ago is attracting buyers, and it will help the markets of the world no little. Argentine corn is offering at New York for June selling at 67½ cents, and for the first week in July that grain was obtainable at 6 cents c/l. f. Atlantic ports.

This is just one report taken at random of many hundreds that we have in our files from the same high authority, and we are prepared to prove to any inquiring minds that the depression of corn from about 75 cents before the passage of the Underwood tariff bill, down to less than 65 cents during the winter months of 1914, was due absolutely to the importation both actual and threatened of Argentine corn. Allow me now to submit a quotation showing the effects upon butter and eggs,

of this same outside competition. I quote from the Produce News of Chicago, Saturday, January 31, 1914:

NEW YORK, *January 30, 1914.*

It is seldom the butter market gets in as demoralized condition as for the last few days. Slump after slump has sent fresh extras down to 29½ cents from the highest price at the close of the year, 37½ cents. This is a drop of 11 cents during the month, almost unprecedented in the history of the trade. All the month trade had dragged because consumers seem to have cut out butter to some extent.

Present conditions are caused largely by the free import of foreign butter, especially from Argentina. There are due from Argentina to the Pacific coast 10,000 packages and 5,000 packages to Chicago early in February. California is oversupplied with foreign butter, and all western markets are demoralized.

I will not tire you with any more market quotations, simply saying that we have in our office, from these and other of the same unquestioned high authorities, any number of actual market quotations, proving beyond all doubt our contention that the prices of the farm produce, such as corn, oats, barley, butter, eggs, potatoes, beef, and so forth, were depressed by this outside competition, and that without lowering the price to the consumer one penny. In addition to these market quotations I wish to submit to you a few opinions of well-known authorities on this same subject.

Henry Wallace, in Wallace's Farmer of February 13, 1914, says:

One thing we consider certain is that farmers hereafter, as long as the present tariff is in court, will have to sell corn in New York much of the time at the price at which the Argentine corn grower can lay it down there. He is already underselling us at least 5 cents per bushel, and this accounts for the recent drops in the price of the markets of the West.

D. W. Snow, in the Orange Judd Farmer of February 21, 1914, says:

The new tariff placing corn upon the free list brings corn growers of the Central West face to face with new and serious problems. The price of American corn has always been fixed by our domestic situation, or, in other words, prices have been determined by American farmers. The free admission of foreign-grown corn makes ours a world's market, or, in plain English, allows the Argentine corn grower to dictate the price at which the American farmer shall sell his corn.

George A. Wells, in Wallace's Farmer of February 27, 1914, says:

The question as to the effect of the price on our domestic corn by the removal of the duty is perhaps debatable, and will unquestionably become involved as a political issue. The removal of the duty has undoubtedly placed the corn-belt farmer of this country on a world basis of competition, whereas heretofore he received prices for his corn that were above an export basis, owing to the large demand by the manufacturers and the high price of meat products. It would thus seem that the corn-belt farmer has lost his hold on the situation and will be obliged to accept lower values for his corn as a consequence of the removal of the import duty.

Henry Wallace, in Wallace's Farmer of April 3, 1914, says:

There is no doubt now that when there is a good crop in Argentina there will be considerable importation of Argentine corn into the Atlantic and Gulf cities, where it will come into competition with corn from the West. The United States has no longer a practical monopoly of the corn growing of the world.

P. V. Collins, editor of the Northwestern Agriculture, editorial of July 14, 1914:

THE FARMER WITH NO FRIEND.

The free traders are in power. There is no possibility of curbing their power until the next presidential election in 1916. There is a possibility of the people going on record at the coming election this fall by electing protective Congressmen. That will help some, although it must be frankly confessed that if all Congress were unanimously in favor of repealing the free-trade law, it could not be repealed until a protective President was put in the White House, for President Wilson would veto any such action; but it is important that Congress be taken in hand by the people and shown that it can not trifle with American prosperity without rebuke. Every Member of Congress who supported the Underwood tariff, which has brought such distress upon the country, should be defeated to the end that this country shall be "governed by the people and for the people."

[Editorial in the Daily Farmers and Drovers' Journal of March 19.]

Now, we are learning who gets tariff benefits. Chicago interests dominate Argentine beef trade, says Government report, but live-stock men knew this before the meat tariff was removed. Some weeks before the tariff bill was passed, the Farmers and Drovers' Journal made the statement editorially that the South American meat trade with the United States, provided the tariff was removed, would be dominated by the great packing interests of Chicago. It was declared at that time that the Chicago packing companies had in the past few years made heavy investments in South American cattle properties and also in slaughtering establishments, and only awaited the removal of the meat tariff to open up to them a profitable business in transporting beef this way. Congress went ahead more or less blindly and removed the tariff. The contention was that it would mean cheaper meats to the American public, but that prediction of our statesmen at Washington has failed to materialize. There has been, however, a decidedly bearish undertone prevailing in the market for home-raised cattle practically ever since the tariff came off. Congress made a mistake when the meat tariff was removed. It has benefited thus far only the interests which wholesale beef in this country, and what it will do later can only be guessed at, but a reasonably good guess would be that free meats will not benefit the consumer but will have some effect in hurting the producer.

Now comes the Department of Agriculture announcement that we are receiving about 9,000,000 pounds of Argentine beef a month from Argentina. We are also informed that of the nine big meat concerns in the Argentine five of them are the properties of Chicago companies. The Government also states that while it had supposed that Argentine beef would cause a reduction in the prices for beef in the United States, "it is not assumed that the American-controlled companies in Argentina are using the Argentine beef to beat down the prices on Chicago beef."

A little investigation by congressional committees into the ownership of the Argentine beef interests prior to the removal of the tariff might have resulted in a tariff arrangement at least equitable to the American producer.

As it is now, the chief beneficiaries of the beef free list are the five American-owned Argentine packing concerns.

When the consumer is actually given some relief from high beef prices and the producer is not feeling its repressive influence, then will it be time for the majority Members of Congress to feel that they really did something in the way of tariff tinkering which brought relief to that part of the public most in need of it.

Referring to the hearings before the Agricultural Committee of the House, I cite the testimony of Mr. Eddy, on page 131, and more especially that of Mr. Goemann in reply to a question by Mr. SLOAN:

Now, take an illustration to-day: I am out of business on corn in the old channels in which I was trading up to six months ago, for the reason that the pressure of Argentine corn in all the consuming sections, from Florida to Maine, has driven me out. Now, all that is taken away from us because the grain is headed here from Argentina, and the consumer realizes that he can buy Argentine corn cheaper than he can buy mine, and he realizes the enormous quantity which he can get, and therefore he buys from hand to mouth, and in his buying from hand to mouth he depresses the corn price in this country, and in consequence of the competition corn has declined 10 cents a bushel; it has declined in the future market.

That this importation of foreign produce affects our markets far beyond what it might if it was only the actual amount of the importation that had to be taken into consideration is very true. Any student of markets understands this, and I will give one quotation from a market letter to illustrate this psychological or sentimental effect.

John F. Wright & Co., in the Chicago Post, June 26:

CORN.

This market seems to be singularly under the hypnotic influence of South American advices. When following the jurisdiction of light supplies at home, indisposition of the producer to sell for shipment, increasing feeding requirements on the farm, threatened impairment of the growing crop through drought and army worms, it is only necessary to report the sale of a cargo of Argentine corn to New York or Galveston to nullify every effect of the domestic situation and turn the price sharply downward.

My district contains an industry that illustrates the woeful effect of the tendency of free trade contained in the Underwood tariff bill. I shall simply give you the history of the pearl-button industry.

The McKinley bill made the pearl-button industry in the United States possible. Before that act pearl shells were practically worthless and wage scale $5 per week.

In 1912 shells worth $30 a ton; wage scale averaged over $15 a week; business worth over $10,000,000 a year; Muscatine had $500,000 worth of machinery; Muscatine had a pay roll of $35,000 to $50,000 a week.

In 1914 tariff cut over 60 per cent; no market for shells; factories closed, or running on short time; 99 per cent of American button industries shut down, unable to sell their buttons; Muscatine pay roll cut down from $35,000 to $5,000 a week; thousands of people thrown out of employment, and button men losing money every day.

---

**Correspondence of Volunteer Soldiers.**

---

## EXTENSION OF REMARKS

OF

## HON. JOHN H. CAPSTICK,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 15, 1916.*

Mr. CAPSTICK. Mr. Speaker, in offering the resolution to facilitate and encourage correspondence between the volunteer soldiers, their families, and business associates, I am prompted by the practical and economic benefit such an innovation would work, and am also conscious of the sentimental feature it embodies.

I think the country generally realizes now the full meaning of the changed conditions of the men along the border. They

returned to their homes from business as usual one day recently, and next day went into camp. There was no time for preparation of their private affairs or to fortify their families for the indefinite separation.

Now they are encamped along the Mexican border and have time to think of the things they would like to have done and the things they would have said in parting. I feel they would like to spend some of their spare time writing. It will be an easy matter to get paper and envelopes to do this, but quite another thing to get postage stamps. I do not believe any of the men are without funds to buy stamps.

The purpose of the resolution is not a financial one, but is to provide a convenience to these men to keep in touch with their personal affairs, and as an incentive for them to write oftener than they otherwise would, thereby relieving the monotony of camp life and keeping them profitably engaged.

It will also have a stimulating effect on the folks at home. They will write oftener. A letter from home at regular intervals will mean a great deal to those men. This idea is not new. It is employed by the nations abroad with troops in the field, and it has proven a boon to the men. Investigation shows this and also that the cost to the Government is very small. Proper regulations can be adopted to prevent abuse of this franking privilege, for that is what it amounts to. I have designated the ranking commissioned officer of each company of volunteers as the official to mark the envelope in lieu of postage. It seems to me that his name, or initials, the company and regiment, could easily be placed on the letters of the men in his command and forwarded from headquarters with other mail or in the usual manner.

## Organization and Equipment of the Flying Corps of Great Britain, France, and Germany.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM S. BENNET,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,
*Thursday, July 13, 1916.*

Mr. BENNET. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I desire to insert the following:

I.

GREAT BRITAIN.

The Royal Flying Corps consists of two wings—the naval wing and the military wing.

The naval wing is administered by a director of the air department at the Admiralty.

On January 1, 1914, all airships in the hands of the army were turned over to the navy.

There were (1914) four sea-plane stations in England and two more in course of erection in Scotland.

One hundred and nine sea planes and aeroplanes were in the possesion of the Admiralty and 20 more had to be ordered.

There is a naval flying school at Eastchurch equipped with some 50 machines.

In 1912 important changes were undertaken.

The military wing was to consist of seven aeroplane squadrons, with the necessary personnel, and an eighth squadron was to be organized and equipped with balloons and kites.

The reserve was to be divided into two classes, the first to consist of those who performed a number of flights across country in each quarter and received a retainer fee, and the second to consist of those who did not make the prescribed number of flights, but who were available in the time of war.

The army and navy wings were to be placed on a war footing and to be so maintained at all times; in peace and war the establishments were to be the same.

In 1914 Great Britain had 1 battle airship, 7 mine-laying and scout airships completed and 7 building. Some of the reconstructed machines were used for training purposes only. There were about 250 efficient aeroplanes and sea planes in the possession of Great Britain.

Subdivisions of the military wing are attached to divisions, corps, and armies as circumstances may require.

The wing is divided into aeroplane squadrons, which consist of a headquarters of 7 officers and 14 men, and three flights of 4 officers, 7 noncommissioned officers, and 32 mechanics and assistants each. There are 12 planes to be attached to each squadron. The transportation that accompanies a squadron is as follows:

| | |
|---|---|
| Light aeroplane tender for headquarters and 2 for each of the three flights | 1 |
| Heavy aeroplane tenders for each of three flights | 2 |
| Motor-repair lorries | 2 |
| Shed lorries, with trailers | 6 |
| Reserve equipment lorries | 3 |
| Motorcycles | 6 |

With a supply train is one motor lorry carrying supplies for headquarters.

There is also a "headquarters detachment" of the military wing, which is attached to divisions, corps, or armies, as circumstances may require, and which consists of 3 officers, 11 men, and 2 motors.

The present field service regulations indicate the presence of an airship and kite squadron, which consists of two airships and two flights of kites.

The headquarters of this force comprises 1 officer and 11 men; to the airships are assigned 8 officers and 98 men, and to the kites 4 officers and 87 men. The transport of the airships is composed of 1 light airship tender for headquarters, and 2 for light 4-motor gas wagons; 2 repair lorries, and 4 motorcycles. With the train is 1 motor lorry for baggage supplies. For first-line transportation of the kites there are 2 carts, 6 wagons (horse-drawn vehicles), and 4 bicycles.

On the line of communication is established a flying depot, the personnel of which consists of 3 officers and 67 noncommissioned officers and men; 1 motor car, and a gas train consisting of a tractor and 3 trucks are attached to this unit.

During five years up to 1914 the following sums of money were spent for aviation:

| | |
|---|---|
| Government expenditures | $3,000,000 |
| Public subscription | None. |
| | 3,000,000 |
| Appropriations for 1913 | 3,000,000 |

II.

FRANCE.

In February, 1914, a decree was issued creating two posts of the ministry of war, one to be known as the technical inspector of aviation and the other as the technical inspector of aeronautics. These officers were to perform technical duties, such as making inspections of troops and material, making studies of improvements and extensions, and keep in touch with technical instruction. About the same time a decree was issued creating a "superior council of military aeronautics."

The duty of this council was to coordinate the efforts of the Government and private parties toward securing progress in both the science and technique of military aeronautics.

The council was composed of the following officials: The minister of war, president of the council, four senators, four deputies, four members of the Institute of France, four technical representatives of aviation, the chief and assistant chief of staff of the army, the chief of staff and the chief of section of the second staff of the navy, the director of aeronautics, the minister of public works, a representative of the minister of colonies, the director of postal administration, and the director of military aeronautics of the army, who was made the recorder of the council. Two officers of the army aviation service were made secretaries.

The troops are divided into companies and sections. The aerostatic organizations are divided into sections, while the aviation sections are divided into flotillas and squadrons. The division of the flotilla (or squadron) is the unit assigned to the various tactical organizations in time of war. It consists of 4 sections, each with 2 aeroplanes, 2 tractors, 1 truck, 1 work truck, and 2 automobiles, with 55 men, who are provided in addition to the observers. A company of aerostatic troops (3 officers and 108 men) is also assigned for use of troops upon mobilization. Aviation detachments are attached to cavalry divisions, army corps, and armies.

During five years up to 1914 the following sums of money were spent for aviation:

| | |
|---|---|
| Government expenditures | $22,000,000 |
| Public subscription | 2,500,000 |
| | 24,500,000 |
| Appropriations for 1913 | 7,400,000 |

Source: CONGRESSIONAL RECORD, House, May 18, 1914, page 8796.

When the European war broke out France had about 1,400 aeroplanes.

Source: Rep., Ntl. Adv. Comm. for Aeronautics, February 27, 1915, page 3.

III.

GERMANY.

In 1914 the German Army had nine battle airships and two more were available, privately owned but subsidized. The navy had one, with another hired, and two building. Five mine-laying and scout airships were in the hands of the army and one building for the navy.

There were at that time about 8 sheds in Germany capable of holding the new model 32-ton ships and 13 capable of holding the 22-ton ships, with a total of 32 sheds built, and 4 building in various parts of the country. The new type of sheds adopted for the housing of aircraft cost 70,000 marks. Sea-plane stations were established at Putsig, Kiel, Wilhelmshaven, and Heligoland.

There were about 500 aeroplanes of all descriptions in Germany in 1914.

The aeroplane sections of the German Army are organized as complete units. Each army corps has its section and each army one or two sections. A section normally consists of six machines, each machine having two officers—an observer and an operator—with a chief of section in charge. The fliers are generally lieutenants, while the chiefs of the detachments are captains. About 6 noncommissioned officers and 100 men are assigned to each section. From 7 to 12 trucks are provided for carrying the spare parts, supplies, workshop, baggage, etc. Automobiles are furnished for the transportation of the personnel, but the aeroplanes themselves, as a rule, fly to their destination. There was one type, however, with folding wings, that by the insertion of a forward axle and wheels can be attached to a motor truck and pulled along the road.

Up to January, 1915, the German aviation had reached a high state of development. There were evidently 75 or more detachments, or, as the Germans call them, "abteilungen." In October, 1914, there were over 50 such detachments, but in the beginning of 1915 there number must have been over 100, as it was probable that Germany had at that time no less than 90 army corps.

A flieger abteilung, or flying detachment, consists of six fliers, with the necessary machines and spare parts—usually seven machines in each abteilung, with the extra parts in the hangars. There are also observers with each abteilung, and the latter is commanded by a captain, who is generally a flier. The fliers are divided up into battalions.

There are some 14 motor trucks to each abteilung for the carriage of the aeroplanes, benzine wagon, repair wagon, two—now generally three—automobiles for the use of the officers and one or two automobile busses for the enlisted personnel.

During five years up to 1914 the following sums of money were spent for aviation:

| | |
|---|---|
| Government expenditures | $28,000,000 |
| Public subscription | 3,500,000 |
| | 31,500,000 |
| Appropriations for 1913 | 5,000,000 |

## Revenue.

## EXTENSION OF REMARKS
OF
# HON. RICHARD WAYNE PARKER,
OF NEW JERSEY,
IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916,*

On the bill (H. R. 16763) to increase the revenue and for other purposes.

Mr. PARKER of New Jersey. Mr. Speaker, this is called "An act to increase the revenue." The principal revenue has always been from a tariff. The present tariff proved insufficient either for revenue or protection. Our first duty is to amend it by a revenue and protective tariff; but this bill is so drawn that this question could not be raised. The bill, it is true, contained some tariff provisions as to certain articles. A small duty is imposed upon dyestuffs, but that duty is not one to encourage manufacture, for it is to be reduced one-fifth every year and abolished at the end of five years. There is no permanent protection, such as would encourage the building of a costly plant and the assembling of a corps of workmen and experts. The Republican Members vainly tried to increase this duty and to make it more permanent. They were voted down. And there is likewise a provision against dumping goods in this country at prices below cost. This is in Title VII, but it is only penal—oppressing the jobber and not touching the foreigner who dumps the goods here. Of course, these provisions are only small parts of a tariff and could not be amended so as to include the tariff scheme so as to get rid of the Underwood free list, which deprives our factories of protection, and so as to get rid of the ad valorem duties which are such fertile sources of undervaluation and fraud.

The minority did think that they could move to recommit the whole measure to the Committee on Ways and Means, with instructions to bring in a bill which should protect American industries and give us revenue by a really protective tariff. But the rules have been so amended that we could not even have a vote upon this subject and were forced to vote yes or no upon the bill itself.

As for myself I have no hesitation in voting "No." Republicans have been used to making the foreigner pay the expenses of our Government in time of peace, reserving all taxes upon our own industries and wealth for time of war. I am unwilling to ratify any other policy. If the Democratic Party chooses to tax our industries in time of peace, they must be responsible for doing so.

This bill is likewise so drawn as to enable 99 people to tax the hundredth man and to put the bulk of the taxation upon the thousandth man. The so-called graduated income tax has been doubled. It only touches one-half of 1 per cent of the community and it divides that one-half of 1 per cent into classes, so as to put 10 times higher rates upon one class than upon another. There are times in the history of the world when it was thought that wealth had to be confiscated. It was so in the confiscation of the abbeys in England. It was so during the French Revolution, when all that was owned by aristocrats was seized for the benefit of the State and sold at auction, so that it really went into the hands of rich contractors for a song. In cases of great public distress and revolution it may be necessary to make taxation unequal. It is at least dangerous to do so now in time of profound peace and prosperity, and it is at least a question whether all legislation for the purpose of equalizing the wealth of the people should not more safely to be intrusted to the States than exercised by the central authority of the United States. We can not favor doubling the income tax in time of peace, or until there is an urgent need for such a measure in time of war.

Another thing contained in this bill is the so-called inheritance tax, by which the United States takes from 1 to 5 per cent even of the share of any estate which goes to widows and orphans, levied according to the amount of the estate. This is called a tax. It is not a tax in principle, but an alteration of the law of descent and distribution, so that the widow, heirs, and next of kin shall not take the property of the dying man but shall share it with the State.

This appropriation of part of the property of the decedent by the State has been supported so far as State legislation is concerned. Each State has full control over the law of descent and distribution, and can say who shall receive a share in the property of the decedent. The United States has no such power. It has the power to impose excise taxes, such as a reasonable stamp upon a deed for the transfer of property, and probably this so-called inheritance tax will be supported in law as a tax. In reality, it is no such thing. It is the confiscation or escheat of part of the property of the subject into the hands of the sovereign.

As a matter of practice, it has been urged that inheritance tax should be imposed only by the State and not by the United States. As a matter of law and right, this change of the law as to the inheritance and distribution of property should only be made by the State and not by the United States.

It is not to be forgotten that this so-called inheritance tax is an appropriation of a part of the capital of the country. It is dangerous when a man has to use his capital for his ordinary expenses. It is just as dangerous when a nation has to seize its capital in order to pay its current outlay. This inheritance tax is an English and foreign invention, which the United States are adopting from lands that are not able to pay their expenses. This tax sometimes is over 20 per cent of a large estate in England and Germany, and if there be several deaths within a few years, such an estate is sometimes destroyed. If an estate consists of land, it is wholly oppressive to ask the heir to pay even a small per cent of the value of that land in cash. It is sure to result in oppression that the widow and orphan children should be asked to pay part of the market value of worn-out lands which have descended to them. It is not a tax which ought to be imposed except in cases of emergency.

My State of New Jersey allows it only when the property goes to others than the widow and children. This statute will rob the widow and children of part of what comes to them, and when it is remembered how urgent their need is when the head of the house is gone and the property that his energies have made valuable is left idle and divided into many shares; when we remember how many such cases of distress we have seen, I can not bring myself to collect the expenses of this great country by seizing the share of the widow and the orphan.

Another part of this bill doubles the tax on the net profits of corporations. This tax on corporations imposes an income tax on some of the people whose earnings are excepted. A man may have an income of less than $3,000 per year, and that income will be free from taxation, but if he owns stock in a corporation, the profits of that corporation will be subject to tax. This is not scientific. It has been well argued that even the poorest should bear some share of the expenses of the Government, even if the share is less, proportionately to their property, but this corporation tax adjusts the matter without any equality whatever, so that if the poor man has bought a share of stock he pays tax on its dividends and on nothing else.

And, then, to make the matter still less governed by principle, a large number of corporations are excepted, such as labor, agricultural and horticultural associations, mutual savings banks, fraternal societies, building and loan associations, cemeteries, religious, charitable, scientific, and educational corporations, boards of trade, civic leagues, clubs, farmers' mutual companies for insurance, telephones, crop sales, and so forth.

This corporation tax is in the nature of an income tax. It is right that the United States should use these great organizations that we call corporations as a means of taxation. The tax is easily collected at the source. The whole scheme of the bill in this respect tends to injustice and inequality. Graduated taxes are imposed by the bill upon money received by manufacturers for sales of munitions of war and copper.

New Jersey does more refining of copper than any other Eastern State. The American Smelting & Refining Co., the United States Smelting & Refining Co., the Balbach Smelting & Refining Co., and the Raritan Copper Works have made copper during years of peace. It was used in enormous quantities for electrical purposes. It is now being exported not only for electrical purposes but for ammunition cases. It could be understood how copper should be taxed if so exported. It can not be understood why peaceful manufacturers of this essential article should be taxed, nor why a small factory should be taxed only

1 per cent and a large factory 3 per cent. Nor should we discourage the manufacturer of munitions for our own country by taxes of 2 to 5 per cent. The United States should spend money if needful to encourage our factories to put in plants with dies, jigs, and gauges which will enable them to supply us with ammunition in large quantities in time of war. In 1808 Mr. Jefferson gave out contracts for arms and munitions without the authority of Congress. The United States ought to pay our factories to learn how to make what the country will need in time of war. Instead of this, this bill taxes all such factories largely on any receipts. This policy is suicidal as to preparedness.

The bill likewise contains an odious tax upon trades and professions. Every money and stock broker is to pay $30, pawnbrokers, $50; ship brokers, $20; customhouse brokers, $10; theaters, from $10 to one-half per cent of gross receipts. Circuses are to pay $100 for each State. Barnum & Bailey can readily afford this, but it may bankrupt the small traveling show. This tax on occupations is odious. It is still more odious to select a few occupations and put the tax only on them, and it is a trifle anyhow—playing with finance.

We stand in the midst of manifold and great dangers. It is our duty to encourage the establishment of munition plants which can make arms and ammunition for the United States in case of need. This bill does the contrary. It is our duty to provide for the hard times that will come after this war ceases by protecting our own market for our own manufactures and seeing that our people shall then have something to do. This bill imposes burdens upon private and public enterprise by seizing its profits and by taxing the right to carry on a trade or profession.

No one can tell how soon we shall be brought face to face with a change such as our business enterprise has never had to meet before, when we shall no longer be asked to send goods to other nations, but shall have to meet their competition in our own markets. The first eight months of the Underwood tariff told us what that meant. Factories were closing, men were out of work, prices were falling. It is only two years ago, but the Democrats can not remember even two years back, and, instead of bettering our conditions, they leave the tariff alone and now pass a bill placing express burdens of taxation upon our home enterprise. I can not vote for this bill. A real revenue bill for protection of our people must come after next November.

## To Study Tariff Scientifically—No Longer To Be Football of Politics.

### EXTENSION OF REMARKS
OF
### HON. CHARLES H. RANDALL,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 15, 1916.*

Mr. RANDALL. Mr. Speaker, it is with much pleasure that the people of this country will receive the news of the passage by this House of the act creating a nonpartisan tariff commission. Upon its passage by the Senate the prosperity of the United States will no longer be disturbed by political tariff talk. The salient features of this act and of the so-called "anti-dumping" act, both of which will become laws, are here given:

TARIFF COMMISSION.

That a commission is hereby created and established, to be known as the United States Tariff Commission, which shall be composed of six members, who shall be appointed by the President, by and with the advice and consent of the Senate, not more than three of whom shall be members of the same political party. In making said appointments members of different political parties shall alternate as nearly as may be practicable. The first members appointed shall continue in office for terms of 2, 4, 6, 8, 10, and 12 years, respectively, from the date of the passage of this act, the term of each to be designated by the President. The President shall also designate biennially the chairman and vice chairman, but their successors shall be appointed for terms of 12 years, except that any person chosen to fill a vacancy shall be appointed only for the unexpired term of the member whom he shall succeed. No member shall engage actively in any other business, function, or employment. Any member may be removed by the President for inefficiency, neglect of duty, or malfeasance in office. A vacancy shall not impair the right of the remaining members to exercise all the powers of the commission, but no vacancy shall extend beyond any session of Congress.

That it shall be the duty of said commission to investigate the administration and fiscal effects of the customs laws of this country now in force or which may be hereafter enacted, the relations between the rates of duty on raw materials and finished or partly finished products, the effects of ad valorem and specific duties and of compound specific and ad valorem duties, all questions relative to the arrangement of schedules and classification of articles in the several schedules of the customs law, and, in general, to investigate the operation of customs laws, including their relation to the Federal revenues, and to submit reports of its investigations as hereafter provided.

That the commission shall have power to investigate the tariff relations between the United States and foreign countries, commercial treaties, preferential provisions, the effect of export bounties and preferential transportation rates, the volume of importations compared with domestic production and consumption, and conditions, causes, and effects relating to competition of foreign industries with those of the United States, including dumping and cost of production.

UNFAIR COMPETITION.

That it shall be unlawful for any person importing or assisting in importing any articles from any foreign country into the United States, to commonly and systematically sell or cause to be sold such articles within the United States at a price substantially less than the actual market value or wholesale price of such articles, at the time of exportation to the United States, in the principal markets of the country of their production, or of other foreign countries to which they are commonly exported, after adding to such market value or wholesale price, freight, duty, and other charges and expenses necessarily incident to the importation and sale thereof in the United States: *Provided*, That such act or acts be done with the intent of destroying or injuring an industry in the United States, or of preventing the establishment of an industry in the United States, or of restraining or monopolizing any part of trade and commerce in such articles in the United States.

That if any article produced in a foreign country is imported into the United States under any agreement, understanding, or condition that the importer thereof or any other person in the United States shall not use, purchase, or deal in, or shall be restricted in his using, purchasing, or dealing in, the articles of any other person, there shall be levied, collected, and paid thereon, in addition to the duty otherwise imposed by law, a special duty equal to double the amount of such duty.

## Federal Employees' Compensation Bill.

### EXTENSION OF REMARKS
OF
### HON. DANIEL J. GRIFFIN,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 12, 1916,*

On the bill (H. R. 15316) to compensate Government employees sustaining injury while on duty.

Mr. GRIFFIN. Mr. Speaker, I am very happy in the thought that at last the opportunity is mine to vote for the pending bill, H. R. 15316, popularly known as the "McGillicuddy compensation bill."

That the bill will pass the House with little or no opposition, I have no doubt. It is my earnest hope that the same aroused public sentiment that is finally forcing this bill to a vote in this body will compel the Senate to pass this bill before the adjournment of this present session of Congress.

The McGillicuddy bill is so full of merit that it is hard to understand how its passage could be delayed so long.

This bill was reported favorably from the Judiciary Committee on April 21, 1914, only to die on the calendar of the House without a vote being reached.

Mr. Speaker, I have followed the fate of this bill in the present Congress since it was introduced on December 6, 1915. I know of the earnest and persistent efforts that have been made by its author and by its friends to have it favorably reported from the Judiciary Committee. The record shows that Mr. MCGILLICUDDY introduced the bill a second time on March 23, 1916, with certain amendments calculated to lessen the opposition to it, and the records further show that the bill was again introduced on May 3, 1916, as finally amended by the Judiciary Committee and as recommended to this House by the committee for passage.

I am in favor of the passage of this bill because it is essentially humanitarian and because it embraces in its provisions a just recognition of the principle that every industry, either public or private, must assume responsibility for the proper compensation of its employees and their dependents on account of death or disability arising out of accidents or injuries sustained in the line of their employment.

Indeed, I regret that the committee found it necessary to strike out a provision contained in the bill as originally introduced, which provided for compensation in the event of death or disability caused by occupational diseases. I am convinced from the study that I have given to this legislation that there are scores and scores of very pathetic cases involving either the death or disability of an employee directly traceable to disease occasioned by the nature of their occupation.

However, the enactment of this bill as reported by the committee will mark a tremendous step of progress in the relations that should exist between the Government as an employer and its employees.

The time has gone by when the wisdom of compensation legislation can be seriously questioned. No legislator can conscientiously vote in favor of compelling the private employer to submit to the terms of compensation legislation without at the same time doing everything within his power to secure the enactment of legislation to compel the Government, in its capacity as an employer, to submit to the same terms.

I do not believe that the people of this Government have approved the conduct of the Government in failing to provide for its workers suddenly left dependent because of injury and accident sustained in the course of their employment. There are very few private employers, either individuals or corporations, so heartless as not to take care of their stricken employees, even though not always obliged to do so by the terms of any special contract.

Civilization to-day recognizes the home as the very bulwark of our institutions, and public opinion cries out against the injustice involved in the breaking up of a home because its head may have suddenly lost his earning capacity through an occupational injury.

The law under consideration is intended to supersede the existing Federal compensation act of May 30, 1908. This act of May 30, 1908, although twice amended, on March 11, 1912, and again on July 27, 1912, to include certain other groups of employees engaged in so-called hazardous employments, is still very inadequate because it covers only about 100,000 of the more than 400,000 civilian employees of the Government.

These acts sought only to afford protection to those employees engaged in employment involving a recognized risk or hazard. But, Mr. Chairman, we are all glad to know that enlightened public sentiment of to-day refuses to draw the line of responsibility after such a policy of unsound reasoning. The fact that an employee may be injured in the discharge of his duty, regardless of the nature of that duty, establishes the fact of the hazard of his particular employment. This principle is definitely recognized to-day in the laws of 21 out of 32 States that have compensation laws on their statute books. These laws recognize that each industry shall bear the burden of the accidents caused by it.

In 1901 Congress made a small appropriation—$25,000—to employ acting clerks in the place of railway mail clerks who might be injured in the discharge of their duties. This provision was further amended in the Post Office appropriation bill of 1903 to include a benefit of $1,000 to the survivors of railway mail clerks fatally injured. In 1910 this benefit was increased to $2,000, and further provided for the payment of full salary for a period of one year and for half pay for another year should the disability continue that long.

By the terms of the so-called Reilly amendment, the benefits of this legislation heretofore confined to employees of the Railway Mail Service was extended to include city and rural letter carriers and clerks and other employees in first and second class post offices.

It will be observed that under the provisions of this legislation, applying to employees of the Postal Service, no benefit extended beyond a period of two years. So also, under the provisions of the act of May 30, 1908, and amending acts, no benefit extended beyond the period of one year.

None of the so-called Federal compensation legislation now existing makes any provision for the support of dependent children or parents.

The McGillicuddy bill, which we are now considering, carefully provides for all of these contingencies.

The McGillicuddy bill contains a most excellent proviso in the following paragraph of section 1 of the bill:

> But no compensation shall be paid if the injury or death is caused by the willful misconduct of the employee or by the employee's intention to bring about the injury or death of himself or of another, or if intoxication of the injured employee is the proximate cause of the injury or death.

The law providing for the compensation of postal employees has the following proviso:

> *Provided*, That no compensation shall be paid any such employee for any injury occasioned by his own negligence.

The benefits to be derived by Federal employees through the McGillicuddy bill, under section 1, as contrasted with the present compensation law for postal employees which has just been quoted are apparent.

Hundreds of postal employees have been denied benefits that Congress no doubt intended they should have, because of narrow-minded constructions of this provision by different officials of the Postal Service.

Mr. Speaker, I am glad to observe that the McGillicuddy bill follows the trend of up-to-date legislation in respect to getting away from the antiquated and unjust theory of "contributory negligence," which has ever been taken advantage of to the detriment of the employee by close-fisted employers.

In conclusion, I wish to voice the sentiment that the public has a right to look to the Government as an ideal employer. Each year society comes to recognize more and more its obligation to care for its more unfortunate members. The McGillicuddy bill in every sense may be accepted as a recognition by the Government of this principle.

---

## The Revenue Bill.

### EXTENSION OF REMARKS
OF
### HON. RICHARD W. AUSTIN,
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. AUSTIN. Mr. Speaker, I can not give the pending measure my support, and hence will record my vote in the negative when the roll is called. During the discussion two statements have been made on the floor of the House which I believe should be controlling, and should influence every Member to go on record against this bill. I refer to the statement of our great Speaker [Mr. CLARK of Missouri], who said that he could take the tariff schedules and write a tariff law which would produce a sufficient amount of revenue to run this Government. The second unchallenged statement was made by the gentleman from Michigan [Mr. FORDNEY], that if the duties carried by the Payne-Aldrich law were in force to-day a sufficient amount of money would be raised, from the present importation of foreign-made goods, to meet the extraordinary expenses which we are called upon to provide for by the Ways and Means Committee.

We are not justified in forcing upon the people of the United States additional and largely increased direct taxation when the money can be raised by increasing the lowest known tariff duties—by compelling our foreign competitors to pay for the valuable privilege of selling their goods in our home market.

At present more than 70 per cent of all imported goods entering our ports are on the free list. It is unjust to burden the American people with additional taxes and at the same time permit foreigners to have free entry and access to our markets on more than 70 per cent of all the goods they sell in the United States.

The foreign manufacturers who furnish over 70 per cent of our foreign goods pay no direct or indirect taxes in the United States, but we make our American plants which compete with them in this country pay Federal, State, county, and city taxes. This is unjust and unfair, and the party which stands for such a policy should not be intrusted with power to legislate for the American people.

In this connection I do not believe I can render a more valuable service to the American people than to call attention to two articles bearing upon the subject of "How shall we prepare for peace?" and "The effects of the present Democratic tariff law." These articles were prepared by Judge Elbert H. Gary, chairman and chief executive officer of the United States Steel Corporation, the greatest industrial plant in the world, and by Mr. Thomas O. Marvin, the efficient and well-informed secretary of the Home Market Club, of Boston.

The articles are as follows:

#### HOW SHALL WE PREPARE FOR PEACE?

[By Elbert H. Gary.]

It is to be hoped, and I think we may expect, that nothing will occur to disturb the international relations existing at the present time between the United States and each of the foreign belligerents. We have no inclination, nor have we the present ability, to engage in war. We can prepare and we should prepare, as rapidly as possible, so that if obliged to defend ourselves, we can not be overcome. But war should be the last resort. When the present combat shall have ceased, we must be on a friendly footing with all other nations.

I would not attempt to decide, at this time, the exact influence that the entering of this country into the war would have upon industry. A discussion would be purely academic, for it is hardly probable that we shall have war. Our great and pressing problem is to prepare against war and for peace, to have an adequate Army and Navy for defense and to conserve our present prosperity so that industry may be put upon a permanent and satisfactory basis.

I am loath to believe that the European war will be long protracted. I think that the warring nations are starving for men and for money and for other essentials. They do not acknowledge this situation, but there are many signs which indicate that the supply of money, men, food, and munitions is getting low. Among these signs are the extraordinary measures of economy which all of the nations have been forced to adopt to maintain their armies and navies.

There are signs of coming peace. There is substantial proof that all of the countries deeply regret that the war was ever started, and they are really, though not admittedly, surprised that it has been prolonged to this date.

The belief is almost universal that little, if any, benefit can accrue to any belligerent country or to the world at large, unless it be the adoption of means to prevent future protracted international contests. It seems doubtful that either group of nations will absolutely conquer. The leaders of all the nations realize and appreciate these facts and are likely soon to act upon them. If not, then the masses of the people will see and decide. Any nation that prolongs the war beyond the time when it can be reasonably and honorably discontinued is slowly but surely committing suicide.

What then is our own condition, and what is the condition of the world as peace draws nearer?

The United States is doing an enormous volume of business with very high prices obtaining for raw materials and for labor. Our exports are increasing at the rate of 77 per cent over the year 1913 and these exports have considerably changed in character. We are now exporting proportionately less raw material and proportionately more fabricated material. The increase in the fabricated material means that more work is being done in this country, and that therefore we are receiving a greater proportionate amount of money for our products. A very considerable proportion of the exports is made up of war supplies for the belligerents. We can not export to Germany, Austria, Bulgaria, or Turkey, and the volume of our exports to South America, the Orient, and the others at peace is greater than before the war.

The period preceding the war and the first few months of the war were marked by an acute industrial depression. Thousands of men were idle, factories were closed or running on part time, and little money for industrial enterprises was available. The stimulating influences of war orders quickened the whole pulse of industry, and for many months past there has been work for every man who cared to work, and nearly every industry is running at its full capacity, with orders booked ahead. The United States Steel Corporation now employs 50,000 more men than it employed last year, and they receive an average of more than 20 per cent greater wage. The corporation will, perhaps, during the present year, spend $70,000,000 in betterments and improvements.

The rate of production in the iron and steel trade at the beginning of the year was about 38,000,000 tons of pig iron and about 41,000,000 tons of steel ingots annually, and at the present time is even greater. Last year the rate was only 19,000,000 tons of pig iron and 16,000,000 tons of steel ingots. Our highest previous records for production were 33,500,000 tons of pig iron in 1913 and 35,000,000 tons of steel ingots in 1912. The entire capacity of the United States Steel Corporation is booked for the current year with many orders running well into 1917.

So far as I am able to estimate, about three-fourths of the total consumption is for domestic use and the balance is exported.

Other lines of industry are also prosperous. There are evidences all about us, certainly of a great turnover, and probably of a large profit. It is still too soon to estimate the measure of our prosperity. It is unquestionably true that many enterprises in the United States have been making exceptional gains during the past 12 months. Others, however, despite an increased volume of business, are not realizing net profits commensurate with the tremendous production; the cost of labor and raw material is very high. The Federal reserve bank of Philadelphia recently asked 369 business houses the question: "Have profits increased proportionately with cost?" Ninety-seven replied, "Yes," while 212 replied "No." This investigation, extending over 33 lines of business, brought out the fact that there had been an average increase of 11 per cent in labor cost and 46 per cent in the cost of materials.

It may be that we are not quite so prosperous, taking the country far and wide, as the volume of business would indicate.

Our accumulation of gold is very great; in fact, we have a supply nearly equal to that of all the warring nations combined. Therefore we have a vast fund for credit extension.

A very important development is that success in business has again become popular. During the months of adversity preceding the war the idle men, competent and willing, but unable to find work, the unemployed tools and implements of industry, the uninvested and unremunerative dollars—in fact, every inactive agency for obtaining the comforts of life—protested in convincing language against unnecessary business adversity, until all are now alive to the fact that it is work—the legitimate and natural employment of all the utilities for production—that is demanded. For some time past there has been a wave of thought throughout our country in favor of such a change in authority as will permit a restoration of normal business conditions.

Apparently we are to have a period of industrial peace and success. Many of the antagonisms which have hitherto been so hurtful and which have prevented natural business growth have disappeared. Legitimate business will therefore have opportunity to progress in accordance with its deserts.

The United States is in a splendid position to take industrial supremacy. But we must be alive to our opportunities.

Now as to Europe. The belligerent nations are passing through a cataclysm of destruction of life and property. The debts which they have incurred are beyond our comprehension. The worth of the lost lives and property is equally beyond estimate. The countries at war are now working on the uncreated capital of the future; their currencies have been inflated through tremendous credit issues.

It does not follow, however, that when the war closes the nations now engaged will be prostrate. The wars of the past have not destroyed industrial efficiency. France, in 1870, although crushed with a great indemnity in addition to the war debt, rose thereafter to greater power than before. It may be expected that the nations will take a new start, and, in many respects, a new course, and will begin immediately to build on a better, firmer, and more permanent basis for success and high achievement. We shall see the most active and persistent efforts to rebuild and extend and to succeed in the international race for supremacy that the world has ever witnessed. From adversity will come greater prosperity than ever before, from necessity will spring thought and study and effort that will enable the survivors to reach greater heights of success than has been supposed to be within reach.

Europe is now buying on national credit, but once the war is over she will be forced to buy on personal credit and will have but a fraction of the present buying capacity. She will have men, trained and disciplined, but she will need money, and this money must come from the nations whose stores have not been depleted by war. Therefore it is to be expected that the cost of production, including wages, will decrease in Europe and that every effort will be concentrated upon gaining gold abroad through sales at lower prices.

The greatest ready-money market will be our own country, and therefore we must expect and prepare against a heavy drive upon our own markets. We have an abundance of money and a high cost of production. We will be an excellent market to sell in and a bad market to buy in.

The close of the war will not immediately check our prosperity, although undoubtedly a large number of the men now working in munition factories will be compelled within a few months to seek other employment. Our business is progressing at such a rate that its very momentum will carry on for some time to come, but I do not agree with the statements which have been made that at the close of the war we may expect in this country a prolonged continuance of the great prosperity now existing. Therefore I think that we should recognize the more or less temporary character of our prosperity and prepare ourselves for its conservation. Left to itself, our prosperity will not continue.

Our chief danger is in refusing to admit that danger is ahead. There are so many factors which are unknown and which it is impossible to predetermine that we should proceed as the careful captain of an ocean steamship might proceed through a lowering, but not impenetrable, fog. We are going at a very rapid rate. We may be going too rapidly. There is at present very great expansion and possibly some inflation. We ought to pause and look about from time to time. The soundest corporations are not now dispersing the bulk of their great earnings in unusual dividends. They are preparing a surplus for the jars and jolts which will mark the stoppage of the present high-speed run.

We must be ready to adapt ourselves to changed conditions. Our producers, including our wage earners, will find themselves in commercial antagonism with the most persistent competition ever experienced. Most of the foreign producing countries—and probably all of them—will be thoroughly protected by tariff provision, and we should be equally protected by reasonable and sufficient laws. This question of protection ought not to be one of politics, for it is a question of economics and good business; it affects all the people, and any protection which is given must be given with a view to the needs of all the people. Just before the war foreign merchants, because of cheap labor and the low transportation, were selling their products here below our cost of production. Although our products were in considerable volume, our prices often meant a net loss to the manufacturer, as the selling price of the foreign goods made the market price. Therefore, to conserve our industries to the proper extent our industries must have an adequate, scientific, and carefully considered protection.

By the very nature of things we will always be compelled to import certain commodities, but we should so organize ourselves as to be prepared to pay for these commodities not with gold but with finished goods. To thus pay in finished goods requires an industrial efficiency such as we have not previously attained, and this industrial efficiency can only be brought about by a well-balanced combination of the financial, commercial, and industrial interests in active cooperation with all classes and departments, both private and public.

In other words, Government and business must work together. We need not fear active competition, provided we are properly protected by our Government. The lack of continuous prosperity and success in this country for a number of years past has in part been the direct result of undue, ill-considered, or unjustifiable assaults which have been made by governmental agencies. Business success has not been fostered or encouraged as it should have been, and the vast possibilities of the country have not been fully utilized.

The business men of the country must give no cause for complaint in the management of their affairs; and, by thus acting, they can and should insist that the Government, with all its agencies and influences, cooperate with them and aid them in establishing credit, in extending commerce, in increasing capacity, and in the development of natural resources.

In the same connection there is ground for improvement in the business methods of the National, State, and municipal governments throughout the country. These governments have extravagantly or uselessly expended many millions of dollars. I believe that if the business methods of the United States Government were as careful and economical as those of many corporations hundreds of millions would be annually saved to the people of this country. It is self-evident that if the Government wastes money, and thereby increases the taxes, the cost of doing business will be increased, and by the amount of such increase will we be handicapped in our competition with foreign producers.

The whole trend of our times is toward lessening the cost of doing business, and the surest means to that end is cooperation, which will eliminate the wastes of business. Certainly there is a great waste if a large number of distinct and antagonistic factors are present in any business. When we find that small units will not permit us to compete with the world, we should combine those small units into larger ones that, under proper regulations, can produce the best results.

We must be prepared for radical changes in volume, in prices, and in resources. There is danger of overproduction, overextension of credit and liability, overconfidence. Business men should realize there is possible danger ahead and should proceed with cautious aggressiveness. With its great and increasing wealth, its natural resources, its productive capacity, its location, and with a well defined and settled policy, it is impossible to measure the future growth and strength of the United States. We have the opportunity to become the leading nation of the world financially, commercially, and industrially. I have seen statements that we already occupy this position. I do not quite agree with this claim. I do not think we are thus permanently established, but it seems certain that we may accomplish this result if we properly conserve our resources. If we live up to the responsibilities that circumstance has thrust upon us, we shall obtain a national reputation and influence greater than ever before possessed by any nation.

Much depends upon the management of affairs. There has never in the history of the world been so great a necessity for wise and disinterested statesmanship or for loyal and honorable conduct on the part of practical business men as at present.

---

### Effects of the Democratic Tariff.

[By Thomas O. Marvin.]

On the evening of October 3, 1913, an interesting group gathered in the oval room of the executive offices at the White House. On September 30 the House of Representatives, by a vote of 255 to 104, had agreed to the conference report on the Underwood-Simmons tariff bill, and on October 2 the bill passed the Senate by a vote of 36 to 17. It had received the signature of the Speaker of the House and the presiding officer of the Senate, and only awaited the signature of the President to become a law. It was to observe that final formality, the signing of the Underwood-Simmons law by the President, that this group met in the executive office.

It was 10 minutes after 9 when this formality was concluded, and Mr. Wilson rose to speak. "I feel a very peculiar pleasure in what I have just done," he said. "I have had the accomplishment of something like this at heart ever since I was a boy." The Underwood-Simmons law, then, is not the result of a temporary impulse nor of a political compromise. It registers the definite and determined purpose of the Democratic Party, and on its success or failure the Democratic Party must stand or fall.

The "peculiar pleasure" which the President experienced when he signed this tariff act was not shared to any noticeable extent by the business men of this country. On the other side of the ocean, however, there were many who rejoiced with him when the Democratic tariff law was signed.

One of the leading Democratic papers of Boston, in an editorial printed a few days after Wilson signed the tariff law, said: "From London, Paris, Berlin, Rome, and far-away St. Petersburg continue to come the hearty plaudits of foreign producers over our new tariff law. Especially in the great English manufacturing centers, Birmingham, Manchester, the West Yorkshire milling towns, and in South Wales is the jubilation enthusiastic. British producers are making arrangements to boom their American trade. The Yorkshire Observer rejoices with the manufacturers in this vast market now opening up to them."

BRITISH MANUFACTURERS GLEEFUL.

An American business man who returned to this country shortly after the President had signed the Democratic tariff law said that he "found English manufacturers very gleeful and happy over the change in the tariff rates of this country. They one and all said that it is a great good thing for their business, and some of them went so far as to tell me that it enabled them to increase their prices on exports to this country to almost the same amount as the saving effected by the reduction in the tariff."

Charles M. Schwab, president of the Bethlehem Steel Co., found Europe in high glee over the low rates of the Democratic tariff. "Everywhere throughout Europe," he said on his return from Europe in October, 1913, "the merchants are preparing to ship heavy consignments of their products to America. It will take some little time before the invasion is well under way, but it will surely come."

A London report, dated October 7, said: "As a consequence of the removal of the American tariff and the remarkable activity in the British boot and shoe trade, British manufacturers are quietly preparing for an invasion of America, and large shipments are expected to be made soon. British bootmakers want to secure the custom of the American middle-class consumer and American workingman, and confidence is expressed that a great percentage of the market will be captured."

The morning after President Wilson signed the tariff law the New York Tribune received a dispatch from Paris which said the new tariff law is welcomed in France and that it "gives satisfaction to the leaders in French industries and commerce." A director of the German Association of Industrialists said to an American correspondent: "Unquestionably the adoption of the new American tariff is the occasion for sincere satisfaction to German exporters. It will bring about a vast increase in our export business." He, therefore, congratulated German manufacturers on "the brilliant opportunities" afforded by the Democratic tariff of invading the American market.

A RUSH OF IMPORTS.

It is certainly an unpropitious outlook when a tariff law signed by an American President receives its warmest welcome in England, France, and Germany. There is little prospect of prosperity for us in a tariff law that causes foreign manufacturers to rejoice at the opportunities for increased business which it brings to them. Increase the sale of foreign goods and you decrease the production of American goods. Send orders to England, France, and Germany and you take them away from the manufacturing towns and cities of the United States—orders for products which can be and should be manufactured here.

And this is just what happened when the tariff law which President Wilson signed took effect.

On the morning of October 3, 1913, when Mr. Wilson, in the evening shadows, gathered his little company of admiring friends to witness the signing of the Underwood-Simmons law, there were held in the bonded warehouses of the country, waiting to be released under the lower duties of the new law, foreign goods to the estimated value of $170,000,000. As the New York Tribune said, the enactment of the new tariff law with its lower duties acted "like a March thaw on the Maine landscape."

In the 48 bonded warehouses of New York $73,000,000 worth of goods were waiting for the lower duties to take effect. The value of the foreign-made goods in the New York bonded warehouses, waiting for the new tariff law to take effect, would much more than equal in value the amount of the total products for an entire year of such manufacturing cities as Lawrence, Fall River, or New Bedford.

The Boston customhouse showed an equal amount of activity. October 4 was the busiest day in its history. It was necessary to treble the number of clerks in the warehouses, and other departments had to have extra help. It was estimated that the value of foreign goods released was between $18,000,000 and $20,000,000, an amount nearly equal in value to the annual product of all the manufacturing plants of the city of Fitchburg, and as large as the total production of the city of Holyoke for the entire year of 1911.

This was one day's story of the effect of the new tariff law. It was an exceptional record and was not duplicated every day throughout the year, but the increased importation of foreign-made goods was so great that before the first year was over the effect upon the industries and workingmen of this country was shown in idle mills, unemployment, and bread lines.

When it is remembered that every thousand dollars' worth of goods imported displaces $1,000 worth of goods made here, and takes from $200 to $500 out of the pay envelopes of our working men, the effect of the new tariff law upon the prosperity of the country and upon the welfare of our workingmen can not remain in doubt.

SUDDEN DECLINE OF BUSINESS.

It was not long before the effects of the Democratic tariff law began to manifest themselves.

The New York Sun of December 15, 1913, a little over two months after the tariff law took effect, said that it is almost unanimously admitted by business men that the volume of commerce continued good until the last week in October, when a general falling off occurred.

On December 17, just two days later, the New York Journal of Commerce, in a review of business conditions in the West, said: "The West continues to be very much depressed in sentiment, and business is steadily slowing down. Business slowed down much earlier in the East than it did in the West, due chiefly to local causes and the tariff. During that period business in the West continued active under the impetus of crops. When the slowing-down process did start it amounted to almost a slump, for new orders fell off in a way that was alarming."

CURTAILMENT AND DEPRESSION.

That paper, whose antiprotectionist leanings are well known, reported that the curtailment in the iron and steel industry amounted to 30 per cent, and that in some instances this meant, too, the laying off of 30 per cent of the employees. According to the Journal of Commerce there was more unemployment in Chicago than there had been for several years.

Hon Martin W. Littleton, a Democratic Member of the Sixty-second Congress, at a dinner of the North Carolina Society, December 17, said: "New York is at this moment the center of the most remarkable pessimism I have ever known. There is a sense of depression and dismay here that I have not seen before in this great city during the 17 years that I have known it."

The Daily Trade Record of December 15 said: "With their business offices crowded with men seeking employment, labor officials are inclined to view present business conditions in a far from optimistic light. Labor is suffering and union leaders declare that they have not faced such a crisis in many years."

The Daily Iron Trade, a nonpartisan paper published in Cleveland, Ohio, said on January 15: "The steel situation continues to grow worse. The Connellsville, Pa., district coke workers' wages are being reduced 10 per cent, and 2,100 coke ovens closed down this week for an indefinite period."

Hon. WILLIAM E. HUMPHREY, Representative in Congress, in a speech said: "This is the story of the iron and steel industry after 87 days of the 'New Freedom.'"

More than one-third of all the steel mills in the United States closed. More than a million men idle. More than $2,000,000 a day in wages gone. More than $125,000,000 invested in closed mills. An annual pay roll of more than $746,000,000 wiped out."

The output of bituminous coal decreased between 40 and 50 per cent; 270,000 miners were out of employment, involving a monthly loss of $12,000,000 in wages, and thousands of railroad men were thrown out of employment because over 190,000 freight cars became idle 60 days after the Democratic tariff law was passed.

Congressman HUMPHREY presented a list of 227 lumber and shingle mills that closed in the State of Washington as a result of the tariff law.

The Westinghouse Electric Co. reduced the wages of 200 employees 16⅔ per cent. The Burden Iron Works, of Troy; the Alan Wood Iron & Steel Co.; and the J. Wood & Bros. Co. also reduced wages. Of 306 blast furnaces in operation in the spring of 1912 only 183 were active three months after the new tariff law became effective.

R. G. Dun & Co. reported four months after the Democratic tariff law took effect a large increase in failures and a decrease in bank clearings of 9.3 per cent. There was a decrease in the March dividend payments of $4,637,000.

UNEMPLOYMENT AND DISTRESS.

It is impossible to get official figures of the unemployment of 1914, but this is no excuse for ignoring such testimony as is furnished by the charitable organizations of New York, which estimated the number of unemployed in that city from 320,000 to 350,000, or the testimony of the United Charities of Chicago that there was "almost unprecedented business depression in many circles. It has resulted in more unemployment among small wage earners than Chicago has ever experienced. We believe fully 25,000 families (or over 100,000 individuals) suffer the cruel sting of poverty here this winter. Appeals for aid from homeless men and boys have increased nearly 400 per cent over last year"; or of this testimony of William H. Farley, superintendent of the free employment office of the State of Rhode Island: "We have no record of the unemployed and know no one who could give you such data; but we find that the number of persons applying for work during the past two months is about three times that of a year ago.

A sensation was created in administration circles when the Federal Commission of Industrial Relations announced that it would inaugurate an investigation to extend from Boston to Kansas City, for the purposes of finding work for the thousands of unemployed walking the streets of all our large cities. Members of the commission tried to explain that they meant that conditions were only normal for that season of the year. An answer from Princeton, N. J., to this statement was sent to the New York Sun by a farmer who had seen the army of the unemployed marching along the highroad from Princeton to Trenton. He said that "the number of laborers (not tramps) on the march along this highway in search of work is simply appalling. I have never seen anything like it in all the years I have lived here. These tramping laborers are easily distinguished from the professional hoboes, who may be seen along the highways in the most prosperous times, and they are only too willing to work for food or a night's shelter. We are largely Democrats in this part of the State, but these are the cold facts nevertheless, whether our Democratic Senators and Representatives like them or not. It is indeed a pitiable spectacle for such a land as ours."

APPEALS FOR WORK.

In the chief cities of the country the local authorities were appealed to to provide work for the unemployed. John H. Martin, president of the Massachusetts Real Estate Exchange, in a telegram to the Secretary of the Navy urging the granting of a supply-ship contract to the Charlestown Navy Yard, said: "One-fifth of labor in this section now unemployed. Contract would assist in relieving some of this condition."

In St. Louis, on February 8, 500 homeless men, carrying a banner inscribed "We want work, not alms," and singing "Throw out the lifeline," marched to city hall and appealed to the mayor for appropriations for the relief of the poor. The parade was called the "Pageant of the unemployed."

On February 24 Gov. Walsh, of Massachusetts, and Mayor Curley, of Boston, were asked by a committee selected at a meeting of the unemployed to throw open the armories and other public buildings for sleeping purposes and the distribution of food for those out of work and to provide work for the idle.

It was not surprising that the administration viewed with alarm the gathering storm and that its spokesmen tried to minimize the appalling evil of idleness and unemployment.

THE COUNTRY'S BROKEN BUSINESS.

As Thomas B. Reed, referring to an earlier epoch of Democratic control of national legislation, said, "They are simply earnest men standing by the broken business of a whole country and trying to tell who destroyed it."

The Democrats promised to "free" business, to strike the shackles from our commerce and inaugurate an era of tremendous expansion in our foreign trade. The official figures of the Department of Commerce show that our total foreign trade for the first six months of the Wilson-Underwood tariff amounted to $2,267,283,000. For the same six months under the Payne-Aldrich tariff our foreign trade amounted to $2,345,251,000, a loss in six months of nearly $100,000,000.

Exports of leather from Leeds, England, to the United States under the new tariff amounted in three months to $211,000. For the corresponding months under the protective tariff leather exports to the United States from Leeds were only $47,507.

New England's great shoe and leather industry felt the effect of the prevailing depression. Shoe factories were working on short time, and a large leather concern near Salem complained of the excessive competition of German tanners. For the first time since their business was incorporated, in 1901, they ran at only 75 per cent of their capacity and on only five days a week. They claimed also that they could sell only 60 per cent of their reduced production.

Trade statistics from all directions told the same story of distress and depression. President Wilson said that the cause was "psychological." Mr. Wilson may be a good psychologist, but Vice President Vauclain, of the Baldwin Locomotive Works, showed that he was a better logician when he declared at a convention in Philadelphia that the reduced tariff lies at the root of the stagnation of business. "If this stagnation continues," he said, "the manufacturers of the United States will have no alternative but to cut wages to European levels." He told the Master Boilers' Association that the average weekly wage in the boiler works of France is $6.20, while in the Baldwin Works the weekly average is $15.50. The French product is just as well made as the American, he said. When the Underwood law was passed, Mr. Vauclain said, the Baldwin Works had 18,500 men on its pay roll; six months later 12,000 of them were looking for jobs.

SUMMARY OF DEMOCRATIC TARIFF EFFECTS.

Let me summarize some of the features which marked our industrial condition during the first year of the Underwood-Simmons law, features which President Wilson called "a state of mind." Among them are 18,280 failures during the year 1914, the worst record in history in number, and exceeded in amount of liabilities only by another fateful Democratic year, 1893. Bank clearings, a fair measure of the country's business, were nearly $20,000,000,000, or 11.1 per cent less than they were in 1912, the last year of Republican administration. Capital invested in new enterprises was less by over $600,000,000 in 1914 than in 1913, and over $700,000,000 less in 1912. Railroad gross earnings declined 4.4 per cent; iron productions, 25.3 per cent; and copper deliveries, 15 per cent. Steel mills were reduced to 40 per cent of capacity; 40 per cent of the looms of our woolen mills were idle on December 1, and capital amounting to $41,000,000 invested in cotton mills was unproductive. The prices of cotton goods at the mills fell off nearly 30 per cent, and the dividends the last quarter of 1914 in 27 New Bedford mills averaged 0.98 per cent; in 38 Fall River mills, 0.96 per cent. The importation of boots and shoes, though still not alarmingly large in amount, more than doubled. The importation of cotton cloths increased 80 per cent. England's exports of woolens to the United States showed the phenomenal increase to 8,219,000 yards in 1914, as compared with 2,190,000 in 1913, while in worsteds England's shipments to the United States were 32,790,000 yards, against only 9,218,000 in the preceding year.

The severity of the business depression of 1914 is emphasized by the annual reports of the great steel-manufacturing plants of the country of their operations during the year. The United States Steel Corportion reported for the last quarter of the year the smallest earnings of its career, and was forced to pass the dividend on its common stock.

REDUCED EARNINGS.

The showings made by some of these companies in 1914 are an unanswerable argument against the present low tariff system. Net results of several companies, as set forth by the Daily Iron Trade, were as follows:

The Cambria Steel Co. earned 4.36 per cent on its outstanding capital in 1914.

The Republic Iron & Steel Co. earned 4.12 per cent on its preferred stock, as compared with 12.4 per cent the previous year. It passed its September and December dividends.

The J. G. Brill Co., Philadelphia car manufacturer, earned 3.47 per cent on its preferred, which compares with 19.63 per cent in 1913. Dividends were reduced in November and February from 1¾ per cent to 1 per cent.

Net earnings of the Republic Iron & Steel Co. for the fiscal year ended December 31, 1914, were equivalent to 4.12 per cent, as compared with $3,101,300, or 12.4 per cent last year. The Republic Co. experienced its full share of the depression ruling in the iron and steel trade. Chairman John A. Topping, in his remarks to stockholders, stated that the year was decidedly the worst in the history of the company.

Hard as the blow was that fell upon the industries of the country, as manifested in curtailed production and decreased dividends, the most distressing result of the Democratic tariff was the loss in wages to our workingmen and the appalling increase in unemployment.

The eighth annual report of the State free employment offices of Massachusetts, covering the year ending November 30, 1914, shows that for the first time since 1906 positions offered in the four offices fell off 27.32 per cent in 1914 from the preceding year; the number of positions reported filled fell off 15.13 per cent, the number of persons furnished employment fell off 18.95 per cent, and the number of persons applied for by employers fell off 19.53 per cent.

The offers of positions in the Boston office fell off 36.36 per cent in 1914 from 1913; the number of positions reported filled, 25.02 per cent; the number of persons furnished employment, 29.53 per cent; and the number of persons applied for by employers, 27.83 per cent. For the Springfield office the decrease in the number of offers of positions was 36.04 per cent; in the number of positions reported filled, 25.98 per cent; in the number of persons furnished employment, 31.47 per cent; and in the number of persons applied for by employers, 32.14 per cent. For the Fall River office the decrease in the number of offers of positions was 20.56 per cent; in the number of positions reported filled, 11.35 per cent; in the number of persons furnished employment, 23.90 per cent; and in the number of persons applied for by employers, 25.26 per cent.

The superintendent of the Springfield office reports as follows for the year 1914:

"The business of the Springfield office this year, for the first time since the office was opened, shows a decrease as compared with that of the preceding year."

*Partial list of unemployed in Greater New York.*

[From a Census of the Unemployed, by Samuel A. Stodel, from Dec. 15, 1914, to Jan. 9, 1915.]

| | |
|---|---|
| Clothing workers (all branches garment industry) | 125,000 |
| General unskilled laborers | 100,000 |
| Building mechanics (32 trades) | 75,000 |
| Store and office workers (bookkeepers, clerical help, and stenographers) | 75,000 |
| Machinists and general metal workers | 30,000 |
| Drivers and general help (wholesale food supply and dry goods distributors) | 25,000 |
| Hotel and restaurant workers | 25,000 |
| Longshoremen | 15,000 |
| Cigar and tobacco workers | 15,000 |
| Domestic help | 15,000 |
| Department store employees | 10,000 |
| Railroad workers (all grades) | 10,000 |
| Printing and allied trades (lithographers, etc.) | 10,000 |
| Shoe workers | 8,000 |
| Laundry workers | 7,500 |
| Millinery workers | 6,000 |
| City employees | 3,000 |
| Firemen (steamboat and stationary) | 3,000 |
| Engineers (steamboat and stationary) | 1,500 |
| Jewelry workers | 3,000 |
| Diamond workers | 700 |
| Total | 562,700 |

The most careful surveys showed that where there was one man unemployed in 1913–14, there were two unemployed during the winter of 1914–15. Without exaggeration it was conceded by those familiar with conditions that 1 out of every 5 breadwinners was unemployed. This unemployment was concentrated in cities primarily, but the small towns and villages also felt the shock and found it necessary to organize relief measures.

An official canvass in Philadelphia showed 200,000 men unemployed; the house-to-house canvass of the Metropolitan Life Insurance Co. of its policyholders in New York, thrifty people ordinarily, gave the basis for an estimate of 357,000 men and women out of work in the entire city. The labor organizations in New York City estimated that 472,102 were either out of work or on part time. In Chicago in January the municipal-markets commission estimated 189,866 out of work. A Cleveland survey in December showed 61,000 unemployed; the city charities in Philadelphia estimated that Philadelphia's unemployed numbered 175,000.

NEED OF PROTECTION WHEN WAR ENDS.

Such is the story of the havoc wrought up to the outbreak of the war by the Democratic tariff law which President Wilson signed on the evening of October 3, 1913, with so much complacency and with such great satisfaction.

It did not reduce the cost of living. It did not increase our export trade. It did not bring prosperity to business or employment to our workingmen. It did not yield sufficient revenue for the Government. It reduced a favorable trade balance and sent import figures to an alarming height.

Then came the great European war, which for a time put a stop to the increasing rush of imports. But the channels of ocean trade did not remain permanently closed. Competition from German mills and factories very largely ceased, but England continues to ship her surplus products here. And when the war closes, as close it will, a renewal of competition fiercer than any we have ever known will come upon us.

War orders to an enormous amount have given a temporary stimulus to business, but war munitions can not form a safe or lasting basis of American prosperity.

Before long we shall face a world seeking to recover the ground which has been lost; strained and ruined lands that will seek our markets for means to rebuild their shattered fortunes. To hold our own under the present tariff law will be impossible. National safety demands the reenactment of a protective tariff. Preparedness is as much needed for the economic and industrial safety of our country as it is for military and naval defense. We do not want to employ our Army in the stern business of war, but we do want to employ all of our wage earners in the pursuit of peace. This can not be done under the Democratic tariff policy. It can be done only under the Republican policy of protection, and all patriotic Americans should enroll under the Republican banner and march to the polls, an invincible army, to demand a return of protection and prosperity.

## Address of Hon. Isaac Siegel.

## EXTENSION OF REMARKS

OF

## HON. WILLIAM S. BENNET,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 18, 1916.*

Mr. BENNET. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address of Hon. ISAAC SIEGEL, at Mount Morris Park, New York City.

The address is as follows:

ADDRESS OF HON. ISAAC SIEGEL TO 10,000 CHILDREN AT MOUNT MORRIS PARK, NEW YORK CITY.

We are here to-day to celebrate the one hundred and thirty-ninth anniversary of the birth of our flag, for it was on June 14, 1777, that the Continental Congress resolved:

That the flag of the 13 United States be 13 stripes, alternate red and white; that the Union be 13 stars, white in a blue field, representing a new constellation.

Let me remind you that the white stripes stand for justice, purity, and fair dealing amongst men as well as nations; the red stripes exemplify the blood that has been freely given on numerous occasions in its defense, and that the Union might live; the blue denotes our belief that Heaven's blessings are necessary in order for the Republic to exist and prosper.

Our flag is the symbol of opportunity. It waves over a land where every man can reach the highest goal to which he may aspire, but he must be honest and recognize that the fundamental principles upon which this Government is founded are faithful service to the people and conscientious devotion to duty. His loyalty to our flag and country must be beyond question.

Where, outside of the United States, could you have as the nominee for President of a great party a son of an immigrant? Gov. Charles E. Hughes was born in 1862, but his parents came here only seven years before. Yet there are men living in this land who are pessimists and who try to tell you that the doors of success here are closed.

We ask no man his religion or where he was born. We ask no man to make sacrifices for the Nation's best welfare that we would not personally make. We have come to a time, however, in this country when we shall and must refuse to tolerate in our midst those who burn our flag and refuse to give it that homage and respect which all patriotic Americans owe to it. For such we have no room. The sooner they realize that liberty of speech and freedom of action does not license desecration of our flag or denunciation of our institutions, the better not only for their own personal liberty but for the common good of our whole country.

To see our flag respected and honored, both abroad and at home, should be the desire of every good and true American man, woman, and child. To have our passports recognized everywhere and American travelers protected under the folds of Old Glory is the devout wish of red-blooded American citizens.

We shall never be the aggressor in any war. Our mission is peace. We desire peace. We shall never seek war, but should the time ever come that our flag is fired upon and our land attacked, then we must have ready a navy equal in efficiency to any Government in the world. We do not need the largest navy, but we must have men, guns, and ships of the highest class.

New York is a patriotic city. Its citizens in the future, as in the past, will never forget Dix's famous message, "If any man attempts to haul down our flag, shoot him on the spot."

In their ears ring the words of Lawrence, "Don't give up the ship." We do not propose either to give up the ship or ever haul down our flag. We are going to teach our children and the growing generation the full meaning of what Nathan Hale meant when he said, "I only regret that I have but one life to give for my country." The sooner those words are thoroughly instilled in the minds of our children the sooner we shall have our people thoroughly know that no country is worth living in unless it is worth fighting for.

The boys of Harlem are in the Army and Navy. They are doing their duty everywhere. We have a right to be proud of them. You remember how a few weeks ago one of our boys was killed at Glen Springs, Tex., and how he was brought home. You remember how we marched through the streets to the tune of fife and drum and bugle, taking him to his last resting place. I refer to William Cohen, of Troop A, Fourteenth Cavalry. He died for our flag. He died for you and me. He willingly gave up his life that we might live in security and peace. He knew what the flag meant to him. It meant love and devotion to his country. He knew that men, women, and children have come here from all the four corners of the earth to make this their permanent home. To learn to thoroughly understand our institutions and to give their children the best education that can be had are their ambitions in life. They seek to make progress in every line of endeavor and are doing so. They help to make America what it is, and they are prepared to make every sacrifice that the Nation may require in its hour of need. They love America. They revere our flag. They know its sentiments. They cherish every fold of it, and they have no use for anyone who would tear it down. Whether native or foreign born, we must be prepared to repel our foe. We must educate our children to know that each and every one of them must grow up into law-abiding citizens, respecting our flag and determined to help make our country greater and grander in every way. We must teach them that this is a country of laws, not men.

We must have them learn early in life that they must share the burden of citizenship some day, and that in order to intelligently do so they must study our form of government and never to forget that this is a "government of the people, for the people, and by the people."

Let me also at this point say that great credit is due to Mrs. Prisk for doing so much to bring about the observance of this day this year.

In conclusion let me read to you a poem that brought forth tremendous applause at Chicago last week:

THE AMERICAN FLAG.

Your flag and my flag, and, oh, how much to-day
In your land and my land and half a world away;
Rose red and blood red its stripes forever gleam,
Snow white and soul white, the good forefathers' dream;
Sky blue and true blue, with stars that gleam aright;
The gloried guidon of the day, a shelter through the night.

Your flag and my flag, and, oh, how much it holds!
Your land and my land, secure within its folds;
Your heart and my heart beat quicker at the sight,
Sun kissed and wind tossed, the red and blue and white;
The one flag—the great flag—the flag for me and you,
Glorifies all else beside, the red and white and blue.

## The Cambridge Post-Office Situation.

### EXTENSION OF REMARKS
OF
### HON. FREDERICK W. DALLINGER,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 18, 1916.*

Mr. DALLINGER. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I insert the following:

LETTER OF HON. FREDERICK W. DALLINGER, REPRESENTATIVE IN CONGRESS FROM THE EIGHTH MASSACHUSETTS DISTRICT, TO THE SPECIAL COMMITTEE OF THE CAMBRIDGE BOARD OF TRADE RELATIVE TO THE CAMBRIDGE POST-OFFICE SITUATION.

WASHINGTON, *April 7, 1916.*

GILBERT A. A. PEVEY, Esq.,
*Chairman Special Post-Office Committee, Board of Trade.*

DEAR MR. PEVEY: In justice to the thorough and painstaking investigation which your committee has been making of the question of improved postal facilities, I feel it my duty to give your committee a clear and unequivocal statement of my position.

As you well know, for many years there has been much complaint from the residents and business men of Cambridge in regard to our postal service. A number of different committees have investigated the matter, and it has been found impossible to get any adequate relief from the postmaster of Boston, who has 80 substations under his supervision and finds it difficult, if not impossible, to secure enough carriers to keep up with the increase of population.

Cambridge differs from the other suburbs of Boston in the fact that, in addition to being a residential city, it is a great university center, as well as a large manufacturing community. The university and the population residing in its immediate vicinity, being close to the Cambridge office, have, as a rule, enjoyed excellent service so far as promptness of delivery is concerned, although there have been occasional complaints from some of the college officials regarding delays in the mail, particularly as to mail coming from a distance. From the other parts of the city, however, complaints of constant and exasperating delays have been on the increase.

After a careful investigation of the subject in all its phases I became convinced that the fault was not due to the clerks and carriers employed in our four substations but to the fact that these substations are treated as simply four of a large number of residential stations and that Cambridge is not treated, as a whole, by some one whose sole business it is to see to it that the different parts of the city are given the postal facilities that they require.

The remedy suggested by my predecessor was the erection of a large building in Cambridge at an expense to the Federal Government of $300,000, a bill for which he introduced in the first session of the Sixty-third Congress. Failing to see how this would remedy the situation in the slightest degree and believing that it is the duty of a Representative in Congress not only to do what he is asked to do but to propose remedies for existing evils, I continued my investigations further and found that the only other large manufacturing city in the metropolitan district, namely, Lynn, had been recently consolidated with the Boston postal district, but that, after six months' experience, with practical unanimity, it demanded to be restored to its in-

dependent status. This was done at the instance of Congressman PHELAN, with the approval of Mr. Murray, then a Member of Congress. Finding that the business men of Lynn, as well as the business men of other manufacturing cities, were getting more prompt and satisfactory service than that enjoyed by Cambridge, I publicly advocated the separation of Cambridge from the Boston postal district and its establishment as an independent first-class office, both before and after my election, and introduced a separate bill for that purpose last December. Wherever I spoke in Cambridge I advocated the change, and everywhere the proposition met with enthusiastic approval. Moreover, I talked the matter over with citizens and business men of all parts of the city and also with many of the clerks and carriers, all of whom seemed to think that the change would prove beneficial both to the public and to the postal employees. This seemed about the only way in which we could get the necessary number of carriers to keep up with the rapid growth in population in many parts of our city.

I expected when I came to Washington that it would take at least a number of years to secure the passage of my separate bill. After talking the matter over, however, with members of the Post Office Committee, I decided to offer my bill as an amendment to the Post Office appropriation bill. Practically all of such amendments during the week and a half that this bill was under discussion were ruled out on points of order or defeated by the House.

Fortunately, however, I was able to convince the House that my amendment was a reasonable one, and it was unanimously adopted. Up to that time I had supposed that everyone, including the people living in the vicinity of Harvard Square, were in favor of the proposed change as the only means of securing the postal facilities which we ought to have and which other communities similarly situated are enjoying. The fact that I asked for no appropriation for any public building, and the further fact that I offered my amendment under a Democratic administration was conclusive proof that I was neither after "pork" nor desirous of patronage, but was actuated solely by a desire to improve existing conditions.

Some little time after the passage of the Post Office appropriation bill by the House one of the Democratic Congressmen from Boston told me that he understood that Postmaster Murray feared that his salary might be reduced if the proposed change went through. Immediately afterwards I heard that the postal clerks and letter carriers of Cambridge had held a meeting, which was addressed by Mr. Murray's assistant, and that they, under the misapprehension that the proposed change would involve a reduction in the number of deliveries and a corresponding reduction in the number of clerks and carriers, accompanied by a reduction in their salaries, were telling people on their routes that their service would be impaired rather than benefited. I also learned that a majority of the members of the city council had been practically pledged to vote against the proposed change, and that a special committee of five members of the council were to hold a public hearing on the question at City Hall. At considerable inconvenience I came on from Washington to attend that meeting, believing that I could convince the clerks and carriers, as well as the public, to whom they had spoken, that they were wrong in their premises, as the department in Washington assured me that none of the things which they feared would take place, and that they had not taken place when Lynn was separated from the Boston postal district. I found, however, that I was unable to convince them, and that they honestly believe that they, as well as the public, will not be so well off if Cambridge is made a separate post office. Moreover, in spite of the facts which I have caused to be published, and in spite of the fact that with one exception all the newspapers published in Cambridge have advocated the change, a great many of our people, including many of the business concerns for whose benefit the proposed change was intended, have apparently believed the clerks and carriers and have signed petitions against a separate post office.

Furthermore, the fact that, with few exceptions, the business men and manufacturers most vitally interested in improved Postal Service have not taken the trouble to attend either of the public hearings or to publicly advocate the change, while, on the other hand, a large number of the citizens and business men of Cambridge have appeared in opposition to it, has convinced me that, as a representative of the people of Cambridge, the opposition to the proposed change is so great that I ought not to press the matter further, but should allow the amendment for a separate post office to be stricken off in the Senate without insisting upon its retention when it comes back to the House. Even if this opposition, based, as I believe, upon a complete misunderstanding of the facts, did not exist, nevertheless the fact that the present postmaster of Boston is evidently determined to oppose the change in the case of Cambridge, although he cooperated to make the separation of Lynn a success, combined with the honest although mistaken belief on the part of the clerks and carriers that they would not be so well off, would make the success of the proposed change exceedingly difficult if not impossible.

I wish to say in conclusion that if the people who have seen fit to oppose this proposed change had given it, as I had every reason to expect they would, their enthusiastic support, I am absolutely convinced that I would have been able to secure not only enough more carriers to insure a prompt delivery of mail to all parts of our city, but I should also have been able to secure a new substation at Inman Square and one at Kendall Square, with connections by pneumatic-tube service through the Cambridge subway from the North and South Stations to Kendall, Central, and Harvard Squares, as well as from the North Station to East Cambridge by way of the viaduct, together with adequate automobile service not only inside of Cambridge but also between Cambridge and the adjoining suburbs. I was willing to take the responsibility of securing all of these benefits and also the delivery of mail to our business men at least 12 hours earlier than they are now getting it, and of securing for our city the best Postal Service of any in the country.

Under all the circumstances, however, while I have not changed my mind in the slightest degree as to the wisdom of the proposed change, if inaugurated under favorable conditions, I believe it inexpedient to force the issue at a time when the powers that be are evidently determined to throw every obstacle in the way of the success of a remedy which has worked so successfully elsewhere. I feel that in this whole matter I have done my full duty and can not be held responsible if Cambridge continues to fail to receive from the department at Washington the Postal Service to which a city of its size and importance is entitled. The fact that the postmaster of Boston has for the first time admitted that the Postal Service is unsatisfactory is certainly one good result of the agitation.

Regretting that the situation here will not permit the keeping of this matter in abeyance until after the report of your committee and the next meeting of the board of trade, I remain,

Very truly, yours,

FREDERICK W. DALLINGER.

Mr. Speaker, the following is an article on the Cambridge post-office situation, published in the Cambridge Chronicle of April 29, 1916:

POSTAL SERVICE FOUND INADEQUATE—SPECIAL COMMITTEE OF BOARD OF TRADE SUSTAINS CONTENTIONS OF ADVOCATES OF AN INDEPENDENT POST OFFICE—RECOMMENDS THAT PRESENT SYSTEM BE GIVEN BUT ONE MORE YEAR'S TRIAL.

Congressman DALLINGER'S stand in favor of an independent post office for Cambridge was unanimously indorsed by the special committee of the board of trade, which has been investigating the matter, in a report submitted at the monthly meeting held Wednesday night. While the committee, in view of the Congressman's decision not to press the matter for the time being, did not recommend an independent office at this time, it did recommend that the organization give Postmaster Murray a year in which to improve the local service, and in case he did not accomplish it that the movement for legislation for an independent office be taken up again. The report was a most exhaustive consideration of the whole subject. The service was condemned and every argument made for an independent office. The bugaboo that there would be a reduction in the number of employees under an independent office was dispelled by comparisons with Worcester and Fall River. The special committee consists of G. A. A. Pevey, Dr. David C. Dow, Alton H. Hathaway, M. R. Jouett, jr., and James J. Scully.

The report in full is as follows:

PRESIDENT AND MEMBERS OF THE CAMBRIDGE BOARD OF TRADE.

GENTLEMEN: Perhaps no question of such importance to the interests of Cambridge, and to its individual inhabitants, has been presented to the board of trade as that of the postal facilities of the city, and the question as to whether or not the present arrangements are the best that can be secured under all conditions and circumstances as they now exist. Whether or not these facilities can the better be used for the benefit of Cambridge in the establishment of an independent post office is the direct inquiry you have placed before your committee upon which to report its conclusions.

When your committee was appointed considerable agitation and interest were manifest in this matter, more especially due to the fact, perhaps, that the Congressman from this district, the Hon. FREDERICK W. DALLINGER, made this question a direct issue of his political campaign, and after his election at once moved to put the idea into effect. Very recently he caused an amendment to be attached to the Post Office appropriation bill, separating Cambridge from the Boston postal district. This amendment was favorably acted on by the National House of Representatives and was referred to the National Senate for further consideration.

This question is so comprehensive that your committee desires to take as much time as was practicable for investigation. It received assurances from Washington that if the report was submitted on April 26 and acted on by the board of trade at that time, such action could be considered by the Senate committee before it took final action on Congressman DALLINGER'S amendment. The committee was, of course, unable to foresee the Congressman's decision to allow his amendment to be stricken from the bill, and this report is therefore submitted at a time when no immediate action is contemplated.

METHOD OF INVESTIGATION.

Your committee has made personal inquiries of and conferred with two of the local superintendents, and also with Congressman DALLINGER and Postmaster Murray. Letters have been sent to over 500 business and professional men, asking them to state whether or not their service is satisfactory and what improvements they could suggest. The committee has also conferred with a large number of men who were particularly well informed on this subject, being most scrupulous to obtain all shades of opinion. Reliable information regarding the service in other cities has been secured. Important phases of the problem have been subject to individual investigation and the facts submitted to the committee. The committee has had at its disposal the services of Secretary Crane, and is especially indebted to Mr. Crane, and also is indebted to Clement T. Bates, of the Harvard Graduate School of Business Administration, for highly efficient service in collecting data and special investigation.

FACTS OF INTEREST.

The Boston postal district includes within its jurisdiction 80 substations, of which number Cambridge constitutes 4. With the exception of Boston, Cambridge is the largest city within this postal district, having a population of 108,855. It stands fourth in the list of Massachusetts cities in its wealth, and eighth in the value of its manufacturing products. No other independent city of this size, wealth, and business interests in the country is thus connected as a subdivision or part of a large postal district, but in every case each city has an independent and separate postal service within distinct divisions. Even the city of Brooklyn when made a part of metropolitan New York retained its independent postal service.

ANNEXATIONISTS OPPOSED SEPARATE POST OFFICE.

Some 40 years ago, when the agitation for a "Greater Boston" was active, and efforts were being made to include Cambridge within this "Greater Boston," an act was passed by Congress making Cambridge a part of the Boston postal district. At that time Cambridge was not entitled as now to a first-class office. In 1896 Congress laid down the rule in the general Post Office appropriation bill that every county seat in the United States should be an independent post office. Cambridge, however, was exempted from the provisions of this act, so that, as the law now stands, every county seat in the United States is an independent post office except Cambridge, Mass., Clayton, Mo., and Towson, Md.

Since then this agitation for the annexation of Cambridge to Boston has arisen several times, but has not met with much encouragement, and Cambridge has retained its identity as a separate municipality. As a tendency perhaps toward this consolidation of interest, however, there now exists by force of statutes a metropolitan park and boulevard system, including highways, and a metropolitan sewerage system, toward the maintenance of which Cambridge contributes its proportional share with other cities and towns in the metropolitan district. Cambridge, however, has not yet been made a part of the metropolitan water system, established by the metropolitan water district, but has a distinct water system of its own. There can be no question that this act before mentioned, placing Cambridge in the Boston postal district, has to some degree lessened the identity and individuality of Cambridge as a city, and that the establishment of a separate post office would have a tendency, at least to some considerable extent, to promote and make more apparent the individual existence of Cambridge as an independent city and municipal unit.

REASONS FOR DELAY UNDER PRESENT SYSTEM.

Complaints of the mail service in Cambridge have, in the final analysis, been confined to those cases where there has been delay from one of two main causes. Delays have been due either to the system by which mail is actually brought to Cambridge—and this includes its transportation between the different substations—or to the peculiar sectional problem by which mail intended for Cambridge A, B, or C has been sent to the Cambridge office.

PRESENT METHODS OF TRANSPORTING MAIL.

Under the present system all mail intended for Cambridge and coming in over the railroads goes to Boston and is then sent back to Cambridge by automobile. This automobile system does not serve Cambridge alone, but serves it merely as part of a larger route. Similarly, outward mail is carried to Boston by automobile and then sent out by train. There can be no question that one of the chief causes of delay is the inadequacy of this automobile service. This service is run on a schedule, but this schedule is not adapted to the needs of Cambridge alone but also to other points which are included in the route. If the service breaks down, as has frequently happened in the past, mail lies dead for a long period in the various local substations. Even when the service is on schedule there seems to be unnecessary delay, which can be obviated only by adapting this service to the needs of Cambridge alone. The committee emphasizes this point because it believes that this constitutes one of the chief defects in the present system.

A, B, C DIFFICULTY.

Delays under the present system have been due not only to the loss of time incident to carrying the mail into Boston and back but to the peculiar sectional problem in Cambridge as well.

In Cambridge at present there are four substations—Cambridge (Harvard Square), Station A (Central Square), Station B (North Cambridge), Station C (East Cambridge). Each substation has a superintendent. Mail coming by rail for Cambridge is sorted in the trains by railway mail clerks. If directed to Cambridge, without designations "A," "B," and "C," such mail will mostly go to the Cambridge station (Harvard Square). In this way a large amount of mail which was meant for other portions of Cambridge is misdirected. The number of pieces of mail so misdirected and sent to the Cambridge substations will average about 4,000 a day, causing inconvenience, if not loss, to as many individuals.

This difficulty has existed ever since the A, B, C designations were adopted, and no material progress has been made toward effecting improvement. It seems to be a hopeless task to make much progress in solving it by attempting to educate the public on this point, as comparatively few persons can be expected to know that a letter addressed to a person residing on a certain street should be directed to a specific substation. The railway mail clerks can not be expected to be sufficiently well informed concerning Cambridge streets to be able to put mail into the channel which will lead to the correct substation.

Over a year ago the grievance committee of the board of trade made a report on the Postal Service and designated this A, B, C, difficulty as the chief cause of complaint. That committee recommended that a separate department for Cambridge be created at the Back Bay station, to which all mail received at the central Boston office or other stations in the Boston district could be concentrated for sorting, and there sorted by clerks whose sole attention would be directed to sorting Cambridge mail, and who could, therefore, become thoroughly familiar with Cambridge designations.

No progress has been made for putting such a plan into operation. In this connection it should be said that Postmaster Murray has plans in mind for solving this problem, with which the committee will deal later.

DELAY IN EARLY MORNING MAIL.

Considerable complaint has been made as to delay in the early morning mail, especially by business men. This delay is doubtless largely caused by one or both of the reasons outlined above. It may also be due to the fact that Cambridge is treated as four residential stations, and the particular attention to which Cambridge is justly entitled, applicable to special phases of the local situation, is not given.

POSSIBLE IMPROVEMENTS.

Your committee recognizes the fact that any system of operation is subject to improvement. We recognize that expert knowledge is necessary in order to correctly diagnose this problem of improving the Cambridge mail service, but we venture to submit the following suggestions, which our study and investigation lead us to believe would benefit the situation.

Arrangements might be made by which pouches for Cambridge could be left by means of arms at the Allston station of the Boston & Albany, the Cambridge station of the Fitchburg division of the Boston & Maine, and possibly near-by stations on the southern, western, and eastern divisions of the Boston & Maine. Such an arrangement would not be unprecedented. Before entering the Boston district Watertown was able to have mail pouches dropped at Newton, and the pouches were then carried to Watertown by wagon. The result was much more satisfactory than the present arrangement by which the mail goes to Boston first. If Watertown was able to do this, there can be little doubt that the larger and more important station of Cambridge would be entitled to similar arrangements. There should be little or no trouble in getting the independent automobiles for this service, as but two or three light trucks would be necessary, and a city like Cambridge is certainly entitled to equipment of this nature, devoted solely to local use. Such an arrangement as this should result in a reduction in time necessary to transport mail from or to Cambridge.

As pointed out above, it ought to be possible to get the mail into Cambridge in a shorter time than at present. Under an arrangement, such as proposed above, much of this mail would be in separate pouches for the four offices in Cambridge, for the mail would still continue to be worked by the railway mail clerks. These pouches would be taken by the Cambridge trucks direct to the individual stations, but there would still remain the so-called misdirected mail. This would go to the office called Cambridge and from there would be sent to its proper designation. In order to send this mail on promptly adequate interstation transportation and adequate clerical forces would be necessary. As to the former, the automobiles for transporting the mail pouched to and from the trains would serve, and as to the latter, if the present force of clerks and carriers were not adequate, a sufficient force should be obtained. A sufficient force of clerks to sort this misdirected mail and the independent and direct automobile service would do much to solve the present difficulty.

PRESENT FACILITIES FOR CAMBRIDGE.

We have at present, as above stated, four substations fairly equipped for efficient and speedy work. In the substations, besides the superintendents, we have in Cambridge 23 clerks and 40 carriers; in Cambridge "A," 20 clerks and 36 carriers; in Cambridge "B," 6 clerks and 15 carriers; and in Cambridge "C," 8 clerks and 9 carriers. This number of employees provides for Cambridge three or four deliveries, varying with the locality. In this connection the committee desires to call attention to the fact that in Cambridge "B" (North Cambridge), despite a large increase in population, there has very recently been a reduction in the number of deliveries.

PER CAPITA RECEIPTS AND NUMBER OF EMPLOYEES.

The attention of the committee has been directed to the fact that at present the Cambridge post office as part of the Boston district enjoys the benefit of being part of a service which has per capita receipts of $6.45, while as an independent office the per capita receipts of Cambridge would be but $3.29. Furthermore it has been argued that the number of clerks and carriers depends on the per capita receipts of the office, and that the number would be reduced if Cambridge were to become independent. The commmittee is convinced, on the other hand, that receipts are not the sole factor, for it is informed by Washington that while receipts do not enter the problem, population, amount, and character of the mail, and other factors are considered in determining the number of clerks and carriers. But even granted that the per capita receipts are the determining factor, it is by no means clear that Cambridge would lose if it became independent.

At present, as part of the Boston post office, with per capita receipts of $6.45, Cambridge has in the four stations 157 employees. That is, as part of the Boston district, for every $0.0410 of per capita receipts, Cambridge has one employee. Worcester has per capita receipts of $3.89 and 206 employees, or one employee for every $0.0188 of per capita receipts—the rate is much lower in Worcester. The advantage of being in the Boston system does not seem to be very clear, for at the same rate, per employee, as in Worcester, Cambridge independent and with per capita receipts of $3.29, should have 174 employees instead of 157 as at present. The same thing holds true if Cambridge is compared with other cities. New Bedford, for example, has one employee for every $0.0194 of per capita receipts, and at the same rate Cambridge should have 169 instead of 157 as at present. Moreover, the receipts of the Cambridge offices have been steadily increasing. The receipts of the Cambridge A office, for example, have increased 29 per cent since 1911. It is interesting to note in this connection that the number of employees in the Cambridge A office has increased but 14.5 per cent in the same time. From these facts it would appear that there is no validity in the argument that a reduction in the amount of per capita receipts which Cambridge is considered as having at present would result in a reduction in the number of employees, but on the contrary, that Cambridge would be able to get any increase in the force if such an increase is necessary to good service.

It is therefore apparent that other considerations than per capita receipts are factors in determining the needs of any particular district and the service to which it is entitled; the character of the occupation of each district, the locality of its business interests, and of its

residential population. In regard to Cambridge more especially, its colleges and other educational and public institutions would seem to enter into the question of service and vitally affect the number of clerks and carriers necessary.

ARGUMENTS IN FAVOR OF AN INDEPENDENT POST OFFICE.

Among others the following forcible and pertinent arguments were made to your committee in favor of an independent post office:

That Cambridge is entitled to such service because Cambridge is a county seat, and, as before stated, one of the largest manufacturing cities in the Commonwealth, and the seat of Harvard University; that an independent post office would tend to gain for Cambridge that respect and favorable treatment at Washington and elsewhere to which its position entitles it; that it would help to establish Cambridge as a separate city with an individuality, and that good postal service in Cambridge would have an appreciable effect in getting Cambridge manufacturers with offices in Boston to move their offices and post-office boxes to Cambridge. It is argued this would mean more deposits in Cambridge banks, as the deposit of the company follows its office; that the banks would gain through an independent office, as all postal deposits would be kept in Cambridge banks instead of in Boston, as at present; and that an independent office would afford an opportunity for southern and western mail to come direct to Cambridge by utilizing local and near-by railroad stations.

An independent post office would mean an independent postmaster, and would bring about several improvements in service. In the first place, the postmaster would necessarily be a local man and as such thoroughly in touch with local conditions and local problems. His entire time would be devoted to the solving of these local problems, and his sole aim would be to serve the Cambridge public. In contrast to this, under the present system, the Boston postmaster must care for Cambridge stations along with 76 others; he must, as his first duty, care for the great business interests of Boston and only incidentally try to improve the service in the suburban districts. As an example of this, the condition of affairs in the business districts of Cambridge may be cited.

The time and number of deliveries is causing considerable dissatisfaction there, and the cause seems to be simply that Cambridge is administered as part of a larger system having a uniform service. In Fall River, on the other hand, with much smaller per capita receipts, the business district gets five deliveries a day and six on Fridays and Saturdays. Not only would the independent postmaster give his entire time to Cambridge problems, but he would be directly responsible to and more easily reached by the Cambridge public. The present superintendent must always try to please the Boston postmaster by economy as well as serve the Cambridge public; he can not decide questions of local policy; and he can not even be reached by telephone from Cambridge without first calling up the Boston office. The greater responsibility and accessibility of the independent postmaster, combined with his greater knowledge of and interest in local affairs, would be highly advantageous to the public.

The experience of the city of Lynn is a strong argument in favor of an independent post office for Cambridge. Lynn was independent, but was suddenly consolidated with the Boston district. The people of Lynn were content to remain part of the Boston district but a few months and then insisted upon leaving it and becoming independent. The Lynn Chamber of Commerce is authority for the statement that the service now provided is far superior to that which was secured as part of the Boston district.

ARGUMENTS IN OPPOSITION.

Those who appeared before the committee in opposition to the proposed change based their contentions on the advantages to be gained from affiliation with a great metropolitan district. They believe that the postmaster of such a district could secure service for all his substations which could not be secured by the postmaster of a smaller city. They pointed out that Cambridge was geographically a part of the Boston district and was located practically in its heart. They believe that Cambridge would suffer by being deprived of the facilities of the larger district. They pointed out that an independent office would lose for Cambridge certain privileges which it now enjoys in the way of forwarding second-class mail and in parcel-post rates. They claimed that it was better for Cambridge manufacturers to be more closely identified with the city of Boston, as at present.

The committee is aware that there has been opposition to an independent post office, in which local postal employees have taken an active part. The committee does not feel called upon in this report to comment on this phase of the situation.

DALLINGER AMENDMENT WITHDRAWN.

On April 4 your committee was notified by Congressman DALLINGER that in view of this opposition that had arisen and the attitude of the post-office officials in the Boston district, that he made it clear that he understood the defects in the service and was anxious to remedy them. He has in mind plans to improve the transportation system to and from Boston and between the substations. In this connection your committee again wishes to emphasize its belief that this problem can be handled satisfactorily only by giving the city service particularly adapted to its needs, and not making this service incidental to a schedule including too large a territory. The postmaster suggests the possibility of quicker service between Boston and Cambridge by the installation of pneumatic tubes. This would be a highly satisfactory innovation and would assist in solving the problem of rapid service. Postmaster Murray suggests the possibility of caring for the misdirected mail by establishing a sorting station in Boston or Cambridge where mail can be sorted direct to carriers' routes. Such an arrangement might solve the A, B, C difficulty.

The postmaster also told the committee that he would endeavor to improve the service provided for the business men.

Your committee held a long conference with Postmaster Murray, and he had concluded to abandon any further efforts for the time being for the establishment of an independent post office in Cambridge.

Your committee therefore finds itself in a different situation than it was when it began its investigation.

RECOMMENDATIONS.

As a result of its study of the situation your committee arrives at the conclusion that under present arrangements the service provided for Cambridge is not up to the standard to which a city of its size and importance is justly entitled. The chief defects are in the transporting of mail to and from Cambridge and between the various substations, the inadequate and unsatisfactory method of dealing with the situation arising from the A, B, C designations, and the failure to provide satisfactory service for the business interests.

Your committee recommends that during the coming year the board of trade keep in close touch and actively cooperate with the postmaster in his efforts to secure these needed improvements.

The present Boston postmaster has held this office for a comparatively short time and is fairly entitled to a reasonable period to demonstrate the advantages which it is claimed Cambridge should receive from being identified with a large consolidated district but which have not as yet materialized.

Your committee therefore recommends that the board of trade take no steps toward attempting to secure an independent post office for Cambridge until a year from this date. If during the interim Postmaster Murray can make definite progress toward bringing about the improvements he suggests, the change in the present system will be unnecessary. If he fails to do this, the Post Office Department will have less justification for advocating a continuance of the present arrangement, and ought not to oppose a remedy which has worked to advantage in other communities.

Under all the circumstances and conditions as above set forth, although very strong arguments exist in favor of an independent post office for Cambridge, your committee at the present time does not deem it advisable to make a recommendation either for or against the proposed change; but, on the other hand, would suggest that the present postmaster of the Boston postal district have the opportunity to demonstrate, within a reasonable time—say a year from date—that the wants and necessities of Cambridge can be amply taken care of under the present postal system and facilities provided at least equal to those at present enjoyed by municipalities having independent post offices.

If, however, at the end of this year no material progress shall have been made toward the establishment of such improvements—better methods of transporting the mail, the installation of pneumatic tubes between Boston and Cambridge, arrangements for a sorting station as above mentioned, improved service for business men—in the opinion of your committee, the board of trade should then go on record in favor of an independent post office for Cambridge, and use its best endeavors to secure the passage of legislation to put such a project into effect.

In other words, if Cambridge, as a part of a larger postal system, can not or does not secure the facilities enjoyed by cities of equal size and importance, Cambridge then should demand a separation from the Boston postal district and the establishment of an independent first-class post office of its own.

## The Federal Workmen's Compensation Bill.

---

## EXTENSION OF REMARKS

OF

## HON. WARREN GARD,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 12, 1916,*

On the bill (H. R. 15316) to provide compensation for employees of the United States suffering injuries sustained while in the performance of their duty, and for other purposes.

Mr. GARD. Mr. Speaker, I consider it a high privilege that to me was referred for investigation and report to the Committee on the Judiciary of the House of Representatives certain bills having for their purpose the payment of compensation to civil employees injured in the performance of their duty.

Being most heartily in accord with this humane law, I gave the subject my very best attention and carefully considered the several bills, finally rewriting the text of H. R. 13621 and submitting it as a committee bill, which was approved and later introduced as H. R. 15316.

By subsequent direction of the committee, I wrote the report to accompany this bill, being report No. 678, Sixty-fourth Congress, first session.

This bill is a departure from existing law. It is a splendid example of modern, progressive, humane legislation, and in my discussion of it I shall not approach it in any attitude of partisanship, but in full recognition of its absolute merit.

I think there are many people in the United States who do not know that this country has had a compensation law for Federal employees. But there was a law passed, and there is an existing law—the law of May 30, 1908—which provides a compensation for certain classes of persons in governmental employment. The idea of that bill was conceived in the development of modern conditions. Under the old common law there was absolutely no recovery for damages for injury or death unless there could be proven that it was not caused by the negligence of the employee himself or of anyone associated with him in employment. This was probably wise in its day, when industry was small; wise when the man in charge of the business had the actual personal knowledge thereof and could look after the welfare of those employed by him; but as time and conditions changed, as development and industry grew, as from a small wayside blacksmith's shop a mammoth manufacturing plant has been developed, from the time when a few men were employed to-day when many thousands of men are employed, radically different conditions have arisen; and so the present belief and the trend of modern thought is that a man who is injured in an accident in a manufacturing plant does not become a broken

human chattel, but that industry and society owe to him the continuing duty of call and attention during disability.

It is not to place a man in the same category as a wheel or a cog that, if broken, is to be cast aside on the scrap heap, but, instead of the injured man and his family having to assume all the responsibility of the injury, the responsibility is now placed on the industry. That is the distinction; that is what makes the difference between the old law and the new law.

The new law in effect is that because the United States of America is to-day the greatest employer of labor in the world, that same employer should put the brunt of the disability upon the industry. This bill merely asks and has for its purpose the extension of aid to a man or his family at a time when aid is needed.

Under the existing law, and the limit of existing law is that if a man be injured or if he be killed, under certain conditions a bill may be brought into Congress and one year's pay may be given him or his family, and under certain other conditions an additional year's pay may be given him. But the distinction this law seeks to write in the statutes and on the record of humane legislation of the United States of America is that from the beginning of a man's injury the United States seeks to protect him and seeks to protect his family.

This bill embodies the most wise and most humane provisions. In the first place, it says that when a man is injured there shall be afforded him immediate temporary relief. He shall have a physician; there shall be called at once medical attendance; he is to have hospital treatment, if necessary, all for the purpose of bringing him speedily back to health and strength.

The next proposition is that if the injury be but trivial, for some slight injury they shall wait a time—three days—and if at that time the injury has developed, then the compensatory protection of the United States begins. This bill provides, and it is a limitation, that to receive compensation one must have been injured while in the performance of his duty. I say with entire frankness that when the bill came to the Judiciary Committee it was not the bill that is here presented—it was wider in its scope—but under the guidance of this committee the bill has been redrafted and reintroduced.

It starts with the primary idea that the injury must occur in the performance of duty. Secondly, it has an exception, that if a man be injured because of his own willful misconduct, then he may not properly recover compensation. If he be injured because of intoxication, he may not have compensation. But in all other cases, subject to the provisions of this bill, the aid of the Government of the United States is tendered for the benefit of the man and of his family.

Of course this bill eliminates the fellow-servant rule. In all modern legislation there is a tendency to eliminate the fellow-servant rule. The tendency of such legislation in every State seems to do away with this timeworn and abandoned idea of one's not being allowed to recover because of the negligence of a fellow servant. This bill starts, then, after an injury has occurred and places before the man who has received the injury two things: First, the best aid of the Government in getting him back to his health and strength; and, second, if the disability be continuing it provides for a two-thirds payment of whatever his salary may be, with the maximum of $100 and the minimum of $50 a month, so that in no event could there be any recovery under the provisions of this bill for an amount in excess of $66.66 per month. The other amounts, based on the sum of $50 or intervening amounts, according to what a man earns, would be in the ratio of two-thirds, but never in excess of $66.66 per month. It is the idea of the law that this sum of money is to protect a man and his family and keep the family together. It is not the idea to pay a large sum of money to encourage malingering, but it is the primary object of the bill to place the benefits of what it contains for the workman and his family in order that the man may be restored to health and strength and ability to work.

This law is administered by a commission. It provides that a commission of three shall be appointed, of whom not more than two shall be members of the same political party. It provides for the administration of this enactment under the guidance of that commission. The commission is vested with the power to employ investigators. It is vested with the power to employ physicians and with the power to afford nursing and hospital treatment, all for the purpose, I reiterate, of restoring the injured man to health. It seems to me that this bill, the outlines of which I have briefly sought to give the members of the committee, is such a bill as must be recognized as a step far in advance toward needed humane legislation. It is a legislative provision which recognizes the human right, that right whose recognition has often been made subservient to the property right. It establishes the dominant rights of life, health, and happiness, and seeks again to rebuild the man and restore him to his family.

Another provision in which the committee may be interested, and it is a very practical one, is to know that since this law of 1908 has been in existence a great number of reports of accidents have been made, and as the existing law applies to something more than one-fourth of those who are the employees of the Government of the United States, I believe that something like $1,800,000 has been paid in the five years of which accurate reports have been made under the present law.

This proposed law carries an authorization of $500,000, and the best evidence that the Committee on the Judiciary could get was that there would not be needed a larger sum of money than this for the first year's operation of the new law.

Under the old law there have been different numbers of accidents and different amounts returned as compensation with about the aggregate I have given. The new law provides, as I have said, this authorization, with the idea that $500,000 will be sufficient for the first year, and with the thought that from the development of this at its maximum the amount of compensation to be paid will never exceed one-half of 1 per cent of the entire governmental pay roll.

The law is comprehensive; it is one law which takes into its provisions all the civil employees of the United States of America. It provides that any of these men or women, or any persons under the age of majority, who may be injured while in the performance of their duty may be compensated as provided herein. It affords safeguards both to the person injured and the Government, of which he is an employee. It provides that an application for compensation must be made, that the application be given consideration, and that a continuing examination be made of the man who has sought compensation under this new Federal law, all to the end that assistance and aid may be given him as he requires it, but that as soon as possible he be again self-sustaining.

Injuries to workmen in the course of their employment may be due to negligence or to accident. Where negligence is the cause, the fault may be that of the workman or his employer, of a fellow workman, or even a stranger. Where accident is the cause, no one is at fault. In all cases the suffering and the loss fall on the injured person and his dependents, except in so far as the law permits the loss to be compensated.

The rules of the common law, which were formulated at a time when industrial operations were simple and conducted in small establishments where responsibility could easily be fixed, permitted recovery only where the workman or his representatives could establish negligence on the part of the employer and denied relief if his own negligence in any way contributed to the injury or if the injury was due to the negligence of a fellow servant or a stranger, and also compelled the worker to assume the risks incident to a dangerous employment. For injuries due to accidents alone there could be no recovery, since a legal wrong could be imputed to no one. The altered situation growing out of the immense changes made in industrial conditions brought a realization of the great injustice worked by established rules of law. Irrespective of the negligence of the employer or a fellow servant or a stranger, and irrespective of the risks incident to dangerous occupations, it was recognized as grossly unjust that the victim alone should be allowed to bear the entire consequences and all the burden of an industrial accident or injury. It was seen that the employment itself, if not the cause of the injury, at least furnished the occasion or the condition without which it could not have occurred. The principle was then formulated and accepted that the financial loss occasioned by injuries received in the course of employment was a proper charge against the industry itself, at least where the injury was not plainly due to the negligence or misconduct of the person injured. A means was thus provided whereby the burden in such cases could be shifted in a measure from a single victim and distributed among many persons.

The Rubinow standard accident table, which is the basis of actuarial calculations for casualty insurance, gives but 2.5 per cent as the percentage of accidents in which total disability lasts longer than three months. According to the same table, less than 1 per cent of accidents result in death.

The following is a summary of reasons why a proper workmen's compensation law should be extended for the benefit of all Federal employees:

1. To secure uniformity, as there are now three different laws in force which all told cover but one-third of the Federal employees.

2. To relieve Congress from hundreds of personal-injury claim bills yearly.

3. Because the need of employees disabled in nonhazardous occupations is as great as in so-called "hazardous" occupations to which the existing law is confined.

4. Because the United States should shoulder the responsibility to its own employees instead of throwing it upon the States.

5. Because the United States as an employer should treat its employees as justly as private employers are required to.

6. Because the United States should be made to feel responsibility for reducing accidents.

Reasons both economic and humanitarian irresistibly bring us to the conclusion that when one suffers injury not through

his own misconduct, the hardship should not fall upon him and his family but it should be considered as an incident—an unfortunate incident—of the industry, and by the industry compensated.

That which may be a tremendous burden upon one suffering man is hardly appreciable upon society at large, and it is now very generally recognized that it is unfair to make the one suffer not alone the injury, but the resultant poverty and distress.

So it follows that if the great industrial concerns of the world compensate their injured workmen, likewise a great Government "ought not to leave helpless those who are working for it when accidents happen to them." This Government relief must be by legislation.

The protection of the life and health of employees against injury sustained while in the performance of duty is to-day recognized as one of the very vital principles in the scheme of government.

It should be the purpose of all employers of labor to give to their employees the most complete protection possible against injuries resulting from their employment, but despite the best efforts to protect employees against injury accidents will occur and the trend of the best thought of the country is to afford relief to the victim of such accident, his family, those dependent upon him, from the dire results of misfortune.

One of the most beneficial effects of this bill will be the safeguarding of employees against accident.

We have given of our thought and effort to prevent "waste" in the conservation of many utilities, but the greatest conservation is that of human health and life; and the work of the commission carrying out the provisions of this act will be to at once give immediate supervision to working conditions in every shop, office, warehouse, in fact every place and position where labor is employed by the Government, so that conditions in which men and women work may be the best and the ratio of accidents and injuries resulting from such employment be reduced to the very minimum.

This act is intended to be a model workmen's compensation act, and to have proper influence with the legislatures of our several States in working out principles for the protection of the workingmen and their families within State limits, and as such and through its own wise provisions it is destined to be of great benefit to hundreds of thousands of men, women, and children.

---

## The Platform of the Democratic Party.

### EXTENSION OF REMARKS
OF
### HON. J. M. C. SMITH,
OF MICHIGAN,
IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 25, 1916.*

Mr. SMITH of Michigan. Mr. Speaker, in the platform of the Democratic Party for 1912 at the Baltimore convention, which nominated President Woodrow Wilson, I find this statement concerning the tariff and the high cost of living:

HIGH COST OF LIVING.

The high cost of living is a serious problem in every American home. The Republican Party, in its platform, attempts to escape from responsibility for present conditions by denying that they are due to a protective tariff. We take issue with them on this subject, and charge that excessive prices result in a large measure from the high-tariff laws enacted and maintained by the Republican Party and from trusts and commercial conspiracies fostered and encouraged by such laws, and we assert that no substantial relief can be secured for the people without import duties on the necessaries of life are materially reduced and these criminal conspiracies broken up.

The Democratic Party made its campaign and came into power under that platform. I wish briefly to consider some of the planks of that platform. The above plank is a complaint against the high cost of living, and it was heralded from every Democratic stump during the campaign that elected Mr. Wilson President. The cause of excessive cost of everyday living mentioned in this plank is attributed to the tariff, and that no substantial relief could be had except a reduction of the tariff duties therein imposed. What has since happened? We all know. The tariff was revised after the Democratic Party came into power. Everything the farmer produces, almost without exception, was put upon the free list. Our markets were thrown open to the Canadian farmer and the producers of other countries, but the cost of living has been the highest during the present administration of any time in the history of our country, aside from the time of the Civil War. Perhaps that is the outcome of natural conditions. It surely proves one thing, that putting all the farmers' products on the free list and putting him in competition with the world has not brought down the high cost of living. I mention this fact because this plank is so certain that the high cost of living was due in a measure to a protective tariff, and subsequent prices have proven that this claim is not well founded.

But now they say that the high cost of living is due to the war in Europe; we hear a good deal about high prices caused by that terrible war. That war has made an extra demand for our products and our produce. But it is the statement in the above platform that has not worked out by free trade, and that is what I want to call attention to.

PLATFORM 1916.

I find the following plank in the present Democratic platform, adopted at St. Louis, 1916:

We challenge comparison of our record, our keeping of pledges, and our constructive legislation with that of any party of any time.

Here is a direct challenge for a comparison, not only of the accomplishments of the present Democratic administration, but also an announcement that it has kept faith with the people, and that it has kept the pledges it made when it came into power in 1912.

The platform of 1912 contained this plank, and I quote it here to show how the Democratic Party in convention at Baltimore when Mr. Wilson was nominated regarded its platform pledges:

CONCLUSION.

Our platform is one of principles which we believe to be essential to our national welfare. Our pledges are made to be kept when in office as well as relied upon during the campaign * * *.

Of course, due allowance must be made for the unexpected extraordinary war conditions which have arisen since that platform was first adopted. But there are many pledges it made that seem to have been lost track of that have no relation to war conditions, and let me here mention a few of them.

ONE TERM.

This one-term plank has rather gotten on the nerves of the Democratic Party. It is so familiar as to be almost trite to repeat it, but in order that all may see just what is the exact wording of that plank I wish to repeat it. From subsequent conditions I think it can be truthfully said that it was never seriously regarded or intended to be kept by the Democratic Party after coming into power, although it makes such a great pretense of keeping its party pledges in letter and spirit, and was so bent on keeping them as to enact a plank that their platform and pledges were to be sacredly maintained:

TERM OF PRESIDENT.

We favor a single presidential term, and to that end urge the adoption of an amendment to the Constitution making the President of the United States ineligible for reelection, and we pledge the candidate of this convention to this principle.

It might be a sufficient explanation of this one-term plank to say that they had not been in power for some 16 years, and that even a single term might be all the people would care to trust the Democratic Party with. It looks at this time as if the people would take the Democratic Party at its word, and that the people will keep this one-term plank for the Democratic Party, even though the party itself ignores it.

PANAMA CANAL.

The Democrat platform containes a plank that they were in favor of American ships passing free and without toll through our American canal, as follows:

We favor the exemption from toll of American ships engaged in coastwise trade passing through the canal.

Soon after coming into power the Panama Canal tolls act passed the House. The Senate also passed it. The President signed it giving free toll to American shipping through the Panama Canal. I voted for that bill. I thought that the Panama Canal was built and owned by the United States. I know it was built at a cost of some $400,000,000 of the American people's money. I think possibly the expenditures made by our Government on the Mississippi River have quite equaled a like amount. American ships can sail the Mississippi River ad libitum and without tolls. American ships can also sail our rivers and into our harbors without tolls. I thought it but just and proper that as long as we built and paid for the Panama Canal and owned it that American shipping in the interest of American commerce was entitled to free tolls. But the free tolls act had not been passed but a very short time when the President appeared before Congress and read a message asking that the free tolls act be repealed. He gave no reason. He kept the reason to himself. No one has been able

to find out since that time why he called on Congress to repeal that act. He claimed that he wished a free hand in some other negotiations, whatever they were, and that he could not act comprehensively and with a free hand unless this free-toll act was repealed. He kept secret his purpose. I did not think we ought to repeal the act without we did so upon a full understanding. The secret has been kept by him ever since as far as I am able to find out, and no one seems to be fully comprehensive of his purpose in making that request to this day. One thing certain about it, before it was repealed our Speaker of the House, Hon. CHAMP CLARK, and the Democrat floor leader, now Senator UNDERWOOD, certainly gave a strong dissertation on the floor of the House as to why party platforms are made and should be kept. Perhaps an emergency existed. If so the President has so far kept it to himself.

ECONOMY.

I wish to call attention to the plank in the Democratic Party of 1912 as to Republican extravagance:

REPUBLICAN EXTRAVAGANCE.

We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befits a democratic government and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

In this platform, as in others adopted by the Democratic Party, the Republicans are charged with great extravagance. In this the American people were not deceived; they continually returned the Republican Party to power, although this plank had been in the platform of 1908 and earlier platforms of the Democratic Party. The largest annual appropriations made by the Republican Party was $1,100,000,000.

When the Government expenditures amounted to $1,100,000,000 it was considered very extravagant by our Democratic friends, and took away their breath, proverbially speaking. They thought it a great waste of the people's money. We are a great Nation and a growing Nation. We are all proud of our progress, of our citizenship, and of our national prosperity. Every thinking man knows that as we continue to progress it calls for additional appropriations. The appropriations for the fiscal year of 1917 will approximate $1,750,000,000 or more, and exceeding any appropriation made by the Republican Party by over $600,000,000. Our Democratic friends claim this increased expenditure is necessary on account of war conditions.

But the great slogan of the Democratic Party for the present campaign will be peace, and that the President has kept us out of war. If we are at peace, it might look to the average man that the appropriation of $1,750,000,000 might be excessive. I am for national defense and sufficient protection to give substance and vitality to maintain our rights among the nations of the earth and to defend our country against the aggression of any foreign power. I think our people generally agree to that position now and that this counry is in favor of preparedness, but it is not in favor of extravagant appropriations in our civil expenditures.

USELESS OFFICES.

Here is a plank found in the Democratic platform to which some attention might be given, although it is seldom referred to:

We demand a return to that simplicity and economy which befits a democratic government, and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

From the Official Registers of the United States on the 1st day of July, 1913, after the Democratic Party had been in power four months, and on the 1st day of July, 1915, two years thereafter, is given the number of employees in the different departments:

Number of employees July 1, 1913 ..... 470,015
Number of employees July 1, 1915 ..... 488,711

Some of the noticeable increases being as follows:

| | 1913 | 1915 |
|---|---|---|
| Department of State | 1,328 | 1,372 |
| Treasury Department | 27,595 | 31,108 |
| Department of Justice | 1,976 | 4,700 |
| Post Office Department | 292,049 | 297,531 |
| Department of the Interior | 14,304 | 19,851 |
| Department of Agriculture | 14,478 | 16,229 |
| Department of Commerce | 7,693 | 10,355 |
| Department of Labor | 1,906 | 2,036 |
| Interstate Commerce Commission | 719 | 1,890 |
| Government of District of Columbia | 4,977 | 7,248 |

This does not exactly show a decrease in the number of employees in these departments. It is presumed they are all needed and used. I call attention to these figures for the purpose of showing that there has been no material reduction of employees since the Democrats came into power. Maybe this little plank has been overlooked or forgotten.

TRUSTS.

Permit me in this connection to also call attention to the plank condemning the Republican Party for failure to prosecute the Standard Oil and Tobacco Trusts, especially mentioned in its platform of 1912:

We condemn the action of the Republican administration in compromising with the Standard Oil Co. and the Tobacco Trust, and its failure to invoke the criminal provisions of the antitrust law against the officers of those corporations after the court had declared that from the undisputed facts in the record they had violated the criminal provisions of the law.

As far as we are able to learn, the Republican Party has prosecuted as many trusts as the Democratic Party has. During the four years President Taft was in office there were many trusts prosecuted, and the judiciary were active in the enforcement of the Sherman antitrust law. We are not hearing much about suits or actions against the officers of the trusts at the present day. Since the Democratic Party especially mentioned our failure to prosecute the Standard Oil and Tobacco Trusts it is not out of place to inquire what the Democratic Party has done by way of prosecution of these or other trusts. Is it the purpose of the Democratic Party to allow prosecution against trusts to become obsolete procedure? Much was heard about the Clayton antitrust law at the time of its passage, but we are not hearing so much about it now.

AT HOME AND ABROAD.

But I am most in favor of that part of the Democratic platform which reads as if it was inspired in comparison with the other provisions. I especially refer to the constitutional rights of American citizens wherever they may be. Its provision is as follows:

The constitutional rights of American citizens should be protected on our borders and go with them throughout the world, and every American citizen residing or having property in any foreign country is entitled to and must be given full protection of the United States Government, both for himself and his property.

The question with me is whether or not the Democratic Party has in any manner kept faith with this provision. It is one that swells the heart of every true American citizen.

I am sometimes asked if I am in favor of going to war. Oh, no. But what did the Democratic Party have in mind when it adopted this plank of its platform in 1912? And what has it in mind now in 1916 when its platform contains a similar plank? It seems to me that almost ever since I can remember the atrocities inflicted on the Armenians have been shocking and revolting. Many equally shocking and revolting crimes have been inflicted on American citizens in Mexico. Innocent women and children have not been exempt.

Something is said in the Democratic platform about having maintained the honor and dignity of the interest of the United States, and at the same time retained the respect and friendship of all the nations of the world. How I wish that was true. How they hate us down in Mexico. One can scarcely pick up a paper that does not contain an account of some heinous outrage on American lives or property in Mexico, showing utter disregard of the rights of our American citizens and of the dignity and honor of our Nation. I say this in relation to Mexico. If American citizens have no right to be in Mexico they should be told so plainly and further told to depart from that country and go to some other or come home. If Americans have a right to be in Mexico under treaty or otherwise, is it right to ignore that right and to permit them to be slaughtered?

The American people, while they are for peace, are also for the protection of American citizens and maintaining the honor of our Nation throughout the world.

## Indian School at Morris, Minn.

### EXTENSION OF REMARKS
OF
### HON. ANDREW J. VOLSTEAD,
OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 18, 1916.*

Mr. VOLSTEAD. Mr. Speaker, to correct some erroneous impressions current in some quarters as to the history of the legislation that transferred the Indian school at Morris, Minn., now the Morris State Agricultural School, from the United States to the State of Minnesota, this statement is submitted.

It can be verified from the official records and by those who took an active part in securing the legislation.

The Commissioner of Indian Affairs, Mr. F. E. Leupp, became convinced that the work done by some of the nonreservation Indian schools were not accomplishing satisfactory results. In several places, including Morris, great difficulty was experienced in securing the requisite number of pupils. This difficulty was greatly aggravated at Morris when the Wahpeton Indian school was completed. After these facts became known to me a visit was made to the school, and after having seen the superintendent of the school and obtained from him and from the Commissioner of Indian Affairs and others what information could be secured the matter was submitted to the Indian Committee of the House with the request that, as the school was not needed, it be turned over to the State upon condition that the State should maintain it as an agricultural or industrial school and allow Indians free tuition and equal treatment with white pupils. This request was refused on the ground that the committee considered it necessary to first have an official investigation to determine what schools could be dispensed with; but the committee promised to secure such an investigation and inserted in the Indian appropriation bill, then in course of preparation, the following direction:

> The Commissioner of Indian Affairs is hereby authorized, under the direction of the Secretary of the Interior, to ascertain whether and upon what terms it may be possible to dispose of any of the nonreservation schools which, in his judgment, are no longer of value to the Indian Service and to report the result of his investigation to the next session of the Congress.

This occurred during the first session of the Sixtieth Congress.

This direction became a law (35 Stats., 70), and at the opening of the second session, on December 4, 1908, the commissioner reported that seven schools, including that at Morris, were not needed; he also reported that he had consulted with the governors of the States where the schools were located and had suggested to them that if the schools were to be maintained as educational institutions the foremost consideration for the transfers would be that Indian pupils be given "free tuition, paying uniform charges for everything else, just as non-Indian pupils would." Upon this report another application was made to the Indian Committee of the House to have the school turned over to the State. This application was successful in securing the insertion in the Indian appropriation bill (H. R. 26916 of the Sixtieth Congress) of a provision directing the Secretary of the Interior to dispose of and convey the school on conditions to be prescribed by him. This language was broader and less definite than desired, but when the committee was asked to amend it I was answered that the governor of the State, Mr. Johnson, had refused to express an opinion on the question whether the State would accept it or not, and that as the State might not accept it the authority should be broad enough so the school might be disposed of either to the State or perhaps to the city or county where located. The conditions upon which it might be granted to the State were not in dispute. When this item was reached for passage in the House Hon. James S. Sherman, then chairman of the Indian Committee and afterwards Vice President of the United States, among other things said:

> The thought in disposing of these schools is to dispose of those remote from the reservations, to dispose of those which have not a sufficient number of pupils to make it worth while and expedient to maintain the schools—that is, that have not enough pupils within the reasonable radius of the school; at the same time to provide in the disposal of them that there shall be free tuition to the Indians at that school and to dispose of them to the State upon the proviso that they shall maintain them as educational institutions.

And he added that the department was authorized to dispose of this school on that condition.

Hon. JAMES R. MANN, the present Republican leader in the House, commenting on this statement, said:

> There are a large number of Indians in Minnesota. Are we going to get ourselves into the position in giving away the present school that in a year or two we will be asked by the gentlemen who represent Minnesota to provide another school up there?

This provision authorizing the school to be turned over to the State passed the House February 16, 1909. If it had been adopted in the Senate in the same language that it passed the House the school would have been conveyed to the State; but, desiring to have the language made more definite, I called Senator CLAPP's attention to it and expressed the wish that he would have it amended when it reached the Senate. That was the practical way of securing the amendment, as the House Indian Committee was opposed to the change. Senator CLAPP had it promptly amended in the Senate Indian Committee, of which he was chairman, by substituting for the language of the House bill the provisions of a bill which he had introduced and recently passed in the Senate, and which I had reintroduced in the House and used in applications for this legislation before the Indian Committee of the House, Senate bill 7472 and House bill 25407. This amendment of the House provision became the law granting the school, except for a slight correction subsequently made in the description in a part of the land.

The Indian appropriation bill, as reported and presented to the House, provided only for the disposition of two schools, the one at Morris and one at Chamberlain, S. Dak. This latter authorization had, as I was informed, been inserted just before the bill was reported, at the request of Hon. E. W. Martin, of South Dakota, who was then a member of that committee. When the bill was considered in the House the expected happened—it was amended by adding two more schools, one in Colorado and one in Nebraska, and two more were added in the Senate. The language used in the House in authorizing the disposition of these schools was, as to all of them, amended in the Senate, except as to the one in Nebraska, which was stricken out.

It is not an easy task to induce Congress to give away a school such as that at Morris, costing the Government upward of a hundred thousand dollars, and especially is that true where the precedent established would result in giving away several hundred thousand dollars' worth of like property, and hence in securing action in the House other Minnesota Members were not only consulted but induced to take an active interest with me in the matter, notably Hon. F. C. Stevens, of St. Paul, who appeared with me before the Indian Committee and otherwise actively aided in securing the legislation. Hon. C. A. LINDBERGH was then a member of that committee, and there supported it strongly.

The legislation granting the school originated in the House, was first passed there, and was afterwards amended and passed in the Senate. Senator CLAPP was actively interested in passing it in the Senate, and took care of it there.

Aside from the Members of the House and Senate who participated in the passage of this legislation, Hon. L. C. Spooner was especially solicitous to procure it and took a very active part with others in having the State accept the grant.

## Our Last Natural Resource, Water Powers.

---

### SPEECH

OF

### HON. JOHN J. ESCH,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 5, 1916.*

The House in Committee of the Whole House on the state of the Union had under consideration the bill (S. 3331) to amend an act entitled "An act to regulate the construction of dams across navigable waters," approved June 21, 1906, as amended by the act approved June 23, 1910, and to provide for the improvement and development of waterways for the uses of interstate and foreign commerce.

Mr. ESCH. Mr. Chairman, the history of the legislation with reference to dams goes back to the river and harbor act of 1890. In that act it was provided that no bridge or breakwater or pier or abutment should be constructed beyond the harbor lines where they were established, and where they were not established such obstructions could not be made without the previous consent of the Secretary of War. That legislation in the river and harbor act of 1890 was supplemented by sections 9 and 10 in the river and harbor act of 1899. In that act the consent of Congress was required for the putting in of obstructions upon navigable waters, and I call attention to this fact at this time because of the difference between the Senate and the House bills as to what authority shall grant consent.

The precedent of Congress granting consent was established by the act of 1899, and in that same act, where the dam or bridge or obstruction was on an intrastate navigable water, and the legislature gave consent, nevertheless the Secretary of War passed upon the plans and specifications and the location. After the plans and specifications and location had been approved by the Secretary of War it was not permitted to change them without the approval of the Secretary of War, a provision in the pending bill.

No further legislation was enacted until the general dam act of 1906. This, too, required the consent of Congress before a dam could be constructed over a navigable water. It required approval of the plans and specifications and location of site by the Secretary of War and Chief of Engineers. It also prohibited any deviation from plans, specifications, and location without the approval of the Secretary of War and Chief of Engineers. It contained this suggestive stipulation as indicating a

power which should inhere in the Government that the person receiving the grant—

shall construct, maintain, and operate, without expense to the United States, in connection with said dam and works, a lock or locks, booms, sluices, or any other structure which the Secretary of War and Chief of Engineers at any time may deem necessary.

It also provides that in approving such plans and location—

such conditions and stipulations may be imposed as the Chief of Engineers and Secretary of War may deem necessary.

Those words "stipulations and conditions" were construed by President Roosevelt in his veto message of the James River Dam bill as a sanction of the power of Congress to make a charge, and, if I remember the debates on these dam bills in recent years correctly, that was the contention of the minority leader who is the author of this act of 1906. The act of 1906 further provides that the grantee shall construct the locks requested by the Government at his own expense, that he shall light the locks at his own expense, furnish the operative power, and establish such fishways as the Secretary of Commerce and Labor may require. All these conditions have been imported into the pending bill. There is also reserved to the United States in the act of 1906 the right to build a lock if it so desires. That right is reserved in the pending bill.

The grantee under the act of 1906 is liable for any damage for overflow. That is in the pending bill. All rights under the act of 1906 cease for failure to comply with the stipulations and penalties are prescribed for failure to comply with the orders and regulations of the Secretary of War and Chief of Engineers.

While no time is specified in the act of 1906, time to begin the construction is one year and for completion three years after the approval of the act. This provision is modified in the pending bill. The right to alter, amend, or repeal is reserved in the act of 1906, with no liability upon the General Government for such alterations, amendments, or repeal. This provision is also incorporated in the pending bill.

Under the act of 1906 several special acts were passed by Congress, one in 1908 for a dam across the Rainy River, an international boundary stream. That act followed the provisions and stipulations in the act of 1906, but was vetoed by President Roosevelt on the 3d of April, 1908. In his veto message he specified these as the conditions which in his opinion should be placed in every grant for the construction of dams across navigable waters:

First. Grant should be annulled if work was not begun or plans carried out in accordance with the authority granted.

Second. Proper official should see that in approving plans the maximum development of the navigation and power is assured.

Third. There should be a license fee or charge, which, though small or nominal at the outset, could be adjusted in the public interest.

Fourth. There should be provision for the termination of the grant at a definite time, leaving the future to determine its course.

Two salient features of the veto message of 1908 were a fixed charge for the power and a limitation on the period of the grant. Now, in view of this veto message an arrangement was entered into with the Rainy River Power Improvement Co. whereby it agreed, practically, to comply with these conditions set forth in the veto message, and the Committee on Interstate and Foreign Commerce, by an agreement with the White House, consented to pass an amended dam bill that would in a way meet the contentions or demands of the President; but it was not done immediately. I find that on April 13, 1908, President Roosevelt in a letter to the Senate Committee on Commerce gave notice that he would not sign any bills thereafter which did not provide specifically for a charge and a definite limitation in time of the rights conferred. Notwithstanding this notice, Congress passed a bill for the construction of a dam on the James River in Missouri, and on January 15, 1909, President Roosevelt vetoed that bill, setting forth as reasons for such veto the reasons he had set forth in vetoing the Rainy River dam and adding another reason in this: He insisted that the license should be forfeited upon proof that the licensee joined in any conspiracy or unlawful combination in restraint of trade, a provision found in the Alaska coal-land act.

These vetoes in 1908 and 1909 practically discouraged the introduction of special bills for dams on navigable waters. Under the act of 1906, 25 special bills were passed, and out of that number only 6 were carried to completion—only 6.

As a result of the veto messages the House Committee on Interstate and Foreign Commerce no longer gave consideration to dam bills because it did not believe in doing a useless thing. In consequence of the agitation caused by the veto messages of the President and as a result of the great movement throughout the country in the interest of conservation of our natural resources, the Committee on Interstate and Foreign Commerce passed the general dam act of 1910. That act practically incorporated the provisions which I have already set forth as being contained in the act of 1906, but it added these provisions by way of concession to the contentions of the then President and to the demands of conservationists.

First, it required that there should be a comprehensive plan for the development of a river or waterway system. That each particular dam project should be given consideration with a view not only to the locality, where located, but with reference to the entire water system of which it constituted a part and that the plan should be so framed as to bring about the greatest possible development of navigation and also of water power. That provision enlarged, elaborated, and strengthened, you will find in the pending bill. Second, another change was made in the act of 1910 in this, that it provided for certain charges, charges to restore the stream to the condition of navigability at the time the dam was first constructed, or if it was not so restored the Government could restore it and the cost charged to the original grantee. That provision is not in the pending bill for reasons which will be discussed under the five-minute rule.

Another charge was authorized to reimburse the Government for expenses of examining plans and specifications and of viewing the sites and locations of the dam. Another charge was authorized to in part reimburse the Government for headwater improvements in the way of reservoirs and forested watersheds. This latter provision is retained in the pending bill with a limitation that the charge shall not exceed annually 5 per cent on the cost of the improvement to the Government. Personally, I do not think that either of these charges for restoring navigability at the point of construction of the dam or this charge for reimbursement for headwater improvement, including reforested watersheds, amounts to very much in the last analysis. There are no other charges provided in the act of 1910, and the chief contention of President Roosevelt that there should be a charge for water power was not incorporated. There was incorporated, however, in the act of 1910 the right to revoke a charter upon payment of just compensation. Third, there was also incorporated the right to terminate the grant at the end of 50 years after the passage or approval of the project. The 50-year term was incorporated in the act of 1910, pursuant to the message of the President, and we have retained it in the pending measure; but I believe the definiteness of the termination of the grant is not what it ought to be, and I shall offer an amendment to make it more definite and certain.

Under the act of 1910 there were 14 special acts passed by Congress, and out of the 14 only 2 went to completion and became working projects. So that under the act of 1906 and under the act of 1910 there has been a total of 29 special acts passed and only 8 dams have been constructed thereunder, developing a total horsepower of only 140,000, an amount quite inconsequential when we consider the enormous possibilities in water-power development still available.

In regard to the amount of possible horsepower, it may be said that an estimate has been made showing that there are 7,000,000 horsepower available on the navigable streams of the United States, with the possible addition of 20,000,000 more on the upper reaches and the feeders of the navigable streams of the United States, making a total of 27,000,000 of possible horsepower. When we contemplate these figures we begin to realize the importance and the value of this pending legislation.

Hydroelectric power is still in its infancy. In the report of the Secretary of Agriculture, made to the Senate in January last, it was disclosed that there are in the United States 28,000,000 of primary horsepower and a maximum of 56,000,000 horsepower outside of any power which we may develop by the construction of reservoirs at headwaters. There is a total of 30,000,000 horsepower used to-day in the United States, derived from all sources; coal, oil, gas, and water, so that the horsepower available on navigable streams and tributaries is almost equal to the total horsepower now being developed by every source of power.

Mr. FESS. Will the gentleman yield there?

Mr. ESCH. Yes.

Mr. FESS. Of the possibility, how much is now realized?

Mr. ESCH. In horsepower?

Mr. FESS. Yes.

Mr. ESCH. There are between six and seven million horsepower developed to-day by water power, not a large fraction. It will be stated in the course of this debate that water power will supplant steam power, but this will never be. In 29 States of the Union to-day they are already using more horsepower than the primary water power available in those States. Those States, therefore, are already getting the maximum of water horsepower possible within their boundaries. Therefore, all

other additional power would have to come from coal, oil, or gas, unless the tremendous potential water power of the Rocky Mountain region can be sent farther and farther from its source than it is now being sent, the limit of transmission now being a little over 200 miles. So that while hydroelectric power will always play an important part in many States of the Union, unless the distance it can be transmitted is greatly enlarged its use must of necessity be very greatly restricted.

In some of the Western States the yield or production of hydroelectric power already exceeds the demand. If it can be transmitted to the Mississippi Valley and still farther east, it will add to the prosperity of the United States.

There is an ever-increasing use of hydroelectric power in the matter of transportation. The most remarkable achievement in this line is the electrification of 115 miles of the Milwaukee Transcontinental Line in the mountain region. It is contemplated to equip at least 450 miles. The 115 miles are already in operation and are proving a wonderful success.

As a tribute to hydroelectric power I wish to read a little headline that I saw in an advertisement of the new electric trains on the Milwaukee system. The lines are as follows:

The kingdom of steam was a limited monarchy.
The empire of electricity is an absolute but benevolent despotism.
Steam has its limitations in power and achievement—electricity has none.
The hundred years of steam have done their work and are now subordinate.
The thousand years of electricity have come to stay.

With reference to the pending bill, I wish to state that I agree with the chairman of the committee in the assertion that Congress should retain its control in the granting of consent to the grantee to build dams across the navigable waters of the United States. The Senate bill gives such power to the Secretary of War. The public-lands bill gives that power to the Secretary of the Interior. In this bill the applicant must come to Congress to get his permit. In river and harbor works every item and project is first passed upon by Congress; and the Chief of Engineers, for the most part, only superintends the construction, based on the plans he has devised. He has no authority to obstruct a navigable stream or make any improvement in the interest of navigation without first getting his warrant from Congress.

When we started the Reclamation Service we gave the money to the Department of the Interior to expend it on projects, leaving their selection and the amount to be expended on each to an administrative officer. But when its receipts fell behind its expenditures, when many projects that had been started could not be completed, when Congress found it necessary to come to the rescue by voting bonds or certificates of indebtedness to the extent of something like $20,000,000, Congress thought it was time to assume control. And so these projects and the amounts allotted to each are now passed upon by Congress. In my opinion, we should retain control over the granting privilege for the construction of bridges and dams across or upon the navigable waters of the United States. Is there anyone here who would favor investing any administrative officer with the right to determine the location of a dam like the Keokuk Dam across the Mississippi River, a project entailing an expenditure of over $20,000,000, and affecting the navigation of the greatest waterway we have in the United States? Your committee believes that we should lodge this jurisdiction in Congress itself.

Another matter as to which I shall offer an amendment is in giving the Secretary of War and the Chief of Engineers the right of demanding that a lock and accessory works be installed in any dam or dam project at the expense of the grantee at any time after the completion of the work and during the period of the grant. This bill does not have that provision, but the lock must be ordered installed when the original grant is made. Thereafter, if there is to be any lock constructed, it is to be done at the expense of the United States. When I offer my amendment I will discuss that more at length.

One of the great and crucial questions in this whole proposition is the right of demanding a charge by the Government for the water power that is developed. This bill, as I have already stated, omits any such proposition. The Senate bill omits such a proposition. The Ferris bill, covering dams constructed on streams in the public domain, permits a charge to be made, basing the right on the fact that the Government is not merely the sovereign but owns the riparian rights.

This question of a charge was ably debated on this floor in 1914, when the dam bill of that Congress was passed, and an amendment was offered giving the Secretary of War the right to impose a charge, with the right of changing the rate at certain specified periods. That amendment passed this House, if I remember rightly, by a vote of 143 to 45. A like amendment will doubtless be offered during the consideration of the pending measure.

In my opinion there can not be the slightest doubt as to the constitutional right of Congress to impose such a charge, and I base the right not upon the fact of riparian ownership, not upon the fact of the ownership of the bed of the stream, not on the right of State sovereignty, but upon the simple principle that whatever the Government has the right to grant as to that the Government has the right to name conditions. [Applause.]

Mr. SMITH of Minnesota. Mr. Chairman, will the gentleman yield for a question?

Mr. ESCH. Yes.

Mr. SMITH of Minnesota. What does the gentleman think about the wisdom of requiring such a charge?

Mr. ESCH. I believe it should be made.

Mr. SMALL. Mr. Chairman, will the gentleman yield?

Mr. ESCH. Yes.

Mr. SMALL. Of course, under the present law and this bill it has application to navigable waters?

Mr. ESCH. That is the only thing over which we have jurisdiction.

Mr. SMALL. And the Supreme Court has defined "navigable waters" as streams which may be navigated.

Mr. ESCH. Which are navigable, in fact.

Mr. SMALL. Now, suppose the streams are not navigable at this time, but by improvement through the necessary locks and dams they become navigable. This law would have application to such a stream?

Mr. ESCH. Yes.

Mr. SMALL. Now, as to a stream that is not navigable, the jurisdiction of the water power developed thereon still belongs to the State? Is that correct?

Mr. ESCH. I did not catch the last phrase of it.

Mr. SMALL. Streams that are nonnavigable; therefore, they are not affected by existing laws or the proposed amendment; they are under the jurisdiction of the States at the present time, and would be if this law were enacted?

Mr. ESCH. Yes. We have not jurisdiction over nonnavigable streams, intrastate.

Mr. SMALL. Now, the gentleman cited the interesting fact of the Milwaukee road having developed large power for the operation of its trains for a distance of about 150 miles. I do not understand that that hydroelectric power was developed upon navigable streams, but upon nonnavigable, for which no permit was asked or obtained from Congress.

Mr. ESCH. Some of it is on streams on the public domain, and therefore would be subject to such legislation as is contemplated in the Ferris bill, not legislation over which we in this bill would have jurisdiction.

Mr. SMALL. By reason of its being a nonnavigable stream?

Mr. ESCH. Yes; a nonnavigable stream.

Now I wish to call attention to another leading feature of this bill.

Mr. FERRIS. Mr. Chairman, will the gentleman yield there for a further question?

Mr. ESCH. Yes.

Mr. FERRIS. The gentleman was dealing with the question of a charge. I did not hear all the gentleman said. Is the gentleman in favor of a charge?

Mr. ESCH. Yes.

Mr. FERRIS. There is none in the bill now?

Mr. ESCH. There is not.

Mr. FERRIS. This matter is a mooted controversy at the other end of the Capitol?

Mr. ESCH. It is.

Mr. FERRIS. But it is not very much mooted at this end?

Mr. ESCH. It was not, if I could judge from the vote on that question in the preceding Congress.

Mr. FERRIS. It is also true as to two bills that recently passed the House affecting the price of a commodity, where both those bills bore a charge?

Mr. ESCH. Yes.

Mr. COOPER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. ESCH. Yes.

Mr. COOPER of Wisconsin. The gentleman has recited certain features of the bill concerning which the consent of the Secretary of War is to be obtained, and one was a provision which would require the consent of the Secretary of Commerce.

Mr. ESCH. That was under the act of 1906, for the establishment of fishways, where the consent of the then Secretary of Commerce and Labor had to be secured before the grantee could establish a fishway. We retain that power in the Secretary of Commerce. We still retain it.

Mr. FESS. I am still in the dark. The charge the gentleman refers to is still a limitation on the licensee; that Congress can say what charge he can make to the consumer?

Mr. ESCH. That is a condition precedent to the grant—that he must pay so much per horsepower developed at the dam.

Mr. STERLING. Mr. Chairman, will the gentleman yield?

Mr. ESCH. Yes.

Mr. STERLING. If the gentleman will look at the first two lines of section 2 of the amendment, on page 23——

Mr. ESCH. The gentleman means of the House bill?

Mr. STERLING. Yes. Does not the gentleman think the language there would give the Secretary of War and the Chief of Engineers the right to impose charges?

That as a part of such approval such conditions and stipulations may be imposed as the Secretary of War and the Chief of Engineers may deem necessary to protect the present and future interests of the United States.

Does not the gentleman think that broad enough to permit a charge to be made?

Mr. ESCH. That was the language in the original act of 1906. It was retained in the act of 1910, and we have put it into this bill. As I stated, President Roosevelt, in his veto of the James River dam bill, quoting those very words, said that they gave sanction to his contention that Congress had the right to make a charge; but because some have thought that the language was too indefinite to authorize the grantor to make such a charge it was thought best to set it forth in specific terms.

Mr. STERLING. Have the courts passed on the question?

Mr. ESCH. Not as to that language, so far as I know.

The decision of the Supreme Court of the United States in the Chandler-Dunbar case made it clear that the owner of the land would not have a property right in the flow of the water of a navigable stream; that the control remained in the Government, and so remaining the Government had the right to exact any conditions it saw fit for its use. Senators Root and Burton, Ex-President Taft, and Ex-Secretaries Stimson, Fisher, and Garrison all concur in the view that there can be no objection based on constitutional grounds to the exercise on the part of the Government of its right to exact charges for the development of water power. In fact, this right is conceded by those who object to the Government's making a charge when they admit its right to require of the grantee the maintenance and operation of locks required to be constructed in the interests of navigation. The cost of maintenance and operation of the locks and their lighting are permanent charges; and if these can be required, the Government can likewise require of the grantee charges based on the development of water power. In granting the right to build bridges over navigable waters Congress has repeatedly imposed the condition that the bridge shall be open to use by others aside from the original grantee, and that the charge per mile on such structures should not exceed the charge per mile on the approaches to such bridge. These conditions are in a sense charges made by the Government as conditions precedent to the granting of the franchise. If, then, there can be no constitutional objection raised to the right to make a charge for the development of water power, there arises the question of policy, Should such charge be made? In my opinion the Government should in specific terms retain the power to make a charge. The amount of the charge is not so material a matter. In fact, the charge in many instances might be small or even nominal, especially during the earlier years of the grant, with authority in the Secretary of War and Chief Engineer to adjust the rates at stated periods. If we fail to retain the power to make a charge in this bill, our action is irrevocable, and the Government loses not merely whatever revenue might be produced, but, what is of greater importance, loses that power of control which is absolutely necessary if these water-power resources are to be developed in the interests of the people to whom they belong. Already we have largely lost our heritage as a Nation in the coal, gas, oil, timber, and mineral lands with which we were so bountifully blessed. These are already in private ownership or in the control of syndicates with right to exact such prices as they see fit. Water powers constitute the last of our great natural resources still within Government control. The lessons of the past and our experiences resulting from our profligate policy with reference to our other natural resources ought to make us resist to the utmost any effort that would deprive the Government of any of its rights in connection with the development of water power. We have no right to rob the next generation of its rightful inheritance. We have no right to transmit to it a natural resource whose ownership in private hands may prove burdensome and oppressive.

To demand a charge for the water power actually developed at a dam built across navigable waters is not the levying of a tax as urged by those who believe that either the Government has no right or ought not to make a charge, but is more in the nature of a license fee. The essence of a tax is that it is not merely uniform but is compulsory. There is no compulsion when men are only subjected to a charge or fee for a project voluntarily entered upon. The Government in recent years adopted a policy too long delayed of charging a license fee in its disposition of coal, oil, and gas lands; but such fee can not be considered as a tax. It is the custom for many municipalities in the United States to charge public utilities such as street car companies, for the use of the streets even in cases where the fee of these streets does not belong to the municipalities but to the abutting owners. No one questions the right of such municipalities to make a charge for such use whether the charge be in the form of a percentage of gross receipts or so much per car.

In recent years Congress itself has established a precedent in the making of a charge for the use of water power in the case of the grant to the city of San Francisco for the development of the Hetch Hetchy Valley. While primarily designed for supplying this city with water a main object of this legislation was to permit this city to develop water power. Some three or four years ago a bill was introduced in the Senate authorizing the construction of a dam across the Connecticut River in Massachusetts. The bill as favorably reported to the Senate contained a provision authorizing the Government to make a charge for the horsepower developed.

It is estimated that under the pending bill, as well as under the Shields bill, at least 50 per cent of the water-power development will be by private individuals, firms, or corporations for manufacturing purposes and not for the purpose of supplying public utilities. As the bill now stands and without the right given the Government to make a charge, such private individuals, firms, or corporations could secure their grants from the Government practically free of charge, and hence free of any control as to rates either through a State commission, the Secretary of War, or the Interstate Commerce Commission. In most instances the power they would develop would be used at the point of development, and there would be no transmission lines giving the business an interstate character, thus subjecting it to control. While it is true that the construction of a dam for such manufacturing purposes might benefit the Government in furnishing slack-water navigation at points in a navigable stream where navigation would otherwise be impossible, and while the locks and accessory works would have to be furnished at the expense of the grantee, nevertheless there would be no regulation either as to service or prices of output. If, on the other hand, the Government by an amendment to this bill were authorized to make a charge, the Government through the control which the imposition of a charge would permit, would be in a position to prevent unconscionable profits. Why under such conditions would it not be the part of wisdom for the Government to offer reductions in the charges for the water power developed on condition that the grantee, the manufacturer, or producer make corresponding or reasonable reductions in the cost of the product to the consumers?

It is contended in this debate that the imposition of a charge by the Government for the water power developed would discourage investment of capital in water-power projects. There has been tremendous development in the mountain States in recent years under revocable permits where there was no definiteness of term and where the Government made a charge for the water power developed. If capital can invest under such conditions, it ought to invest in a project where there is a fixed term of at least 50 years with a certainty that the actual cost of their lands and rights of way and the fair value of the other property, such as buildings, machinery, transmission lines, and so forth, would be repaid to the grantee by the Government or a new grantee at the end of the term. So eagerly have the water powers of the mountain States been taken up by great groups or syndicates that in quite a number of these States the power already developed is considerably in excess of the demand, and in several a majority of the horsepower, both developed and undeveloped, has already gone into the hands of a single corporation or syndicate. The further fact that their rates were subject to the regulation and control of the several State commissions, even to the control in some instances of the issuance of stocks and bonds, did not discourage investment.

As a rule the rates charged by a hydroelectric company to the consumer will be such as the traffic will bear; that is, they will approximate the rates charged for the production of power by steam. Steam therefore will, in a large measure, fix the cost of hydroelectric power. Owing to its greater convenience, there will always be a preferential demand for electric power. If, then, it is an actual fact that hydroelectric power can be generated at considerably less cost than by the use of coal, oil, or other fuel in regions where coal is not found or must be hauled a

considerable distance, there is a possibility of producing power by electricity considerably cheaper than by the use of coal, oil, or other fuel. If, under such circumstances, a charge is made by the Government, such charge will not be added to the cost to the consumer or be reflected in the rates, but will be deducted from the profits which the grantee would otherwise put in his own pocket. It is also to be remembered that whereas our supply of coal, oil, and gas is more or less limited, our rivers will continue to run to the sea for all time to come and hence make available a perpetual power, a power which therefore will continue to grow more and more valuable as time goes on, and this furnishes another reason why this Congress should not relinquish irrevocably the rights it now possesses and the powers it now can exert over the last of our great natural resources—water power. If the terms and conditions of the pending legislation are considered too severe to encourage capital to invest, a subsequent Congress can mitigate the terms and conditions, but if we fail to exercise now the rights which we have under the Constitution we may sacrifice the interest of this and subsequent generations in favor of private interests.

The grant of a permit to construct a dam across a navigable stream gives a monopoly to the grantee. Under the provisions of the bill rights of eminent domain can be exercised in the condemnation of private property. The grantee is thus permitted to exercise rights of sovereignty. From the very nature of things he is given a monopoly, and hence should be subject to regulation and control as is provided in the pending bill. A monopoly of water power may mean a monopoly of transportation, heat, light, and power for manufacturing and public uses. Without regulation no such monopoly could or should be tolerated. In the words of Senator Burton:

> The possibility of a control of a business of a country through the agency of water power is more imminent than any other form of control ever attempted in the history of human endeavor.

The pending bill not merely provides for the regulation of the rates for hydroelectric power charged to consumers, but also gives the Secretary of War control over the stock and bond issues of the grantee, with full access to books and records, and with requirements for accounting and special or regular reports. Under these provisions the unit of cost can be ascertained and profits determined. The stock watering thus curbed or entirely eliminated and profits on only bona fide investment made more certain, the charge prescribed by the Government would be more easily met and the hope of success for the project increased.

The State can tax the physical properties of a power plant within its boundaries, but not the franchise for its construction, which the Government alone can grant, and for the granting of which the Government alone should be permitted to levy a charge. The franchise is in its nature a special privilege, for which, like other privileges, the Government can ask compensation. For a hundred years we have been legislating for and in behalf of contract rights or vested interests, but the day is now here when we should so legislate as to bring the people back to their own.

Upon the termination of the 50-year term, section 10 of the pending bill provides the method by which the Government can recapture or take over the possession of the power plant and its necessary appurtenances, including transmission and distributing lines. Three alternatives are provided: First, the Government may itself take over the property; or, second, authorize a third party to take it over; or, third, make a new grant under the terms of the law then applicable to the original grantee. In taking over the property by the Government or a third party authorized by it, the original grantee is to receive only the actual cost of what may be termed the nonperishable property—that is, the lands upon which the dam is built, the flowage rights thereto, and rights of way for transmission lines—and the reasonable value of the perishable property—that is, the structures, machinery, and transmission and distributing lines—but nothing for the value of the franchise or good will or profits to be earned on pending contracts or any other intangible elements. The unearned increment is not to be reimbursable. It is contended that these provisions as to recapture at the end of the 50-year term are unfair to the original grantee and may discourage the investment of capital. If, however, these terms are compared with those in other countries, where water-power development has been made in recent years, it will be found that the terms of the pending bill are comparatively generous.

Italy grants concessions for water power for a period of not longer than 30 years on annual rental.

In France:

> Power plants on national lands are developed under concessions for periods not exceeding 50 years, at the expiration of which the grantee, if concession be not renewed, is required to restore the premises to the conditions previously existing, or deliver the plant to the nation without indemnity as the nation may elect. The amount of rental to be paid is required to be fixed in the articles of concession.

In Norway:

> The law authorizes the granting of concessions for power development for a period of 60 years and a maximum of 80 years. When the concession expires the land, with improvements and works, reverts to the Government. Various payments for the privilege are required, among them the establishment of a poor fund under public control, the surrender of a certain percentage of produced power to the community, also to the central Government, and in certain specified developments there may be assessed a yearly tax of 1.25 crowns for every horsepower over 500.

In the Dominion of Canada:

> The law authorizes the issuance of licenses for 21 years, renewable for three further terms of like extent at a fixed fee payable annually, and providing that upon the termination of a license the works may be taken over by the Government upon payment of the value of the actual and tangible works, and of any lands held in fee in connection therewith.

In the Province of Ontario, where the term of the lease is not exceeding 20 years with the right of renewal for two further and successive terms of 10 years each upon rentals stated in the lease, and upon such other terms and conditions as the minister may prescribe, the privileges upon the termination of the lease—

> together with all dams and other structures or works made or erected by the lessee in connection therewith, revert to and become the property of the Crown, subject, however, to the right of the lessee to remove machinery, failure in which removal shall become the property of the Crown, also subject to the payment of compensation to the lessee of such sums as the minister may deem proper for buildings or structures of a permanent character and necessary or useful for the development or utilization of the water privilege.

When it is considered that in the construction of some of these dams upon the larger navigable rivers years will be required for the completion of the dams, and in many instances 10 years or even longer may be required before a market can be found for the full horsepower development of a given project, I do not believe that a term of 50 years is too long. A less period would discourage investment and prevent, or at least hinder, financial success.

There is another feature of the bill to which I wish to call attention, and that is to the closing two lines of section 3, where, as between two or more contesting applicants equally well qualified to undertake the work of constructing a dam and developing the region as to water power and navigation, "preference shall be given to the one who has first complied with the laws of the State or States in which the dam is to be constructed."

I shall offer an amendment basing the preference, as follows:

> Which offers in good faith to the United States the most favorable terms for taking over the property at the end of the franchise and the lowest rates for public service under the franchise under the provisions of this act.

When we come to the consideration of the bill under the five-minute rule I shall seek to give my reasons therefor. [Applause.]

I have consumed more time than I had expected. I yield five minutes to the gentleman from Minnesota [Mr. SMITH].

---

## The Agricultural Department and Practical Farming.

### EXTENSION OF REMARKS

OF

### HON. FINLY H. GRAY,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, May 11, 1916.*

Mr. GRAY of Indiana. Mr. Speaker, this elaborate and extensive Department of Agriculture provided by the Government and maintained at great cost to the people is in vain unless the same is brought within the reach of farmers and made to serve them.

The farmers of the country, either separately as individuals or as organized associations, must be informed of what information, assistance, and cooperation is available to them from this deaprtment.

They must know where to make application for such information, assistance, and cooperation.

They must have their applications for such information and assistance promptly, fully, and plainly complied with.

They must be able to receive special instruction on particular subjects of farming and as to improved methods of agriculture.

They must have demonstration of such methods made on farms in their own communities and in actual farm operations

and with implements and facilities available to farmers in such communities, instead of being compelled to depend upon reports of demonstrations at specially equipped agricultural stations, and which can not be followed in actual farm operations.

To meet these requirements there must be in the Department of Agriculture a special bureau of farm information, to which every farmer in the country may apply for and receive special instruction in any of the various branches of farming in which he may be interested and may also secure demonstrations in connection therewith and conducted in actual farm operations and on farms in their own communities.

To this end I will introduce a bill to create a bureau of farm information in the Department of Agriculture and, among other functions to be performed, providing duties as follows:

To receive and take up for compliance all applications for information from farmers and to furnish from the proper bureau, division, or office of the Department of Agriculture special instuction in improved methods of agriculture;

To assemble and collate all information published or otherwise available from the various bureaus, divisions, and offices of said department relating to such inquiries and of practical value in farming, and to transmit the same with such special instruction;

To furnish, from time to time, such supplemental information to farmers to whom special instruction has been given as may be necessary to enable such instruction to be properly carried out;

To arrange for demonstrations of improved methods of agriculture under actual farming conditions and with facilities generally available upon farms in the respective localities where conducted;

To conduct all correspondence relative to the above-mentioned functions and duties; to have charge of all papers, books, and writings in connection therewith; and to keep a record of all such applications, the proceedings had in connection with such instruction, and the results obtained; and

To devise means of coordinating, as far as possible, all work done by or under the supervision of the Department of Agriculture, with a view of making the results of such work most available for the information and instruction of farmers, and of farm associations.

## Public Buildings.

### EXTENSION OF REMARKS

OF

### HON. FRANK CLARK,

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 25, 1916.*

**Mr. CLARK of Florida.** Mr. Speaker, I dislike very much to again consume the time of the House with relation to the public-buildings bill recently reported by the Committee on Public Buildings and Grounds, but I am quite sure that it is my duty to take a very few minutes in which to refute a glaring falsehood which is being industriously circulated over the country. A firm of brokers located at 115 Broadway, New York, and known as H. P. Taylor & Co., have issued a bulletin which they call Circular No. 296, and in this document they attack the river and harbor bill, the good-roads bill, the public-buildings bill, and the Congress itself.

Life is entirely too short for me to undertake to follow these creatures through all their misrepresentation of and slanderous statements with reference to these different bills and the committees which reported them. The bulletin as a whole is simply saturated through and through with slander, falsehood, malice, and venom. While this bulletin is so palpably false upon its face, yet, as some good citizen into whose hands it may come might be misled, I shall briefly call attention to the statements made therein with relation to the public-buildings bill. Taylor & Co. say they quote from the New York Times when they print the names of 15 towns which they claim are included in the bill for the respective amounts stated. I do not know, Mr. Speaker, whether they quote from the New York Times or not; but if the New York Times has ever made the statement that these 15 towns were included in the bill, then the New York Times and H. P. Taylor & Co. belong to different classes of falsifiers. The New York Times would be an originating perverter of the truth, and H. P. Taylor & Co. would be a circulating medium of falsehood. I want to submit the main portion of this circular referring to the public-buildings bill, and especially the names of the 15 towns, so that any person may determine for himself from the record what the truth of this matter is. This portion of the circular is as follows:

As for the public-buildings bill, it is entirely within the bounds of fair statement to characterize it as the boldest and most unblushing raid on the Treasury which has been undertaken for a generation. One of the most reliable and reputable newspapers in the country, the New York Times, has felt constrained to expose the "pork" appropriations in the public-buildings bill, and from its exhibit we take the following items:

| Post office. | Population. | Annual receipts. | Cost of building. |
|---|---|---|---|
| Grand Canyon, Ariz | 209 | $5,312 | $25,000 |
| Susanville, Cal | 638 | 7,058 | 60,000 |
| Mancos, Col | 567 | 4,040 | 50,000 |
| Brooksville, Fla | 979 | 5,566 | 100,000 |
| Greenville, Pa | 909 | 2,848 | 60,000 |
| Hailey, Idaho | 1,231 | 6,073 | 100,000 |
| McKee, Ky | 146 | 526 | 75,000 |
| Saylersville, Ky | 310 | 1,161 | 75,000 |
| Clayton, N. Mex | 970 | 7,848 | 125,000 |
| Pembina, N. Dak | 717 | 2,027 | 75,000 |
| Franklin, N. C | 379 | 1,433 | 75,000 |
| Pawnee, Okla | 2,161 | 8,714 | 200,000 |
| Seneca, S. C | 1,313 | 5,289 | 100,000 |
| Louisa, Va | 318 | 5,084 | 50,000 |
| Sundance, Wyo | 281 | 2,989 | 75,000 |

Of course, no objection can reasonably be made to the prosecution of deserving and "good-faith" river and harbor works or to the erection of suitable buildings of the Government in cities where they are actually needed. In Pittsburgh, for example, the need of a new post-office building has long been so urgent that the Government paid nearly $1,000,000 for a site 11 or 12 years ago. The site is still unimproved, and the business interests of the community meanwhile suffer from insufficient postal facilities, while southern and western villages destitute of either industry or commerce are the objects of the prodigal generosity above indicated. A Pittsburgh newspaper points out that if Pittsburgh, with its population of 700,000 and its annual postal receipts of $3,000,000, were treated as lavishly as McKee, Ky., or Sundance, Wyo., it would at once receive a new post-office building appropriation of $210,000,000, instead of which it gets nothing.

It is claimed in this article that the bill carries for each of the 15 towns named an authorization for the amount mentioned for each. This statement, I understand, is sent broadcast over the United States and the people asked to believe that it is true, and yet the fact is that only 2 of the 15 towns are mentioned in the bill at all. Nowhere within the bill, from beginning to end, can you find the name of either of the other 13 towns, and this is just about as near the truth as the average critic of the public-building legislation of Congress ever gets. But these people do not even tell the truth about the two towns in their list which are named in the bill. Take Susanville, Cal. These people say that Susanville has a population of 638, postal receipts of $7,058, and gets $60,000 for a building, leaving the impression that the post office is the only Federal activity at Susanville. For a wonder, they came pretty close to the postal receipts and close to what the population was six years ago, but they did not state the further fact that there is at Susanville a United States land office, Weather Bureau, Forestry Service, and veterinary service, the employees of all to be housed in the same building with the employees of the post office. Nor did they state that the bill only carries for Susanville an authorization of $10,000 with which to acquire a site. No building is authorized for Susanville at all.

The next and only other town named in their list of 15 which appears in the bill at all is Greenville, Pa. These people say that Greenville has a population of 909 and postal receipts of $2,848 per annum, and that the bill authorizes a building there to cost $60,000. The truth is that the census of 1910 gave Greenville, Pa., a population of 5,909, and the postal receipts for the fiscal year ending June 30, 1915, were $31,245.42, and the bill carries an authorization of $75,000 to purchase a site and construct a building. So you see H. P. Taylor & Co. have lied unblushingly about the two towns in their list which do appear in the bill; and as to the other 13, their lies were simply manufactured out of the whole cloth. There is absolutely no excuse under the sun for the circulation of these deliberate, wanton, uncalled-for, and malicious lies. This bill has been printed—it is a public document—and is accessible to any person who may desire to see it, and the facts upon which the committee acted in framing the bill are likewise accessible to the public, and therefore there is not the slightest excuse for the circulation of such infamous, slanderous, false, and malicious documents with which these perverters of the truth are now flooding the mails.

I will simply mention Pittsburgh, to which they refer. Congress did authorize the purchase of a site at Pittsburgh about

10 years ago. The then Secretary of the Treasury went to Pittsburgh in person and selected it, and paid $940,000 for it. It was a site entirely unsuited for the purpose, and the representative citizens of Pittsburgh strongly protested against erecting the Government's building on it, and Congress has been trying ever since to sell it. Although for the past 10 years Pittsburgh has grown wonderfully, and although real estate in Pittsburgh has steadily advanced in value, this Government lot can not be sold to-day, according to the information of the committee, for over $200,000—a clear loss of $740,000 and interest for 10 years. Neither Congress nor its committee bought that lot. Where, then, does the blame lie for this transaction? Why can not H. P. Taylor & Co., and other such slanderers, if they really want to save the country, cease downright and inexcusable lying for a season and pick up a few of these real extravagances and issue a few circulars about them? Will they, or do they just naturally prefer falsehood to truth?

---

**The Full Territorial Form of Government for Alaska.**

## EXTENSION OF REMARKS
OF
## HON. JAMES WICKERSHAM,
OF ALASKA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 25, 1916.*

Mr. WICKERSHAM. Mr. Speaker, under the unanimous-consent leave granted to me to extend my remarks in the RECORD on the subject of "The full Territorial form of government for Alaska," I desire to call special attention to the necessity for the enactment of laws so extending the old organic acts of the Territory as to meet present-day necessities.

The people of Alaska are Americans and proud of their citizenship; as a class they are law-abiding and liberty loving. They were nurtured in free American homes and educated in the common schools. They are naturally democratic in their ideas and devoted to the principles of a republican form of government. When called to assist in constructing government on the frontier they know of but one American plan to follow—that plan which our forefathers embodied in the Constitution and which has been adopted in every American Territory or State organized under the flag of the Union.

But, alas, there was opposition to adopting that plan in the development of Alaskan government. Not only was there opposition but its strongest antagonists were those who were responsible for maintaining government in the northern Territory. The opposition to the creation of an elective legislative body for Alaska, such as all other American Territories had, came from President Taft and his administration. The opposition to the creation of a full Territorial form of government for Alaska now comes from President Wilson and his administration. The invisible forces which organized the opposition to a more perfect government for the people of Alaska under both administrations are those powerful interests which desire to seize, own, and exploit the great undeveloped resources of Alaska, free from governmental control.

The Taft administration sought to impose the Beveridge bill on us, for the creation of an appointive legislative commission composed in part of officers of the United States Army, under the control of the Bureau of Insular Affairs in the War Department, with autocratic powers of government over our people and unlimited authority to dispose of and to manage the undeveloped resources of the Territory. The Wilson administration now seeks to withdraw from our people what few legislative powers we captured from the Taft administration, after a long and bitter struggle, and to transfer their exercise to irresponsible appointees and bureau chiefs in Washington, by authorizing them to enact rules and regulations, having the force of law, for our government, without our knowledge or consent.

1. UNDER THE TAFT ADMINISTRATION.

For 45 years under the Government of the United States Alaska was without a law-making body. During that period, though Congress had the power, it did little to encourage the improvement of government there. When the Sixty-first Congress convened in special session on March 15, 1909, no provision had yet been made for the creation of a Territorial legislature for Alaska, and it became my duty to offer a bill to create such an assembly. On June 7, 1909, I introduced the bill H. R. 10418, "to create a legislative assembly in the Territory of Alaska, to confer legislative power thereon, and for other purposes." The bill was carefully copied from the standard type used by Congress in creating all other Territories, and had nothing new or dangerous in it. But there was instant opposition. It came from those big interests which had already preempted large holdings in Alaskan transportation, coal, copper, fisheries, and other valuable undeveloped resources, and who wished to exploit the Territory without hindrance. So active and efficient was this opposition that it persuaded President Taft to denounce the plan adopted in all other American Territories, proposed by my bill, and this he did in vigorous language in his messages to Congress of December 7, 1909, December 6, 1910, and February 2, 1912. As an offset to the plan of an elective Territorial legislature coming from the body of the people, there was prepared, under Mr. Taft's direction, in accordance with the views stated in his previous message, a bill providing for the appointment by the President of a legislative commission of nine members, including the governor, one or more of whom might be officers in the United States Army, the commission to report to and be under the control of the Bureau of Insular Affairs in the War Department and to have autocratic legislative and administrative power in Alaska.

This bill was introduced in Congress by Senator Beveridge, and it is generally known as the Beveridge bill. The issue was squarely made by President Taft in this bill and in his messages. On the one side the Delegate from Alaska contended for the enactment of a law creating the elective legislature, with the powers always theretofore given to Territorial legislatures; on the other the President and his administration, aided by the big-interest lobby, which knew what it wanted, urged the acceptance of the Beveridge bill, which placed all power in the hands of a small body of the appointees of the President.

The struggle between these two contending forces was long-continued and unpleasant. However, in time the Beveridge bill failed in the Senate, and in the Sixty-second Congress the elective-legislature bill was favorably reported, passed, and on August 24, 1912, signed by President Taft. The big interests engaged in exploiting Alaska finally contented themselves with procuring the insertion of amendments in the bill limiting the power of the Alaska Legislature over the fisheries, schools, roads, and other important matters of local concern which had always theretofore been controlled by a Territorial legislature. These limitations, being those most generally complained of by the people of Alaska, are found in section 3 of the act of August 24, 1912, creating the legislative assembly in Alaska and giving it legislative power, and are as follows:

That the authority herein granted to the legislature to alter, amend, modify, and repeal laws in force in Alaska shall not extend to * * * (1) the game, fish * * * and laws relating to fur-bearing animals * * * (2) or to the laws of the United States providing for taxes on business and trade, or to the act entitled "An act to provide for the construction and maintenance of roads, the establishment and maintenance of schools, and the care and support of insane persons in the District of Alaska, and for other purposes," approved January 27, 1905, and the several acts amendatory thereof.

The first group of limitations withdrawing from the control of the legislature the game, fish, and fur-bearing animals of Alaska was put into the bill by amendments on the floor of Congress, over my protest, while the second group, withdrawing power from the legislature over taxes on business and trade, the roads, schools, and insane, was put in through the influence of the Alaska Board of Road Commissioners to prevent the legislature from reducing the amount of money in the Alaska fund or from controlling or limiting the board's activities in Alaska. The Delegate from Alaska protested against these limitations upon the legislative powers in Alaska, but was defeated on the floor of Congress in both matters. These limitations, and others in the bill as it was passed, were not in the bill as introduced.

2. UNDER THE WILSON ADMINISTRATION.

Every one in Alaska hoped that when the Wilson administration was seated a wider range of government would be conferred on the Territory by the proper extension of our legislative powers, until we would be given "full Territorial form of government." Of course, the trouble over the passage of the legislative bill under the Taft administration is water over the wheel, but it seems to be equally as difficult to get legislation from the Wilson administration to remedy the defects which time has disclosed to exist in our organic law, whether by the growth of new demands in the Territory or occasioned by the amendments forced in it on its passage, as it was to get the original enactment.

The deficiencies in the organic act creating the legislature have been purposely exaggerated by those politicians and newspapers in Alaska who prefer to contend for political advantage rather than to assist in securing better government for the people. Their constant effort is to find a way how not to do it, and then cry out that the law is faulty. But there are well-known defects and limitations in all organic acts for Territo-

ries, always were, and always will be, and that fact is well recognized by the people of Alaska. In the Democratic Territorial platform for 1912, among its resolutions that party declared "that the Democratic Party regards and has always regarded Territorial government as but a temporary makeshift and a preparatory step to complete statehood."

And yet until we can secure statehood for Alaska every good citizen of the Territory must seek for the best laws possible with which to maintain and develop its government and resources. While I have not always been patient with my opponents in Alaska in seeking to tear down what I have so laboriously attempted to build up, I have not failed to note suggestions for the betterment of our organic laws. Even when I the benefit of the doubt to the people of the Territory and sought to secure a wider range of power for our legislature, even though, in my judgment, it already exists in statutes which are not heeded.

3. THE FULL TERRITORIAL FORM OF GOVERNMENT BILL.

On January 4 last I introduced H. R. 6887 in the House and caused it to be referred to the Committee on the Territories. The bill is as follows:

A bill (H. R. 6887) to establish the full Territorial form of government in Alaska, to amend the act of Congress approved August 24, 1912, entitled "An act to create a legislative assembly in the Territory of Alaska, to confer legislative power thereon, and for other purposes," and for other purposes.

*Be it enacted, etc.*, That there be, and is hereby, created and established the full Territorial form of government in Alaska, and the legislature of said Territory is hereby authorized and empowered to have and exercise the full powers of Territorial legislation heretofore given to and exercised by the Territorial legislatures of other Territories of the United States.

SEC. 2. That the governor of Alaska shall reside in the Territory during his term of office, and he shall be commander in chief of the militia thereof. He may grant pardons and reprieves and remit fines and forfeitures for offenses against the laws of the Territory and respites for offenses against the laws of the United States till the decision of the President can be made known thereon. He shall commission all officers who are appointed under the laws of such Territory and shall take care that the laws thereof be faithfully executed.

SEC. 3 That the Legislature of Alaska is hereby empowered and authorized to provide for county form of government in the Territory; and so much of section 9 of the act of August 24, 1912, entitled "An act to create a legislative assembly in the Territory of Alaska, to confer legislative power thereon, and for other purposes," as provides that no acts or laws passed by the Legislature of Alaska providing for a county form of government therein shall have any force or effect until it shall be submitted to and approved by the affirmative action of Congress is hereby repealed.

SEC. 4. That all Territorial, township, district, and county officers, including justices of the peace and officers of the militia, shall be appointed or elected in such manner as may be provided by law enacted by the legislature of the Territory; and all other Territorial officers not herein otherwise provided for the governor shall nominate and, by and with the advice and consent of the legislative senate, shall appoint, and the officers so appointed shall hold their offices for the period fixed by law unless sooner removed agreeably to the laws of the Territory. And whenever a vacancy happens from resignation or death during the recess of the legislative senate in any office which is to be filled by appointment of the governor, by and with the advice and consent of the Territorial senate, the governor shall fill such vacancy by granting a commission which shall expire at the end of the next session of the legislative senate.

SEC. 5. That the Legislature of Alaska is hereby empowered and authorized to create a supreme court in said Territory, which shall have appellate jurisdiction in all Territorial causes arising therein, to provide for the appointment or election of the judges and other necessary officials thereof, and to fix and pay their compensations.

SEC. 6. That the Legislature of Alaska is hereby empowered and authorized to provide by law for the appointment or election of a Territorial attorney general and county or district Territorial attorneys, to provide their duties and powers, and to fix and pay their compensation.

SEC. 7. That section 3 of the act of Congress approved August 24, 1912, entitled "An act to create a legislative assembly in the Territory of Alaska, to confer legislative power thereon, and for other purposes," and constituting section 410 of the Compiled Laws of Alaska, 1913, be, and the same is hereby, amended to read as follows:

"SEC. 3. That the Constitution of the United States, and all the laws thereof which are not locally inapplicable, shall have the same force and effect within the said Territory as elsewhere in the United States; that all the laws of the United States heretofore passed establishing the executive and judicial departments in Alaska shall continue in full force and effect until amended or repealed by act of Congress; that except as herein provided all laws now in force in Alaska shall continue in full force and effect until altered, amended, or repealed by Congress or by the legislature: *Provided*, That the authority herein granted to the legislature to alter, amend, modify, and repeal laws in force in Alaska shall not extend to the customs, internal-revenue, postal, or other general laws of the United States or to the fur-seal laws of the United States applicable to Alaska. And the legislature shall pass no law depriving the judges and officers of the district court of Alaska of any authority, jurisdiction, or function exercised by like judges or officers of district courts of the United States."

And the provisions of said section 3 not included in the foregoing amended section be, and they are hereby, repealed.

SEC. 8. That section 9 of the act of Congress approved August 24, 1912, entitled "An act to create a legislative assembly in the Territory of Alaska, to confer legislative power thereon, and for other purposes," and constituting section 416 of the Compiled Laws of Alaska, 1913, be, and the same is hereby, amended to read as follows:

"SEC. 9. The legislative power of the Territory shall extend to all rightful subjects of legislation not inconsistent with the Constitution and laws of the United States, but no law shall be passed interfering with the primary disposal of the soil; no tax shall be imposed upon the property of the United States; nor shall the lands or other property of nonresidents be taxed higher than the lands or other property of residents; nor shall the legislature grant to any corporation, association, or individual any special or exclusive privilege, immunity, or franchise without the affirmative approval of Congress; nor shall the legislature pass local or special laws in any of the cases enumerated in the act of July 30, 1886; nor shall it grant private charters or special privileges, but it may, by general act, permit persons to associate themselves together as bodies corporate for manufacturing, mining, agricultural, and other industrial pursuits, and for the conduct of business of insurance, savings banks, banks of discount and deposit (but not of issue), loans, trust, and guaranty associations, for the establishment and conduct of cemeteries, and for the construction and operation of railroads, wagon roads, vessels, and irrigating ditches, and the colonization and improvement of lands in connection therewith, or for colleges, seminaries, churches, libraries, or any other benevolent, charitable, or scientific association, but the authority embraced in this section shall only permit the organization of corporations or associations whose chief business shall be in the Territory of Alaska; no divorce shall be granted by the legislature, nor shall any divorce be granted by the courts of the Territory, unless the applicant therefor shall have resided in the Territory for two years next preceding the application, which residence and all causes for divorce shall be determined by the court upon evidence adduced in open court; nor shall any lottery or the sale of lottery tickets be allowed; nor shall the legislature or any municipality interfere with or attempt in any wise to limit the acts of Congress to prevent and punish gambling, and all gambling implements shall be seized by the United States marshal or any of his deputies, or any constable or police officer, and destroyed: *Provided*, That nothing herein shall be held to limit the power of the legislature from passing laws for the more effectual suppression of gambling; nor shall spirituous or intoxicating liquors be manufactured or sold, except under such regulations and restrictions as Congress shall provide: *Provided*, That nothing herein shall be held to limit the power of the legislature from passing laws to submit to a vote of the people of Alaska the prohibition of the sale and manufacture of intoxicating liquor in the Territory; nor shall any public money be appropriated by the Territory or any municipal corporation therein for the support or benefit of any sectarian, denominational, or private school, or any school not under the exclusive control of the Government; nor shall the government of the Territory of Alaska, or any political or municipal corporation or subdivision of the Territory, make any subscription to the capital stock of any incorporated company, or in any manner lend its credit for the use thereof; that all authorized indebtedness shall be paid in the order of its creation; all taxes shall be uniform upon the same class of subjects and shall be levied and collected under general laws, and the assessments shall be according to the actual value thereof; no tax shall be levied for Territorial purposes in excess of 1 per cent upon the assessed valuation of property therein in any one year; nor shall any incorporated town or municipality levy any tax, for any purpose, in excess of 2 per cent of the assessed valuation of property within the town in any one year: *Provided*, That the Congress reserves the exclusive power for five years from the date of the approval of this act to fix and impose any tax or taxes upon railways or railway property in Alaska; and all laws passed, or attempted to be passed, by such legislature in said Territory inconsistent with the provisions of this section shall be null and void: *Provided further*, That nothing herein contained shall be held to abridge the right of the legislature to modify the qualifications of electors by extending the elective franchise to women.

And the provisions of said section 9 not included in the foregoing amended section be, and they are hereby, repealed.

SEC. 9. That in addition to the powers now authorized to be exercised by the Legislature of Alaska, its legislative power shall extend to and over all the fish and fisheries of Alaska, and all wild animals and birds thereln, and the legislature shall pass laws for the conservation, protection, and regulation thereof, and may levy and collect for Territorial use a license tax on trades and business, including the fish and fisheries, and may control the domestication of all wild animals and birds, and provide for the erection of fish hatcheries and stocking barren streams and lakes with fish.

SEC. 10. That all the provisions of the following acts of Congress shall extend to and be in force in Alaska, to wit: The act approved July 30, 1886, entitled "An act to prohibit the passage of local or special laws in the Territories of the United States, to limit Territorial indebtedness, and for other purposes"; the act of March 4, 1898, entitled "An act to amend an act to prohibit the passage of local or special laws in the Territories, to limit Territorial indebtedness, etc."; and the act of June 6, 1900, entitled "An act to amend an act to prohibit the passage of special or local laws in the Territories, to limit the Territorial indebtedness, etc.," and all acts amendatory thereof.

4. DEMOCRATIC PLEDGES TO ALASKA.

The Committee on Territories is composed of 10 Democrats and 6 Republicans. The Wilson administration is Democratic in every branch. In his message to Congress, on December 2, 1913, President Wilson said:

A duty faces us with regard to Alaska which seems to me very pressing and very imperative; perhaps I should say a double duty, for it concerns both the political and the material development of the Territory. The people of Alaska should be given the full Territorial form of government, and Alaska, as a storehouse, should be unlocked.

In the Democratic Territorial platform adopted at Skagway, on August 4, 1914, the party declared:

The Democratic Party of Alaska, in convention assembled, therefore pledges itself and its candidate for Delegate to Congress to cooperate with the national administration in securing the following beneficial legislation: (1) An amendment to the organic act, so that, in the words of the President, Alaska may have a "full Territorial form of government," enlarging the powers of the Territorial legislature to every needful subject of legislation not of a strictly national character.

The bill (H. R. 6887) was prepared by me to cover every supposed or known defect in the organic act, and was specially intended to cover those defects pointed out in House joint memorial No. 3, introduced in the Territorial legislature on March 12, 1915, and printed at page 53 of the Journal of the House of Representatives of Alaska. This memorial was publicly approved by those Democratic administration papers

at Juneau as pointing to the amendments to the organic act necessary to give Alaska "the full Territorial form of government." H. R. 6887 was introduced by me to give Alaska just that addition to our powers of government which President Wilson and his official representatives declared we ought to have.

Since the people of Alaska and the Delegate wished to secure those additions, it seemed it would be an easy and pleasant task, with the assistance of the Wilson administration, to pass the bill. But again, alas, for there is still opposition to adding to the powers of the people of Alaska so as to give them "the full Territorial form of Government," even though the President of the United States had personally pledged it in his message to Congress.

5. AN ADVERSE REPORT.

It is the invariable practice in Congress when a bill is introduced having some relation to matters within the jurisdiction of a department for the chairman of the committee to refer it to the Secretary with a request that it be carefully examined, and the committee be advised as to the desirability of its enactment. That course was taken with House bill 6887, and on January 6, two days after it was introduced, Chairman HOUSTON, of the Committee on the Territories, transmitted copies thereof to the Attorney General and to the Secretary of Commerce for examination and report with recommendations. The Attorney General declined to report on or recommend the bill, but the Secretary of Commerce did not fail to come forward promptly with an adverse report. The following official communication was received by Chairman HOUSTON:

WASHINGTON, *January 18, 1916.*

Hon. W. C. HOUSTON,
*Chairman of the Committee on the Territories,*
*House of Representatives.*

MY DEAR CONGRESSMAN: Your letter of January 6, directed to the Secretary, inclosing House bill 6887, and stating that you would be pleased to have his recommendation in regard thereto, was, under his instructions, referred by me to the Bureau of Fisheries. I am this morning in receipt of a report from the bureau upon the bill in question, setting forth its objection thereto, which I herewith transmit to you.

If there is any further information in regard to the bill that you care to have, we will be glad to furnish it to you if we can do so. I will also be glad to have a representative of the bureau at your committee hearings on the bill, if you so desire.

Very truly, yours,

A. L. THURMAN, *Solicitor.*

The letter from the Bureau of Fisheries, which was the only answer made by Secretary Redfield to the request for a recommendation on the bill for "the full Territorial form of government" in Alaska, was written by the commissioner of that bureau. It opposes the bill, and not only denounces it but the people of Alaska as well. So far as it is pertinent the letter is as follows:

DEPARTMENT OF COMMERCE,
BUREAU OF FISHERIES,
*Washington, January 12, 1916.*

Mr. A. L. THURMAN,
*Solicitor Department of Commerce.*

DEAR MR. THURMAN: In compliance with the request made in your communication of the 7th instant, transmitting a copy of H. R. 6887, providing for a Territorial form of government for Alaska, embraced in the following, will be found the views of the bureau as to why it will be unwise to allow the control of the fisheries to pass from the Federal Government to the Territorial government of Alaska.

* * * * * * *

The taking over of the control of the fisheries of Alaska by the Territory would undoubtedly mean the appointment of local men to enforce the law and administer all of the duties pertaining to the industry. It has been thought by some that the appointment of men who are more or less identified and linked with local interests is not as conducive to an impartial handling of the situation as is the case when men are brought in from the outside.

The time will undoubtedly come when Alaska may be able to administer properly at least certain phases of her fisheries problems, but from present indications that day is quite far distant. Alaska has an extent of approximately 540,000 square miles and a population of about 35,000 whites. This as about 1 person to every 15 square miles. The Territory still partakes of many of the characteristics of the frontier, for although there are citizens of great ability and high integrity it may be said that they are so in the minority that a responsible citizenry scarcely exists and that they have no effective voice in the management of civic affairs. The people come and go in their search for fortune in Alaska, and this itinerant characteristic, which will probably continue for a long time, is not calculated to develop rapidly or increase, except slowly, the comparatively small number of citizens which make the backbone of the Commonwealth. Such a situation as this affords great opportunity for professional agitators and other disturbing elements to create strife and friction between the various diverse local interests. The latter feature is unusually important in Alaska for the reason of the vast extent of the coast line.

* * * * * * *

Until such conditions improve it is scarcely to be thought that the fisheries of the Teritory will receive better attention or will be improved in any way by transferring their control from the Federal Government to the Territorial government.

* * * * * * *

Steps are now under way to transfer jurisdiction over the terrestrial fur-bearing animals of Alaska from the Department of Commerce to the Department of Agriculture. It seems not inappropriate, however, for the bureau to herein state that any move tending to place the control over fur-bearing animals in the legislative body of Alaska will be productive of anything but beneficial results. Such a move would be unwise and unprogressive. * * * The problem is national and international rather than local or Territorial. This is demonstrated clearly and emphatically in the fact that no State has ever been able to handle the conservation of its fur-bearing animals in a satisfactory manner, because it has been almost impossible to approach the problem except from a purely local standpoint and under a policy more or less vacillating and influenced by local political exigencies.

Very truly, yours,

H. M. SMITH, *Commissioner.*

This unfavorable report, which was personally approved by Secretary Redfield, and specially published in the fishery hearings by Acting Secretary Thurman, is the only report which could be dragged out of the Wilson administration in relation to H. R. 6887, "a bill to establish the full Territorial form of government in Alaska." Its insulting and untruthful references to the people of Alaska, where citizens of great ability and high integrity are declared to be "so in the minority that a responsible citizenry scarcely exists and that they have no effective voice in the management of civic affairs," is the answer of the Wilson administration to our prayer that "the people of Alaska should be given the full Territorial form of government," which was promised us by President Wilson personally in his message to Congress of December 2, 1913.

6. SECRETARY REDFIELD OPPOSES FULL TERRITORIAL GOVERNMENT.

Nor is that humiliating rebuff the only unfriendly action by the Wilson administration in opposition to giving Alaska "the full Territorial form of government." In 1914, Dr. E. Lester Jones, Deputy Commissioner of the United States Bureau of Fisheries, held up the bills pending in Congress intended to give the Territory jurisdiction over its fisheries while he took a jaunt along the Alaskan coast to gain some A B C information about salmon. His report to President Wilson is full of beautiful pictures, and his first recommendation is as follows:

The following recommendations are submitted:

"1. That full control of the fisheries and fur-bearing animals be vested in the Department of Commerce. There should be no division of this authority with other Federal departments or with the Territorial Government."

Secretary Redfield, in his annual report of 1915, addressed to President Wilson, approved Dr. Jones's report and recommendations, and declares—

the report is a valuable contribution to the study of Alaskan conditions. * * * The recommendations made in the report of Dr. Jones have been given careful consideration. Many of them were included in the fisheries bill (H. R. 21607, 63d Cong.) introduced with the department's approval at the last session. This bill will be introduced in the Sixty-fourth Congress.

* * * * * * *

On April 29, 1915, the Legislature of Alaska passed an act imposing additional license fees on certain kinds of business, including fisheries, salteries, fish traps, and gill nets. It at once became apparent that if the Legislature of Alaska exercises this power the result is double taxation on persons engaged in such kinds of business, and further a dual control would exist between the Department of Commerce and the Legislature of Alaska over at least a branch of such kind of business. The latter condition is the one that primarily concerns the Department of Commerce. The control of the fisheries of Alaska is by law placed in that department, which is responsible not only for their preservation but also for their growth and development. Clearly if the Territory of Alaska has a joint right of control over the whole or any portion of such fisheries the plans of the Department of Commerce for the growth and development may meet with serious interference, and the result may be most harmful to the industry. If, for example, the Legislature of Alaska may impose license fees and taxes to an extent that might seriously impair the industry by making it unprofitable, the Department of Commerce, charged with the responsibility of caring for this industry, would be practically helpless.

Not even the possibility of such a situation, much less the situation itself, should be allowed to exist. As long as Congress sees fit to continue the control of the Alaska fisheries in the Department of Commerce, that control should be exclusive. It is respectfully suggested that Congress should either repeal the proviso contained in section 3 of the act of August 24, 1912, which authorizes the Legislature of Alaska to impose other and additional taxes or licenses, or so amend it as to exclude fisheries and kindred occupations in Alaska from its operation. This would leave the law as it stood before the passage of the act of August 24, 1912, and all license fees and taxes for the carrying on of fisheries and kindred occupations in Alaska would then be fixed by Congress.

Beginning with the advent of the Wilson administration and the Sixty-third Congress, Secretary Redfield, in collaboration with the Fish Trust lobby in Washington, caused several fishery bills to be prepared and introduced in Congress by Congressmen FLOOD, CARLIN, and ALEXANDER to carry out the policy of the administration to take from the Legislature of Alaska its modicum of power over the Alaska fisheries. The last one, H. R. 9528, was introduced January 20, 1916, by Mr. ALEXANDER, of Missouri, and referred to his Committee on the Merchant Marine and Fisheries.

7. ATTEMPT TO REPEAL "FULL TERRITORIAL GOVERNMENT."

In line with the policy adopted by the Secretary of Commerce, this bill sought to repeal the fishery clause in the organic act of August 24, 1912, and take from the legislature its power over

the Alaska fisheries. Section 21 of the Alexander bill, prepared and introduced at the request of Secretary Redfield, under the general policy of the Wilson administration, is as follows:

SEC. 21. Territorial legislation prohibited: That from and after the passage of this act the Territory of Alaska shall not pass any legislation that has the effect of repealing, altering, or amending this act, nor shall said Territory impose any license fees or taxes upon the business hereinbefore referred to, nor upon the output thereof, nor upon any property, real or personal, used in said business in said Territory, and any such existing statutes heretofore enacted by the Territory of Alaska are hereby expressly disapproved.

The effect of that prohibition is to take from Alaska so much of the present "Territorial form of government" as relates to her fisheries. It had another serious effect, evidently not appreciated by the Solicitor of the Department of Commerce, who says he drew the bill; it repeals the acts of the Territorial legislature laying the tax on fishery output, and having no saving clause would have instantly destroyed the right of the Territory to recover about $250,000 back taxes due from the canneries in Alaska to the Territory.

On the effect of this repealing or disapproving clause in the bill Mr. Thurman, the Assistant Secretary of Commerce and Solicitor, said on the hearings:

Mr. WICKERSHAM. I want to call your attention to the repeal of the acts of the legislature——
Mr. THURMAN. Yes, sir.
Mr. WICKERSHAM. Not to their repeal, but to their disapproval.
Mr. THURMAN. Yes, sir.
Mr. WICKERSHAM. Those acts were passed by the Legislature of the Territory of Alaska?
Mr. THURMAN. I think so; yes, sir.
Mr. WICKERSHAM. Approved by the governor of the Territory of Alaska.
Mr. THURMAN. I understand so; yes, sir.
Mr. WICKERSHAM. And until disapproved by Congress they are the law of Alaska?
Mr. THURMAN. I understand so; yes, sir.
Mr. WICKERSHAM. Provided, of course, they are within the organic power given by Congress?
Mr. THURMAN. That is correct.
Mr. WICKERSHAM. In the preparation of your bill, I understand, you provided that Congress shall disapprove those acts?
Mr. THURMAN. Yes, sir.
Mr. WICKERSHAM. Without any saving clause; is that correct?
Mr. THURMAN. I think so. The bill speaks for itself.
Mr. WICKERSHAM. Why did you not put in a saving clause, saving the taxes that are now due from these people?
Mr. THURMAN. I think—possibly I did not think about it one way or the other, Mr. WICKERSHAM. That phase of it had not occurred to me; we thought this law simply should be disapproved.
Mr. WICKERSHAM. Do you know how much is due from the fisheries to the Territory under the laws that now exist?
Mr. THURMAN. I do not.
Mr. WICKERSHAM. You have no idea?
Mr. THURMAN. No, sir.
Mr. WICKERSHAM. Have not these gentlemen informed you anything about it?
Mr. THURMAN. No, sir; I do not think they ever said a word to me about it.
Mr. WICKERSHAM. You do not know, then, what it amounts to?
Mr. THURMAN. No, sir; I do not.
Mr. WICKERSHAM. Then tell the committee what, in your judgment, would be the effect of the disapproval of those acts, without any saving clause, upon the taxes that are now due.
Mr. THURMAN. I think the taxes would be wiped out.
Mr. WICKERSHAM. If they amounted to $250,000 or $300,000, it would be a very serious matter to the Territory, would it not?
Mr. THURMAN. I am not prepared to answer that, sir; I do not know.
Mr. WICKERSHAM. Before you did this did you consult the governor of Alaska—Gov. Strong—or the attorney general of Alaska?
Mr. THURMAN. No, sir. I have told you, I do not know how many times, I wrote that bill under direction of the Secretary of Commerce.
Mr. WICKERSHAM. Without paying any attention to the governor of Alaska, the attorney general, or anyone else?
Mr. THURMAN. That is true; yes, sir.
Mr. DOWELL. Or as to what effect it would have?
Mr. THURMAN. That is true. It was written not with the idea of the taxes at all; it was written to do away with this double control which the department felt should not be there and which it felt it was its duty to call to the attention of Congress.
Mr. WICKERSHAM. You realized the Government of the United States was not going to lose anything by the payment of this tax, didn't you?
Mr. THURMAN. Yes, sir.
Mr. WICKERSHAM. You knew nobody was going to lose anything except these gentlemen my friend Britton over here represents; is that right?
Mr. THURMAN. That is true, if that is the result of the tax.
Mr. WICKERSHAM. You do not know whether they paid any double taxes or not?
Mr. THURMAN. I do not know, sir.
Mr. WICKERSHAM. Why didn't you find out?
Mr. THURMAN. Because, Mr. WICKERSHAM, I was not interested in that phase of it; I was not representing the packers, and I had no interest in it in any way, shape, or form. This was done, as I keep telling you, growing out of the report of the Secretary of Commerce, discovering a condition which he thought ought not to exist.

These admissions of the chief law officer of the Department of Commerce specially representing Secretary Redfield clearly demonstrate the indifference, even the ignorance, with which the Secretary treats the gravest Alaskan problems, and how little regard he has for Territorial officials there, notwithstanding the Wilson administration, of which he is one of the chief representatives, is responsible for them.

On the other hand, you may examine the Alexander bill with a microscope and you will not find in it a word which in any way hurts the Booth Fisheries Co., under indictment in the United States district court at Seattle for violation of the United States antitrust laws in Alaska, or Libby, McNeil & Libby, the Chicago Meat Trust, engaged in monopolizing Alaska fisheries, or any other element of the Alaska Fish Trust.

The Secretary may be indifferent, but not so the trust. While the lawyer representing the Department of Commerce did not know what effect his repealing clause would have, the affable attorney at his elbow, under pay of the Fish Trust, knew exactly that it would save his clients $250,000, and nobody would lose anything but the people of Alaska. That repealing clause was prepared in Secretary Redfield's office by his solicitor, with some assistance, and introduced in Congress at his request. It is his way of giving the people of Alaska "the full Territorial form of government"; his bureau was to have the much-sought-for jurisdiction and power and the Fish Trust the rebate of their Alaskan taxes and the monopoly and ownership of the Alaska fisheries. The people of Alaska be damned!

8. PHILIP DRUNK TO PHILIP SOBER.

The recent Democratic Territorial convention held at Juneau on May 24 adopted a platform in which this specific declaration is found:

The Alaska Legislature under the organic act has no power to enact legislation regarding the game or fish of the Territory. The representatives of the people of Alaska are best qualified to enact laws to protect and preserve our game and fish, and this power should be extended to the legislature. This is a matter of vital importance to every resident of Alaska, and the Democratic Party insists that the people of Alaska should have control over one of its greatest resources and industries, and the National Government should restrict its activities to scientific investigation.

As the Delegate from Alaska and as a citizen thereof I heartily approve that sentiment, but the Democratic administration in Washington does not. As Alaska's Delegate, I introduced H. R. 6887, and other bills from time to time, to secure that power for the people of Alaska, and to save the fisheries of Alaska from monopoly through the present inefficient congressional laws; but in each and every instance the Democratic administration in Washington has opposed the passage of the bill. Dr. Jones denounced it in his report of 1914; Secretary Redfield denounced it in his annual report to President Wilson of October 30, 1915; Dr. Smith, Commissioner of Fisheries, appointed by President Wilson, denounced it on January 12, 1916, in his unfavorable report on H. R. 6887, "a bill to establish the full Territorial form of government in Alaska."

On February 25, 1915, the Delegate from Alaska wrote a letter to President Wilson, calling his attention to the situation and begging him to assist in securing legislative control for the people of Alaska over their fisheries, but he refused; the Fish Trust lobby in Washington this winter has worked hand in hand with the Democratic administration, and successfully, to prevent Congress from giving the people of Alaska control of the fisheries or "the full Territorial form of government."

Let the Democrats in Alaska understand that that plank in their platform is not popular with either the Wilson administration in Washington or the Alaska Fish Trust. It will not be approved by the Wilson administration. Secretary Redfield and his department have drawn and caused to be introduced six bills, viz, H. R. 153 and 21607, Sixty-third Congress, and H. R. 222, 753, 9527, and 9528, Sixty-fourth Congress, to prevent just what the Alaska Democratic platform demands and to take from the Territorial legislature what little power it now possesses under the organic act over the fisheries. The Delegate from Alaska has introduced quite as many bills to secure for the Territory just what that Democratic platform demands, and his effort is successfully opposed by Secretary Redfield with the whole power of the Wilson administration, and he and his bills were defeated before Democratic committees.

In my struggle to secure the passage of my bill, H. R. 6887, "to establish a full Territorial form of Government in Alaska," and to defeat Secretary Redfield's effort to repeal what Territorial power we now have, I have had the active sympathy and support of the chamber of commerce, the mayor, and the pioneers of Alaska at Nome, of the chambers of commerce of Fairbanks, of Seward, and of Petersburg, but not one word from the Democratic organization or administration newspapers at Juneau. These have offered every assistance to Secretary Redfield's efforts—two exceptions must be noted. Gov. Strong and Territorial Senator Aldrich, being in Washington, went before the committees with me at my request and did all they could

to prevent the proposed repeal of "full Territorial form of government" by the Redfield-Alexander bills.

Let me offer this word of warning and advice to Alaskans, born of my experience with the "full Territorial" bill this winter: "Full Territorial form of government" for Alaska will never be accomplished as long as the bureau and Alaska Fish Trust can prevent it. The power thus sought for by the people of Alaska will be obtained through Statehood more certainly than in any other way.

9. DEMOCRATIC BUREAUCRACY IN ALASKA.

Another particular enemy to Territorial government in Alaska these days is bureaucracy. The fundamental laws for the government of Alaska and the control of administrative activities in national work there are necessarily enacted by Congress. These laws are liable to change at any moment by an amendment in any bill before almost any committee of Congress, without notice to or the consent of the citizens of Alaska. It is an easy pay streak for bureaucratic extension and is never overlooked.

Every bureau in Washington with any duty to perform in Alaskan affairs, or whose chief thinks it ought to have jurisdiction there—and they all do—gives some time and thought to lobbying for an extension of its power to the utmost limit. The start is usually made through securing an appropriation in the sundry civil appropriation bill, with some vague phrase of authority, which enables the bureau to get a finger hold. About the second time the appropriation is asked for the phrase is made more specific, and the bureau has arrived. Its chief now begins to talk loudly about conservation and the protection of Alaska's resources from destruction, and his appropriations are demanded as a vested right. He begins to denounce the Territorial government and the people of Alaska and to assume great virtues and the guardianship of the people's rights. Having secured its place in the sun, the bureau now begins to push and crowd other bureaus for a share of their jurisdiction and appropriations and to point out the evils of "the full Territorial form of government."

No department head has so clearly stated the evils of this bureaucratic waste and misgovernment in Alaska as Secretary Lane. In early 1914 he prepared and gave out "Red tape in the government of Alaska," in support of his Alaska development-board bill, introduced in the Senate on February 2, 1914, by Senator CHAMBERLAIN. Here is part of his condemnation of the system:

Alaska's problems are largely peculiar to Alaska. Our present system of government there is heterologous. Instead of one government in Alaska we have a number, interlocked, overlapped, cumbersome, and confusing. In their zealousness for the particular parts of the public welfare they represent, the long-distance representatives of bureaus located in Washington are apt to lose sight of the fact that they all represent the same interest and purpose. There is a government of the forests, a government of the fisheries, one of the reindeer and natives, another of the cables and telegraphs. There is a government for certain public lands and forests, another for other lands and forests. Each of these governments is intent upon its own particular business, jealous of its own success and prerogatives, and all are more or less unrelated and independent in their operation. * * *

While this patchwork system of administrative machinery has answered well enough while the Government's policy has been merely to keep the door shut and discourage development, it will not answer under the new policy. If the work needed in the future were to be purely and solely administrative, it must still be efficient and under responsible and readily responsive supervision. Alaska's remoteness alone makes anything like supervision by bureaus located in Washington more or less perfunctory and superficial. What we now have in Alaska is little more than a number of independent and unrelated agents, acting largely upon their own initiative, each attending only to some special branch of police work, and no branch adequately organized to cope with its own problems, without even attempting to coordinate its work with that of the other branches.

* * * * * * *

I have pointed out in some detail the shortcomings of the present system, its delays, red tape, circumlocution, divisions and overlapping of authority, and ineffectiveness, as well as the discouragements it offers to settlers whom we want to encourage. To secure effectiveness we must eliminate these delays, the red tape, and the confusing and confused machinery now in use and substitute for it machinery that will be direct, prompt, and certain in its operation.

11. WILSON ADMINISTRATION CONDONES BUREAUCRATIC INEFFICIENCY.

After this terrific and truthful arraignment of administrative failure, extravagance, inefficiency, and waste in the government of a helpless people in a Territory, given to the world with the sanction of President Wilson by the strong man in his Cabinet, the public expected, and had a right to expect, some adequate and immediate effort to cure the evils from the Wilson administration. But no such effort was made, and the reason was not far to seek. The arraignment was true and terrific, but feeble to secure action, for it was not made to cure the evil so much as to enable the Department of the Interior to capture from other departments and bureaus their dearly loved jurisdiction over Alaskan affairs, and to centralize it in the Department of the Interior.

Secretary Redfield, in his letter of May 21, 1914, strongly disapproved of the plan, and so did Secretary Houston later. The Lane allegations against the Wilson administration of national affairs in Alaska yet hold good. The conditions are worse than when, two years ago, he pointed them out and condemned them. What has the Wilson administration done to make better government in Alaska since that time? Nothing, except to make the unfavorable report on the bill drawn and introduced by the Delegate from Alaska, H. R. 6887, "A bill to establish the full Territorial form of government in Alaska." President Wilson had promised the people of the country this relief should be given to Alaska in his message to Congress of December 2, 1913, but he did not keep his promise.

11. SECRETARY LANE FAVORS NEW ALASKA BUREAUS.

Worse, Secretary Lane has had a relapse. On April 26, 1916, he addressed a letter to the chairmen of the Senate and House Committees on the Territories, in which he said:

DEPARTMENT OF THE INTERIOR,
*Washington, April 26, 1916.*

MY DEAR SENATOR: I submit herewith a proposed draft of a bill authorizing the President to make and promulgate such rules and regulations as he may deem necessary to preserve order and to preserve the health of the employees and other people living along and in the vicinity of the Government railroad, constructed or contemplated, and within town sites established pursuant to the act of Congress of March 12, 1914. The importance of the Government being able to maintain order and control sanitation in all towns and construction camps along the line of the railroad during the period of construction is apparent.

* * * * * * *

The remarkable success from a sanitary and health standpoint of the construction and operation of the Panama Canal was no doubt made possible by the authority that was given the President by the act of June 28, 1902 (32 Stat., 481), which authorizes him to make such police and sanitary rules and regulations as shall be necessary to preserve order and to preserve the public health. The same reason that justified the granting of that authority to the President in the Panama Canal Zone applies with equal force in Alaska.

* * * * * * *

I have addressed a similar communication under even date to Hon. WILLIAM C. HOUSTON, chairman of the Committee on the Territories, House of Representatives.

Cordially, yours,

FRANKLIN K. LANE,
*Secretary.*

The following is a copy of the proposed draft of the bill submitted by Secretary Lane, which was introduced in the Senate by Senator PITTMAN and in the House by Chairman HOUSTON, of the Committee on the Territories:

A bill (S. 5790) to confer additional authority upon the President of the United States in the construction and operation of the Alaskan railroad, and for other purposes.

*Be it enacted, etc.,* That in connection with and during the construction and operation of the Alaskan railroad, under the provisions of the act of Congress approved March 12, 1914, entitled "An act to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes," the President is hereby authorized and empowered to make and promulgate such police, quarantine, and sanitary rules and regulations as shall be necessary to preserve order and to preserve the public health along and in the vicinity of said railroad or railroads constructed, being constructed, or located by survey, and within town sites established, or to be established, under and pursuant to said act of March 12, 1914.

SEC. 2. That such rules and regulations shall become effective on a date to be named in proclamation of the President promulgating same, and any person violating such rules or regulations, or any of them, shall be deemed guilty of a misdemeanor, and shall, upon conviction thereof in the courts of Alaska, be fined not more than $500 or be imprisoned not less than 10 days nor more than one year, or both.

This letter and bill thus submitted by Secretary Lane are interesting when one stops to consider his arraignment of the misgovernment in Alaska by the 20 bureaus which now muddle there, waste the people's money, and retard the development of the Territory.

No railroad contractor or builder, public or private, on any of the transcontinental railroads in the United States or on any Alaska construction had ever thought it necessary to request, nor did any of them ever have authority—

to make and promulgate such police * * * rules and regulations as shall be necessary to preserve order * * * along and in the vicinity of said railroad or railroads constructed, being constructed, or located by survey, and within town sites established or to be established under and pursuant to said act.

Nor was such enactment in Alaska necessary, for the judges and other officers of the courts there are appointed by the President and perform their duties well, and the Legislature of Alaska had already provided ample laws to control and govern sanitary and quarantine conditions. The truth is it is an effort of the Lane bureau to build up its jurisdiction at the expense of "the full Territorial form of government" by the people. It was an effort on the part of the Lane bureau to establish in democratic Alaska the autocratic military Panama Canal government, with power in its members to "make and

promulgate such police, quarantine, and sanitary rules and regulations" for the government of the people and towns as it saw fit, such laws having the force of penal statutes. The effect will be to establish two or three additional little pestiferous bureaucratic governments in Alaska, such as Secretary Lane condemned in his "Red tape in the government of Alaska," in duplicate of the courts, officers, and laws already sufficient and in being.

12. THE LEASING SYSTEM V. FULL TERRITORIAL GOVERNMENT.

Chief Forester Pinchot, under President Roosevelt, was the father of the system of withdrawing the public lands and their resources from disposal or sale to the people of the country for development, and the originator of the plan of leasing them to monopoly, and Secretary Lane is his prophet. In the report of the Secretary of the Interior to the President on November 20, 1915, the Secretary uses the common formula to express the bureaucratic lack of confidence in democracy and his assurance of the divine right of the bureau to guardianship:

Then, too, there is the matter of the further development of Alaska. That land is a long way off. It would be too hazardous a thing to surrender these resources to local control or disposal, for those who have lived in any new country know how great the temptation is to grant away water-front and power sites, forests, and other exceptional resources to those who come offering large sums for quick improvement.

Secretary Lane's reason for his loss of confidence in popular government is without any basis of fact. No "new country," like Alaska, ever "granted away water-front and power sites, forests, and other exceptional resources" of that type, because none ever had the power to do so. That power when rashly used, as it sometimes was, was invariably exercised by Congress and not by the people of a "new country," like Alaska. But the point is that the Secretary has lost his confidence in the democracy of the people and believes in the system launched by Mr. Pinchot of reserving the public lands and leasing their resources to monopoly. It may be right and necessary; it may be a good system; but it is not "the full Territorial form of government for Alaska," promised to the people of that Territory by President Wilson.

Under the Pinchot idea Secretary Lane's department prepared the Ferris coal-leasing bill for Alaska which passed Congress and was approved by President Wilson October 20, 1914, and which permanently withdrew from sale all coal lands in the Territory, creates and establishes forever a great coal-land reservation, withdraws these lands and all improvements thereon from taxation by the Territory of Alaska forever, and establishes the United States as an absentee landlord for enormous estates there, which must be forever administered by a Government bureau in Washington. I did everything a Delegate could do to defeat that bureaucratic plan for preventing the development of "the full Territorial form of government in Alaska," but the Wilson administration, trying to out-Pinchot Pinchot, forced it on the Territory and its people. We must accept it and do the best we can to persuade the bureau to so administer it as to prevent the curse of Government monopoly. Those Americans who live on those lands must do so as tenants under "rules and regulations" to be established there by the Secretary of the Interior, who will be their real governor. It is a big corporation scheme. It holds no place in it for the poor man and offers him no hope. It is President Wilson's way of keeping his promise to the people of Alaska that they should have "the full Territorial form of government."

The Democratic Territorial convention at Juneau on May 24, 1916, adopted the following plank in its platform:

We demand that Pinchotism be banished from the Territory. The paramount issue between the Democratic Party on the one side and Delegate Wickersham and the Republican Party on the other relates to the question whether Alaska shall be conserved and Pinchotized or thrown open to settlement and development.

On that paramount issue Secretary Lane is in opposition to the declaration in the Territorial platform of his party. He is and always has been a strong supporter of Mr. Pinchot and his policy of withdrawal, reservation, and leasing. The Democrats of Alaska could not secure a specific indorsement of the first demand in the foregoing plank from Secretary Lane, for it would be a complete reversal of his whole policy in dealing with Alaskan problems.

"Pinchotized," in the phraseology of the Democratic platform makers in Alaska, means to stigmatize and condemn the withdrawal of public coal and timber lands, of lands valuable for oil and gas, and their leasing to monopoly for a royalty to be paid into the Public Treasury. Democrats in Alaska condemn that system, but Secretary Lane approves it in Washington and makes his approval good by drawing and procuring the Democratic majority in Congress to enact his Pinchotized ideas into law. The Ferris coal-leasing bill, the water-power bill, the oil and gas bills for Alaska are Pinchotized ideas, but the bills were drawn by Secretary Lane's department, recommended by him, passed by a Democratic Congress, and approved by a Democratic President. Of course, it is no part of "the full Territorial form of government for Alaska," but it is national Democratic doctrine, and the Territorial Democrats of Alaska must take their medicine whether they like it or not.

Quite recently Secretary Lane caused the reservation of 3,000 feet in area around Annette Island, excluded all Alaskans from fishing in the area, and leased the privilege of that fishery to a nonresident Fish Trust employee, giving him a written contract in the name of the United States for a special fishing privilege there for five years. If Alaskan waters are thus subject to the Secretary's contracts the fisheries of Alaska may next be leased to the Fish Trust and all Alaskans excluded.

13. ACT EXTENDING FULL TERRITORIAL GOVERNMENT.

In the Sixty-third Congress the Delegate from Alaska introduced H. R. 11740, a bill to confer additional powers on the legislature, and there being nothing objectionable in it to the bureaus or to the Alaska Fish Trust, it was passed and approved by the President on August 29, 1914 (38 Stat., 710). This act was drawn by the attorney for the Territory and sent to me by the governor for enactment. It is the only specific request for enactment of "the full Territorial form of government" ever made to me, either by the people or officials of the Territory. It is as follows:

[Public—No. 192—63d Congress.]

An act (H. R. 11740) to amend an act entitled "An act creating a legislative assembly in the Territory of Alaska and conferring legislative power thereon, and for other purposes," approved August 24, 1912.

*Be it enacted, etc.*, That nothing in that act of Congress entitled "An act creating a legislative assembly in the Territory of Alaska and conferring legislative power thereon, and for other purposes," approved August 24, 1912, shall be so construed as to prevent the courts now existing or that may be hereafter created in said Territory from enforcing within their respective jurisdictions all laws passed by the legislature within the power conferred upon it, the same as if such laws were passed by Congress, nor to prevent the legislature passing laws imposing additional duties, not inconsistent with the present duties of their respective offices, upon the governor, marshals, deputy marshals, clerks of the district courts, and United States commissioners acting as justices of the peace, judges of probate courts, recorders, and coroners, and providing the necessary expenses of performing such duties, and in the prosecuting of all crimes denounced by Territorial laws the costs shall be paid the same as is now or may hereafter be provided by act of Congress providing for the prosecution of criminal offenses in said Territory, except that in prosecutions growing out of any revenue law passed by the legislature the costs shall be paid as in civil actions and such prosecutions shall be in the name of the Territory.

Approved, August 29, 1914.

14. SOME CONCLUSIONS ON THE SUBJECT OF "FULL TERRITORIAL FORM OF GOVERNMENT FOR ALASKA."

In conclusion let it again be stated that—

1. The Delegate from Alaska drew and introduced H. R. 6887, "A bill to establish the full Territorial form of government in Alaska."

2. The bill was referred to Secretary Redfield for examination and recommendation, and he disapproved it.

3. It was specifically denounced in the letter of the Commissioner of Fisheries, which denunciation was concurred in by Acting Secretary of Commerce Thurman, and thereafter by Secretary Redfield.

4. The bill was disapproved by the Wilson administration, and the Democratic Committee on the Territories declined to report it favorably.

5. The Wilson administration, through Secretary Redfield, has drawn, introduced, and sought to secure the passage of the Alexander and other bills with a special clause to repeal the act of Congress giving the Alaska Legislature power to levy taxes on canneries, purposely seeking to destroy that much of our Territorial form of government.

6. The repealing section in the Alexander bill had no saving clause, and was intended to release the tax lien of the Territory, and throw its suits to recover cannery taxes out of court, to the advantage of the Fish Trust, in the sum of more than $300,000 loss to the Territory.

7. Secretary Lane's department drew and requested Senator PITTMAN to introduce the bill to establish the Panama Canal form of autocratic government in Alaska, which would have enabled him, through the Alaska Engineering Commission, to have arrested the union men at Anchorage and deported them from Alaska without trial; and which now authorizes him to establish an autocratic form of bureaucratic government over the people along the railroad in Alaska.

8. The Wilson administration has opposed the enactment of fair and just laws to establish the full Territorial form of government in Alaska, promised by President Wilson in his message of December 2, 1913.

## Rural Credits Law.

### EXTENSION OF REMARKS
OF
### HON. J. M. C. SMITH,
OF MICHIGAN,
IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 25, 1916.*

Mr. SMITH of Michigan. Mr. Speaker, the subject of rural credits is one of much importance to the people of the United States in general, but more particularly to the farmer. This is apparent by the great interest manifested not only by the farmers themselves but also by the press. It is also of much interest to the banks of the country. It is likewise of interest to the loaning public and people having money to loan and to borrow. All the leading political parties, including the Progressive Party, declared in their platforms in favor of rural credits. The present session of Congress passed a rural-credit bill which has been signed by the President and is now the law of the land. The Republican platform of 1912 contained this plank:

It is of great importance to the social and economic welfare of this country that its farmers have facilities for borrowing easily and cheaply the money they need to increase the productivity of their land. It is as important that financial machinery be provided to supply the demand of farmers for credit as it is that the banking and currency systems be reformed in the interest of general business. Therefore we recommend and urge an authoritative investigation of agricultural credit societies and corporations in other countries and the passage of State and Federal laws for the establishment and capable supervision of organizations having for another purpose the loaning of funds to farmers.

Mr. Speaker, I stand for the principle therein enunciated. I am for a workable rural-credit law—one that is practicable. I think that the law should be broadened. I think it should be made easier for the farmer to obtain a loan under it. I think the law should apply to the man who is trying to own a home in the city as well. I think it should be more economically administered, and not made a harbor for a lot of expensive additional Federal officers.

During the discussion of this bill, May 15, 1916, I introduced the following amendment.

Mr. SMITH of Michigan. Mr. Chairman, I ask unanimous consent to present an amendment and for five minutes to talk on the amendment.

The CHAIRMAN. The gentleman from Michigan offers an amendment, which the Clerk will report.

The Clerk read as follows:

"Page 109, after section 15, insert:

"'That the Government of the United States shall loan to the Federal land banks created and established (and to all member banks of the present Regional Reserve System) such public money as may be needed to loan on real estate mortgages under this act at 3 per cent interest, such Government loans to be secured by Government bonds or other acceptable bonds or the real estate mortgage bonds issued under this act: *And provided*, That such Government money shall be loaned to borrowers under this act at 5 per cent interest.'"

The CHAIRMAN. The gentleman from Michigan [Mr. SMITH] asks unanimous consent to address the committee for five minutes.

Mr. GLASS. I object, Mr. Chairman.

Under this amendment the present banks and banking institutions of the country would be free to loan the farmers money at a rate not exceeding 5 per cent. Under this amendment it will be noticed that the banks were to pay the Government 3 per cent for the money to loan on farm security. Under this amendment the banks were to secure Government loans by Government bonds or other acceptable security. None of which is provided for in the new law.

#### LAW.

Under this new law a new system of banking is to be created. A large number of new banks are to be established. The country is to be divided into 12 regions or districts with a central bank called a Federal land bank in each district. Each of these banks is to have a capital stock of not less than $750,000, and every farmer who borrows money under this law must subscribe for stock in this bank to the amount of 5 per cent of his loan before he can get any money on his mortgage. This amount of stock he subscribes for is to be deducted from his mortgage loan if he does not pay it in cash. The Government may subscribe for the whole of the $750,000 of the capital stock of each one of those central banks providing it is not subscribed by individuals. This for all 12 Federal land banks makes $9,000,000 of the people's money which is put into these farm-loan banks. This money is taken from the United States Treasury without any security, and I mention these facts briefly to show the foundation of this rural-credit banking system and some of the machinery provided.

#### SYSTEM.

It is estimated that the farm property in the United States is valued at $40,000,000,000; that the mortgages upon farm property is estimated at $6,000,000,000.

I wish here to append a table showing the amount of money loaned by insurance companies upon real estate in the United States and the average rate of interest charged and paid in the several States:

TABLE F.—*Farm mortgage loans of life insurance companies December 31, 1914.*

[Amount of mortgage loans on farm property held December 31, 1914, by 126 American life insurance companies, whose total mortgage loans amounted to 97 per cent of all mortgage loans held by American companies, with the average rate of interest received in each State, arranged by States in the order of amount loaned.]

| States, in order of amount loaned. | Farm loans by insurance companies, Dec. 31, 1914. | | Estimated farm values, United States census, 1910. | |
|---|---|---|---|---|
| | Amount. | Average interest rate. | Land average per acre. | All farm property. |
| Iowa | $139,511,101 | 5.32 | $82.58 | $3,257,379,400 |
| Nebraska | 62,390,393 | 5.34 | 41.80 | 1,813,346,935 |
| Kansas | 60,395,448 | 5.46 | 35.45 | 1,737,556,172 |
| Missouri | 58,406,800 | 5.35 | 41.80 | 1,716,204,386 |
| Illinois | 49,941,759 | 5.16 | 95.02 | 3,522,792,570 |
| Indiana | 47,014,148 | 5.31 | 62.36 | 1,594,275,596 |
| Minnesota | 33,981,293 | 5.36 | 36.82 | 1,262,441,426 |
| Texas | 32,242,856 | 6.99 | 14.53 | 1,843,208,385 |
| Oklahoma | 28,056,308 | 5.91 | 22.49 | 738,677,224 |
| South Dakota | 26,959,777 | 5.44 | 34.69 | 1,005,080,807 |
| North Dakota | 18,142,658 | 5.88 | 25.09 | 822,656,744 |
| Ohio | 16,588,937 | 5.39 | 53.34 | 1,654,152,406 |
| Georgia | 14,828,323 | 6.28 | 13.74 | 479,204,332 |
| Tennessee | 9,386,015 | 5.56 | 18.53 | 480,522,587 |
| California | 8,736,255 | 6.42 | 47.16 | 1,450,601,498 |
| Kentucky | 6,282,692 | 5.41 | 21.83 | 635,450,372 |
| Arkansas | 3,851,605 | 6.99 | 14.13 | 309,166,813 |
| South Carolina | 3,377,477 | 6.47 | 19.89 | 332,888,081 |
| Colorado | 2,945,316 | 6.02 | 35.81 | 498,518,881 |
| Montana | 2,900,458 | 7.29 | 16.74 | 251,625,930 |
| Idaho | 2,751,254 | 8.53 | 41.63 | 245,065,825 |
| Mississippi | 2,719,324 | 6.99 | 13.09 | 334,162,289 |
| Washington | 2,391,781 | 6.97 | 44.18 | 571,968,457 |
| Wisconsin | 2,003,744 | 5.53 | 43.30 | 1,201,632,726 |
| North Carolina | 1,475,010 | 5.79 | 15.29 | 456,624,607 |
| Louisiana | 1,379,592 | 7.64 | 17.99 | 237,544,450 |
| New Mexico | 1,306,042 | 7.55 | 8.77 | 111,830,990 |
| Michigan | 1,252,126 | 5.41 | 32.48 | 901,138,299 |
| Utah | 1,192,602 | 8.74 | 20.28 | 117,545,332 |
| Oregon | 1,107,912 | 6.66 | 35.23 | 455,576,309 |

#### MACHINERY.

I wish now to call attention to the law adopted for procuring a loan under the Federal land-bank system.

By section 3 it is provided that there be established at the Department of the Treasury a bureau known as the Federal farm-loan bureau, under the supervision of a farm-loan board. This board shall consist of five members. One, the Secretary of the Treasury, and four other members appointed by the President, by and with the advice and consent of the Senate. Each of the four shall receive an annual salary of $10,000, and their term of office to be eight years each.

This board shall also appoint a farm register in each land-bank district. It shall also appoint one or more land-bank appraisers for each district and as many land-bank examiners as it shall deem necessary.

The salaries and expenses of the Federal farm-loan board and of the farm-loan registers and examiners shall be paid by the United States. The appraisers shall receive such compensation as the Federal farm-loan board shall fix and shall be paid by the Federal land banks.

The Federal farm-loan board shall be authorized and empowered to employ such attorneys, experts, and assistant clerks,

laborers, and other employees as it may be necessary to conduct the business of the board to be paid for out of the United States Treasury, unless otherwise provided.

FEDERAL LAND BANKS.

It is provided by section 4 that the Federal Farm Loan Board established in Washington shall divide the continent—United States, excluding Alaska—into 12 districts known as Federal land-bank districts and establish in each Federal land district a Federal land bank in such city within the district as shall be designated. Each Federal land bank shall be temporarily managed by five directors appointed by the Federal Farm Loan Board. They shall receive such compensation as the Federal Farm Loan Board shall fix. They are authorized to employ such attorneys, experts, assistants, clerks, laborers, and other employees as they may deem necessary. Their compensation is to be fixed by the bank, subject to the approval of the Federal Farm Loan Board. The board of directors of every farm-land bank shall consist of nine members, each holding office for three years. Directors of Federal land banks shall receive, in addition to any compensation otherwise provided, a reasonable allowance for necessary expenses, in attending meetings of their respective board to be paid by the respective Federal land banks. The compensation for the directors, officers, or employees shall be subject to the approval of the Federal Farm Loan Board.

NATIONAL FARM-LOAN ASSOCIATIONS.

By section 7 corporations to be known as national farm-loan associations may be organized by persons desiring to borrow money on farm-mortgage security.

Such persons shall enter into articles of association. It shall have a board of not less than five directors. The board of directors shall choose a secretary-treasurer, who shall receive such compensation as said board of directors shall determine. The board of directors shall elect a president, vice president, and a loan committee of three members. The directors and all officers excepting the secretary-treasurer shall serve without compensation unless the payment of salaries to them shall be approved by the Federal Farm Loan Board.

The reasonable expenses of the secretary-treasurer, the loan committee, and other officers and agents of national farm-loan associations and the salary of the secretary-treasurer shall be paid from the general funds of the association. If no such funds are available, the board of directors may levy an assessment on members in proportion to the amount of stock held by each. The associations shall be composed of 10 or more persons who are the owners or about to become owners of farm land qualified as security for a mortgage loan. The aggregate loan of the members of these farm-loan associations shall not be less than $20,000.

Upon receipt of the articles of the association, accompanied by the affidavit and stock subscription to the Federal land bank, the directors shall send an appraiser to investigate the solvency and character of the applicants and value of their land, and the Federal land banks shall determine whether or not charter shall be granted to such association.

APPRAISAL.

By section 10 it is provided that whenever an application for a mortgage loan is made to a national farm-loan association, it shall be first referred to the loan committee. Such loan committee shall then examine the land and make a detail written report signed by all three members, giving the appraisal of said land as determined by them and such other information as may be required by rules and regulations of the Federal Farm Loan Board.

This written report of the loan committee shall be submitted to the Federal land bank, together with the application for the loan, and the directors of said land bank shall examine said written report but they shall not be bound by the appraisal. It shall not be bound by the appraisal of the committee, but before the mortgage loan is made the Federal land bank shall refer the application and written report of the loan committee to one or more of the land-bank appraisers, and such appraiser or appraisers shall investigate and make written report upon the land as a security upon said loan. No borrower shall be eligible as an appraiser.

By section 28 the Federal Farm Loan Board shall appoint as many banking examiners as in its judgment may be required to make careful examinations of the banks and associations permitted to do business under this act.

Such examiners shall receive salaries to be fixed by the Federal Farm Loan Board.

Sufficient of the law establishing these banks has been quoted to show that it is an expensive and apparently top-heavy procedure through which the farmer must go to make his application, have his land and his abstract examined, to get his money.

I quote from the weekly letter of the United States Department of Agriculture of July 26, 1916, to show:

HOW LOANS ARE OBTAINED.

A member of a national farm-loan association before obtaining a loan must first fill out an application blank supplied to the loan association by the Federal Farm Loan Board. This application blank and other necessary papers will then be referred to a loan committee of the association, which must appraise the property offered as security. Such application as is approved by the loan committee is then forwarded to the Federal land bank and must be investigated and reported on by a salaried appraiser of the bank before the loan is granted. This appraiser is required to investigate the solvency and character of the prospective borrower as well as the value of his land. When a loan is granted the amount is forwarded to the borrower through the loan association.

PRESENT METHOD.

Most of us are familiar with the present method of securing a loan. It is prompt and effective, and in the district in which I reside the rate charged is usually 6 per cent. It is not subject to delay. No appraisers' or lawyers' fees are usually charged to the borrower. I print the cost of a $1,000 loan as submitted by Congressman NORTON, of Minnesota, on page 13205 of the CONGRESSIONAL RECORD of July 21, 1916, as follows:

"If his application is found satisfactory by the examining committee of the national farm-loan association, and is approved, he would be entitled to a loan of 50 per cent of the value of the real property, or 50 per cent of $1,600, which would be $800, and he would be entitled to a loan of 20 per cent of the value of the improvements on the land, which in this case would be 20 per cent of $1,000, making $200. He would thus be entitled to make a maximum loan upon his property of $1,000. After his loan application has been approved he would execute a mortgage of $1,000 to the Federal farm-land bank of the district. He would then receive as proceeds of this mortgage from the national farm-loan association $1,000 less the cost of appraising the land, the recording fees, the cost of abstract of title, and 5 per cent of the amount of the loan, which would be applied for the purchase of stock in the farm-land bank. This stock in the Federal land bank, amounting in this case to $50, would be held by the national farm-loan association as part security for the payment of the loan, but the borrower would be entitled to all dividends and profits on the stock. The result of the application for a loan of this kind would be approximately as follows:

| | |
|---|---|
| Security offered by borrower: | |
| Land valued at | $1,600 |
| Improvements valued at | 1,000 |
| Total value of borrower's land and improvements | 2,600 |
| Estimated cost to borrower: | |
| Subscription to stock in land bank | 50 |
| Cost of abstract of title (estimated) | 6 |
| Cost of examining abstract (estimated) | 3 |
| Cost of appraisement (estimated) | 10 |
| Cost of recording mortgage (estimated) | 3 |
| Total cost to borrower | 72 |
| Total loan borrower can obtain | 1,000 |
| Cash to be paid borrower | 928 |

"If, as it is fair to do, his stock in the farm-land bank is considered as an investment, it is seen that the borrower obtains a loan of $950 at an approximate cost of $22."

The law states that the "loan shall not exceed 50 per cent of the value of the land mortgaged and 20 per cent of the value of the permanent insured improvements thereon, the value to be fixed by appraisal." If this be an approximate estimate of the cost of procuring a loan of $1,000, the costs are much more than charged in the vicinity from which I come. Much is claimed for the amortization privilege given to the borrower under this new rural-credits act. I am not certain that a long period is either profitable or desirable for the mortgagor. I am rather inclined to think that most mortgagors prefer their mortgage to run from three to five years only, with the privilege of paying the same on any interest day after it has run one or two years. I am sure that the person loaning money prefers to have the mortgage loan, if it is well secured, run for a number of years, and usually consult and accedes to the desire of the mortgagor as to the times and installment of payment.

I herewith present a table taken from the weekly letter of July 26, 1916, issued by the United States Department of Agriculture:

The table which follows illustrates how a loan of $1,000, bearing interest at 5 per cent, would be retired in 20 years by an annual payment of $80.24. A study of the columns shows how from year to year the interest is reduced and the proportion of the payment which goes to discharge the principal steadily increases. The final payment cancels the debt.

| Annual periods. | Total annual payment. | Interest at 5 per cent. | Paid on principal. | Amount of principal still unpaid. |
|---|---|---|---|---|
| 1 | $80.24 | $50.00 | $30.24 | $969.76 |
| 2 | 80.24 | 48.49 | 31.75 | 938.01 |
| 3 | 80.24 | 46.90 | 33.34 | 904.67 |
| 4 | 80.24 | 45.23 | 35.01 | 869.66 |
| 5 | 80.24 | 43.48 | 36.76 | 832.90 |
| 6 | 80.24 | 41.65 | 38.59 | 794.31 |
| 7 | 80.24 | 39.72 | 40.52 | 753.79 |
| 8 | 80.24 | 37.69 | 42.55 | 711.24 |
| 9 | 80.24 | 35.56 | 44.68 | 666.56 |
| 10 | 80.24 | 33.33 | 46.91 | 619.65 |
| 11 | 80.24 | 30.98 | 49.26 | 570.39 |
| 12 | 80.24 | 28.52 | 51.72 | 518.67 |
| 13 | 80.24 | 25.93 | 54.31 | 464.36 |
| 14 | 80.24 | 23.22 | 57.02 | 407.34 |
| 15 | 80.24 | 20.37 | 59.87 | 347.47 |
| 16 | 80.24 | 17.37 | 62.87 | 284.60 |
| 17 | 80.24 | 14.23 | 66.01 | 218.59 |
| 18 | 80.24 | 10.93 | 69.31 | 149.28 |
| 19 | 80.24 | 7.46 | 72.78 | 76.50 |
| 20 | 80.33 | 3.83 | 76.50 | ..... |
| Total | 1,604.89 | 604.89 | 1,000.00 | ..... |

The following table shows the annual payments necessary to retire a mortgage of $1,000 in 36 years:

| Annual periods. | Annual installment. | Interest at 5 per cent. | Part of installment paid on principal. | Amount of principal still unpaid. |
|---|---|---|---|---|
| 1 | $60.00 | $50.00 | $10.00 | $990.00 |
| 2 | 60.00 | 49.50 | 10.50 | 979.50 |
| 3 | 60.00 | 48.97 | 11.03 | 968.47 |
| 4 | 60.00 | 48.42 | 11.58 | 956.89 |
| 5 | 60.00 | 47.84 | 12.16 | 944.73 |
| 6 | 60.00 | 47.24 | 12.76 | 931.97 |
| 7 | 60.00 | 46.60 | 13.40 | 918.57 |
| 8 | 60.00 | 45.93 | 14.07 | 904.50 |
| 9 | 60.00 | 45.22 | 14.78 | 889.72 |
| 10 | 60.00 | 44.49 | 15.51 | 874.21 |
| 11 | 60.00 | 43.71 | 16.29 | 857.92 |
| 12 | 60.00 | 42.90 | 17.10 | 840.82 |
| 13 | 60.00 | 42.04 | 17.96 | 822.86 |
| 14 | 60.00 | 41.14 | 18.86 | 804.00 |
| 15 | 60.00 | 40.20 | 19.80 | 784.20 |
| 16 | 60.00 | 39.21 | 20.79 | 763.41 |
| 17 | 60.00 | 38.17 | 21.83 | 741.58 |
| 18 | 60.00 | 37.08 | 22.92 | 718.66 |
| 19 | 60.00 | 35.93 | 24.07 | 694.59 |
| 20 | 60.00 | 34.73 | 25.27 | 669.32 |
| 21 | 60.00 | 33.47 | 26.53 | 642.79 |
| 22 | 60.00 | 32.14 | 27.86 | 614.93 |
| 23 | 60.00 | 30.75 | 29.25 | 585.68 |
| 24 | 60.00 | 29.28 | 30.72 | 554.96 |
| 25 | 60.00 | 27.75 | 32.25 | 522.71 |
| 26 | 60.00 | 26.13 | 33.87 | 488.84 |
| 27 | 60.00 | 24.44 | 35.51 | 453.28 |
| 28 | 60.00 | 22.66 | 37.34 | 415.94 |
| 29 | 60.00 | 20.80 | 39.20 | 376.74 |
| 30 | 60.00 | 18.84 | 41.16 | 335.58 |
| 31 | 60.00 | 16.78 | 43.22 | 292.36 |
| 32 | 60.00 | 14.62 | 45.38 | 246.98 |
| 33 | 60.00 | 12.35 | 47.65 | 199.33 |
| 34 | 60.00 | 9.97 | 50.03 | 149.30 |
| 35 | 60.00 | 7.46 | 52.54 | 96.76 |
| 36 | 60.00 | 4.84 | 55.16 | 41.60 |

These tables are computed at the rate of 5 per cent interest. The law states that the rate shall not exceed 6 per cent.

Under the first table the borrower pays a total of $1,604.80, while under the latter the borrower pays $2,160, a considerable sum or more than double the amount of the loan.

When the bill was signed it is stated that the President used two pens. It is not exactly certain why it was necessary to use two pens, but we presume it was purely a matter of taste or rather to give prominence to the transaction. At that time he felt constrained to give expression to his feelings concerning this legislation by stating:

> I have a feeling of profound satisfaction in signing this bill and of real gratitude that we have completed this piece of legislation which, I hope, will be immensely beneficial to the farmers of the country. The farmers, it seems to me, have occupied hitherto a singular position of disadvantage. They have not had the same freedom to get credit on their real assets that others have had who were in manufacturing and commercial enterprises and, while they sustained our life, they did not, in the same degree with some others, share the benefits of that life. Therefore this bill, along with the very liberal provisions of the Federal reserve act, puts them on an equality with all others who have genuine assets and makes the great credit of the country available to them.

It only remains now to give the law a chance to see how it works out. I for one wish it to succeed. The farmers are entitled to all the benefits of the law, and it will be interesting to note how it will be accepted by them. I do not know of any farmers in my district who would pay $72 for a loan of $1,000 at 6 per cent interest or 5 per cent. I do not think he would pay $22 if his farm was half paid for and the title clear. Neither would he need to pay any such amount. On its face it seems not to be an especial improvement upon the present method of borrowing money upon a farm that is one-half paid for with a perfect title. There is no assurance that the rate will be uniformly less throughout the United States upon farm mortgages or that there will be any appreciable lowering of the rate which was and is the purpose and intent of the act. Especially the procuring of the loan should be made as easy as possible under the law.

## Territorial Capitol Building in Juneau, Alaska.

### EXTENSION OF REMARKS
OF
### HON. JAMES WICKERSHAM,
OF ALASKA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 25, 1916.*

Mr. WICKERSHAM. Mr. Speaker, under the leave given to extend my remarks on the very interesting and ever-present subject of public buildings I wish to advise my constituents of the efforts I have made, alone and without assistance, to establish Juneau as the capital of my Territory and to procure appropriations to erect there a fair public building for Federal and Territorial officials.

The people in my district are mildly and somewhat spasmodically interested in securing appropriations for the erection of public buildings. One of my constituents recently urged me to introduce a bill for the purpose of securing an appropriation for that use in his beautiful and rapidly growing city, where a half dozen or more Federal offices are maintained in rented buildings, liable to fire and the destruction of public records at any moment. He assured me of the public interest and declared the business men in his town would sign a petition favoring the appropriation. An Alaskan newspaper, in urging the public to act vigorously in such an enterprise, also declared:

> Visitors in our midst from the States are so accustomed to the sight of Government buildings that if they happen to visit a town that is not provided with one or more they notice it immediately. It is a well-known fact that every little village in the States has one or more Government buildings, particularly when the importance of the village is such as to demand the presence of representatives of the various governmental bureaus.

Conceding that my editorial friend is getting rather too much pepper in his prayer, still it must be apparent to those who know how well the villages in the States are stocked up with public buildings that the distinguished Floridian who serves with such distinction as chairman of the House Committee on Public Buildings and Grounds, and for whose amiable qualities and businesslike activities I have the most profound respect, is holding out on me. The great Territory which I represent, with its hundred prosperous and ambitious villages, towns, and cities, has not to this moment one public building of the monumental type, but scores of Federal officials in rented rooms. We have several shanty courthouses, but generally the Federal officials not intimately connected with the courts hold their business headquarters in rented office rooms in the towns where they are stationed.

The following-named Federal bureaus maintain offices in most of the larger Alaskan towns, and generally in rented quarters: Forest Service, Biological Survey, Agricultural Experiment Stations, Alaska Board of Road Commissioners, Signal Corps, Customs Collectors, Internal Revenue, Revenue-Cutter Service, Post Office, Bureau of Fisheries, Bureau of Lighthouses, Coast and Geodetic Survey, Steamboat-Inspection Service, General Land Office, Geological Survey, Bureau of Mines, Bureau of Education, Public Health Service, Weather Bureau, and probably others. Alaska has a horde of bureaucratic officials within her borders, and but few of them have permanent quarters or any security for their public records. There is not a single public building in any town in Alaska capable of holding one-half the Federal officials whose headquarters are in that town.

While public buildings are thus of great necessity to the economical conduct of public business in Alaska, there seems to be an inertia in the Treasury Department in relation thereto which is so inexcitable as to be almost solid. For the benefit of the people of the living, growing, active, and prosperous towns in Alaska, where any private business having employees of a

similar important type would build to house them, permit me to recount my eight years' experience with public buildings, with appropriations therefor, and with the adamantine inertia of the Treasury Department in drawing plans and constructing public buildings in Alaska.

Let me take the thriving city of Juneau, the metropolis and capital of Alaska, as the example. In 1909, when I first came to Congress as the representative of the Territory of Alaska, filled with enthusiasm and the ideas relating to public buildings so innocently and editorially used and quoted from my Alaskan newspaper friend, I introduced two bills to make Juneau what it ought to be and what some day it will be—the most beautiful and romantic capital city on the Pacific coast. The first of the bills mentioned was the bill to create a legislative assembly in Alaska, to organize it into a real Territory, and to establish Juneau as its capital. This bill was most earnestly objected to by President Taft, who was misled and persuaded to do so by the governor of Alaska, who then resided at Juneau, and who was supported in his contest by some of the more influential citizens and mining companies there. For three years the Beveridge bill and other blocks were kept in the way, but at last, after a contest which cost me my place in the political sun, the bill was forced through Congress and approved by President Taft, who, after three years' swearing that he'd ne'er consent, consented.

Section 2 of the bill approved on August 24, 1912, contained this provision, just as I had written it in the first bill introduced on June 7, 1909:

SEC. 2. That the capital of the Territory of Alaska shall be at the city of Juneau, Alaska, and the seat of government shall be maintained there.

When the bill was under consideration before the Senate committee, after its passage in the House, the Senator in charge was determined to change that section, either by removing the capital to a more central town in Alaska, by naming another town there in place of Juneau, or by providing for its location by a vote of the people. I stood by Juneau and prevented such action being taken, and by my own single-handed effort made Juneau the capital of Alaska by law.

My home-rule bill was introduced on June 7, and on June 10, 1909, three days later, I introduced the bill H. R. 10576, Sixty-first Congress, special session, entitled "A bill to provide for the purchase of a site and the erection of a public building thereon at Juneau, in the Territory of Alaska." Before the bill was favorably reported Gov. Clark came to Washington and immediately got busy in opposition. He represented that $250,000, which my bill called for, was too much for a public building at Juneau, and persuaded the committee to cut it down to $200,000 and to appropriate $40,000 of the savings for an executive mansion, which was done. In the act of June 25, 1910 (36 Stat., 684), appears this authorization:

SEC. 4. That the Secretary of the Treasury be, and is hereby, authorized and directed to acquire, by purchase, condemnation, or otherwise, a site and to contract for the erection and completion thereon of a suitable building, including fireproof vaults, heating and ventilating apparatus, and approaches, complete, for the use and accommodation of the United States post office and other governmental offices in each of the cities enumerated in this section within its respective limit of cost, including site, hereby fixed:

United States post office and customhouse at Juneau, Alaska, $200,000.

United States Territorial executive mansion, furnishings, library, and museum at Juneau, Alaska, $40,000.

It seemed now as if my plan for organizing and building up government and the accessories thereto in Alaska was anchored to a safe holding line. My home-rule bill was being opposed, but since it was right and American in principle there seemed no doubt of its ultimate success, and this authorization for the Juneau public building certainly fastened the capital at Juneau, a promise I had given to the old sour-dough mayor should be done, and now was done. The foregoing bill, however, was only the authorization, so in the following sundry civil appropriation act of March 4, 1911 (36 Stat., 1374), I procured the appropriations of $40,000 for the executive mansion, and for post office and customhouse, for site and commencement of building under present limit, $40,000, to begin the work.

Thereafter, in the appropriation act of June 23, 1913 (38 Stat., 9), I procured an appropriation of an additional $40,000 for continuing the work on the Juneau public building, and by the act of March 3, 1915 (38 Stat., 825), an additional sum of $75,000 for continuing the work. These three items of $40,000, $40,000, and $75,000, aggregating $155,000, were each made "for the fiscal year," and because the Treasury Department made no plans and did not let the contract to build, those three appropriations lapsed at the end of the fiscal year.

I gave much time and attention to urging the people of Juneau to assist in procuring the site for the public building, but it was done so slowly by the Treasury Department and Gov. Clark, that nothing could be done by me to prevent the lapsing of all the appropriations.

When the Sixty-fourth—the present—Congress met I went at the Juneau project again, notwithstanding all my successful labors in the prior Congress had been allowed to lapse and no contract had been let or building begun. On the first day of the Congress I introduced House bill 231. I had also introduced a public-building bill for Fairbanks and secured an authorization in the Sixty-second Congress for Cordova. The rule is that a Congressman may not have two appropriations for public buildings in his district in the same Congress; and in view of the fact that I had three projects in being at the same time, I was called upon to choose which one I would take, the others to be laid aside. On February 25, 1916, I received the following letter from the chairman of the committee:

COMMITTEE ON PUBLIC BUILDINGS AND GROUNDS,
HOUSE OF REPRESENTATIVES, UNITED STATES,
*Washington, February 28, 1916.*

DEAR COLLEAGUE: Kindly advise me which particular public-building project in your district you are especially interested in. This information is for the use of the subcommittee No. 1, and is to be used in connection with the preliminary work of preparing a public-buildings bill. We are desirous of securing reports on these bills at once, but we do not wish to burden the Treasury Department with a large number of requests for reports on bills which stand no chance of being included. Hence the necessity of your expressing a preference, which, by the way, will be treated as strictly confidential. After the report is received from the department, you will be advised and it can then be taken up with the subcommittee for a hearing and final action.

With best wishes, I am,
Yours, most truly, FRANK CLARK, *Chairman.*

To that letter I answered as follows:

WASHINGTON, D. C., *February 29, 1916.*

Hon. FRANK CLARK,
*Chairman Committee on Public Buildings and Grounds,*
*House of Representatives.*

MY DEAR MR. CLARK: I have your note of February 28 asking me to advise you which particular public-building project in my district I am specifically interested in. You ask this information for the use of the subcommittee, etc., and advise me that the matter is confidential.

The situation in Alaska compels me to say that the public-building item for the completion of the Juneau (Alaska) building is the one which ought to be given precedence. This building is so much needed for the general public good of the Territory that I hope the committee can see its way clear to give sufficient appropriation this year to complete it. I will talk to you about the matter personally when I have a little time.

* * * * * * *

Respectfully, JAMES WICKERSHAM,
*Delegate from Alaska.*

Thereafter, on April 12, 1916, I appeared before the Committee on Public Buildings and Grounds, and the following statement is copied from the hearings:

PUBLIC BUILDING, JUNEAU, ALASKA.

The CHAIRMAN. We will now hear Mr. WICKERSHAM on the bill (H. R. 231) introduced by him to increase the limit of cost for the construction of the United States public building authorized at Juneau, Alaska. The bill under consideration is as follows:

A bill to increase the limit of cost for the construction of the United States public building authorized at Juneau, Alaska.

*Be it enacted, etc.*, That the limit of cost for the construction of the public building at Juneau, Alaska, authorized by section 4 of the public-buildings act approved June 25, 1910, be, and the same is hereby, increased by the sum of $450,000 to meet the cost of additional space needed for rooms for the Territorial legislature and for the Territorial library and museum to be located therein, and the Secretary of the Treasury is hereby authorized to enter into contract for the completion of said building within the limit of cost provided in the act of 1910 and the additional limit herein authorized.

Thereupon I was cross-examined for pages about Juneau and Alaska and the necessity for the appropriation of money to erect a public building there to house the Federal and Territorial officers. The committee seemed divided on the question whether we were entitled to the large sum asked for or for any amount for housing Territorial officials. The objection to allowing any appropriation for increased space in the building for Territorial officers—for the governor, the legislature, and other strictly Territorial officials—now began to give much trouble. Finally the committee sent for me and advised me they had concluded to cut off that part of the appropriation for Territorial offices, and on July 7 I received the following letter:

COMMITTEE ON PUBLIC BUILDINGS AND GROUNDS,
HOUSE OF REPRESENTATIVES, UNITED STATES,
*Washington, July 7, 1916.*

Hon. JAMES WICKERSHAM,
*House of Representatives, Washington, D. C.*

MY DEAR JUDGE: When you appeared before the Committee on Public Buildings and Grounds yesterday at the committee's request it was because we had been informed by the Treasury Department that it is not the rule to appropriate for erecting a capitol building in a Territory, and the committee wished you to be advised of the objection. I am now instructed by the committee to advise you further that the committee has concluded to recommend for the Juneau public building the sum of $150,000, in addition to the $177,000 now available under your former bill; and I am also instructed to say to you that if you can offer the

committee precedents to support your statement that Congress has heretofore appropriated for Territorial capitol buildings so as fairly to establish our duty to do so, we will add the other $150,000 to the bill for legislative rooms in the building. Otherwise the Territory will be expected to provide its own capitol building.

Yours, very truly,

FRANK CLARK, *Chairman.*

Upon that request I at once entered upon a full and careful examination of the early United States statutes relating to the establishment of Territorial capitals and prepared and submitted the following letter brief in support of my bill:

JULY 10, 1916.

Hon. FRANK CLARK,
*Chairman House Committee on*
*Public Buildings and Grounds, Washington, D. C.*

DEAR SIR: I have the honor to acknowledge the receipt of your letter of the 7th instant, advising me the committee has concluded to recommend an appropriation of $150,000 in addition to the amount now available for the erection of the Juneau, Alaska, public building. You also advise me of the objection of the Treasury Department to adding the further sum of $150,000 for providing quarters in the building for the Territorial legislature, but you add you are instructed to inform me that if I can offer the committee precedents to support the statement that Congress has heretofore appropriated for Territorial capitol buildings, so as fairly to establish the duty of the committee to do so, you will add the other $150,000 to the bill for providing legislative rooms in the building. Otherwise the Territory will be expected to provide its own capitol building.

As requested by you, I have given the matter of precedents and jurisdiction very careful consideration, and I beg herewith to present the facts as I found them in the statutes in relation to appropriations for the erection of Territorial capitols in former Territories. I will begin with the one with which you are most familiar, suggesting in advance that Congress has in some way or other treated all the Territories alike in respect to public buildings at the capital.

FLORIDA TERRITORY.

The act of May 24, 1824 (4 Stat. L., 30), granted to the Territory of Florida one-quarter section of land "for the seat of government" and three-quarters of the contiguous section for sale for the purpose of raising a fund for the erection of public buildings at the seat of government.

The act of March 2, 1829 (4 Stat. L., 357), section 3, provided for the survey and sale of public lands at Tallahassee "and the proceeds applied to the erection of public buildings in Tallahassee."

The act of March 3, 1839 (5 Stat. L., 323), enacted "that the sum of $20,000 be, and the same is hereby, granted to the Territory of Florida, out of any money in the Treasury not otherwise appropriated, for the purpose of defraying the expenses of erecting a suitable state-house or public building in the Territory of Florida for the use and accommodation of the Territorial legislature of said Territory, and in which building, when erected and completed, the office of the secretary of said Territory shall be kept and also the public records and archives of said Territory."

The act of March 3, 1845 (5 Stat. L., 788, sec. 1), is a supplemental enabling act for the admission of Florida as a State, and provided: "That in consideration of the concessions made by the State of Florida in respect to the public lands, there be granted to the said State eight entire sections of land for the purpose of fixing their seat of government."

IOWA TERRITORY.

The act of June 12, 1838 (5 Stat. L., 235, sec. 13), provided: "And the sum of $20,000, out of any money in the Treasury not otherwise appropriated, is hereby granted to the said Territory of Iowa, which shall be applied by the governor and legislative assembly thereof to defray the expenses of erecting public buildings at the seat of government."

The act of March 3, 1839 (5 Stat. L., 330), provided: "That there be, and hereby is, appropriated and granted to the Territory of Iowa one entire section of land, of any of the surveyed public lands in said Territory, for the purpose of erecting thereon the public buildings for the use of the executive and legislative departments of the government of the said Territory: *Provided*, That said section of land shall be selected under the authority of the Territorial legislature, the seat of government located thereon, etc."

The act of March 3, 1845 (5 Stat. L., 789, sec. 6, subdivision 3), provided "that five entire sections of land * * * are hereby granted to the State for the purpose of completing the public buildings of the said State, or for the erection of public buildings at the seat of the government of the said State, as the legislature may determine and direct."

OREGON TERRITORY.

The act of August 14, 1848 (9 Stat. L., 323, sec. 15, p. 329), provided: "And the sum of $5,000, out of any money in the Treasury not otherwise appropriated, is hereby appropriated and granted to said Territory of Oregon, to be there applied by the governor to the erection of suitable buildings at the seat of government."

The act of June 11, 1850 (9 Stat. L., 438), is entitled "An act to make further appropriations for public buildings in the Territories of Minnesota and Oregon." In the first section $20,000 is appropriated for the penitentiary in each Territory, and section 3 provides: "That the sum of $20,000, in addition to that appropriated in section 15 of 'An act to establish the Territorial government of Oregon,' approved August 14, 1848, be, and the same is hereby, appropriated, out of any money in the Treasury not otherwise appropriated, to be applied by the governor and legislative assembly of the Territory of Oregon to the erection of suitable public buildings at the seat of government of said Territory."

The act of February 14, 1859 (11 Stat. L., 383, sec. 4, subdivision 3), provides: "That 10 entire sections of land, to be selected by the governor of said State, in legal subdivisions, shall be granted to said State for the purpose of completing the public buildings or for the erection of others at the seat of government, under the direction of the legislature thereof."

MINNESOTA TERRITORY.

The act of March 3, 1849, section 13 (9 Stat. L., 403 (407)), provided the legislature should establish the seat of government for the Territory; "and the sum of $20,000, out of any money in the Treasury not otherwise appropriated, is hereby appropriated and granted to said Territory of Minnesota to be applied, by the governor and legislative assembly, to the erection of suitable public buildings at the seat of government."

The act of June 11, 1850 (9 Stat. L., 438), entitled "An act to make further appropriations for public buildings in the Territories of Minnesota and Oregon," in section 1 appropriated $20,000 for the erection of a penitentiary in each Territory, and in section 2 of the act the governor and legislative assembly were specially authorized to expend $20,000 made by section 13 of the foregoing act of March 3, 1849, "for the erection of suitable public buildings at the temporary seat of government of said Territory," etc.

The act of March 3, 1853 (10 Stat. L., 243), provided "That the sum of $25,000 be, and the same is hereby appropriated, out of any money in the Treasury not otherwise appropriated, for the continuation of the public buildings in the Territory of Minnesota, one-half of said sum to be applied to the completion of the capitol at St. Paul and the remainder to the completion of the prison buildings at Stillwater, in said Territory, to be expended under the direction of the legislative authority thereof," etc.

The act of February 26, 1857, section 5, subdivision 3 (11 Stat. L., 166), contained the usual grant of 10 sections given to all new States "for the purpose of completing the public buildings, or for the erection of others at the seat of government, under the direction of the legislature thereof."

TERRITORY OF UTAH.

The act of September 9, 1850, section 12 (9 Stat. L., 453 (457)), provided for locating the seat of government of the newly created Territory. "And the sum of $20,000, out of any money in the Treasury not otherwise appropriated, is hereby appropriated and granted to said Territory of Utah to be applied by the governor and legislative assembly to the erection of suitable public buildings at the seat of government."

The act of July 16, 1894, section 7 (28 Stat. L., 107 (109)), the enabling act provided "That upon the admission of said State into the Union * * * 100 sections of the unappropriated lands within said State * * * shall be, and are hereby, granted to said State for the purpose of erecting public buildings at the capital of said State, when permanently located, for legislative, executive, and judicial purposes."

WASHINGTON TERRITORY.

The act of March 2, 1853, section 13 (10 Stat. L., 172 (177–178)), provided for locating the seat of government temporarily: "And the sum of $5,000, out of any money in the Treasury not otherwise appropriated, is hereby appropriated and granted to said Territory of Washington, to be there applied by the governor to the erection of suitable buildings at the seat of government."

The sundry civil appropriation act of March 3, 1857 (11 Stat. L., 221 (227)), contained this special appropriation: "For the erection of a temporary capitol for Washington Territory, $30,000, and for a penitentiary in the same Territory, $20,000, inclusive of the sites of the buildings," etc.

The enabling act of February 22, 1899, sections 12 and 17 (25 Stat. L., 676 (680–681)), granted to Washington 50 sections of land, and 100,000 acres additional, for public buildings at the State capital, etc.

NEBRASKA TERRITORY.

The act to organize the Territories of Nebraska and Kansas, of May 30, 1854, in section 15 (10 Stat. L., 277 (283)), stated the general policy, past, present, and future, of Congress in the matter of appropriations to aid newly organized Territories in erecting capitol buildings at the seat of Territorial government:

"SEC. 15. *And be it further enacted*, That there shall hereafter be appropriated, as has been customary for the Territorial governments, a sufficient amount, to be expended under the direction of the said governor of the Territory of Nebraska, not exceeding the sums heretofore appropriated for similar objects, for the erection of suitable public buildings at the seat of government, and for the purchase of a library, to be kept at the seat of government, for the use of the governor, legislative assembly, judges of the supreme court, secretary, marshal, and attorney of said Territory, and such other persons, and under such regulations as shall be prescribed by law."

The act of March 3, 1855 (10 Stat. L., 635), in pursuance of the general policy of Congress announced in the foregoing section, made an appropriation from the Treasury "as has been customary * * * for the erection of suitable public buildings at the seat of government," as follows:

"That the sum of $50,000 be, and the same hereby is, appropriated, out of any money in the Treasury not otherwise appropriated, for the continuation and erection of public buildings for the use of the Legislature of the Territory of Nebraska, to be expended under the direction of the governor of said Territory," etc.

The enabling act of April 19, 1864, section 8 (13 Stat. L., 47, 49), grants 20 sections of land to the State of Nebraska, when admitted, "for the purpose of erecting public buildings at the capital of said State for legislative and judicial purposes, in such manner as the legislature shall prescribe."

KANSAS TERRITORY.

The organic act of May 30, 1854, section 33 (10 Stat. L., 277, 279), made the same promise of future customary appropriations for capitol buildings as were made to Nebraska, supra.

The act of March 3, 1855 (10 Stat. L., 635), appropriated $25,000 "for the continuation and erection of public buildings for the use of the Legislature of the Territory of Kansas," etc.

The enabling act of January 29, 1861, section 3 (12 Stat. L., 126, 127), granted to Kansas the usual 10 sections of land "for the purpose of completing the public buildings or for the erection of others at the seat of government," etc.

NORTH DAKOTA, SOUTH DAKOTA, MONTANA, AND WASHINGTON ADMITTED AS NEW STATES.

The enabling act of February 22, 1899, section 12 (25 Stat L., 676, 680), provided:

"SEC. 12. That upon the admission of each of said States into the Union * * * 50 sections of the unappropriated public lands * * * shall be and are hereby granted to said States for the purpose of erecting public buildings at the capital of said States for legislative, executive, and judicial purposes."

Section 17 of the same act, on page 681, granted other and additional lands to each of said new States "for public buildings at the capital." South Dakota, 50,000 acres; North Dakota, 50,000 acres; Montana, 150,000 acres; and Washington, 100,000 acres.

CONCLUSIONS.

The foregoing precedents might be extended to include every Territory heretofore created by Congress, for the rule has always been as it was declared in the fifteenth section of the Nebraska-Kansas act of May 30, 1854: "It has been customary to appropriate for the Territorial governments a sufficient amount, to be expended under the direction of the

governor of the Territory, for the erection of suitable public buildings at the seat of government"; that this appropriation has included, in every instance, the erection, as the first building, of a Territorial capitol.

The act of August 24, 1912, section 2 (37 Stat. L., 512), provided: "That the capitol of the Treasury of Alaska shall be at the city of Juneau, Alaska, and the seat of government shall be maintained there," but Congress has not yet made the customary appropriation in a sufficient amount to erect any public building there for housing the Territorial legislature, the governor, and other Territorial officials which it has created to aid it in maintaining and developing good government in that distant Territory.

On the first day of this Congress I introduced H. R. 231, as follows: "That the limit of cost for the construction of a public building at Juneau, Alaska, authorized by section 4 of the public-buildings act, approved June 25, 1910, be, and the same is hereby, increased by the sum of $450,000 to meet the cost of additional space needed for rooms for the Territorial legislature and for the Territorial library and museum to be located therein, and the Secretary of the Treasury is hereby authorized to enter into contract for the completion of said building within the limit of cost provided by the act of 1910 and the additional limit herein authorized."

This bill was carefully drawn to answer the objections that have been made. Both new items, rooms for the Territorial legislature and for the Territorial library, have universally been appropriated for by Congress in new Territories. This bill authorized the erection of the building, with the additional appropriation for these additional uses, but, contrary to the usual practice, authorizes the Secretary of the Treasury, instead of the governor of the Territory, to expend the appropriation. This is done because the Secretary has charge of the expenditure of the former appropriations, and, of course, it is better that he should have entire charge of the whole expenditures for the building.

The objection that it is a departure from the general rule to allow the Territorial officials, the governor and the legislature, and the Territorial library to be located in a United States building is not fundamental, for all these officials are created by acts of Congress, are engaged in assisting Congress to govern the Territory, and are paid out of the same Treasury.

In conclusion, it seems to be established as a general rule, to which there are no exceptions, that Congress has heretofore appropriated for Territorial capital buildings, so as fairly to establish your duty to do so, and under that condition, in your letter to me dated July 7, you said for the committee, "We will add the other $150,000 to the bill for legislative rooms in the building." Please do so in the exact language of my bill, H. R. 231, so there may be both authority and appropriation.

Respectfully,

JAMES WICKERSHAM,
*Delegate from Alaska.*

While the preparation of that brief gave me some labor, it gave me more satisfaction some days later when I received the following letter from the chairman of the committee allowing the full sum of $300,000, including the $150,000 for the Territorial offices and legislative hall:

COMMITTEE ON PUBLIC BUILDINGS AND GROUNDS,
HOUSE OF REPRESENTATIVES, UNITED STATES,
*Washington, July 14, 1916.*

Hon JAMES WICKERSHAM,
*Delegate from Alaska.*

MY DEAR MR. WICKERSHAM: The brief prepared by you in the matter of the jurisdiction of the Committee on Public Buildings and Grounds to make appropriation for additional rooms in the public building at Juneau, Alaska, for use by the governor and Territorial legislature has been considered by the committee, and, in view of its disclosures, the committee has concluded to allow the additional sum of $150,000 asked for by you for that use. It will be included in the bill to be reported at once.

Respectfully,

FRANK CLARK, *Chairman.*

On July 17, 1916, the Committee on Public Buildings and Grounds favorably reported the committee bill, H. R. 17052, "to increase the limit of cost of certain buildings," and so forth, and section 1 of the bill provided:

*Be it enacted, etc.*, That to enable the Secretary of the Treasury of the United States to give effect to and execute the provisions of existing legislation authorizing the acquisition of land for sites or the enlargement thereof, and the erection, enlargement, extension, remodeling, or repair of public buildings in the several cities hereinafter enumerated, the limit of cost heretofore fixed by Congress therefor be, and the same is hereby, increased, respectively, as follows, and the Secretary of the Treasury is hereby authorized to enter into contracts for the completion of each of said buildings within its respective limit of cost, including site:

United States post office, customhouse, court house, Territorial legislature, and other Government offices at Juneau, Alaska, $300,000.

This additional increase of $300,000 makes the total authorized expenditure for the Juneau public building the sum of $500,000, of which $22,500 has been expended for the site, which leaves $477,500 available for the construction of the building. Here is a sum sufficiently great to erect a splendid capitol building for the use of Federal and Territorial officials. But even authority and appropriations are not enough. There must be civic pride and organization to take hold of the project and keep it moving. When the old pioneer, Emory Valentine, was mayor of Juneau, there was constant effort to procure the site and push the construction of the building, but since that time the people of the capital city seem to have rested in their activities, and the sum of $155,000 of actual appropriation which I secured for construction was permitted to lapse. Of course, this arose in large part from the refusal of the Treasury Department to act, but if a strong local organization had been actively interested, the Treasury officials would not have been permitted to hold up the work until the various appropriations lapsed. This matter is mentioned not in criticism but by way of suggestion, so the people of Juneau may take steps to keep posted on the passage of the acts of Congress authorizing appropriations, and to keep the project moving in the Treasury Department. If prominent newspapers and business men of Juneau had given half as much time and energy to this public-building project as they have to placing tacks under the tires of progress the Juneau capitol would have been completed.

This statement is also made to enable those interested in similar projects in other towns to appreciate the length of time and the effort required to get authorization, appropriation, and to erect a public building in Alaska.

---

**Revenue Bill.**

## EXTENSION OF REMARKS
OF
## HON. SAMUEL J. TRIBBLE,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, July 14, 1916.*

Mr. TRIBBLE. Mr. Speaker, the necessity for this increase of tax as provided in this bill is largely due to the demand for preparedness. It is interesting to note that the section of the United States most interested in a large Navy and Army will pay the principal part of the tax as provided in the revenue bill now before Congress. Surplus incomes, large estates, and munition plants are required to furnish the additional revenue needed by the Government. Therefore the increase will come from sources where the burden will not fall on those least able to bear tax burdens. We propose to make the personal and intangible property contribute its just portion to the support of the Government.

New York owns about $30,000,000,000 of the wealth of the country, and before the enactment of the income-tax law more than one-half of this $30,000,000,000 escaped the taxgatherer. On the other hand, the taxgatherers never fail to find all the assets of the man with one little farm, one cow, one horse, and small income. His little possessions are visible and his tax burdens heavy. Enormous estates have grown up in this country by the thousands and pay practically nothing to the Federal Government, while they exact much from the Government as protection to the great estates and interest thereto attached.

Why should not these mammoth fortunes be taxed? They require much of the Government revenue to throw around them the arm of Government protection. The incomes are so large that the holders thereof can not consume them even by luxurious living. Therefore, incomes become a dangerous surplus, gnawing at the very vitals of our national life, and they circumscribe the efforts of men in the common walks of life to obtain a competency of this world's possessions. The vast accumulations of wealth can well afford to bear taxation and increase of tax better than any other class of taxable property. I am very happy in realizing that I have contributed my part as a representative of the people in producing this bill, which raises $200,000,000 additional tax from incomes, inheritances, and munition tax, and have the conscious satisfaction of knowing that the masses of people have not been called upon to pay one dollar of it. At the present time the average tax per family is about $33 per year. When it became apparent that a new tax levy would have to be made, I could not give my consent to add this additional burden to the overtaxed poor. It was said among many of the prominent men that the stamp tax could not be repealed during the European war with large increase for preparedness facing Congress, and that the stamp tax would be extended to gasoline and other products. When I appealed to Congress to repeal the stamp tax last winter there seemed to be little hope of success, but we can now thank Congress that the stamp tax is gone, and the needed funds will not be collected from the obnoxious stamp tax or from the poor, but from the sources of wealth untouched by the taxgatherer previous to the enactment of the income and inheritance tax law. It will be of interest to note how much revenue was raised last year by the income tax from the different States. I insert the following statement:

| | Amount collected. |
|---|---|
| Alabama and Missisippi | $177,449.00 |
| Arkansas | 44,278.00 |
| Florida | 133,560.00 |
| Georgia | 199,545.00 |
| North Carolina | 175,922.00 |
| Oklahoma | 489,415.00 |
| South Carolina | 76,250.00 |
| Tennessee | 207,346.00 |
| Louisiana | 296,341.00 |
| Kentucky | 165,109.00 |
| New York | 30,286,607.61 |
| Pennsylvania | 6,312,204.29 |
| Massachusetts | 4,195,873.18 |

### Pensions, War With Spain, Etc.

## SPEECH
OF
# HON. CHARLES H. SLOAN,
OF NEBRASKA,
IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, February 16, 1916.*

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 54) to pension widows and minor children of officers and enlisted men who served in the War with Spain, Philippine insurrection, or in China.

Mr. SLOAN. Mr. Chairman, I move to strike out the last word. On two former occasions when this bill passed the House there was considerable delay, and it was somewhat late in the session. Its early passage here augurs well for the prospect of its becoming a law in a short time.

Having on previous occasions spoken in favor of the bill, and favoring it to-day, I rise simply to give publicity in this way to the part taken by the State of Nebraska in furnishing, as it did, three regiments and a cavalry troop for that war. Large contributions to each of these organizations came from each of the 11 counties of the district I represent.

The large majority of the enlisted men and many of the officers were unmarried. Still, in many cases coming under my observation wives and little ones were left at home, while husbands and fathers went out in obedience to the humanitarian call President McKinley had made.

Their ages averaged probably 20 to 21 years. They are now nearly two score years. They were then in the first flush of their young enthusiastic manhood. They are now in the ripeness of mature citizenship. They were both strong in body and clear in mind. The bullet of fray, fever of swamp, and fatigue of tropic heat collected a very heavy life toll and left the impress of disease upon many whom death spared.

They all contributed to the last great and brilliant chapter of American martial history. Their valor and achievements made the sunset of the nineteenth century for America memorable and glorious.

They returned to civil life and took up their home, industrial, and civic duties. Many returned to fulfill the tender vows sacredly made before following the mad music of war to southern waters or the far-off antipodes. Brides became matrons and beautiful children, cementing love and radiating sunshine, gladdened new homes.

But valor, triumphant on field where death and danger stalk, insures no immunity against accident or disease along the ways of peace.

So the message that Spanish bullet or Philippine knife could not carry has many times since been delivered in the avenues of peace. Husbands have been taken and fathers called. They had a right to believe that while republics were said to be ungrateful the United States was an exception. They were warranted in believing that the fathers and the fatherless of those who had answered the call of country first, and death thereafter, would be given that aid which, added to a fair measure of industry, would keep them on that plane of life which the sacrifice of the departed had fairly earned for them.

The widow and minor pension measure before us to-day is designed to meet that end. I hope that there will be few voices lifted against it, not many votes to oppose it, and no obstacles or delays submitted to prevent its early enactment into law.

Men talk much of Americanism. I thoroughly believe in it, both in the abstract view and its concrete manifestation. It may, in some parts of the country, seem necessary and proper to discuss Americanism with relation to ancestral strains. It is not and has not been necessary in Nebraska. Of the young men who went forth in 1898 there was a mingling of all the strains which, continuing through generations, has been evolving the American race. Of the young men leaving my home city and neighboring cities there were those who could trace their ancestry to the early Puritan and Cavalier stocks. There were many who, reverting but a generation, would be in one of the great nations now in Europe's great convulsion; while others would hark back to those countries whose steadiness of purpose during the last two years, who although in almost immediate contact with their warring neighbors, have maintained their neutrality.

Well do I remember seeing in these ranks faces and features revealing the fire of France, the indomitable courage of Germany, the bravery of Bohemia, Scandinavian gallantry of Sweden, Norway, and Denmark, unyielding England, the sturdy firmness of Scotland, and the fighting passion of Ireland. But they followed and were devoted to the same flag, saw the same beauty in its stripes and the same glory in its stars. They had and gave that flag but one allegiance. I would not inquire into the memory of other flags, other days, and other generations. If men give unto this country the deeds and the hazards of their lives, we should not deny them either the comforts or the sorrows of memory.

Greece could not teach these young men grandeur nor Rome nobility. They had these with all the added charm and strength that an enlightened Christian civilization can confer. They made the name of America transcendent among the nations. Let us not forget them nor neglect the objects of their solicitude and love. [Applause.]

### Indorsement of the Lieb Bill.

## EXTENSION OF REMARKS
OF
# HON. LINCOLN DIXON,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, July 21, 1916.*

Mr. DIXON. Mr. Speaker, my colleague, Mr. LIEB, has introduced in the House a bill for the establishment of a department of aviation, and I desire to extend my remarks by the publication of an article from the July number of the Flying Magazine on that subject. The article is as follows:

[From the July number of the Flying Magazine.]

THE PROPOSED DEPARTMENT OF AERONAUTICS.

Only a dozen years ago the flying machine was the merest creature of rumor, its existence doubted by all. Half a dozen years later it had become a reality, but seemingly a useless thing save for sport. Two years ago it had arisen in dignity, it had become an instrument of promised usefulness in warfare. To-day the nations of the earth by means of it as fiercely struggle in the air for mastery as, with all their age-old machinery of warfare, they struggle upon and beneath the ground, upon the sea and within it. Thus the aeroplane and the airship have at a single flight, as it were, taken rank with the most useful weapons of man.

But, what is more strange and enormously more important, aeronautics has brought warfare into the third dimension of space. What does this portend? Let us see. In warfare celerity of action is of the essence of success. As wheel is swifter than keel, so is wing swifter than either. In warfare to see best is often to succeed. For the first time man may look the earth in the face, may study at pleasure its countenance and all that moves thereon. In warfare mobility also is of the essence of success. The groovelike highways of terrestial travel, unknown to the sea, likewise are unknown to the air—to the air, where a third dimension has been added to the mobility of military forces. And ranges. A navy is arrested by a coast, an army by a sea, an aerial armada by neither. Before the flying machine and the airship was there ever such a vehicle of warfare? In any of the long-established instrumentalities of battle does there lie the opportunities for dominion promised by aerial fleets? Has not a wholly new service been born, differing in kind, differing in the method to be employed in its use, differing in the medium in which it works, differing in the universality of its employment above land or sea indiscriminately, regardless of either?

A new species of warfare has come into the world. How shall it be dealt with? After old models, which are wholly unlike it, or after a pattern of its own? Shall it be chained to that sprawling thing aground called an army, or to that plunging thing afloat called a navy? Shall it be divided between them, not above, to be wing clapped, but to be hurt by its halving? Or, having a realm of its own, shall it not be given a scepter of its own?

These are the questions which all Governments must solve forthwith. Indeed, they are already in process of solution. In England the work is in hand. On March 9 Lord Montague, of Beaulieu, then vice chairman of the joint naval and military board in control of the aerial service, asked His Majesty's Government whether, in view of the great and growing importance of aviation in modern warfare, both by sea and land, and the need for special attention and effort being concentrated upon it, they would create a separate ministry to deal with the whole question. Everything must be subordinated to the needs of the war, and although he welcomed the appointment of the committee over which Lord Derby was to preside, which was in itself an admission of weakness, he wished to convince the Government that there was need for something bigger, with wider powers, and with a man of imagination and foresight at its head.

At the present time the air service was merely auxiliary to the fighting forces of the navy and army. He could see a time coming when the air service would be more important than either the army or navy. We must get into the habit of looking at the air service not as an auxiliary to the army and navy but as a great service which was an establishment of itself and to which we should have to look in future years largely for the defense of this country. It would take many years before the full value of air power was realized.

Then, there was another aspect. All war would become more and more scientific, but warfare in the air would become more scientific than anything which had preceded it. There should be one responsibility, and one only.

In the United States also it has been perceived that the aerial service must be a separate service, possessed of its own, its independent, head, whose concern shall be its welfare and nothing else. Our experience already has proven that neither of the other services can satisfactorily develop this new one. It is not of the nature of the case that they should be able to do so. Each of the others has its own particular and pressing needs, and this alone places aeronautics, so long as it remains with either, in the position of foster child.

This Congressman CHARLES LIEB, of Indiana, saw and has essayed to remedy. By means of the provisions of his bill recently introduced at Washington it is purposed to establish a separate department of aviation—it should be made to read "of aeronautics"—having at its head a secretary with a seat in the President's Cabinet. Without undertaking at this writing to discuss the details of the measure, we nevertheless heartily indorse the project and bespeak for it the active aid of all who are interested not alone in aeronautics but in projecting our defenses upon the most forward-looking and durable plan.

## The Revenue Bill.

### EXTENSION OF REMARKS

OF

### HON. ISAAC BACHARACH,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. BACHARACH. Mr. Speaker, this is a billion-and-a-half dollar Congress. The estimated disbursements over the receipts for the year ending June 30, 1917, amount to $266,922,000. The bill before the House contemplates raising the amount needed by a direct tax upon the people. This method of taxation is in direct opposition to the beliefs and policies of the Republican Party, and I therefore regret that I can not support the principles for which this bill stands.

Being a firm believer in the need of a greater and stronger Army and Navy for the adequate and proper protection of our country, I voted for the various bills which were brought before the House for that purpose, and I am very sorry that I can not have an opportunity to vote for the means to raise the revenue necessary to meet these extraordinary expenditures without being forced to subscribe to principles of taxation to which I am antagonistic.

This bill covers every form of direct taxation known to political science, and it is a plain indictment, on the face of it, of the wanton extravagance of the present administration, and an admission, although an unwilling one, of the complete failure of the "tariff-for-less-than-revenue" policy of the Democratic Party, and a public acknowledgment of its profound inability to properly and successfully handle the reins of this great Government.

The total estimated appropriations for the year ending June 30, 1917, is $1,579,000,000, an increase of $435,000,000 over 1916 and $430,000,000 over those of 1915. It is true that the appropriations for the Army and Navy, because of the "preparedness" program, are considerably greater than heretofore, but there are a great many pet projects of the party in power which very easily could have been omitted when the revenue was needed for more important purposes.

I refer particularly to the direct levy upon the Treasury of $50,000,000 for the Government ship ownership bill, which represents a tax of 50 cents on every man, woman, and child in the United States; or, if they were to levy the tax upon the voters of the country only, it would represent a per capita tax of $3.50. The $21,000,000 emergency war tax—forced upon the people when the country is not at war, or at least the administration says we are not at war—is an additional tax of 21 cents; the flood bill, granting upward of $50,000,000 for the reclamation of private lands, is another tax of 50 cents; the appropriation for the Government-owned nitrate plant is a further tax of 20 cents; the rural-credits bill represents a 15-cent tax; the good-roads bill an 85-cent tax; the armor-plate plant an 11-cent tax; the new income, inheritance, and munitions taxes make up another levy of $1.50, while the various commissions, bureaus, boards, and so forth, will add a new tax of 5 cents, or a total of $4.07 upon every man, woman, and child in the United States.

Since Congress met in December it has been spending money at the rate of $10,000,000 per day, excluding Sundays and holidays, and puts a heavier burden of taxes on the American people than any other session of Congress in the history of the Republic.

#### THE UNDERWOOD-SIMMONS TARIFF.

In 1912, a minority President having been elected, and both Houses of Congress being of the same political complexion—the first time such an event had happened in 16 years—in accordance with the pledges made during the campaign, the first important legislation taken under consideration was the revision of the Payne-Aldrich tariff and harmonizing that tariff law with the free-trade ideas and principles of the party.

The historic principle of the Democratic Party since 1876 has been a "tariff for revenue only." As a revenue producer the Underwood-Simmons law has been an abject failure.

The Democrats are insistent that the prosperity which this country has been enjoying since the late summer of 1914 is not a war-order prosperity; on the contrary, they give as a reason for the enactment of the emergency war tax, which was enacted when there was no war for the purpose of augmenting the rapidly growing deficiency in the Treasury, that the war had stopped importation; but in spite of the war, importations for the year ended June 30, 1916, amounted to approximately $2,000,000,000, about $300,000,000 greater than the importations under the Republican tariff.

The Republican Party is equally insistent that our industrial prosperity for the past two years has not been due to the activities of the administration or its policies, but is solely due to war orders which have come to this country. Who among us does not remember the disturbed business conditions that obtained throughout the country for some time prior to the fall of 1914? In the second congressional district of New Jersey, which I have the honor of representing in this House, practically every factory—no matter what the industry—was either closed down or was operating on a greatly reduced schedule. Men and women were out of employment, there were numerous business failures, and there was general depression and stagnation in industrial circles. The American markets were being flooded with the cheap merchandise of European manufacture which was allowed to come in, under the Underwood tariff, either duty free or under a tax so low that American manufacturers were unable to meet the competition. Conditions kept going from bad to worse; business had reached its lowest ebb and the country was on the verge of one of the greatest panics it has ever known.

Such was the industrial and financial condition of this country when the whole world was shocked by the outbreak of the European war. No one at that time could foresee, nor did anyone realize what a terrible conflict that war would prove to be. Almost immediately it became of such magnitude that the resources of practically the whole of Europe, for the manufacture of munitions and other necessary supplies essential in the carrying on of such a gigantic operation, were soon unable to meet the demands made upon them, and it became necessary for the warring countries to look about for other markets to supply their wants.

Naturally they turned to America. Manufacturers here, just at that time, were at their wits' ends trying to find some means to take care of their employees and to find work for them to do, and they naturally welcomed the large orders for ammunition and other supplies which immediately flooded the American markets at prices and upon terms which could not be refused. Immediately there was a transformation in our industrial affairs; factories that heretofore were engaged in peaceful pursuits, but which were then practically lying idle because of the great business depression and dearth of orders, were promptly converted into manufactories of war supplies. New buildings were erected in great numbers to take care of the war orders that were constantly increasing in size and volume. There was an unprecedented demand for labor at wages never before dreamed of, and the mad race for wealth and supremacy was on. The country became extravagantly prosperous, and fortunes were made and lost over night. Prosperity was everywhere in evidence, and labor shared in it proportionately with capital.

The Democratic Party was quick to seize upon, as an excuse and to lay the blame upon, the war as the cause of the business depression that had gripped the country soon after the Underwood tariff law was put in operation, which depression had reached the top mark just prior to the breaking out of the war; but just as soon as there was a noticeable effect upon business as a result of the receipt of war orders, and the country again took on a semblance of prosperity, this same party was very quick to change its wail, and immediately they would have you believe that the wave of prosperity that had so thankfully hit us, was caused not by war orders, but that it was the logical outcome of the policies of a "forward-looking" Democracy. They despise "backward-looking" people, and well they might, for if one will look backward and analyze the

situation that obtained just prior to the war he will find facts and figures which will show beyond the shadow of a doubt to what the country's prosperity is due.

I submit two tables from the Bureau of Foreign and Domestic Commerce showing the total values of imports and exports for the United States; the first for the 11 months ending November, 1915, and the second for the 11 months ending May, 1916. The first portions of these tables will show the value of imports admitted to this country duty free and the value of those imports which were subject to a duty tax.

*Total values of imports and exports of the United States—November, 1915.*

MERCHANDISE.

**If one will take the time and trouble to analyze the figures given in these tables, it will be seen that immediately following the going into effect of the Underwood tariff law the imports into this country steadily increased and our exports just as systematically decreased, showing a steady decline of the favorable trade balance which this country had enjoyed. This decline regularly progressed month after month until April, 1914, when the balance of trade in our favor was entirely wiped out and our imports exceeded our exports in the enormous amount of $11,209,544, which represented the balance of trade against us for that month. At no time from the month of April to the month of September, 1914, did our exports exceed our imports. In May the balance of trade against us amounted to $2,548,896; in June it amounted to $457,406; in July, $5,538,344, while in the month of August it overtopped all other months to the tune of $19,400,396.**

**The Democratic Party was finding itself pretty hard pressed to give a suitable explanation for this loss of our country's prestige when—happily for that party—the war in Europe broke out, and they immediately put the blame on the war, stating that because of it there was no demand for our goods in Europe.**

**As stated above, the balance of trade against us for the month of August, 1914, was $19,400,396; in that month the war broke out, and, notwithstanding the fact that there was no market for our goods, according to our Democratic friends, the month of September showed an increase of exports over imports amounting to $16,341,722, representing the balance of trade in our favor, and this favorable balance steadily and increasingly mounted up and up until it reached the astounding sums of approximately $131,000,000 in December, 1914, and $187,000,000 in December, 1915. Thirty-one articles properly characterized as munitions of war made up 52 per cent of our total exports.**

**From the Department of Commerce I obtain the following figures showing exports of ammunition and firearms for each month from August 1, 1914, to the latest date for which statistics are available, June 29, 1916:**

***Exports of ammunition and firearms from the United States during each month from August 1, 1914, to the latest date for which statistics are available.***

| Month of— | Cartridges. | Gunpowder. | | Other explosives. | Firearms. |
|---|---|---|---|---|---|
| 1914. | | *Pounds.* | | | |
| August | $154,080 | 30,946 | $16,821 | $26,336 | $208,644 |
| September | 421,982 | 193,037 | 65,465 | 187,510 | 201,556 |
| October | 1,452,740 | 90,982 | 24,395 | 56,305 | 692,146 |
| November | 1,231,235 | 63,064 | 23,027 | 78,062 | 1,194,510 |
| December | 1,098,875 | 55,352 | 27,989 | 980,665 | 1,092,158 |

*Exports of ammunition and firearms from the United States*—Con't.

| Month of— | Cartridges. | Gunpowder. | | Other explosives. | Firearms. |
|---|---|---|---|---|---|
| 1915. | | *Pounds.* | | | |
| January | $1,381,970 | 372,085 | $129,617 | $1,039,961 | $2,156,757 |
| February | 1,909,774 | 73,015 | 34,884 | 1,020,904 | 584,694 |
| March | 1,615,625 | 181,043 | 65,481 | 1,081,860 | 545,716 |
| April | 2,648,667 | 645,690 | 417,919 | 2,863,014 | 464,913 |
| May | 3,028,083 | 1,591,136 | 1,048,607 | 4,439,777 | 1,101,751 |
| June | 2,467,378 | 4,376,677 | 3,234,549 | 5,911,186 | 914,118 |
| July | 2,427,761 | 5,504,772 | 4,567,929 | 9,329,303 | 1,948,717 |
| August | 2,284,540 | 6,653,841 | 5,296,118 | 6,907,046 | 693,413 |
| September | 1,412,144 | 11,183,468 | 8,026,411 | 8,743,149 | 1,047,722 |
| October | 1,648,329 | 9,205,229 | 6,593,691 | 10,836,147 | 550,740 |
| November | 1,737,673 | 20,892,232 | 16,730,384 | 13,495,527 | 1,197,768 |
| December | 2,260,734 | 23,204,516 | 20,201,180 | 23,366,260 | 954,102 |
| 1916. | | | | | |
| January | 3,343,497 | 13,149,659 | 10,104,525 | 12,569,635 | 1,513,087 |
| February | 3,616,702 | 13,483,939 | 12,043,610 | 32,235,724 | 1,902,020 |
| March | 4,174,827 | 20,066,043 | 16,868,622 | 29,150,515 | 1,568,379 |
| April | 3,963,133 | 26,997,792 | 22,245,946 | 29,351,236 | 1,933,953 |
| May | 5,390,715 | 27,487,570 | 21,300,333 | 41,384,610 | 2,576,447 |
| Total, 22 months | 49,602,465 | 185,493,090 | 149,067,503 | 235,143,732 | 25,050,311 |

A total of $458,924,011

I submit also a table showing the amount of exports of the same articles for the three years prior to the war:

| | Cartridges. | Gunpowder. | Other explosives. | Firearms. |
|---|---|---|---|---|
| 1911 | $98,361 | $46,554 | $998 | $373,054 |
| 1912 | 156,631 | 109,964 | 50,098 | 566,680 |
| 1913 | 296,960 | 43,410 | 100,269 | 736,227 |
| | 551,952 | 199,928 | 151,365 | 1,675,961 |

A grand total for the three years of $2,579,206.

From these tables it will be seen that the total amount of exports of ammunition and firearms for the 22 months beginning August 1, 1914, and ending May 30, 1916, exceeds the total amount of like exports for the 36 months beginning January 1, 1911, and ending December 31, 1913, by the appalling sum of $456,344,805.

But to show that the increase in our exports is not entirely due to the shipment of munitions, which, together with copper, are the only war items subjected to a tax under this bill, I incorporate the following table.

If we are going to put a tax on war orders, why not distribute it equally, and not discriminate against any class of people?

*Exports of American Products.*

| Articles. | Seven months ending January, 1914. | Seven months ending January, 1916. |
|---|---|---|
| Cattle | $355,000 | $2,000,000 |
| Horses | 1,653,000 | 51,183,000 |
| Mules | 389,000 | 14,116,000 |
| Total exports of animals | 3,000,000 | 67,693,000 |
| Brass and manufactures | 4,331,000 | 44,511,000 |
| Corn | 3,832,000 | 10,104,000 |
| Breadstuffs | 63,897,000 | 125,000,000 |
| Cars, carriages, etc | 69,000 | 4,654,000 |
| Automobiles and parts | 13,251,000 | 54,000,000 |
| Cars for steam railways | 6,249,000 | 13,000,000 |
| Chemicals, drugs, etc | 15,531,000 | 58,000,000 |
| Manufactures of cotton | 17,937,000 | 24,767,000 |
| Wearing apparel | 5,965,000 | 17,595,000 |
| Cartridges, dynamite, gunpowder | 3,367,000 | 180,782,000 |
| Canned salmon | 5,882,000 | 10,592,000 |
| Glass and glassware | 2,273,000 | 6,307,000 |
| India-rubber manufactures | 1,882,000 | 9,755,000 |
| Iron and steel and manufactures of | 4,349,000 | 16,482,000 |
| Cutlery | 724,000 | 1,908,000 |
| Firearms | 2,213,000 | 7,911,000 |
| Locomotives | 2,311,000 | 10,702,000 |
| Metal-working machines and tools | 8,209,000 | 25,196,000 |
| Total exports of machinery | 59,279,000 | 92,524,000 |
| Steel rails | 7,567,000 | 10,640,000 |
| Tin plate | 1,825,000 | 9,104,000 |
| Wire | 5,961,000 | 25,118,000 |
| Leather and tanned skins | 20,855,000 | 46,666,000 |
| Boots and shoes | 10,584,000 | 26,787,000 |
| Harness and saddlery | 12,263,000 | 38,933,000 |
| Meat and dairy products | 91,482,000 | 170,671,000 |
| Silk, manufactures of | 1,242,000 | 2,449,000 |
| Vegetables | 3,866,000 | 8,617,000 |
| Manufactures of wool | 2,741,000 | 29,066,000 |
| Spelter, zinc, etc | 261,000 | 25,579,000 |
| Total | 395,528,000 | 1,242,412,000 |
| Increase, 1916 over 1914 | | 846,884,000 |

The showing for the nine months ending March 31, 1916, is even more impressive:

| | |
|---|---|
| Exports, nine months ending Mar. 31, 1916 (war period) | $2,995,875,232 |
| Exports, nine months ending Mar. 31, 1914 (anti-war period) | 1,883,221,915 |
| Increase in war period | 1,112,653,317 |

Our great agriculturists of the South and West will perhaps find in this table the cause of the prosperity which they have been enjoying for the past two years. In foodstuffs alone the total amount of exports far exceeds the munitions business; and whether the war soon ends or not, the demand for foodstuffs will continue for some time to come, since the crops of all European nations are greatly below the normal. America must feed Europe whether Europe fights or not. And some of our Democratic friends from the great agricultural districts, especially of the West and South, would have you believe that the tremendous prosperity of the farmers and the never-before-dreamed-of prices which they are receiving for their products is due not to the European war but to the benefactions and benedictions of the Underwood tariff and the other so-called constructive policies of the Democratic Party. If there had been no war in Europe to furnish a market for the products of the American agriculturist will anyone believe this class of citizens would be enjoying the prosperity which is now theirs? You may draw your own conclusions as to the truth or fallacy of the claims of the Democratic Party.

Tuesday, June 6, was the high record day for shipments of exports from the port of New York. On that date domestic exports left the United States to the value of $25,744,411. Of this sum, loaded projectiles made up $3,686,127; fuses, $2,351,588; cartridges, $291,162; gunpowder, $5,131,322; refined copper, $2,365,610; cotton for making guncotton, $202,744; firearms, $455,723; metal-working machinery used by the allies for turning out war material, $1,055,456; barbed wire for entanglements, $124,761; shoes for Russian soldiers, $345,450; sole leather, $310,493; automobile tires for English war motors, $125,171. Total value of these 12 war commodities, $16,445,607. And this does not take into account clothing, medicines, brass and steel products, cutlery, commissary stores, and a thousand and one other things being used by the belligerents in this war. Seventy-six vessels were required to transport the day's shipments.

This is the high-water mark in Democratic prosperity, and they try to make you believe that it is not a war-order prosperity. Do you believe it? If you do, it is purely psychological.

It is interesting, particularly from a local standpoint, to quote here abstracts from some letters which I have received from manufacturers in the second congressional district of New Jersey, which are on file in my office. The first is in reply to a letter which I had written to a concern in whose factory the post office is located, calling their attention to the fact that the office had been relegated to the "fourth class." The reply, which follows, was most instructive and impressive:

Thanks for your letter of June 21, just received. I note all you say, our old-line business, woodworking machinery, has been in a very much depressed state for sometime, and in order to keep busy we have taken some orders caused by the war in Europe, principally for iron-working machinery; we have taken several orders of about $50,000 to $100,000 each, which has helped us out very much, but where one order of $100,000 would only cause us a correspondence of perhaps 8 or 10 letters that many orders in our old line would keep half a dozen stenographers busy all the time till such orders were completed; hence inasmuch as in our old line we haven't done over 50 to 75 per cent of our normal business, our post-office receipts have fallen off very much. Another thing, when there is no business there is no use in advertising, and where ordinarily we might send out one or two hundred letters a day of advertising matter, we have been sending out very little of late. I regret to learn that we will probably go to "fourth class," but if we only get a change in the administration, revise our tariff laws, I am not at all alarmed but what we will get back into third class. The country would have been in a bad fix to-day in my opinion if the war in Europe hadn't caused us manufacturers to get busy, and I do most sincerely hope that the Republican Party will get back into power; if I can do anything to help the party here in New Jersey I am bound to do it.

—

I have most of my life been a Republican with medium rather than high-tariff ideas, as I think a very high tariff extensively applied would mean taxing the poor people rather than the rich, which is wrong.

There is no doubt, however, but what in the present condition of things we need tariffs to protect certain industries, which, without them, would languish. On the other hand there are some imports which should be taxed as little as possible to prevent poor people paying too high prices for their necessities.

In general, I have no doubt but that the best course to follow is to have a good nonpartisan tariff commission—if we can get a good one—to regulate all such taxation scientifically and logically.

In politics I am a Roosevelt man who rather expects to vote for Mr. Hughes, as we certainly should all pull together; and this seems the best way.

—

The writer believes we should have a tariff sufficiently high to keep out manufactured products from abroad; not only this, but we should most certainly have a strong dumping clause similar to the one in Canada, which will prevent shipments of materials to us, sold on a basis lower than the same materials would be sold in the home country. At the conclusion of the European war there is undoubtedly going to be a tremendous lot of scrap and other materials of iron thrown on the market at very low prices. We certainly should guard against any danger of these materials being dumped into the United States at low prices. If the submarine carried scrap iron as ballast, we presume all the steamers on the other side would be likely to carry cast-iron pipe on their first trip to this country, and we should like to see a tariff sufficiently high to prevent it. Roughly, living expenses I believe have gone up, say 105 per cent, and probably wages in our plants have gone up 40 to 45 per cent in the last 10 years.

—

I have your favor of the 13th instant and regret very much that the time is too short to allow me to get any facts or figures together that would be of real value. However, roughly speaking, would state that we commenced to feel the effect of importations in our line of product from abroad, from April 1, 1914, to October 1 of that year. From October on to about the middle of January, 1915, we experienced a period of considerable dullness and depression, due to the uncertainty and hesitancy caused by the outbreak of the war. About the middle of January, however, business commenced to improve, and has been steadily increasing up to the present time. Just now we are running at the top notch of our capacity and almost entirely on domestic orders. We find that the volume of our sales for the first half of 1916 is equal to practically the entire volume of sales for the year 1914, and the rate of wage and average weekly pay roll to-day is almost 50 per cent greater than in 1914. There have been several advances in wages this year and the present rate is at a figure which could not possibly be sustained in the event of a resumption of foreign importations and the consequent competing with low-priced foreign labor costs.

—

In reply to your letter of July 7, would state that our case is exactly parallel with the dye people. Before the European war there was little or no scientific glassware made in this country. The absolute cessation of all European importation in scientific glassware created conditions in America that were startling. Supplies were running entirely out for hospitals, boards of health, and educational institutions, and it was upon their solicitation that glass manufacturers of this country went into the question of the manufacture of glassware for scientific purposes. This meant to them that entirely new plants had to be built and equipped for this especial purpose. Workmen had to be schooled in a technique wholly new to them, all of which required a great outlay of money and time. The result of this is that American manufacturers are to-day supplying the entire demand from the hospitals, governmental, educational, and industrial laboratories. Now there is existing and has been for 30 years a duty-free clause for educational and industrial institutions, which allows the entry into America of glassware made under conditions that it is absolutely impossible for American manufacturers to compete with or exist under. Of course at the present time we are protected from these conditions by the war, but we are confronted in the West by Japanese importations of ware made under even more impossible conditions from a labor standpoint than in European countries. We shall not only be up against absolutely free trade in the scientific-glassware markets but are now threatened with a Japanese invasion of ware that will be even worse than European competitions. It is needless for us to explain to you that American manufacturers who employ nothing but high-priced labor in scientific-glassware plants and who have stepped into the breach to prevent what would have been a calamity to the entire medical, surgical, and chemical professions, want to be protected by at least the abolition of this duty-free clause and by a tariff that will enable them to continue in business

after the war. The present union scale of wages for lamp blowers on laboratory glassware is from $3.50 to $6 per day. Lamp workers make approximately the same under the union scale.

AFTER THE WAR—WHAT THEN?

After the European war is over this country is going to face a world competition which will make intelligent handling of the tariff an imperative necessity, if we are going to meet this competition successfully.

We will be flooded with merchandize from abroad, for that is the only thing the nations at war will be able to pay their debts with; they will have no money to spare, and they will have to sell their goods where they can get the most money for them.

Probably never before was it so easy to sell goods, get credit, find a job, or get an increase of salary than it is at the present time. How long this sunny condition will last or to what heights it will go, no one can foretell with any degree of accuracy; just one thing is certain, and that is that it will not last forever, and wise is the man who sets something aside from the prosperity which he is now enjoying, for to that extent he is going to be the winner no matter what happens.

It is truthfully said that enormously as the country has profited in money as the result of the European war, it may be doubted whether to-day we can point to a single benefit that has come to us in the two years with confidence that it is permanent and substantial.

At no time in the country's history has there been a greater need for cooperation between capital and labor. What may be in store for us industrially after the war is over our wisest statesmen or business men can not forsee. That the world will witness an industrial upheaval is not doubted. We do know that great changes will take place and that the best thought and effort of a united people will be necessary for the preservation of our industrial welfare.

INCOME TAX AND INHERITANCE TAX.

When all other means of revenue fail the Democratic Party proceeds to double the tax on the living and on the dead.

The Democratic Party is exceedingly fond of taking the credit for the adoption of an income tax. They fail to remember, however, or at least to tell about it, that the sixteenth amendment to the Constitution of the United States—which provides for the adoption of an income tax—was submitted to the legislatures of the several States by a resolution of Congress, being Senate joint resolution No. 40, by Mr. Aldrich, a Republican, passed on July 12, 1909, at which time there was a Republican majority in both the House and Senate, and signed by President Taft. The vote on the amendment was practically unanimous, only seven votes in the whole House being recorded against it. The thirty-sixth State to ratify the amendment—the necessary number for its adoption—was Wyoming, on February 3, 1913. New Jersey and New Mexico ratified it on February 5, 1913, and the announcement of the ratification was made by the Secretary of State, Mr. Bryan, on the 25th day of February, 1913. Four States ratified the amendment subsequent to the announcement made by Mr. Bryan.

There was, therefore, nothing left for the Democratic Party to do but to follow out the directions thus given it and formulate a plan for the collection of an income tax. This they did, and hailed it as the greatest piece of constructive legislation that had ever been enacted. It was a panacea for all revenue ills, and, used in conjunction with the Underwood tariff bill, it would reduce the cost of living and yield more than a sufficient sum to take care of the Government's expenditures.

Evidently they were mistaken, for in the present bill they increase the normal tax on incomes and the tax on corporations from the present rate of 1 per cent to 2 per cent, with a proportionate increase in the surtax.

I favor a just and equitable income tax, for I believe that an income tax is nothing more or less than a tax on brains. The greater one's brain power the more tax one is obliged to pay, and, conversely, if your brain is small, your tax is small.

And it is well to note that the greatest amount of revenue from income tax comes from those States north of the Mason and Dixon line. Four States—New York, Pennsylvania, Illinois, and Massachusetts—paid more than $75,000,000 of the $124,867,429 in income taxes turned into the National Treasury during the fiscal year of 1916, which ended June 30. A table issued by the Treasury Department of payments by internal revenue districts shows that New York alone paid $45,230,579, and that the greatest percentage of increase which raised the total from the $80,000,000 collected last year came from the four States headed by New York.

It is very interesting, indeed, to hear some Members, coming from that part of the country which yields the least return on incomes, tell how they are for an increased income tax because it removes the burden of taxation from the shoulders of the farmer and laborer and places it upon the shoulders of the millionaire, the capitalist, the banker, and those of like means. Show me the farmer and laborer who can truthfully say that his taxes have been any less since the advent of the income tax? Show me, also, if you can, the man or woman who is not willing to pay a just tax for the privilege of being classed among those who have "brains"? I know of no farmer, mechanic, or laborer who would not be willing to pay a tax of $20 for an income of $1,000 over and above the exemptions and deductions allowed under the income-tax law. The adoption of an income-tax law was the logical evolution of an economic necessity; it would have been written on the statute books no matter what party was in power; there was no choice; the amendment was adopted by a Republican Congress and was ratified by more than three-fourths of the States; there was no alternative for the Democrats but to carry out the instructions thus placed upon them.

No man, no matter what his avocation may be, wants to be relieved of paying his just share of taxes for the maintenance of the Government. Throw around American citizens the mantle of protection so that their labors and their efforts will bring them a just return and you will find them ever willing and ready to pay their share of the burden. To exempt them from paying an income tax will not reconcile them to meeting the free-trade and cheap-labor competition of the Underwood Tariff. I have great respect for the intelligence of the farmer—the most independent of Americans. I respect, also, the keen intellect of the American mechanic and laborer, and, if I am any judge of human nature, both these classes of American citizens, as well as every other class, will know how to vote at the coming election for the proper protection of their interests.

DEMOCRATIC PROTECTION (?)

The Chairman of the Ways and Means Committee appeals to our patriotism for support of the bill, and supplements that plea with the statement that it ought to have our entire approval because it contains certain provisions that are sufficiently Republican in character to command our respect.

These items are: A duty on dyestuffs, which is not in accordance with the ideas of the dyestuffs experts. It is limited in its operation or application to a certain period after the war, and it will by no means give the dyestuff industry in this country the protection it needs for its industrial development.

Another item of a supposedly Republican nature is the antidumping clause, which provides that it shall be unlawful for any person importing or assisting in importing any articles from any foreign country into the United States, to commonly and systematically sell or cause to be sold such articles within the United States at a price substantially less than the actual market value or wholesale price of such articles at the time of exportation to the United States in the principal markets of the country of their production, after adding to such market value or wholesale price freight, duty, and other charges incident to the importation and sale of such articles in the United States.

The second congressional district of New Jersey is, perhaps, not a tremendously heavy industrial center, yet there are a number of industries therein of considerable importance in their respective lines, among which are glass factories; boot and shoe factories; factories for the manufacture of wire rope, cable, fence wire, and so forth; woodworking machinery; machine tools; cast-iron pipe, hydrants, fittings, and other water-power supplies; gas engines; and much other merchandise of a similar character.

Can anyone imagine the manufacturers of these goods selling their output at a price to compete with the cheap labor of the markets of Europe? Does anyone suppose that they could get the necessary mechanics and laborers to work for such wages as are paid to similar tradesmen in foreign countries? Whatever good there might be in this antidumping clause is taken from it by the proviso which places upon American manufacturers the burden of proving that such act or acts as described in the clause is done with the intent of destroying or injuring an industry in the United States or of preventing the establishment of an industry in the United States or of restraining or monopolizing any part of trade and commerce in such articles in the United States. We must rely solely upon the veracity of the European manufacturer as to whether or not his intention of sending his goods into the United States at a price substantially less than the actual cost, plus the cost of freight, and so forth, is for the purpose of destroying or injuring an industry in this country.

The next item in the bill which is supposed to appeal to the Republican Members of the House is that providing for a tariff commission. After legislating out of office a Republican tariff

commission by failing to provide an appropriation for its continuance on the ground that it would be only a waste of money, and that anyway such a commission was not needed, the Democratic Party now seeks our support for a so-called nonpartisan tariff board. From the very nature of things any tariff commission appointed by President Wilson would be a partisan free-trade body, if we are to judge by his appointments to the other nonpartisan boards and commissions that have come into being under his administration. I am, and always have been, in favor of a permanent tariff commission, but I would not want to see such a commission made up of a set of men who are dyed-in-the-wool tariff-for-revenue-only advocates.

The bill as originally prepared by the majority members of the Ways and Means Committee provided that no person should be eligible for appointment on the tariff board who had been elected or served in the House of Representatives or Senate of the United States, nor should any member of the board be engaged in any other business, function, or employment. This excluded from service on the commission the only men who are really qualified to act in the capacity of tariff experts. The absurdity of this provision was recognized by many of the Democrats, who supported the amendment offered by Mr. LONGWORTH striking out the clause which prohibited ex-Members of Congress from serving on the commission.

A FORECAST.

Mr. Speaker, on the 7th day of November next the Democratic Party and the Democratic administration will be called up before the voters of the United States to be judged for its four years of errors of omission and commission. What will be the verdict of the people? Will they vote to return to the conditions of business stagnation and industrial depression, that prevailed throughout the country before the European war came to our rescue, by returning Mr. Wilson and his followers to power? I think not. They are going to put in power in his stead Mr. Charles Evans Hughes and a Republican Congress that is consecrated to the principles of protection for American industries and American labor.

## To Provide Service Honor Flags to Volunteer Soldiers Now on Service Along the Mexican Border.

EXTENSION OF REMARKS

OF

HON. JOHN H. CAPSTICK,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 25, 1916.*

Mr. CAPSTICK. Mr. Speaker, in the introduction of this resolution I have in mind the accomplishment of three things:

First. To convey to the soldiers some lasting material evidence that their high patriotism is appreciated and taken into account by the Government, aside from the financial considerations involved.

Second. To in a measure fittingly recognize their relatives for the sacrifices being made in so many homes all over our land by reason of the absence of one of the household.

Third. To add another incentive to stimulate enlistments in the reserve forces upon which we must rely in times of emergency.

The men comprising the Volunteer Army along the border a few short weeks ago were engaged in the daily pursuit of peaceful occupations. Such had been their lives for years. Now they are a warlike organization. They are not warlike in spirit, but should circumstances require it, I feel confident they will all be true to our Nation's traditions. Meanwhile they are preparing. Incidentally they must withstand the midsummer heat of a tropical sun and the other discomforts of the climate and changed conditions. To these they will adapt themselves, but before this is attained there will be yearnings and homesickness. I am not trying to paint a doleful picture. I merely mention these things as reasons for the resolution I have offered.

Its provisions are designed to give to these soldiers inducement and encouragement to remain constant to the cause they have sworn to uphold and defend. In the long hours of night picket duty they can think with satisfaction of the pride felt by the folks at home each morning when they unfurl the "service honor flag," proclaiming abroad that "Here is the home of a true son doing his patriotic duty." In the burning hours of the day, whether on drill or unengaged, they can recall, with a thrill of pleasure, the memories and thoughts that flag constantly suggests to relatives and friends alike.

In homes all over our land is being cherished some token or souvenir associated with an event of bygone days in which some member of the household participated. Why can not this generation increase that highly prized little store with a token of how these men creditably acquitted themselves during these trying times? Why would not a souvenir, as indicated in the resolution, be a fitting one? I feel it would be carefully preserved and would materially quicken the patriotic impulses of our children's children.

It is my earnest hope and prayer that the present emergency will pass without the necessity of firing another shot or going a step farther across the Rio Grande. Let the termination come with honor and no relinquishment of any of our rights. Have it fully understood that the limit of our endurance has been reached and we will avenge with force any violation of the sanctity of our sovereignty as a liberty and peace loving people.

## The Revenue Bill.

EXTENSION OF REMARKS

OF

HON. FRANK PARK,

OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. PARK. Mr. Speaker, the necessity for the passage of this great revenue bill grows out of the demand by the people of the country that Congress make provision for adequate preparedness. The extraordinary increases in the appropriations for the Army and Navy and fortifications of our country required the enactment of a revenue law to provide the money necessary to meet these additional appropriations. It will be noted that the section of the United States most concerned about our having a large Army and Navy will be required, under this law, to pay the principal part of the tax. By increasing the tax on surplus incomes, levying a tax on large estates and war-munition plants this additional revenue needed by the Government will be raised. In this way the burden will not fall on those least able to bear tax burdens, but the increase will come from sources that have not heretofore contributed their just portion to the support of the Government.

This bill provides for an enlarged income-tax law; doubles the present normal tax and levies an additional or surtax beginning with 1 per cent on incomes of $20,000 and increasing up to 10 per cent on annual incomes of $500,000 and over. It also proposes an increase in the normal tax on incomes and the tax on corporations from the present rate of 1 per cent to 2 per cent. The following table shows the tax rates imposed in lieu of the present income-tax law:

| | |
|---|---|
| 1 per cent additional on incomes over $20,000 and not exceeding | $40,000 |
| 2 per cent additional on incomes over $40,000 and not exceeding | 60,000 |
| 3 per cent additional on incomes over $60,000 and not exceeding | 80,000 |
| 4 per cent additional on incomes over $80,000 and not exceeding | 100,000 |
| 5 per cent additional on incomes over $100,000 and not exceeding | 150,000 |
| 6 per cent additional on incomes over $150,000 and not exceeding | 200,000 |
| 7 per cent additional on incomes over $200,000 and not exceeding | 250,000 |
| 8 per cent additional on incomes over $250,000 and not exceeding | 300,000 |
| 9 per cent additional on incomes over $300,000 and not exceeding | 500,000 |
| 10 per cent additional on incomes over $500,000. | |

The bill leaves the income exemption at $3,000 for unmarried persons and $4,000 for married persons, or heads of families. It is estimated that during the fiscal year ending June 30, 1917, the income tax proposed by this measure will yield $227,000,000, or $107,000,000 more than would be received by the Government under the rates provided in the present law. Provision is also made for levying a Federal estate tax upon inheritances in excess of $50,000. Deductions are allowed for all valid claims against the estate from the gross value of the estate in addition to the exemption of $50,000 in determining the value of the estate. These taxes are levied as follows:

One per cent of the amount of the net estate not in excess of $50,000.

Two per cent of the amount by which the net estate exceeds $50,000 and does not exceed $150,000.

Three per cent of the amount by which the net estate exceeds $150,000 and does not exceed $250,000.

Four per cent of the amount by which the net estate exceeds $250,000 and does not exceed $450,000.

Five per cent of the amount by which the net estate exceeds $450,000.

This revenue bill further provides for a tax upon the manufacturers of munitions of war. It is estimated that the munitions tax will yield during the fiscal year ending June 30, 1917, $71,000,000.

This bill also provides for a nonpartisan tariff commission, free from political control, so much desired by the business world, which will greatly change the method of making tariffs.

About $30,000,000,000 of the wealth of the country is owned by New York. Prior to the enactment of this income-tax law at least half of this huge amount escaped the tax assessor, whereas the taxgatherer seldom fails to find all available assets of the one-horse farmer. What little he possesses is easily found, and he is heavily burdened with taxes. The enormous estates that have grown up in this country by the thousands, which pay practically nothing to the Government, while exacting much from the Government, should bear their proportionate share of the burden of taxation.

I insert the following statement showing the amount of revenue raised last year by the income and inheritance tax law:

| | Amount collected. |
|---|---|
| Alabama and Mississippi | $177,440.00 |
| Arkansas | 44,278.00 |
| Florida | 133,560.00 |
| Georgia | 199,546.00 |
| North Carolina | 175,922.00 |
| Oklahoma | 489,415.00 |
| South Carolina | 76,250.00 |
| Tennessee | 207,316.00 |
| Louisiana | 296,341.00 |
| Kentucky | 165,109.00 |
| New York | 30,286,607.61 |
| Pennsylvania | 6,312,204.29 |
| Massachusetts | 4,193,873.48 |

When it became evident that a new tax levy would have to be made, I opposed any plan that would add this additional burden to the already overtaxed poor. I appealed to Congress last year to repeal the iniquitous stamp-tax law for this same reason. It is a pleasant realization to know that I have contributed my part as a representative of the people in providing this bill which raises over $200,000,000 for adequately preparing our country for defense purposes without calling upon the masses of the people to pay one dollar of it.

## Genuine Protection by the Present Democratic Administration for the Producers and Consumers of Butter.

### EXTENSION OF REMARKS
OF
### HON. MICHAEL E. BURKE,
OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, April 27, 1916,*

On the bill (H. R. 12717) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917, and for other purposes.

Mr. BURKE. Mr. Speaker, availing myself of the privilege of extending my remarks I desire to present a brief review of the splendid record made by the United States Bureau of Internal Revenue, under the direction and administration of the Hon. William H. Osborn, Commissioner of Internal Revenue during the present administration, in the enforcement of the oleomargarine laws, and in the protection of the producers and consumers of genuine butter.

We have under consideration to-day the bill H. R. 12717, a bill making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917, and for other purposes. Among the laws of greatest importance to the agricultural industry of this Nation are the oleomargarine laws and their enforcement. It is proper that there should be presented in connection with the consideration of this important bill a history and a review of the administration of those laws under the present Democratic administration by the present honorable Commissioner of Internal Revenue, Hon. William H. Osborn.

Let me observe in the beginning that this is one of the largest appropriation bills that receives consideration and action by Congress each year. This year it contains an appropriation for expenditures during the year commencing July 1, 1916, and ending June 30, 1917, of the sum of $24,501,093, exclusive of permanent annual appropriations, which is an increase of $1,529,311 over the appropriations for the current fiscal year. Congress has during each year of this Democratic administration increased the annual appropriations to be expended by the Agricultural Department.

For the year commencing June 30, 1914, there was appropriated $17,986,945; for the year commencing July 1, 1915, $19,865,832; for the year commencing July 1, 1916, $22,971,582. This is ample evidence that the agricultural interests of this Nation are being treated amply and liberally by a Democratic Congress. While our Republican friends frequently charge—unjustly, however—this Democratic Congress with being extravagant in many directions in the expenditure of the public funds, yet from no source have we ever heard any complaint or any charge of extravagance in the matter of appropriations for the Agricultural Department. Neither have we heard any complaint that such appropriations have not been sufficient for the proper transaction of the duties of that department and the promotion of the welfare of our agricultural interests. The history of our country proves conclusively that the Democratic Party always has been the friend of the farmers, and there is every reason for the farmers of this country having in the future as in the past confidence of receiving liberal treatment whenever the Democratic Party is in power.

STRICT ENFORCEMENT OF OLEOMARGARINE LAWS DURING PRESENT ADMINISTRATION.

The record of the present Bureau of Internal Revenue, Commissioner William H. Osborn, in the enforcement of the oleomargarine laws during his administration, commencing on the 4th day of March, 1913, is not only interesting but a splendid and admirable record, entitling the honorable commissioner of this administration to the gratitude and admiration of both the producer and consumer of genuine butter. It is a record of which the honorable commissioner, as well as the administration, may feel gratified and honored. It is one which has never been equaled by any commissioner of that bureau. It is one for which the creamery and butter farmers of the Nation have reason to feel grateful.

The present oleomargarine law and its proper enforcement is of the greatest value and importance to the dairy farmers of all the Northern States, and especially to the State of Wisconsin, which I have the honor in part to represent.

In 1915 Wisconsin produced 203,727,000 pounds of condensed milk from 464,000,000 pounds of whole milk. It also produced 182,000,000 pounds of cheese and 130,000,000 pounds of butter during the season. Expressed in another form, 1,700,000 dairy cows in Wisconsin in 1915 produced sufficient milk, in addition to their other products, so that at every tick of the clock the condenseries were able to turn out 65 pounds of condensed milk, the cheese factories 5½ pounds of cheese, and the creameries 4.2 pounds of butter. Wisconsin produces over one-half of the cheese produced in the country, and for many years it has led in the production of butter. It has the honor of being the largest productive dairy State in the Union.

I have the honor of representing the largest productive dairy district in the United States, and in my district—consisting of six counties—there are situated 10 condenseries, 350 cheese factories, and 107 creameries; besides large quantities of excellent dairy butter are made by individuals and placed upon the market. It therefore is perhaps fitting as the Representative of such a district that I should undertake to submit in my humble way to House and the country a brief review of the efforts of the administration in enforcing the oleomargarine laws during the present administration.

ORIGIN OF PRESENT OLEOMARGARINE LAWS.

It may be urged that it was most appropriate for this Democratic administration to strictly uphold and enforce the oleomargarine laws. Those laws are of Democratic origin. The original oleomargarine laws were enacted in 1894, by being passed by a Democratic Congress and approved by a Democratic President, Hon. Grover Cleveland. Perhaps it has required Democratic officials at the head of the Internal-Revenue Bureau to recognize the merits of these Democratic laws, for during 16 years of Republican administrations preceding the present Democratic administration these laws were left in a state of innocuous desuetude.

JUSTIFICATION OF THE OLEOMARGARINE LAW BY PRESIDENT CLEVELAND.

To the use of radical statements in the consideration of legislative matters President Cleveland was not addicted. He was known as a conservative man, and not given over to radical statements. Therefore I am sure that his remarks in justification of the passage of the oleomargarine bill will be of interest to those who have been and are now trying to produce oleomargarine at the expense of butter. I quote from Mr. Cleveland's message to Congress:

The Constitution has invested Congress with a very wide legislative discretion, both as to the necessity of taxation and the selection of the objects of its burdens.

Those who desire to see removed the weight of taxation now pressing upon the people from other directions may well be justified in the hope and expectation that the selection of an additional subject of internal taxation so well able to bear it will in consistency be followed by legislation relieving our citizens from other numerous burdens by the passage of this bill, even more than heretofore unnecessary and needlessly oppressive.

Referring to the Cassandra wail, then as now ascending, he said:

I am convinced that the taxes which it creates can not possibly destroy the open and legitimate manufacture and sale of the thing upon which it is levied. If the article has the merit which its friends claim for it, and if the people of the land, with full knowledge of its real character, desire to purchase and use it, the taxes exacted by this bill will permit a fair profit to both manufacturer and dealer. If the existence of the commodity taxed and the profits of its manufacture and sale depend upon disposing of it to the people for something which it deceitfully imitates, the entire enterprise is a fraud and not an industry.

Not the least important incident related to this legislation is the defense afforded to the consumer against the fraudulent substitution and sale of an imitation for a genuine article of food of very general household use. Notwithstanding the immense quantity of the article described in the bill, and notwithstanding the claims made that its manufacture supplies a cheap substitute for butter, I venture to say that hardly a pound ever entered a poor man's house under its real name and in its true character.

OLEOMARGARINE FRAUDS EXPOSED AND FINES COLLECTED.

During the administration of Mr. Osborn widespread violations of the oleomargarine law, extending over the entire 13 years that the present law has been on the statute books, and resulting in the loss of uncounted millions of dollars in revenue to the United States Government in the past, have been effectively checked by a sweeping investigation and vigorous prosecution by the Commissioner of Internal Revenue, under the direction of the Secretary of the Treasury. The comprehensive scope of the investigation and its startling results up to this time were announced in a preliminary report recently submitted by Commissioner Osborn, which has been briefly summarized as follows by the Treasury Department:

As far as estimates can be made, the Federal Treasury has lost at least $27,000,000 in stamps and special taxes through these frauds during the period mentioned. These figures alone show that since 1902 more than 200,000,000 pounds of colored oleomargarine have been manufactured and fraudulently sold as uncolored oleomargarine or as butter. It is believed that a great proportion of this product reached consumers as butter. This amount represents more than twice the average yearly consumption of both colored and uncolored oleomargarine by the people of the United States since the present law went into effect.

Approximately 185,000,000 pounds of this 200,000,000 pounds were sold by oleomargarine manufacturers to dealers as uncolored oleomargarine, and then, in many cases, sold to the ultimate consumer as butter. The remaining 15,000,000 pounds were made by butter manufacturers and sold as butter without the payment of any tax.

The commissioner has already recovered and deposited in the Treasury $851,000, with the prospect of further very large collections. Forty-two violators have been convicted since January 1, 1915, 29 of whom have been sentenced to terms in prison ranging from 30 days to 3½ years. Total fines of $148,000 have been imposed.

These fines are exclusive of the recoveries mentioned above. Ten other of the more flagrant violators of the law are under indictment awaiting trial. In addition there are many smaller criminal cases pending in the courts.

While the facts set forth in the commissioner's preliminary report relate primarily to oleomargarine frauds developed during the past year, the activities of the bureau during the past two full fiscal years have resulted in the detection of a total of approximately 6,000 frauds or illegal practices of this character. As a consequence of this rigid enforcement of the statute, the receipts of the Government from oleomargarine taxes during these two years have been the greatest in the history of the law, more than 24 per cent of the total collections of oleomargarine taxes from 1902 to 1915 being received during the fiscal years 1914 and 1915.

Among the larger cases are the following:

One company, whose president and treasurer pleaded guilty and were sentenced to one year and one day in the penitentiary and to pay a fine of $1,000 each, and whose plant was seized, has been assessed $798,696.

Another concern, six of whose officials and employees pleaded guilty and were fined an aggregate of $8,000, and whose plant was seized, has been assessed $612,391.

In St. Louis 34 persons were convicted, 27 being given prison sentences, and fined a total of $138,000.

In another city one manufacturer was assessed by the commissioner $32,000 special and stamp taxes on account of the manufacture and sale of oleomargarine colored with tumeric, which has been paid. As it appeared that he was ignorant of the fact that the oils used contained tumeric, the United States attorney reported that criminal proceedings could not be sustained.

One company, whose president, treasurer, and secretary are under indictment on charges of oleomargarine frauds, and whose plant was seized, has been assessed $916,523 for evaded taxes.

Another concern, whose president and secretary-treasurer likewise have been indicted, and whose plant was seized, has been assessed $193,413.

A company, five of whose officers or agents are under indictment and whose plant was seized and sold by the Government, has been assessed $2,090,027.

These are the more striking cases developed since May 1, 1914, and, as stated above, the Treasury Department will take steps to recover all taxes due in each case.

EXTRACTS RELATING TO OLEOMARGARINE FROM THE 1915 ANNUAL REPORT OF THE COMMISSIONER OF INTERNAL REVENUE.

The operations in oleomargarine for the fiscal year ending June 30, 1915, show a slight increase over the preceding fiscal year, there being reported produced 138,214,907 pounds of the uncolored and 7,595,141 pounds of the artificially colored product, or a total of 145,810,048 pounds of both classes, compared with 137,637,054 pounds of the uncolored and 6,384,222 pounds of the colored product, making a total of 144,021,276 pounds of both classes produced during the fiscal year ended June 30, 1914.

From these figures it will be noted there was an increase during the fiscal year 1915 of 577,853 pounds of uncolored and 1,210,919 pounds of the artificially colored goods, or a total net increase of 1,788,772 pounds in the two classes over the previous year.

During 1915 there were withdrawn, tax paid at one-fourth cent, 137,693,610 pounds, and 3,753,012 pounds tax paid at 10 cents, as against 137,747,982 pounds and 3,831,706 pounds of the two classes, respectively, in the previous year, or a net decrease of 54,392 pounds in the uncolored and 78,694 pounds in the colored product, making a total net decrease of 133,086 pounds in the withdrawals of the product tax paid in both classes.

In 1915 the withdrawals for export amounted to 31,172 pounds uncolored; 3,081,356 pounds of colored goods—a total of 3,112,528 pounds, or an increase of 968,826 pounds over the previous year in these items.

There were withdrawn free of tax for use of the United States in 1915 a total of 734,030 pounds of artificially colored oleomargarine and none of the uncolored product, as against a total of 579,360 pounds of both classes in 1914, or an increase of 154,670 pounds in the withdrawals for this purpose during the past year.

The collections from oleomargarine sources during the fiscal year 1915 amounted to a total of $1,695,256.95 as against a total of $1,325,219.13 in 1914. Of this amount $761,200.63 was from stamp tax at 10 cents per pound; $347,141.81 from stamp tax at one-fourth cent; $586,914.51 special taxes of manufacturers and of wholesale and retail dealers in the two classes, this being an increase of $341,326.49 in stamp taxes at 10 cents per pound, $3,229.65 from stamp tax at one-fourth cent, and $25,481.68 from special taxes of manufacturers and dealers, or a total net increase in collections from all oleomargarine taxes of $370,037.82 in 1915.

These figures do not include amounts collected by compromise in cases growing out of violations of the oleomargarine law on account of the manufacture and sale of the product without payment of special and stamp taxes, or on account of placing the product on the market as uncolored goods under one-fourth cent stamp or as butter, without payment of any tax thereon, and thus evading tax at the rate of 10 cents which was due on the artifically colored product so manufactured and sold.

The investigations instituted and conducted into oleomargarine violations during 1914 were continued with renewed energy during 1915 with gratifying results, as a number of the largest cases involving extensive frauds in stamp taxes due, in which investigations were begun the latter part of the preceding year, were completed and additional new cases of lesser importance discovered during the current year.

The total amount of taxes out of which the Government had been defrauded on account of artifically colored oleomargarine being placed on the market under stamps at one-fourth cent instead of at the rate of 10 cents per pound due on such product in four of the largest cases of this character ever discovered were definitely determined during 1915, and the sum found due reached the enormous total of $17,692,410.47, representing the tax on practically all of the oleomargarine produced and placed on the market as uncolored oleomargarine under the one-fourth cent stamp by the manufacturers in question since the inception of the present law on July 1, 1902.

In addition to the completion of these four cases, one other case was discovered during the current fiscal year where the amount out of which the Government had been defrauded amounted to $1,503,203.30, which sum represented the tax of 10 cents per pound on the product manufactured for a period of six years that these frauds had continued undetected, and during which time all of the product in this case was placed on the market as butter without payment of any tax. These five cases alone involved a total of $19,195,613.77 stamp tax due the Government, which figures do not include special taxes of dealers incurred on account of the purchase and sale of the product.

Of this latter amount only $4,611,051.83 was within the assessable period of two years, the remainder being collected only by suit. Assessments of stamp taxes to this amount were made on suits instituted to recover the balance, or such portion thereof as might be possible, and during the fiscal year 1915 there had been collected approximately $751,000 from these five cases and arrangements perfected whereby further recoveries of these taxes are expected to be made within the next fiscal year.

The principal officers and employees of the companies involved in the above-mentioned frauds were indicted, and in three cases

where trials have been held all were convicted or plead guilty and received sentences of fines or imprisonment, or both.

In addition to these cases a large number of violations involving illicit coloration of white oleomargarine and sale of the product without payment of tax at 10 cents per pound due, and in many instances as and for butter, and of other infractions of the law, were discovered during 1915 and prosecutions instituted in all of these cases where the facts warranted such action.

Convictions upon trial by jury or pleas of guilty have been secured in every case tried since January 1, 1915. A summary of this work shows a total of 2,777 violations discovered during 1915 involving 2,411 persons, as against 2,704 violations involving 2,327 persons reported during 1914. These violations reported during 1915 were against 75 persons as manufacturers, 95 as wholesale dealers, and 2,241 as retail dealers.

DEMOCRATIC PROTECTION OF BUTTER.

Far more important than any tariff that may be imposed upon butter imports is the protection of the American farmer butter maker and creamery man from the fraudulent competition of oleomargarine and other substitutes for butter. For years this sort of competition has been going on, notwithstanding a statute sufficient, if enforced, to protect the American farmer. Great losses have been sustained by the American farmer through want of the enforcement of this law. Those Republican partisans who are now singing in chorus the calamity howl, for 16 years sat idly by winking at the fierce competition to which the American butter makers were forced by the Beef and Oleomargarine Trusts, and never once did they raise their hand to protect the American butter maker against this sort of competition.

Since the Department of Justice has been in charge of a Democratic administration the American farmer has witnessed the doing of things for his protection against those who would compete with him by fraud and deception.

Take the case of John F. Jelke, the millionaire oleomargarine manufacturer, convicted on the 4th day of May, 1914, in the United States district court at Chicago, and sentenced by Judge F. A. Geiger to serve two years in the Federal penitentiary at Fort Leavenworth, Kans., and fined $10,000 for conspiring to defraud the United States Government of taxes on oleomargarine, the sentence imposed upon him being the maximum under the law.

Nine of the associates and employees of this oleomargarine manufacturer, Jelke, were fined $2,500 each for conspiring with him in the perpetration of oleomargarine frauds.

It is true that Jelke was indicted under the Taft administration late in the summer of 1911. After commencing the prosecution of this millionaire manufacturer who had colored white oleomargarine and sold it without paying the Federal tax, Federal suits were started by the Government during the Taft administration in Chicago, to recover $800,000 in oleomargarine tax from this violator of the law. When the case was gone into on preliminary examination, it was found that the oleomargarine manufacturer, the J. F. Jelke Co., owed the Government over $2,000,000 in oleomargarine taxes which they failed to pay the Government, instead of $800,000, which Secretary of the Treasury MacVeagh, a Republican Cabinet Member, had compromised for $101,000. Upon the coming into power of the Wilson administration the proposed compromise with this millionaire violator of the oleomargarine law was set aside.

Commissioner Osborn, the present faithful Demoratic Commissioner of Internal Revenue, is pushing the investigation of these cases of violation of the oleomargarine laws for the collection of $2,000,000 that was overlooked by Commissioner Cabell and Secretary MacVeagh, under the Taft administration, and a Democratic Department of Justice has commenced proceedings to recover the same.

The butter interests of the country owe a debt of gratitude to the present Democratic administration in bringing the facts concerning these cases out in the open and showing up the unfaithful officials under the Taft administration who had sworn to perform their duties to the American people, but were caught compromising with the oleomargarine manufacturers who had gouged the Government out of $2,000,000, and were allowing them to be let off criminally and financially with the payment of only $101,000. A sentence of this oleomargarine manufacturer of two years in the United States penitentiary at Fort Leavenworth, and the payment of a fine of $10,000, will go further toward purifying the butter markets of the country of spurious and fraudulent butter competition than all the tariff duties that can be piled upon imported butter.

This is only one conspicuous example of what the present Democratic administration has done in trying to stamp out this fraudulent competition on the part of oleomargarine manufacturers against real butter produced by the genuine farmer. There are many other examples or cases of prosecution started to punish oleomargarine offenders which time and space forbid to specify at this time. Such work is the kind of protection this Democratic administration is giving the real butter makers of the country. If oleomargarine were made to stand upon its own bottom, the genuine butter producers of this country would need have absolutely no fear of foreign competition.

This is one of the few instances in which a millionaire has been sentenced to prison for violating the law. It will have a far more reaching effect in protecting the farmer from such fraudulent competition than a thousand ordinary sentences by fine for such violations, and it will have a most wholesome effect.

There is now pending similar criminal prosecutions against the Moxley Oleomargarine Co., of Chicago, who are slated to be tried on a similar charge. For years the farmers have been complaining of the looseness and lack of enforcement of the law when violated by oleomargarine manufacturers, but this is the first administration in the history of that law in which violators have been given the stern sentence of imprisonment. This is genuine protection for the farmer.

ENFORCEMENT OF OLEOMARGARINE LAW BY JUDICIARY DEPARTMENT.

The Judiciary Department of the present Democratic administration has shown an active and particular interest in the protection of the butter interests of the country. Before this administration the enforcement of the laws controlling and regulating oleomargarine was considerable of a joke and produced insignificant results. A sample of the interest taken by this administration in the welfare of the farmer is shown by its vigorous prosecution of John F. Jelke, a millionaire oleomargarine manufacturer, who was convicted on the 4th of May last, in the United States district court at Chicago, for various violations of the oleomargarine laws. He was given the maximum penalty and sentenced to serve two years in the Federal penitentiary and pay a fine of $10,000 for conspiring to defraud the United States Government out of taxes on oleomargarine.

CLAIM THAT OLEOMARGARINE IS THE POOR MAN'S BUTTER IS FALSE.

The friends of oleomargarine in their attacks upon the present laws protecting genuine butter claim and pretend that oleomargarine is the poor man's butter, and that the present tax of 10 cents a pound upon oleomargarine when colored as butter is a discrimination and a hardship upon the working man and poorer class of people.

It may be stated here that at no time have the friends of butter objected to the sale of oleomargarine for what it really is. They demand, however, that oleomargarine should not be sold as a subterfuge and counterfeit of butter. When it is so sold, then it is sold as a counterfeit of butter and injurious to the butter interests of the country. No better answer to the claim that the present oleomargarine law is a discrimination against the poorer class of consumers and in favor of the dairy producers can be found than a statement made by Hon. James H. Maurer, president of the State Federation of Labor, and a member of the Pennsylvania Legislature for several terms, given to the secretary of the National Dairy Union, which is as follows:

For the past six years, or the three last legislative sessions of Pennsylvania, I opposed all proposed legislation which aimed to legalize the coloring of imitation butter by manufacturers or dealers. My objections are not based on any thought that coloring matter is unhealthful or that imitation butter is not fit for human consumption. My objection is solely an economic one. At present imitation butter, in its natural state, sells for from 18 to 22 cents a pound in Pennsylvania, while the genuine dairy product costs 36 cents a pound. The purer the imitation is, the whiter it is. If the manufacturers and dealers in the imitation article were permitted to color their product, the imitation would be complete, so much so that nothing short of an analysis would reveal its component parts. This is, at least, true of the great majority of consumers.

The imitation article, therefore, like any other imitation which closely resembles the genuine, comes in direct competition with it. Once we allow it to be colored, its price will begin to soar dangerously close to the real article, and, as a consequence, the consumer who is now buying oleomargarine or butterine for 20 cents a pound will pay the advanced price.

One thing sure, the farmer never could hope to compete with the manufacturers of the imitation article. As a result, many of the dairy farmers would be compelled to go out of the dairy business and turn their farms to raising something else. And just as fast as this happens, the price of the imitation article will rise until finally the great packing companies will have a monopoly, then the consumer will pay more for the imitation article than we are now paying for the genuine. Besides, the imitation will, most likely, not be as pure as it is now, if colored, because the purer the whiter, and the consumers know this. When colored, a certain amount of impure, foreign matter may be used and can not be detected by sight because of the coloring.

On the other hand, if the farmers can not find a profitable market for their milk and turn their farms to other products, it means the starving of their land, as fertilizers produced by cattle are the life of the soil.

Therefore, looking at the question from every angle possible, I can see but two reasons why some dealers and manufacturers want a law giving them the right to color their product in imitation of butter: One is to charge more for their product and the other is to give them a monopoly of the butter market.

Let oleomargarine and butterine and all other substitutes stand on their own feet and sell for what they are and not for what their manufacturers can make people believe they are.

EXPRESSIONS OF APPRECIATION BY DAIRYMEN'S ASSOCIATIONS.

The faithful, honest, and efficient work of Commissioner of Internal Revenue William H. Osborn in discharging the duties of the important office committed to his trust is widely manifested by various State and county dairymen's associations throughout the country.

The same labor leader, in testifying before a committee of the Pennsylvania State Legislature a few years ago, said:

That if oleomargarine were colored it came into competition with the dairy cow—that the dairy cow could not stand up against such unfair competition, and if allowed in a few years we would have the same story repeated as we have in the beef business, and then we would pay the same price for oleomargarine that we are paying for good dairy butter to-day.

If this is the poor man's butter, give it to him uncolored, for he will buy it cheaper and better. Statistics show that in the State of Pennsylvania, where oleomargarine is required to be sold uncolored, that it is selling cheaper and better in quality and more of it than in any other State of the Union.

It is a well-known fact in manufacturing, and in many other businesses, that if one concern can practice dishonesty the others in order to meet the competition must follow similar tactics, and so it goes from bad to worse until to-day we are buying shoddy for wool, pasteboard for leather, loaded silks and hundreds of other imitations palmed off on the public as genuine articles at profitable prices to the dishonest manufacturers, but ruin to honest dealers and robbery to the consumers.

Further proof can be had from a letter written by Hon. James H. Maurer, president of the State Federation of Labor of Pennsylvania, to Samuel Gompers, in which he says, in concluding his letter, the following:

Therefore, looking at the question from every angle possible, I can see but two reasons why some dealers and manufacturers want a law giving them the right to color in imitation of butter their product—one is to charge more for their product and the other to give them a monopoly of the butter market.

Hon. James Foust, dairy and food commissioner of Pennsylvania, also says:

The oleomargarine sold in Pennsylvania now is practically white, and everyone who sells the product sells it for oleomargarine and at oleomargarine prices. All packages are marked, the places of business are placarded, and the consuming public know just what they are getting.

The practice which was conducted years ago of some unscrupulous dealers with wagons, claiming to be farmers and selling dairy butter, is a thing of the past.

The product is purer and more wholesome than it was when all sorts of schemes were devised to impart to it color or a tint by adding cottonseed oil and other oils, which depreciated its flavor and quality. This manipulation was only carried on by some manufacturers and was for the purpose of escaping the 10-cent tax on colored goods.

We are having practically no trouble in Pennsylvania now, and the consuming public is better satisfied with the flavor and quality of the product.

I desire to further add that we charge $100 a year for the privilege of selling oleomargarine at retail, and it is sold just as cheap in Pennsylvania as it is in any State in the Union, notwithstanding the license fee is paid; and the product is better than it is in States that permit the goods to be sold having a shade of yellow or that are tinted, for the reason that the yellow color is imparted to the product by the addition of cottonseed oil or other oils, which depreciate its quality and almost destroy its flavor.

At the annual convention of the Wisconsin Dairymen's Association held last December the following resolutions expressing the appreciation of the Wisconsin Dairymen's Association for the work done under the supervision of Commissioner Osborn were unanimously passed:

Whereas the Internal-Revenue Commissioner, Mr. Osborn, has effectively enforced the oleomargarine laws and thereby protected the dairy industry from much fraud and imposition from oleomargarine: Therefore be it

*Resolved*, That we, the Wisconsin Dairymen's Association, in our forty-fourth annual convention, extend to him our sincere appreciation of this splendid service; be it further

*Resolved*, That we believe the present oleomargarine law should be retained upon the statute books until a better and more comprehensive law can be secured.

At the 1915 annual convention of the Nebraska State Dairymen's Association the following resolutions were adopted:

Regardless of party affiliations, we hereby extend our sincere thanks to the Commissioner of Internal Revenue, Hon. William H. Osborn, for the careful and conscientious enforcement of the law regulating the oleomargarine traffic. The enforcement of the definite and specific laws now upon our statute books affords protection to the producers and consumers of this Nation.

We do not object to oleomargarine when uncolored and sold as oleomargarine; however, we realize that there must be a distinction between the two products, and we feel that a color line is the most logical way of making the distinction.

In various other States at their recent annual conventions State dairymen and county dairymen's associations have commended the good work of Commissioner Osborn in protecting the interests of both the producer and consumer of genuine butter.

FAIL TO LEARN AND OBEY.

Notwithstanding the strenuous campaign of exposure and prosecution waged by the Commissioner of Internal Revenue and the Judiciary Department of the United States against offending manufacturers of oleomargarine and their agents, the oleomargarine interests appear to have learned nothing, but are still actively and strenuously engaged in ways that are dark to undermine the interests of genuine butter producers and consumers. One would think that after the extensive exposures and prosecutions to which such interests have been subjected during the last three and one-half years there would be in the future compliance and obedience to such laws without prosecution. But the oleomargarine interests have everything to gain and nothing to lose by pursuing their past criminal and fraudulent policies. They have everything to gain in overcoming and undermining the present laws, which protect the producers and consumers of genuine butter. Their agents are more active in trying to undermine the butter interests of the country and prejudice it in the minds of the public than ever before.

HOUSE JOINT RESOLUTION NO. 137.

On the 11th of February, 1916, there was introduced in the House of Representatives by the gentleman from Maryland [Mr. LINTHICUM] a resolution known as House joint resolution No. 137, the essence of which was the appointment by the Speaker of the House of Representatives of a committee of five Members of the House, whose duty it shall be to investigate and report, as speedily as practicable, whether conditions prevailing in the dairy industry seriously menace the property and health of the citizens of the United States; whether to the reasonable protection of the property and health of the United States it is necessary to establish Federal inspection of dairies, creameries, and so forth, and if so, then the best and most economic methods of enforcing such inspection and supervision.

This resolution on its face appeared fair and prompted many of the leading dairymen and dairy papers of the country to hasten to its support. Undoubtedly it was the expectation of the friends of this resolution that it would meet with vigorous opposition from the dairy interests of the country if its true purposes were made known. Such, however, was not the case, as is amply evidenced by the attitude of several important dairy papers, which at first failed to suspect its real objects. As proving that the dairy interests of the country were not opposed to this resolution, but, on the other hand, were supporting it, I herewith insert an article published last March in Hoard's Dairyman, published at Fort Atkinson, Wis., in my district, heartily approving of the purposes of House resolution 137.

In this connection I desire to say that Hoard's Dairyman is one of the oldest, one of the best edited, and most experienced dairy papers to be found in the United States, and carries the largest number of subscribers of any dairy paper to be found in this country. It was founded by Hon. W. D. Hoard, one of the most distinguished editors of dairy papers that America has produced. Under his investigations, experiments, experience, and wisdom the great dairy interests of the Northwest have been built up and placed on a solid and prosperous foundation.

He has done more to further the development of the dairy interests in the North, and especially the Northwest, than any man living. His work is so well known and appreciated in the State of Wisconsin that in 1915, when the governor of the State was invited by the San Francisco Exposition to name Wisconsin's greatest citizen, a board appointed by the governor of that State, composed of distinguished citizens, unanimously selected ex-Gov. Hoard as Wisconsin's greatest and most famous citizen.

He has always stood true and loyal to the dairy interests of the State. He has always kept abreast of the times. He has always advocated progressive ideas in the dairy business, and he has not been afraid to condemn whenever he found it necessary those dairymen of the country who were slack, unclean, and insanitary in their business.

As showing that the dairy interests of this country, at whose head stands Hoard's Dairyman, are in favor of any reasonable set of laws or regulations which will insure and enable consumers of milk and dairy products to obtain pure and sanitary dairy products, I insert the following article commenting favorably on the Linthicum resolution:

DAIRYMEN FOR INVESTIGATION.

Congressman LINTHICUM, of Maryland, has introduced a resolution in the House of Representatives requesting that the Speaker appoint a committee of five Members whose duty it shall be to investigate the sanitary and other conditions of the dairy industry. It is the purpose of the resolution to determine whether it is feasible to establish Federal inspection, in cooperation with the States, of dairies, cheese factories, creameries, and milk-bottling plants. If it is found that the Federal Government should establish an inspection system, this committee shall determine the most economic method of inaugurating and enforcing it.

Hoard's Dairyman can see much good in a movement of this kind, provided capable and sincere men are appointed on this committee. There is no question but that there is opportunity for the Federal Government to assist the State governments in securing a higher quality of dairy products. The time has come when the slovenly and do-not-care milk producer must go out of business and permit the dairymen who produce wholesome dairy products to enjoy a larger market and receive a better price for them. One of the great drawbacks to the dairy industry has been those who have taken no pride in their work and have been willing to sell unwholesome milk. They have not only been the means of curtailing the consumption of dairy products but have depressed the prices of butter, cheese, and milk and produced a prejudice in the minds of city consumers against dairy products, to the great hurt of the industry. In the make-up of such a committee there ought to be included two or more men who are thoroughly posted as practical dairymen. If they can not be found among Members of Congress, then provision should be made to select dairymen of understanding and integrity outside of Congress.

Dairy products are the most nutritious and economical foods on the market, and if the consumer knew their value and could always be assured that they were wholesome the consumption would be greatly increased. The consumer must be taught the food value of dairy products and that a reasonable price must be paid for them when they are produced in the right way. An intelligent, comprehensive Federal inspection of dairy products and conditions under which they are produced would be of material assistance to the good dairymen, as it would provide a larger and a better market for dairy products.

EXPOSURE OF OLEOMARGARINE INTERESTS ATTEMPTS AT DECEPTION.

The above article approving of the adoption of House resolution 137, for the purpose of investigating the purity and sanitary conditions of the dairy products supplied to consumers, was published after the publication of such resolution, yet it was but a short time before the real purposes of the same and the hypocrisy which prompted the introduction of this resolution were indirectly exposed in this House by a speech made by the gentleman from Maryland [Mr. LINTHICUM], delivered on the 1st day of April, 1916.

In various parts of the speech of the gentleman from Maryland can be found positive evidence that such resolution was introduced and is being urged for passage not by those who are unselfishly interested in the promotion and maintenance of the public health by preventing the sale and distribution of insanitary dairy products. Certain remarks of the gentleman and quotations from certain alleged dairy and farm papers show conclusively to the friends of dairymen that the main purpose behind such resolution is to attack, to degrade, and to prejudice butter in the minds of the consuming public.

Upon such speech coming to the attention of the editors of Hoard's Dairyman, an editorial answer was made to the same in its edition of May 5, 1916, the title of the same being "The Rights of Butter." It is in my humble opinion a complete answer to the speech of the gentleman from Maryland and an exposure of the secret purposes of House resolution 137. It brands in a convincing manner the purposes of that resolution; it shows in a convincing manner that it is the oleomargarine interests which are behind and actively supporting the same. It shows that it is an attempt on the part of the oleomargarine interests to create in the public mind a hostility to the present law protecting the butter producers and consumers by engendering in the minds of consumers of dairy products a widespread suspicion against the genuine butter product.

I herewith take the liberty of inserting the editorial above referred to from Hoard's Dairyman, in so far as it relates to the question raised by the gentleman from Maryland in his said speech:

THE RIGHTS OF BUTTER.

In previous issues of Hoard's Dairyman we have mentioned Congressman LINTHICUM'S resolution which provides for an investigation of the dairy industry and Federal inspection should the results of the investigation warrant it. The dairy industry has nothing to fear from an honest and capable investigation. Institutions which do not measure up to sanitary requirement should be forced to do so or close up shop. Farmers who persist in selling unclean milk should enter other fields of endeavor and give the good dairyman a better market for his product.

We have read carefully Congressman LINTHICUM'S speech pertaining to his resolution as reported in the CONGRESSIONAL RECORD. In his remarks he expresses the desire to secure a most wholesome milk supply for the people of this country. He well says that milk properly produced is the most nutritious, useful, and healthful food of all. Running through his entire speech are false and misleading statements which indicate strongly that he has not prepared his resolution with the high motive that should characterize a work of this kind. He makes the following statement:

"The question of the use of coloring matter in butter, so that no matter how impure, no matter how long it has stood, no matter how unclean it might be, it could be covered and hidden from the general consuming public by this coloring matter, the contents of which in itself is usually impure and unhealthy."

This statement is untrue. Color does nothing of the kind. If butter is made from overripe or from off-flavored cream, it is shown in its quality and by its flavor. Color can not and does not cover up any such defects. It simply gives the butter a uniform shade of yellow color, which is so much demanded by the consumer. When butter is made from the milk of cows grazing on grass it is yellow; certain breeds of cattle produce yellow butter the entire year, and certain combinations of feed produce yellow fat in winter, no matter what the breed may be, and under such conditions no color is needed to produce yellow butter. It is plain that under such conditions there would be various shades of yellow fat produced and there would be no possible way of providing a uniform shade of yellow butter without color. Butter color is not made from impure and unhealthful products. The juice of carrots was used by our forefathers and now the juice from the fruit of the annatto tree provides the material for making commercial butter color. The coloring material obtained from the pulp of annatto is mixed with some neutral oil, and neither of these products is injurious to health. It might be said that the pure-food laws prevent the use of any injurious products in the manufacture of butter. The coloring of butter is a commercial question and not a health question.

Here is another paragraph from Congressman LINTHICUM'S remarks:

"It is not commonly known among consumers that the great bulk of butter is colored in imitation of the June product. The butter thus painted sells for considerable over its true value, while if not colored it would mean a saving of millions of dollars to the consumers, money which at the present time is being spent in the innocent support of a fraudulent practice. If butter is to be sold artificially colored, why should it not be made obligatory to state this fact upon the label?"

Butter was colored by the good housewife on the farm long before there was a dairy industry or a creamery, and Congress has recognized color as an ingredient of butter. There may be consumers who do not know that butter is colored to give it a uniform shade of yellow. There are undoubtedly those who do not know that butter is made from the fat of cow's milk and that butter contains casein, milk sugar, ash, and water. It is not the fault of the butter manufacturer if the consumer does not know the composition of butter, nor does his ignorance make the use of color in butter a fraud any more than the use of salt is a fraud or a deception. If the natural color of butter were white, as is the case with oleomargarine, then some objections might be raised against the practice of coloring butter. Butter is colored to please the taste and to make it a uniform shade of yellow throughout the year, for under certain conditions which we have mentioned butter is a deep shade of yellow, and man can not help it. Yellow is the trade-mark of butter and made so by nature. This, together with the long-continued practice of coloring butter, indicates that the use of color in butter is neither a fraud nor a deception. It is still butter and never sells for anything but butter. Butter is not colored to make the consumer think it was made in June, for butter made in June and held in storage till winter is not as good as butter made in the winter. Congressman LINTHICUM shows his ignorance of market conditions and standards. He has meddled with something that he does not understand. The main consideration in the market sale of butter is its fresh flavor and not color.

If butter were not put upon the market in a certain shade of yellow, it would be misleading to the consumer. For years the consumer has been buying butter colored yellow to suit his fancy, and if Congress had not by an enactment made color an ingredient of butter it would be so considered, because it has been used for a great many years. Popular uses and customs not in conflict with statutory law become common law. Of course, an evil practice, one that is detrimental to the welfare of society, can not be accepted as common law. But the material used for coloring butter is harmless and gives to butter a mark by which the consumer may judge whether it is butter or an imitation of butter. The butter interests hold that yellow is not only a trade-mark of butter but a demarkation for distinguishing butter from oleomargarine. Butter has a right to demand that oleomargarine be not colored in imitation of yellow butter. When oleomargarine is colored in imitation of yellow butter, fraud and deception follow. It is for this reason that the dairy interests demand that oleomargarine be sold in its natural color and not in the shade of yellow which is the trade-mark of butter. Color can not cover up impurities, flavors, or anything in butter that might be deleterious to health. If butter was a uniform shade of yellow the entire year, there would be no excuse for using any coloring matter.

LABELING PACKAGES.

Since butter is not colored to deceive, and since color is an ingredient of butter, so recognized by an act of Congress, there is no reason to require butter packages to be labeled "artificially colored" when containing butter which has been colored, unless Congress considers it desirable to have stated upon the butter packages all the ingredients of butter. We can see no good reason for mentioning one ingredient of butter and not the rest. If Congress should require the ingredients of butter to be put upon the packages in which butter is sold, then the ingredients of oleomargarine should also be printed upon the packages in which it is sold.

Congressman LINTHICUM also makes the charges that butter contains too much moisture and too much salt. If butter containing 16 per cent or more of moisture is sold or offered for sale, the Internal Revenue Department has the power of levying a tax of 10 cents a pound and imposing heavy penalties besides. If the department desires, it may confiscate the butter. The Federal law is already ample to take care of frauds of this character, and Congressman LINTHICUM knows it. Consumers vary in their tastes as to the amount of salt they desire in butter. Some want a light-salted butter, others a medium-salted butter, and some demand a heavy-salted butter. If the manufacturer puts in more salt than the consumer desires he injures no one but himself, for the consumer can easily obtain butter salted to his taste. There is no argument here worth considering.

REVENUE FRAUDS.

In the press notices of his speech as sent out by Congressman LINTHICUM, he does not hesitate to insert the report of the Internal Revenue Department in such a way that the casual reader would gather that the butter interests were committing revenue frauds against the Government. He says:

"It is charged that certain butter factories have practiced fraud. The annual report of the Secretary of the Treasury for 1915 says: 'One case was discovered during the current year where the amount out of which the Government has been defrauded has reached a total of $1,503,203.30. All of the product in this case, while not butter, was placed on the market as butter without the payment of any tax.'"

Note this product was not butter but was placed on the market as butter, then read the opening sentence of the quotation from Congressman LINTHICUM'S own report of his speech. We let the reader draw his own inference.

Here is what the Secretary of the Treasury's report for 1915 says:

"The total amount of taxes out of which the Government had been defrauded through artificially colored oleomargarine being placed on the market under tax-paid stamps at one-fourth of 1 cent per pound instead of at the rate of 10 cents due on such product, in four of the largest cases of this character ever discovered, was definitely determined during 1915, and the sum found due reached the enormous total of $17,692,410.47, representing the tax on practically all of the oleo-

margarine produced and placed on the market as uncolored under one-fourth cent stamps by these manufacturers since the inception of the present law.

"In addition to the completion of these four cases, one case was discovered during the current year where the amount out of which the Government had been defrauded reached a total of $1,503,203.30, which sum represented the tax on the product manufactured for a period of six years that these frauds had continued undetected, all of the product in this case having been placed on the market as butter without payment of any tax.

"These five cases alone involved a total of $19,195,613.77 stamp taxes, which does not include special taxes of wholesale and retail dealers incurred on account of the purchase and sale of the product."

What does Congressman LINTHICUM mean when he tries by inference to place these revenue frauds at the door of the butter industry? What has his statement pertaining to the coloring of butter, about too much moisture and too much salt in butter, and references to revenue frauds as perpetuated by the oleomargarine manufacturers got to do with the necessity of a dairy investigation?

Instead of entitling his remarks "Federal regulation and inspection of milk, butter, and other dairy products," it would have been better to have entitled them "An inaccurate tirade about a subject of which I know nothing." He has misquoted those who have made statements concerning the dairy conditions which should be improved; he has misquoted reasons given as to why milk should be produced by clean methods, and the necessity of healthy cows; all of this to such a degree that it is impossible to recognize that which is true and that which is untrue.

There is opportunity to improve the sanitary conditions upon some dairy farms; to improve the health of some herds; to provide better sanitary methods in some institutions where dairy products are manufactured; but to say conditions are worse now than years back is unwarranted and is disproved by the facts.

DAIRY PRODUCTS.

Dairy products are more wholesome now than they ever have been in the history of the dairy industry. In the past few years sanitary barn equipment companies have sprung up everywhere in the dairy sections, indicating that the dairy farmers desire to produce a better grade of milk. These companies could not have existed in the early days of dairying, as the average dairy farmer did not see the necessity of providing clean and wholesomer surroundings for his cows. The demand for sanitary equipment for creameries has increased. There would not be a demand for better machinery and better equipment for our creameries, cheese factories, and milk concerns if the owners were not improving the quality and wholesomeness of dairy products. A few years ago milk or cream used for making butter was not pasteurized, but now the practice is very common, and each year finds a larger number of creameries pasteurizing both milk and cream. Within the past few years the big milk companies began to pasteurize milk for direct consumption, and now the cities like New York, Boston, Chicago, Philadelphia, San Francisco, Washington, Milwaukee, and many others are well supplied with pasteurized or certified milk, and no one of necessity must use unwholesome milk. Inspection of the dairy farms is becoming more general, and there has been a substantial improvement in the production of sanitary milk the past few years.

Congressman LINTHICUM utters not a word of commendation for the sanitary improvements that have been made in recent years, but rather distorts statements appearing in old Government reports and in dairy papers that had been made for the purpose of indicating the necessity of better methods of producing dairy products.

There is still opportunity for improving conditions under which dairy products are produced and handled, but it is unfair to the dairy interests and to the consumer to ignore the fact that there are more wholesome dairy products produced and offered for sale now than at any time since dairying became an industry. It is easy to knock; it is easy to distort statements made for the purpose of bringing forth better dairy conditions; it is easy to weave wrong interpretations into Government reports; but it requires knowledge, work, and sincere motives to outline methods that will bring about the desired improvement in all dairy practices.

Unfortunately it is true that some better regulation in order to protect the consumers may be necessary, but wholesale condemnations of dairy products are unjustified. The intelligent dairy interests of the country will be found supporting, as Hoard's Dairyman has, any just and legitimate measures honestly intended to improve the sanitary conditions of dairy products wherever necessary; but those interests will oppose with all of their might the making of an investigation of dairies and dairy products as a weapon with which the oleomargarine interests may slander and libel the legitimate dairy interests of the country.

THE FUTURE.

The dairymen of the country, in view of the splendid record of this Democratic administration in investigating and discovering repeated violations of the oleomargarine laws and in prosecuting offenders for such violations, and in enforcing that law as much as possible, have found a friend in the Democratic Party. That party upon this question has been weighed and found not wanting. They have had 16 years of Republican administration of the oleomargarine laws. The Democratic Party in coming into power three years ago inherited a vast system of violations of the oleomargarine laws from previous Republican administrations. They have corrected all abuses of the law and are strictly enforcing the same, and the dairy farmers of this country may safely rely upon the Democratic Party in the future to protect their interests as that party has in the past. It is a protection for the dairy farmer that is actual and can be seen and appreciated by them. The best interests of the dairy farmers of the country can best be promoted by maintaining the present administration in power for another four years.

## The Revenue Bill.

### EXTENSION OF REMARKS
OF
### HON. EDWARD COOPER,
OF WEST VIRGINIA,
IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. COOPER of West Virginia. Mr. Speaker, under the leave given me to extend my remarks in the RECORD on the revenue bill, I take this opportunity of making some observations on this bill.

The same methods heretofore pursued by the Democratic Party in collecting revenue are used in this bill to make up the deficit which to-day is apparent to all will exist in the near future. There is no attempt made to meet the inevitable which will occur as soon as the war in Europe is over; but the only fixed purpose in the minds of the makers of this bill is to collect revenue, and the method is adopted which will prove the easiest way to get the money. To do this the past as well as the future earnings of the munition corporations will be called upon to pay into the National Treasury the cash necessary to carry out the expenditures of an extravagant administration of the affairs of the Government.

Not satisfied with taxing the future earnings of the corporations, it is proposed to make this bill effective from January 1, 1916, and call upon the industries of the Nation to furnish the cash to pay the bills conceived by the leaders of the majority of this Congress. All of this under the plea of "preparedness," when it is a well-known fact that had a policy of retrenchment been adhered to there would have been no occasion whatever for this special revenue bill.

In view of the unrest of the world for the past two years and the apparent necessity for the adoption of a proper program of preparedness by this Congress, I am one of the Members of this Congress who believe the present agitation for much of the expensive and extensive legislation at this session could have been deferred until a later day. But even though the appropriations passed were necessary, and they were not, I feel it would have been much better to have raised the greater part of the needed revenue by a reasonable protective-tariff law, which would have protected our industries and our laboring men by at least the difference in the cost of the production of an article of commerce at home in the United States and abroad in Europe.

I know it has been said we need have no fear; that after the great European war is over Europe will be bankrupt; that after the guns and swords are laid down and peace again reigns supreme Europe will be depleted and not able to compete with the United States, but so far as I am concerned I do not believe one word of it.

To-day the whole of Europe is a workshop—men and women working day and night to keep the men at the front supplied with every conceivable article used in the defense of their country; labor better drilled to realize the necessity of production on a cheaper, broader, and quicker scale—the life of the nations at stake; organization the battle cry of Governments; and thousands of skilled workmen at the front fighting for the preservation of their country. As soon as the men at the front lay down the gun and sword and return to their respective countries they will reenlist, not in the army to fight with the gun and sword, but they will reenlist in the great body of workingmen to fight for bread and meat, and for the reestablishment and preservation of their country's commercial supremacy through the mills and mines of Europe. They are men with military training, knowing how to receive and obey orders, knowing but one command: "Find the enemy and conquer him."

With this organized force of skilled workmen, enlisted in every line of commercial industry, ready to make sacrifices to win battles of commerce, the same as of war, pray tell me what chance will an honest American industry of workmen have against these men and this organization, unless our Government meets the inevitable by protecting our interests and our laboring men by reasonable tariff laws?

I believe it is the duty of Government so to adjust the laws of this country that the burden of living be made as light as possible, and in the coming fight for life every protection should be given our industries and thereby protect the men depending upon the success of our industries for employment. Any policy adopted which falls short of giving protection to our industries and fails to drive away the coming clouds of depression

will be a complete failure and will be resented at the ballot box in November.

No taxation, whether direct or indirect, can in the end be levied which will not be a burden upon the whole people. Taxation, like water flowing downstream, some day will seek its level and cover those who have and those who have not, and the very people upon whom you are attempting to place the burden of taxation will shift the proper share to the people whom you are attempting to make believe you are relieving from taxation. The interests of labor and capital are identical, and no law which is constitutional can be made which will favor the one but which will not benefit the other. Public sympathy may cause the operators of Pennsylvania to increase the wages of the miners in the coal fields of Pennsylvania, but the public in the end pays the increase of wages for the miners by paying an increased price for their fuel. Taxes against industry may be laid, and the fair burden of taxation will be shifted to the public by an increase being made on the products of the mines and mills.

The landlord who has a large income from rentals, and whom this bill will make pay a large share of this tax, will in the end transfer the proper proportion of the tax to the parties to whom he rents his properties, by the simple method of increasing his rents, so I am led to believe that in the end the direct tax is a failure, and it is much better to make the collections necessary for the expenses of Government at the customhouses and not by a patched-up system of taxation such as we now have.

I am now, have always been, and shall continue to be, for that system of taxation known as the "protective-tariff system," under which system of taxation our country has grown to be the foremost country in the world, the wealth of the Nation having increased beyond all expectations, and under which system the people of our fair land have always been contented, happy, and prosperous.

---

**Fourth of July Oration of Hon. Ashton C. Shallenberger, of Nebraska, Delivered at the One hundred and twenty-eighth Celebration of the Society of Tammany or Columbian Order, New York City, on July 4, 1916.**

## EXTENSION OF REMARKS
OF
## HON. MURRAY HULBERT,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 12, 1916.*

Mr. HULBERT. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I include the oration of my colleague, Hon. ASHTON C. SHALLENBERGER, of Nebraska, delivered at the one hundred and twenty-eighth celebration of the Society of Tammany or Columbian Order, New York City, on July 4, 1916, as follows:

"Our Republic has become the richest, the most powerful, the most commercial Nation in all the world. Our armies are undefeated upon land and our Navy rides triumphant upon every sea. In trade, in commerce, in everything that makes for world power, we now excel not only every country of this day and age, but every nation told of in history.

"But what is the source of our strength? What does it all rest upon? It is not dependent upon the size of our standing Army, because when it comes to mustering men in line of battle ready for warfare at the blast of a bugle Germany, with her 10,000,000 trained soldiers, can outnumber us 20 to 1.

"It does not rest upon the size of our war fleets upon the sea, for England can marshal 30 miles of warships in line of battle on a single day if she needs them and outnumber us 3 to 1.

"Our material strength is primarily dependent upon the productive capacity of the Nation.

"We are invincible because American intelligence and American industry produces each year more than a thousand millions of surplus products which we do not need and which we can spare to sell to the rest of the peoples of the world, and we send those products eastward across the Atlantic; we send them westward beyond the Pacific; we send them north and south to our sister countries in America, and with them we lay hold upon the gold and the silver of the world. Not alone that dug this year, but, if necessary, the accumulation of 4,000 years of civilization is tribute to us, and we sweep it across these mighty seas and pour it into the lap of American industry, and with it we can build navies and equip and feed armies when the Nation needs them. The youth of the Nation has always been ready to furnish the men for the fighting line in the hour of peril.

"They have never failed us in the past; they will be even more anxious for the sacrifice of service in the future, because, with the example of Europe before them, they now know that upon the perpetuity of this Republic and the ideals for which it stands depends the future advancement of civilization—the real freedom of mankind.

"America is the young giant among the nations of the earth, a land of youth—of glorious youth—and therefore the land of opportunity. I presume the door of opportunity opens wider here in this great State of New York, in this imperial city of your Commonwealth, than in any other spot upon earth; yet I sometimes wonder if the youth of our land appreciate the glorious opportunities that belong to them and realize and understand that it is not wealth or power or numbers that shall determine the destiny of the Nation or the influence we shall have upon the progress of mankind, but rather the things we stand for and the things we do for the advancement of humanity and the betterment of the race. It is good for them to know that without a proper patriotism and just pride all opportunity is of little avail, and with them all things are possible, even to the most humble. Let me illustrate that thought for a moment.

"I have in mind this moment a boy born upon a stony hillside farm in far-off Scotland a hundred and fifty years ago. He was born to penury and want. No boy of the east side in this great city was ever born to more abject poverty than the boy of whom I speak.

"He could never hope to secure a liberal education such as you give free and without price to the youth of this great city, and he never did obtain it. He could never expect to achieve wealth, power, or position because of the environment in which he lived, and he never did acquire it. On the contrary, he felt the cruelest grip of poverty throughout all the years of his short life. But in spite of it all he loved the very land upon which he lived; he loved nature which was about him, the trees, the birds that sang in the trees, the flowers that bloomed and blossomed upon the land. He knew the history of his country was behind him for 2,000 years and that he had a race heritage in it all that couldn't be taken from him.

"He loved the language that his people spoke, and he knew that with that language he could build monuments for himself that would live forever. It is only with the human language we can build everlasting monuments. The boy loved the accent with which his people speak our language, but above everything else he loved the songs that they sing in their accent of our language; and so inspired by it all, when yet a youth, he wrote these matchless lines:

E'en then, a wish (I mind its pow'r),
A wish that to my latest hour
Shall strongly heave my breast,
That I for poor auld Scotland's sake
Some usefu' plan or book could make,
Or sing a sang at least.
The rough burr-thistle spreading wide
Amang the bearded bear,
I turn'd the weeder-clips aside,
An' spar'd the symbol dear.
No nation, no station
My envy e'er could raise;
A Scot still, but blot still,
I knew nae higher praise.

"And Robert Burns, although he died in penury and want at 37 years of age, sang the songs of his country so well that he only of all the poets that have ever lived in the tide of time has had his name honored by having his birthday made the national holiday of a great people the world round. And that is what this flower of patriotism and just pride can do when it blooms and blossoms in the humblest human heart. We will never go very far, either as individuals or a Nation, until we begin to feel this sort of thing, and feel it very deeply.

"If you would try to make the world the better for your having lived in it, or mankind regret when you are gone, you will have to get outside of yourselves and resolve to do something to make the load of life easier upon the backs of others.

"This is true of our own Republic as it to-day confronts the great problem upon our southern border and faces its duty to civilization in the world crisis beyond the seas.

"We can not shirk our duty or responsibilities either as men or as a Nation even if we would. The future of human civilization will be largely determined by the action of this great Republic in this hour of trial for humanity and American ideals.

"The youth of the Republic are given an opportunity right now to show the compelling power of patriotism to unite a people in the face of a national peril.

"For the second time in 50 years the President has summoned the young men of the land to the colors for the defense

of the flag and the Nation which it represents. It seems as though the faces of our soldiers are always turned to the southward when the Republic is threatened with the trial of battle.

"What a picture it is of a united country when once more at the call of the President the youth of the Nation can all be seen hurrying in countless thousands to where a new-born duty points to a flag which flashes in the sky, glorious with the memory of a thousand brave deeds done in its honor both by flood and field. Thank God, not this time to fight breast to breast upon those southern battle fields where their fathers fought, but all crowding in generous emulation to see which shall stand closest beneath that flag which now, henceforth, and forever shall float for all of us.

"To make a human shield, a mighty ring about Old Glory against which no power on earth shall evermore prevail.

"Let the foes of this Nation remember that from this day forth they must reckon with the blood and brawn of that race of men who fought with Grant at Vicksburg, Shiloh, and Cold Harbor, together, side by side, shoulder to shoulder, with those who died with Lee at Gettysburg, Antietam, and the Wilderness.

"They tell us it may mean sacrifice and struggle for the Nation, but struggle and sacrifice bring to the surface the best there is in nations as well as individuals. Mankind has never secured anything worth having without sacrifice and struggle before it was won. The longer we have to fight for a thing the more we value it after we win it.

"What is the most priceless thing that belongs to the American people to-day? It is this thing we call constitutional liberty and representative government. It is our right under the flag to elect the men who make the laws for us, to elect the judges who should interpret the law, to choose the governor and the President who should enforce the law.

"But we do not always hold this right as sacred as we should, a thing never to be used except upon conscience and upon honor. The reason, in my opinion, is that we have never had to struggle as a Nation to secure it. It was a gift to us from our mother country, England. When we chased the Englishman from our shores 140 years ago he left this thing of constitutional liberty and representative government behind him. It is the proudest achievement of the Anglo-Saxon race that they won it first among all the civilized people of this earth.

"Men have been fighting for that right in Russia within a generation, and they died for it over there, but they haven't won it yet in Russia. Men were fighting for that right in Turkey within five years, but they haven't won it yet in Turkey.

"Men are dying for it in Mexico to-day. That is the source of all trouble in Mexico. They have no constitutional liberty nor representative government in that land as you and I understand it and enjoy it. And there can be no lasting peace there, there ought not to be in any land, until the common man has some rights the fellows above him are bound to respect. Englishmen did not win that right easily to hand down to you and me. They won it only after fighting for more than 300 years against the power and prerogatives of kings and princes in that land. Men gave their lives for it and died, and kings and princes declared the idea was dead with the men who had died for it. But it lived on and on, and finally, after 700 years, it has come down to you and me as the very corner stone and bulwark of American liberty, of all liberty the world around.

"If we will go back 700 years to the beginning of this struggle, we can learn a lesson that will apply to our national duty to-day.

"For there stands stout old Simon de Montfort, the first real fighter for constitutional liberty among English-speaking people. He was ambushed at the Battle of Evesham by the overwhelming forces of the King of England, and a follower who rode beside him said to him, "My Lord, the King's men outnumber us 10 to 1; nothing is left to us but to surrender or to flee." But De Montfort said to him, "Not so; one other thing we can do to-day as Englishmen for England, and that is to die like men upon the field of battle in a just cause." And as he laid his lance in rest to make his last charge, before he drove spurs into his horse's flanks, he rose in his stirrups and called to the little band of faithful knights about him, "Gentlemen, commend your souls to God, for our bodies are the enemy's." And so he died, fighting gloriously, that you and I and every man that speaks the Saxon tongue might have a representative form of government; might be free. The names of those who won upon that fatal field are lost amid the oblivion of 700 years and will be heard of no more in human history, but the name of him who fell in behalf of constitutional liberty and representative government, who gave his life that you and I might be free, his name will live until the English language is forgotten.

"And so it is in every great struggle in this world—permanent and lasting fame is only for him who has the courage to fight upon the side of justice and the great mass and body of the people. The world will judge our actions in the present Mexican crisis by the degree that we live up to the duty that we owe to civilization and humanity.

"If we are forced to intervene in Mexico, it must be to bring peace and justice to the struggling people of that distracted land rather than to insure profit and opportunity for more profit to those who have great investments there.

"There are men in this country who were not satisfied with the opportunities for profit at home, profits made upon investments under our own flag that has the stars of heaven upon it, but risked their money under the flag of Mexico, that has a snake emblazoned upon its center, and now they would have our President send the boys of America to death in the desert beyond the Rio Grande to make secure and safe the silver pesos that they have risked with the snake in Mexico rather than under the Stars and Stripes.

"But I have faith to believe that President Wilson will never wage war in such a cause. In the face of continued efforts to plunge us into the great maelstrom of war that now roars around the world, he has stood steadfast as a rock for peace and has kept the peace with our national honor unsullied.

"The brave message of the President's speech at the New York Press Club, in which he declared his devotion to American ideals of peace and justice, went right to the hearts of the American people. He never sounded a higher or truer note than rang through that great speech. It was filled with true Americanism from end to end. When he bravely declared he would rather lose the Presidency than win it by action adverse to his own convictions of right and justice as to Mexico he spoke as the American people would have their President voice the conscience of the Nation. At one stroke he won the hearts of all the people. He demonstrated once again that he is responsive to the heart-deep demand of the Nation that we keep steadily in the paths of peace.

"We are at peace while all the rest of the world is in arms. There is war in Asia, there is war in Africa, there is war in Europe; the fiercest war ever fought in all the tide of time is being fought over there in the very center of civilization. There is war in Mexico, but in our own dear land peace still reigns. Why are we spared the awful curse of war while all the rest of the world is taken? Two years ago all Europe was at peace; not one person in a million over there believed that war could come to them.

"Their statesmen, their philosophers, their thinkers all united in declaring that a great European war was no longer possible.

"But about that time we sent thousands of regular soldiers to Vera Cruz, professional soldiers armed to the teeth and trained to kill. We backed them up with a great war fleet upon the sea, but we didn't fight. We are sending hundreds of thousands of soldiers to our southern border at this time, but they do not fight. Why are we still at peace and all Europe at war? We are the same kind of men and women as those over there, the same flesh and blood, they enjoy the same civilization as ourselves. I know they are the same kind of men and women, because America is what she is because she is the son or the daughter of Europe. We are all proud to trace our lineage there, and most of us do not have to go very far back in our pedigrees until we land over there either.

"Yes; Europe is peopled by the same kind of flesh and blood, it has a like civilization, but, thank God, not the same form and ideals of government, the same opportunity for public opinion to express and demonstrate its power.

"In Europe, kings and emperors yet rule. Upon questions of peace or war, they get together in secret conclave with their councillors and bring war upon the nation and the people are powerless to prevent it. The only thing the common people of kingdoms and empires are allowed to do is to fight the battles in time of war and pay the debts in time of peace. But in America, thank God, public opinion is still supreme.

"The reason American boys have not died in countless thousands upon the cactus-covered plains of Mexico, just as the boys of Europe are dying in untold millions in the trenches over there, is because our President at Washington knows that the great mass and majority of the American people are in favor of peace and opposed to war. The American people want no war. They believe that Woodrow Wilson intends to keep them out of war and therefore they intend to keep him in the White House. Public opinion is still supreme as a potential power in determining the destiny and action of this Nation, and this constitutes the wonder, the glory, and the everlasting honor of the Republic.

"It is a marvelous country, a wonderful civilization, a matchless opportunity that we commemorate here to-day. All that our

Nation and our civilization stands for is represented by the flag which I see displayed upon every hand in this historic hall. It typifies and epitomizes the spirit of American institutions. It is the most beautiful flag in all the world. You see it shining here in all the radiance of its matchless and glorious colors, the red, the white, and the blue! That flag whose crimson bars are dyed with the blood of heroes, that you and I might be free, and striped with the purest white from freedom's highest mountain top! Whose blue field was torn from the azure dome of high heaven and spangled with the stars of Almighty God. Watch it as it floats on high! Look in its upper corner, there are 48 bright stars there now and every star stands for a State. With that thought and inspiration upon us all, here in this great city of the Empire State, a city destined to become the greatest city in all the world, let us pledge mutual fealty to each other to do all that lies within our power to keep the patriotic fire ablaze in every star that shines upon the broad shield of our Nation's flag with the spirit of a just pride in all that we have done and hope to do for the advancement of civilization and justice for all mankind."

## Analysis of the Federal Rural-Credit Law and Suggestions as to How Farmers May Secure Loans.

### EXTENSION OF REMARKS
OF
### HON. CARL VINSON,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 15, 1916.*

Mr. VINSON. Mr. Speaker, the act in question provides for the establishment in the city of Washington, in the Treasury Department, a Federal farm-loan bureau, which shall be charged with the execution of this act.

FEDERAL FARM-LOAN BOARD.

The bureau created by this act shall be under the supervision, charge, and control of what is known as the Federal farm-loan board, which shall consist of five members, including the Secretary of the Treasury, who shall be a member and chairman ex officio. The other four members of the board are to be appointed by the President, not more than two being from one political party. Each member of said board is required to be a citizen of the United States and appointed for a term of two, four, six, and eight years, respectively, and shall receive a salary of $10,000 per annum.

One member of the said board shall be designated by the President as the farm-loan commissioner, who shall be the active executive officer of said board.

No member of the board shall, during his continuance in office, be an officer or director of any other institution, association, or partnership engaged in banking or in the business of making land-mortgage loans or selling land mortgages.

The Federal farm-loan board shall have the authority to appoint a farm-loan registrar in each land-bank district to receive application for issues of farm-loan bonds and to perform such other services as may be prescribed by law.

In addition to the appointment by the Federal Farm Loan Board of a farm loan registrar, they shall also appoint one or more land bank appraisers for each land bank district throughout the United States and as many land bank examiners as the business and necessity may demand. All of the officers appointed by the Federal Farm Loan Board shall have no connection with any other institution, association, or partnership engaged in banking, or in the business of making land mortgage loans or selling land mortgages.

The salaries of the various officers appointed by the board shall be regulated by it and shall be paid by the Federal land banks and the joint stock land banks which they serve in such proportion and in such manner as the Federal Farm Loan Board shall order.

To carry out the provisions of this act, the board is permitted to employ such attorneys, experts, assistants, clerks, laborers, and other employees as they find necessary. Each Federal land bank shall semiannually submit to the Federal Farm Loan Board a schedule of the salaries or rates of commission paid to its officers and employees, and the Federal Farm Loan Board shall annually make a report of all its doings to the Speaker of the House of Representatives, who shall submit the same to Congress.

The board shall, from time to time, require examinations and reports to be made of the conditions of all land banks established and shall publish consolidated statements of the results and standings of the same.

It shall also cause to be made appraisals of all farm lands as provided for by the act and shall prepare and publish an amortization table which shall be used by the National Farm Loan Association and the land banks organized by the same.

FEDERAL LAND BANKS.

As soon as practicable after the appointment of the four members of the Federal Farm Loan Board it shall become their duty to divide continental United States, excluding Alaska, into 12 districts, which shall be known as Federal land bank districts, for the purpose of making long term loans on real estate on the amortization plan.

The stock in each one of the 12 Federal land banks established by this act shall not be less than $750,000, and this stock, unless subscribed within 30 days, is to be taken by the Federal Government, but the Government shall not participate in any dividend declared by the bank.

In the location of the land-bank district no fractional part of any State shall be included. After the districts have been established the Federal farm-loan board charters the Federal land banks, and after they obtain their charter they become a body corporate and have all the powers of a corporation, which I will not enumerate, but which authorize the Federal land bank to carry on the business of exclusively making long-term loans on real estate, and no one loan made by a Federal land bank shall be less than $100 nor more than $10,000.

The right to make loans by a Federal land bank is limited to the following purposes:

(a) To provide for the purchase of land for agricultural purposes.
(b) To provide for the purchase of equipment and live stock necessary for the proper and reasonable operation of the farm.
(c) To provide buildings and for the improvement of farm lands.
(d) To liquidate the indebtedness of the owner of the land mortgaged existing at the time of the organization of the farm-loan association.

The Federal land bank under this act is permitted to loan 50 per cent of the value of the land mortgaged and 20 per cent of the value of the improvements situated thereon.

The loan can not be made for a period of less than 5 years nor more than 40 years, and no loan on a mortgage can be made under this law at a rate of interest exceeding 6 per cent per annum, exclusive of amortization payments.

No person can avail himself of this act to borrow money from a Federal land bank who is not at the time or shortly to become engaged in the cultivation of the farm mortgaged.

Each Federal land bank shall be temporarily managed by five directors who shall be appointed by the Federal farm-loan board. These directors are required to be citizens of the United States and residents of their respective land-bank district. Their compensation, like other employees, shall be fixed and regulated by the Federal farm-loan board. They shall choose from their number, by majority vote, a president, a vice president, a secretary, and a treasurer, and these directors selected in the manner above pointed out are authorized and empowered to employ such attorneys, experts, assistants, clerks, and other employees as they may deem necessary, and to fix the compensation subject to the approval of the Federal farm-loan board, for the purpose of carrying out the provisions of the act relative to the Federal land banks.

After the subscription to stock in any Federal land bank shall have reached the sum of $100,000, the officers and directors of said land bank shall be chosen by the national farm-loan association and the Federal farm-loan board as follows:

Six of said directors shall be known as local directors and shall be chosen by and be representatives of the national farm-loan association; and the remaining three directors shall be known as district directors, and are appointed by the Federal farm-loan board and represent the public interest. Therefore, each Federal land bank shall be controlled by nine directors, each holding office for a term of three years.

It will be observed that when the subscription reaches the amount of $100,000, the borrowers who own the stock in the bank will control the same.

NATIONAL FARM-LOAN ASSOCIATION.

The national farm-loan association, provided for by this act, must be composed of not less than 10 men in any community or county within a Federal land-bank district, who desire to secure loans and who organize into what is termed and classified by the act as a national farm-loan association.

When 10 borrowers desire to organize for the purpose of creating a national farm-loan association they shall in a general way specify in articles of agreement for what purpose the

association is formed, the territory, community, or political subdivision within which it is to do business.

They then draft what is termed articles of agreement, send a copy of the same to the Federal land bank of the district, accompanied by a subscription of stock in said Federal land bank amounting to 5 per cent of the aggregate amount of the loans desired by the 10 men who organize the national farm-loan association.

These 10 men elect not less than 5 directors from their membership and also select a secretary-treasurer. The board of directors then select from the 10 men who desire to organize the national farm-loan association what is termed a loan committee, which shall consist of 3 members. They forward their application, articles of agreement, together with their subscription to stock, to the Federal land bank in that district. The aggregate amount of loans desired by the incorporators can not be less than $20,000.

Then the Federal land bank shall send an appraiser to investigate the solvency and character of the applicants and the value of their land, and upon receipt of the report shall determine whether or not in their judgment a charter shall be granted to the 10 men who desire to be incorporated.

The Federal land bank of the district in which the national farm-loan association is seeking to be created shall forward all articles of agreement and the evidence submitted by the 10 men to the Federal Farm Loan Board at Washington City with their recommendation.

If said recommendation of the Federal land bank is unfavorable, and it is agreed to by the Federal Farm Loan Board, a charter is refused.

If said recommendation is favorable, then the Federal farm-loan board shall thereupon grant a charter to the 10 applicants, designating the territory in which said association may make loans, and shall forward to said applicants, through the Federal land bank of that district the charter.

Upon receipt of the charter authorizing the establishment of the national farm-loan association it would be authorized and empowered to receive from the Federal land bank of the district in which it is organized and chartered to do business sums of money to be loaned to its members who organize the same.

These three organizations, first, the Federal farm-loan board, which is located at the Treasury Department at Washington City; second, the Federal land bank, located in a city in each Federal land-bank district; and, third, the national farm-loan association, constitute the machinery of this act.

METHODS BY WHICH A BORROWER SECURES A LOAN.

Having briefly outlined the organization and machinery for carrying out the provisions of the act under discussion, it becomes important now to explain to you the methods by which one may secure a loan.

At the outset let me impress upon you this fact, that no borrower can secure a loan from a Federal land bank unless he is a member of the national farm-loan association of the community or county in which the borrower's land is situated.

When a national farm-loan association has been organized in the method I have just pointed out, for a borrower to obtain money he must become a member by making application to the secretary-treasurer of the association, who submits his application for a loan to the loan committee of the association.

The loan committee appraises the value of his land and the improvements thereon. Then the board of directors pass upon the loan. His application must be accompanied by an agreement to take 5 per cent of the amount of the loan in stock in the Federal land bank of that district. The application, the agreement to take stock, the chain of title, and the recommendation of the local farm-loan association are then forwarded by the secretary-treasurer of the association to the Federal land bank.

The Federal land bank, if it so desires, can have another appraisement of the land and the improvements, and the loan is then approved or rejected.

If the loan is approved, he then becomes a member of the National Farm Loan Association and obtains his loan from the Federal land bank.

Now, to cite a concrete case: Suppose A has a piece of land worth $1,800, and the improvements thereon being worth $500—the total value of land and improvements, $2,300. He desires a loan, therefore A must become a member of the association in the manner I have pointed out, and under the law he can borrow 50 per cent, or $900, on his land and 20 per cent, or $100, on the value of the improvements. A does not get in cash the whole sum of $1,000 because he must take 5 per cent of the amount of the loan in stock. In this case A would be required to take $50 in stock in the Federal land bank of that district. However, A is entitled to whatever profits are made on his stock, and when his loan is paid off he is credited with the $50 worth of stock, and it is then canceled.

In addition to this purchase of $50 worth of stock A must at the time he becomes a member sign an agreement guaranteeing a liability to the extent of 10 per cent, or twice the amount of stock. In other words, in the case now used, A is required to assume $100 liability for his loan of $1,000.

Under the law regulating the farm-loan association, supervised as it will be by the Federal land bank and the farm-loan board, it is not believed that the borrower will ever have to pay any loss on account of this guaranty, and this amount is not deducted from the loan and not paid at all unless a loss is sustained by the farm-loan association.

Of course when the borrower's loan has been liquidated his stock is canceled and the agreement is at an end. In other words, his stock is simply an investment which he must make to secure his loan.

The results, as far as I have been able to estimate ahead of time in the case referred to, would be about as follows:

| | |
|---|---|
| Security A offered: | |
| Land valued at | $1,800 |
| Improvements valued at | 500 |
| Total value of A's land and improvements | 2,300 |
| Estimated cost to A: | |
| Subscription to stock in land bank | 50 |
| Cost of abstract of title (estimated) | 10 |
| Cost of examining abstract (estimated) | 5 |
| Cost of appraisement (estimated) | 5 |
| Cost of recording mortgage (estimated) | 2 |
| Total cost to A | 72 |
| Total loan A can obtain | 1,000 |
| A receives in cash | 928 |

Counting his stock as an investment, he borrows $950 at an expense which it is believed will not exceed $22.

At this point let me digress and call your attention to the absolute necessity that the General Assembly of the State of Georgia adopt the Torrens title system or some other similar system which will shorten the initial expense and reduce the cost of abstracting.

Of course, if the borrower already has an abstract of title, that cost will not have to be borne again. Even the initial fee may be paid by the bank and deducted from the loan.

REPAYMENT OF THE LOAN.

Having analyzed in a brief manner how a borrower becomes a member of the association and obtains his loan, it is important now to point out for your benefit how a loan will be repaid.

Of course the borrower regulates the period of time for the loan to run, and it can extend for a period of not less than 5, nor more than 40 years, and the interest rate at no time can be over 6 per cent per annum.

Now, let us take the case of A who has real estate valued at $1,800 and improvements thereon valued at $500. He desires to secure a loan of 50 per cent of the value of his land, which would be $900, and 20 per cent of the value of the improvements, which would be $100—the total amount of the loan that A can obtain being $1,000, on his land and improvements. A desires this loan for a term of 20 years at 6 per cent interest and to repay the same on the amortization plan, which is an annual payment consisting of part of the principal and the interest. He would repay the loan according to this table:

| Annual periods. | Total annual payment. | Interest at 6 per cent. | Paid on principal. | Amount on principal unpaid. |
|---|---|---|---|---|
| 1 | $87.19 | $60.00 | $27.19 | $972.81 |
| 2 | 87.19 | 58.36 | 28.83 | 943.98 |
| 3 | 87.19 | 56.63 | 30.56 | 913.42 |
| 4 | 87.19 | 54.80 | 32.39 | 881.03 |
| 5 | 87.19 | 52.86 | 34.33 | 846.70 |
| 6 | 87.19 | 50.80 | 36.39 | 810.31 |
| 7 | 87.19 | 48.61 | 38.58 | 771.73 |
| 8 | 87.19 | 46.30 | 40.89 | 730.84 |
| 9 | 87.19 | 43.85 | 43.34 | 687.50 |
| 10 | 87.19 | 41.25 | 45.94 | 641.56 |
| 11 | 87.19 | 38.49 | 48.70 | 592.86 |
| 12 | 87.19 | 35.57 | 51.62 | 541.24 |
| 13 | 87.19 | 32.47 | 54.72 | 486.52 |
| 14 | 87.19 | 29.19 | 58.00 | 428.52 |
| 15 | 87.19 | 25.71 | 61.48 | 367.04 |
| 16 | 87.19 | 22.02 | 65.17 | 301.87 |
| 17 | 87.19 | 18.11 | 69.08 | 232.79 |
| 18 | 87.19 | 13.96 | 73.23 | 159.56 |
| 19 | 87.19 | 9.57 | 77.62 | 81.94 |
| 20 | 86.85 | 4.91 | 81.94 | ..... |
| Total | 1,743.46 | 743.46 | 1,000.00 | ..... |

It will be observed by the above table, which I have worked out on the amortization plan, that the amount paid annually is $87.19, making a total of $1,743.46.

The calculation of principal and interest on $1,000 for 20 years at 6 per cent totals $2,200; therefore one can save $456.54 on a loan of $1,000 at the same rate of interest under the amortization plan.

It is claimed that the interest rate will be less than 6 per cent per annum, and, of course, the interest will be regulated by the sale of bonds which are issued and sold by the Federal land bank, from which sale the money is derived to make the loan to the borrowers.

It is to be sincerely hoped that the interest rate will be below 6 per cent, but under no condition can it be above that amount. I have made a calculation and insert a table showing the loan of $1,000 for 20 years at 5 per cent interest, on the amortization plan, which is as follows:

| Annual periods. | Total annual payment. | Interest at 5 per cent. | Paid on principal. | Amount of principal still unpaid. |
|---|---|---|---|---|
| 1 | $80.24 | $50.00 | $30.24 | $969.76 |
| 2 | 80.24 | 48.48 | 31.75 | 938.00 |
| 3 | 80.24 | 46.90 | 33.34 | 904.67 |
| 4 | 80.24 | 45.23 | 35.01 | 869.66 |
| 5 | 80.24 | 43.48 | 36.76 | 832.90 |
| 6 | 80.24 | 41.64 | 38.59 | 794.31 |
| 7 | 80.24 | 39.71 | 40.52 | 753.79 |
| 8 | 80.24 | 37.68 | 42.55 | 711.23 |
| 9 | 80.24 | 35.56 | 44.68 | 666.56 |
| 10 | 80.24 | 33.32 | 46.91 | 619.64 |
| 11 | 80.24 | 30.98 | 49.26 | 570.39 |
| 12 | 80.24 | 28.51 | 51.72 | 518.67 |
| 13 | 80.24 | 25.93 | 54.31 | 464.36 |
| 14 | 80.24 | 23.21 | 57.02 | 407.34 |
| 15 | 80.24 | 20.36 | 59.87 | 347.46 |
| 16 | 80.24 | 17.37 | 62.87 | 284.60 |
| 17 | 80.24 | 14.23 | 66.01 | 218.59 |
| 18 | 80.24 | 10.93 | 69.31 | 149.28 |
| 19 | 80.24 | 7.46 | 72.78 | 76.50 |
| 20 | 80.24 | 3.82 | 76.50 | ..... |
| Total | 1,604.80 | 604.80 | 1,000.00 | ..... |

BENEFICIAL TO TENANTS.

I shall endeavor to show you how this act can be of material benefit to the tenant farmer.

For the purpose of illustrating, take the case of A, who is a tenant of B, renting annually 100 acres of land, on which A conducts a three-horse farm and pays in rent to B two bales of cotton per plow, or six bales per year. At 10 cents a pound for the cotton, A is paying an annual rental of $300.

A (the tenant) is thrifty, industrious, and honest, and desires to purchase the 100 acres of land which he has been renting year by year from B.

B agrees to sell the land to A at $10 per acre, or $1,000, provided A can make a substantial cash payment and also agrees that the balance is to be paid in four annual payments, with interest at 8 per cent, on the amortization plan.

A accepts the terms and the trade is consummated on the conditions above stated. A at the time of purchase has no cash to make the first payment; therefore he obtains from B a warranty deed to the 100 acres of land for the purpose of mortgaging the same to the Federal land bank in order to secure money to make the cash payment, and also files his application to become a member of the national farm-loan association of the district in which the land is situated, and asks for a loan of 50 per cent of the value of the land, or $500, which loan is to be for a period of 20 years, at 6 per cent interest, on the amortization plan.

When A files his application, accompanied by the warranty deed and the chain of title, he is also required to subscribe to 5 per cent of the amount of the loan for stock in the Federal land bank, which in this case amounts to $25. This is an investment, and under the calculation above set out I estimate that the abstracting, and so forth, would amount to about $22, making the investment in stock and the expense that A has to bear to obtain his loan amount to $47, which sum is to be deducted from the loan of $500.

A would obtain in cash from the Federal land bank $453, which he would pay to B as his cash payment and at the same time transfer to B the bond which the Federal land bank had given to A when he executed his mortgage, or, if he desired to do so, make to B a second mortgage on the 100 acres of land. By this transfer of the bond or the execution of the second mortgage it would insure B from any loss in the event A could not meet the payments to the Federal land bank or the deferred payments for the purchase of the land.

I insert below a table showing A's loan of $500 for 20 years at 6 per cent on the amortization plan to the Federal land bank.

| Annual periods. | Total annual payment. | Interest at 6 per cent. | Paid on principal | Amount of principal still unpaid. |
|---|---|---|---|---|
| 1 | $43.59 | $30.00 | $13.59 | $486.41 |
| 2 | 43.59 | 29.18 | 14.41 | 472.00 |
| 3 | 43.59 | 28.32 | 15.27 | 456.73 |
| 4 | 43.59 | 27.40 | 16.19 | 440.59 |
| 5 | 43.59 | 26.43 | 17.16 | 423.38 |
| 6 | 43.59 | 25.40 | 18.19 | 405.19 |
| 7 | 43.59 | 24.31 | 19.28 | 385.91 |
| 8 | 43.59 | 23.25 | 20.34 | 365.57 |
| 9 | 43.59 | 21.93 | 21.66 | 343.91 |
| 10 | 43.59 | 20.63 | 22.96 | 320.95 |
| 11 | 43.59 | 19.25 | 24.34 | 296.61 |
| 12 | 43.59 | 17.80 | 25.79 | 270.80 |
| 13 | 43.59 | 16.25 | 27.34 | 243.46 |
| 14 | 43.59 | 14.61 | 28.98 | 214.48 |
| 15 | 43.59 | 12.87 | 30.72 | 183.68 |
| 16 | 43.59 | 11.03 | 32.56 | 151.23 |
| 17 | 43.59 | 9.07 | 34.52 | 116.71 |
| 18 | 43.59 | 7.00 | 36.59 | 80.12 |
| 19 | 43.59 | 4.81 | 38.78 | 41.33 |
| 20 | 43.81 | 2.48 | 41.33 | ..... |
| Total | 872.02 | 372.02 | 500.00 | ..... |

It will be observed by the table above set out that A pays $43.59 each year, which includes the interest and a portion of the principal to the Federal land bank.

At the same time that A would be making his annual payments to the Federal land bank, he would be required also to make payments to B on the deferred notes that he had given him for the balance due, which in this case amounts to $547.

I insert a table below showing the amount, interest, and installment payments that A would be due to B, according to the terms of the trade, and also the payments to the Federal land bank, and the total amount paid by A to both parties during the four years that A is liquidating the debt to B for the balance due on the land:

| Year. | Deferred payments on amount due B. | | | | Annual installment to Federal Land Bank. | Total payment each year. | Saved by A in buying farm instead of renting during first four years. |
|---|---|---|---|---|---|---|---|
| | Total annual payment. | Interest at 8 per cent. | Paid on principal. | Principal unpaid. | | | |
| 1 | $165.17 | $43.76 | $121.41 | $425.59 | $43.59 | $208.76 | $91.24 |
| 2 | 165.17 | 34.05 | 131.12 | 294.47 | 43.59 | 208.76 | 91.24 |
| 3 | 165.17 | 23.56 | 141.61 | 152.86 | 43.59 | 208.76 | 91.24 |
| 4 | 165.09 | 12.23 | 152.86 | ..... | 43.59 | 208.68 | 91.32 |
| | 660.60 | 113.60 | 547.00 | ..... | ..... | ..... | ..... |

From the above table it will be seen that the total annually paid by A to B, including both interest and principal, amounts to $165.17. At the end of four years A will have complied with the terms of the sale and liquidated his indebtedness to B, and he will then be required to pay but the annual payment of $43.59 to the Federal land bank for a period of 16 years, at which time he will have paid the entire amount due on the loan.

It will also be further noted from the above table that the total payments, both to the Federal land bank and to B, during the four years in which he is making payments to both, is $91.24 less than the rent which A has been paying.

I have by the case used above demonstrated to a mathematical certainty how a tenant can buy land and become a home owner under the provisions of this act without at the date of the purchase of the land having had one dollar in cash, yet having made a substantial cash payment when the trade was consummated.

EXEMPTION FROM TAXATION AND FEDERAL DEPOSITS.

The act provides that the Federal land bank, the mortgage and bonds issued by it, are exempt from Federal, State, and municipal taxation. This exemption will save to the owners of the bank, who are the borrowers, large amounts and will also increase the demand for the bonds and make them sell for a better price, thereby reducing the cost of money to the borrower.

The act provides, in the event any disaster should occur in any section of the country and the farmers who have borrowed money should be unable to meet the payment, that the Government is authorized to deposit in each land bank a sum not exceeding $500,000 to enable the borrower to meet the interest obligations on the bonds, thereby guaranteeing to the bond-

holder that his bond is good and also assuring the borrower that under such circumstances he will not be closed out and his farm sold.

HOW THE MONEY IS OBTAINED BY THE BANKS.

When the Federal land bank begins operation and secures these farm first mortgages, then it is given the right to issue its own bonds. The security of these bonds is: (1) The capital stock of the bank itself; (2) whatever earnings and reserves the bank may have made; (3) the indorsement of the local farm-loan associations, which will be backed by the guaranty of all members of the association to the extent of 10 per cent of the loan of each; (4) the first mortgages of farm lands at 50 per cent of their value, and on improvements at 20 per cent of their value; (5) the bonds are exempted from local, State, county, and national taxation; (6) the supervision of the Federal farm-loan board; (7) the act makes the bonds a lawful investment for all fiduciary and trust funds.

Under these circumstances these bonds ought to be just as good as any United States Government bonds and ought to sell at a very low rate of interest, and, no doubt, soon after the system gets in good working order, the rate of interest at which a farmer will be enabled to obtain money will be low indeed. From the sale of these bonds the banks will get the money to lend to the farmers.

In my opinion the Government should have underwritten the bonds. It should have guaranteed to the holders of the bonds their redemption.

If the act had done this, it would have been the same that the Federal reserve act did for commercial banking—guarantee the observance of all of its contracts and the redemption of all of its obligations.

JOINT-STOCK LAND BANKS.

In my opinion this is the joker in the bill. The joint-stock land banks should be made as lonesome as a martin on a fodder stack by the farmers' refusal to patronize them.

The farmers should not obtain the money from these private banks, but should patronize the Federal land banks and make them a success.

The Federal land bank, of course, will be interested in reducing the interest rate. The joint-stock land banks will be interested in increasing the interest rate.

The farmer who is a borrower should not be misled by borrowing from these private institutions thus authorized. It was a serious mistake to authorize these private land banks, and one that ought to be remedied by amendment, but the farmers can themselves remedy this error by not patronizing them.

The bill is not perfect. It is not all I wanted, but it is only a beginning in the right direction. It is a recognition of the kind of legislation that we need, and it is to be sincerely hoped that the members of the Federal farm-loan board will construe the provisions of the act liberally; and with the right kind of men on the Federal farm-loan board, placing the proper constructions upon the numerous provisions of the act, great good will come, and it will be to the farmers of this Nation like "a pillar of cloud to lead them the way" and "a pillar of fire to give them light."

## Compensation for Injuries for Federal Employees.

### EXTENSION OF REMARKS
OF
### HON. CYRUS CLINE,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 12, 1916.*

Mr. CLINE. Mr. Speaker, I want to give the bill under consideration my most hearty approval. The very greatly increasing business of the country, the rapid advancement in the complicated mechanism with which business is accomplished, and the great and constantly increasing number of employees give rise to the necessity for this legislation. There are several angles from which this bill may be viewed as a very worthy one. The growth of popular conviction that the man who is employed should not bear all of the evil consequences of his employment, the belief that the man or corporation that profits out of the employment should divide the results of the injury, the rising tide of humanitarianism, all give force to the proposition that the man who toils should have a recourse if he suffers injury or death during his employment through no negligence of his own for the injury or loss of life that he may sustain. The several States of the Union have recognized the merit of this legislation and have taken advanced stands to give labor that protection that all men who have investigated the subject declare that it justly deserves. The man who enters the employment of the State or the corporation, and there can be no difference in principle in the relationship, offers his best service and his honest effort for the advancement of his employers' interests. He ought not to be asked to take all of the dangers incident to his employment. No man will willingly and voluntarily incur a risk of bodily injury simply to be remunerated for the injury he may sustain. So there is no reason springing from moral decrepitude that enters into this problem. Conceding that no motive of that kind could influence the employee, then we have the simple proposition, When an injury occurs and the employee or his family suffers from the injury, who in equity and good conscience ought to bear it? The Government to whom he has given his honest efforts or the employee? That is the proposition in a nutshell. I have no hesitation in saying who should respond. States recognize the duty of great corporations to take care of their employees. They recognize that if they are compelled to do that they will be careful first to see to what extent they will suffer employees to meet hazardous conditions; they will exercise judgment and care in that direction and to a great degree lessen the opportunity for accident or injury. Then, too, the man with a family depending upon his employment for their daily bread, and the father in a degree being compelled to accept such employment as his environment offers, always with more or less danger from accident, should not be required to make the sacrifice resulting in injury or loss of life when the injury or loss of life occurred without his negligence. The injury to the father is an injury to the family directly, especially when their daily food and sustenance depend upon his daily toil. I support this bill especially for the reason that it is a great humanitarian measure. The time is here when the great masses of the workers in the Government employ in this Republic should have the care and protection that similar employment guarantees to them by the State. When great employers of labor find that it is to their best interest to provide their workers an insurance against damage or injury, they find that they not only get better service but a willing service. Men render their best service when they are assured that injury to themselves does not mean a total loss to their families. When such conditions exist in the States it is not too soon for the Federal Government to take the necessary steps to safeguard the life and limb of the laborer in its employ. I do not pretend to discuss the details of this bill or its administrative features, but simply to voice my approval and indorsement of the principle upon which a workmen's compensation act is based. The bill should pass without a dissenting vote. It marks another instance illustrating the willingness of the Democratic Party to meet emergency conditions and constructive legislation in the interest of labor.

## Explanation of the Mexican Situation.

### EXTENSION OF REMARKS
OF
### HON. FRANK PARK,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 25, 1916.*

Mr. PARK. Mr. Speaker, on March 13, 1914, two and a half years ago, when reports of Mexican attacks and outrages against American citizens in Mexico and against settlers on the border of Texas and New Mexico filled the press of the country, I introduced a resolution to acquire by treaty, by purchase, or by conquest the northern States of Mexico, including the Mexican border States. I was actuated then by some resentment against people who seemed determined to annoy and harass our people without cause, feeling that American life and property should be guarded by the American flag when endangered by foreign foes. I still feel that America should protect her citizens within her borders, who have the right under the Constitution to live in peace. Within two months after introducing the resolution I abandoned it, and it has been dead for over two years.

I have kept in touch with the Mexican situation, have studied the problems and relationship between their country and ours.

Since my resolution was introduced opportunity has been afforded to all American citizens to leave Mexico, and expense money has been provided for their departure and travel to this

country; besides this the largest standing army since the Civil War is now guarding our border and protecting the lives and property of our citizens. This revolutionizes the conditions, and there is no need for intervention, no need for war with Mexico, unless Mexicans shall force it upon us.

The Mexican people have much cause for unrest. They have been plundered and murdered by bandits whom their Government could not control. The Government itself has confiscated their lands and sold them to Chinese, Japanese, and others who have gone there to exploit their country and not to benefit Mexico. The knowledge of these conditions excites my sympathy and I feel that assistance should be extended them, if they will permit, in their blind efforts to establish a stable government and return peace and prosperity to these war-tortured people. If Mexico is capable of self-government, the United States will assist them.

It has been the law of my life to upbuild and not tear down, and I would prefer that we had Mexico as a friend and neighbor rather than as an enemy and menace. I would rather help them establish good government than to annex them, if it can be done in peace and our citizens be unmolested.

To have peace it may be necessary to intervene, but only will intervention come because Mexico forces it.

The Congress is anxious and willing for Mexico to work out its own salvation, if it can be done without imposing too great burdens on us to protect those whom we are legally bound to protect.

I am for peace and not war, and am for intervention only as an absolute necessity; and I trust the necessity will never arise.

When the question of intervention has been brought recently to the attention of Congress by transactions in Mexico that made war at one time seem imminent, I heard only expressions of regret from Members at conditions, and none desired intervention only as a last resort.

We can not be unmindful that American blood has freely spilled on Mexican soil in two wars in the past—once for the independence of Texas and after the annexation of Texas to fix the boundary between their country and ours. These wars were fought largely by southern soldiers, who have ever been ready to give their lives at their country's call or when wrong oppresses right.

And when we of the South consider that our land has not yet recovered from the awful four-year conflict, when we can still look about us and see the armless sleeve, the crutch, and wooden leg, wreckage of the truest band that ever faced a great foe, and realize and know that the wounds of our beautiful and beloved Southland are still unhealed, we shrink from opening them afresh by war with any country. We shall not intervene unless Mexico forces intervention. We shall not intervene until the honor of our country shall no longer permit inaction.

I oppose any step which may precipitate a war that will sacrifice our young men, every one of which is needed in the great preparedness movement of our section which will restore her to her former proud position of supremacy in the Union.

The President of the United States alone knows the facts in the Mexican situation. He alone can make the decision that will conserve the national interests. While orators are making their declarations in public places the people by wire and letter are telling the President that they, who must make the sacrifices and who will not ask that some other mother's son make it for them, want peace so long as it is compatible with the Nation's honor.

President Wilson with all the facts before him was able to win a diplomatic victory in the submarine controversy, satisfying the Nation's honor without the frightful toll of war.

The relationship between this country and Mexico is unstable, unsettled, and each month during the past three years it has presented material pointed differences from the preceding month.

On the one side, in the Nation to-day, as in all crises in the past, there are those who, without knowing all the facts on which the great decision must be made, agree for immediate action against Mexico regardless of the consequences. On the other side are those who are praying that peaceful means of protecting the Nation's honor shall be completely exhausted before there is recourse to arms and a sacrifice of the blood of American soldiers.

Those orators who cry out for a given course of action in the name of the national honor without having before them all the facts that exist to-day and which affect the nation! interest in a crisis merely demonstrate their lack of responsibility and their callous selfishness.

It speaks well for the American people that they have never chosen a President who has been stampeded into war by false advisers or critics.

Strong as is the desire to preserve the strength of the United States for the more civilized purposes of humanity, the American people as a unit will be ready to fight and to die if necessary to preserve the national honor.

It is not the corporations, the landowners, or the captains of industry who have the vital interest in the question of war or peace. It is not the politicians or orators, the organizations of public preparationists, or public pacifists that have the most at stake. It is the average citizen—the citizen who earns his bread by the sweat of his brow, the citizen who loves his family and wants to continue giving that family his support and protection who has the most at stake.

If the honor of the United States can be maintained by peaceful methods, who shall say that our Nation should go to war?

Those who want war must be willing themselves to sacrifice their lives upon the altar of national devotion.

None but a poltroon and a coward would care to make the sacrifice if the honor of the country were at stake, but only those who are in full possession of all the facts in the Mexican situation can decide what the national interest demands.

What man in public life, what official or orator in the market places can say that he is more jealous of the national honor than are the people themselves? The honor of the Nation is safe in the hands of the American people.

And what are the people saying? What are they thinking as they walk through the streets and travel the roads? What are they saying about their own supper table after they have returned from their daily work?

In one of his speeches the President said:

> I would great deal rather know what the men on the trains and by the wayside and in the open shops and on the farms are thinking about and yearning for than to hear any of the vociferous proclamations of policy which it is so easy to read by picking up any scrap of printed paper.
>
> Those who are expected to sacrifice their sons on the battlefields, the fathers and mothers who yield their sons and who yield them willingly when the honor of the Nation is at stake, should have something to say about the question of war.

The Secretary of the Interior has concisely stated the Mexican situation step by step up to this time. He says:

> The doctrine of force is always fighting with the doctrine of sympathy, and the trouble with the two schools of warism and pacifism is that neither one will recognize that both philosophies have a part to play in the life of every individual and of every nation, and in the production and advancement of that strange thing we call civilization.
>
> Now, the doctrine of force has been worked to its limit in Mexico. President Wilson believes that the doctrine of sympathy should have its chance in that country and this is the foundation of his Mexican policy. Not that Mexico wants our sympathy. It does not—and that is one of the great difficulties we have to contend with. Another is that it takes a long while to make a Mexican believe that we intend his country good and not evil. The people of Mexico have inherited the pride of Arragon, and the thing above all others that they do not want and will not stand for is that kind of sympathy which is nothing but pity.
>
> Mexico is a bad neighbor now. There is no use in denying this. We live at peace with Canada on our northern border, without a soldier along 3,000 miles of land, while, as a matter of necessity, we are obliged to keep an armed force on our Mexican border all of the time, and have now gathered there the largest army assembled in the United States since the Civil War. The superficial reason for this is that Mexico can not settle her own troubles at home and that the "de facto" government has been unable to prevent bandits from harassing us.
>
> Our neighbor's sewage is running over into our lot, and we must find some way to stop it even if we have to go over the boundary line and stop the pipes ourselves. This is the easiest thing in the world to say, but to respect the letter of the law and at the same time abate a nuisance that is not on your own property is one of the most difficult things in the world.
>
> Mexico will always be a nuisance to us until a few fundamental reforms are put into effect there. If it is to be lasting, however, some one inside of Mexico must do it. It can not be done by us unless we are prepared not only to conquer Mexico but to annex Mexico. We should not only have to make war on Mexico and impose peace by force, but after giving it a preliminary cleaning up we should have to establish and maintain indefinitely a government there.
>
> Diaz was a great man. The peace that he maintained was an imposed peace, not coming from the people themselves.
>
> Diaz ruled by fear. He had gone into office with promises upon his lips, and I am willing to believe that he meant to keep them. But once in power he was appalled by the span of years necessary for the slow process of constructive civilization, and he determined that to gain time Mexico was to be saved by two things—force and wealth.
>
> And so, while observing to some extent the letter of the constitution, he cynically avoided its spirit. He always placed property rights before human rights. Although he sought to improve and did improve Mexico's material condition, it was without even so much as a thought of her moral progress. He kept the masses of the people in subjection by keeping them in ignorance. When he died 83 per cent of the people could neither read nor write, and as far as her political development went Mexico was no further forward and no more fitted for self-government than in 1821, when, having wrested her independence from Spain, she was first recognized as a sovereign nation by the United States.

A great lawyer in Mexico City stated:

> "I am a constitutionalist. Either before Diaz dies or immediately upon his death a revolution will break out in Mexico having for its purpose three things—the restoration of the land to the people, the establishment of public schools throughout the country, and a judicial system in which the courts will decide according to law and not according to executive desires."

The Madero revolution followed exactly on these lines, but Madero was a dreamer, an idealist, a man who took his constitution seriously and who failed for two reasons, or, rather, because of two weaknesses of his own character. He was not strong enough to suppress the rapacious rascals who surrounded him, and he was not practical enough to deliver the goods that he had promised. Men in Madero's own Government saw in his revolution only another opportunity for getting rich quick, and they ruined him while he was still dreaming.

Huerta was his commander in chief, a soldier trained by Diaz and dominated by Diaz's friends. He, too, believed in saving Mexico by force and wealth; he was in complete sympathy with the philosophy expressed in the Diaz administration. There is no truth in the oft-repeated allegation that all the trouble with Mexico would have been avoided if President Wilson had recognized Huerta. I ask anyone who wishes to be fair to this administration to look back three years and read the newspapers of that day and the debates in Congress in which the murder of Madero and Suarez was denounced.

WHY WE SAID "HUERTA MUST GO."

Had we recognized Huerta or had we not taken a positive stand against him the criticism this administration has received for the policy we have pursued would be as nothing to what would now overwhelm us. Who were the American statesmen who demanded Huerta's recognition? What one of our leaders of either party set forth the principles upon which a better feeling between this country and all of our sister Republics of the south could be simulated by taking a position that was abhorrent to our American conscience?

We know what we have suffered in the past three years, and it is too easy now to say that all this would have been avoided if Huerta had been recognized, but the only demand made at that time by the more solid of our men of affairs who were antagonistic to the administration's policy was that we should intervene, that we should bring order to Mexico by force.

No one then believed and no one really believes now that the recognition of Huerta would have solved the Mexican problem. We do know, however, one thing that we were not conscious of them, that Huerta himself had so slight a hold upon Mexico that he did not dare to leave the capital and that he was to all intents and purposes a prisoner of the reactionaries, able only to reach the sea at its nearest point.

Although it is self-evident that this country, as the champion of constitutional government in America, can never recognize a military despotism based upon assassination, it is not necessary to call Huerta an assassin in order to justify our refusal to recognize him. His attempted dictatorship was but a fiction of government. With the elected President and Vice President murdered and the Minister of State, who was their lawful successor, cowed into submission, Huerta took the reins of power at the best as a temporary stop-gap.

The revolution against Huerta broke out immediately upon the news of Madero's death. The correspondence between Huerta and Carranza recently published shows that every practical inducement was held out to Carranza to put an end to his revolutionary movement. To Carranza's credit be it said, he refused to come to terms with those who he believed had been the cause of the President's death and who had set to one side the laws of his country.

A NEW WORLD CIVILIZATION.

It is not to be forgotten that Huerta did not pretend even to be a constitutional ruler. He sent word to the United States that he had taken the Government of Mexico into his own hands and that he was all the law that was to be found in Mexico. His statement was so bold that even the supreme court of Mexico uttered a feeble protest, which was somewhat more loudly echoed in the Mexican Senate.

In the face of this, Huerta asked for recognition from the United States, but President Taft felt that he could not conscientiously grant it, and he left the problem to be dealt with by his successor, who had already been elected. That was the situation when President Wilson took office. Could President Wilson have recognized Huerta? Surely there can be but one answer to that question—No!

To have recognized Huerta would have been a twofold injustice. First, to the people of Mexico; and, secondly, to all the people of South and Central America. To give to the commander in chief of an army recognition as President under such circumstances would have been to announce to all ambitious military officers that they had but to ally themselves with a successful junta, seize the Government by force, murder the lawful incumbents, and announce the overthrow of all law and a supreme military dictatorship in order to gain the recognition of the United States, we being thoroughly aware of all that had happened.

Americans are justified in the pride that through the operation of the Monroe doctrine there is gradually growing up in the New World a civilization that will make old-time revolutionary methods impossible, that will carry forward all of the 21 Republics to the unification of our international interests in the true spirit of Pan Americanism. We have so amplified the Monroe doctrine that we are virtually the co-partners of the Republics to the south of us, and to proclaim that the violation of their constitutional laws would not in the slightest interfere wih our recognition of a conspiracy to murder lawful executives and overthrow their established republican forms of Government would have been rightly considered by the American people as the most cowardly and shortsighted policy imaginable. Condemnation would have arisen not only from the people of the United States but from all the nations of the Pan American Union.

HIS FACE SET AGAINST INTERVENTION.

During Huerta's régime we learned much of the ability of the Mexican as a casuist. The notes that came from Mexico were models of the seventeenth century style of diplomatic state paper. President Wilson attempted, it will be remembered, to find a basis upon which there could be set up in Mexico a Government that we could recognize. There was nothing peremptory about our attitude in the beginning of the diplomatic exchanges.

Our whole effort was to the obtaining of a republican form of Government in Mexico which would have the people back of it and guaranties against the establishment of an absolutism on our southern border under which the people of Mexico would so chafe that we should have a constant state of revolution there.

Many of the best Mexicans were in sympathy with the attitude that the United States took toward Huerta. They knew that stability of Government was not to be hoped for under a man of his temperament and disposition. After it became evident, by continued negotiation, which ended nowhere, that Huerta was standing, so to speak, in the City of Mexico heaping insolence on the United States President Wilson gave notice that Huerta must go.

Then followed the Tampico incident. Our sailors landed at Tampico and were arrested, marched through the streets in ignominy, and eventually returned to their boat. The admiral in charge was so incensed at their treatment that he immediately made upon Huerta a demand that a national salute should be fired in atonement for the insult to the flag. Again the Mexican Government attempted to continue its policy of diplomatic quibbling.

Meanwhile the revolution had gained such headway in the north that it was difficult from day to day to say which force had or occupied the greatest portion of Mexican territory. Huerta was keeping up his resistance because he was being supplied with ammunition from abroad. A ship was reported ready to land at Vera Cruz with a cargo of arms, and as a warning to Huerta and in proof of the seriousness of our purpose to bring Huerta to a recognition of our attitude the order was given to seize the customhouse and occupy the port of Vera Cruz.

We did not go to Vera Cruz to force Huerta to salute the flag. We did go there to show Mexico that we were in earnest in our demand that Huerta must go, and he went before our forces were withdrawn. The occupation of Vera Cruz was carried out without difficulty, with the loss of 19 of our brave sailors and marines, and if aggression and intervention had been our aim we could have easily seized the railroad to Mexico City and occupied the capital.

The menacing attitude of the Mexican troops surrounding our force of occupation at Vera Cruz made hostilities appear imminent, and again the strongest kind of pressure was brought to bear upon the President to intervene, that we should go into Mexico and take matters into our own hands. This is the one thing that the President has set his face against from the first. It is the thing to which this administration is opposed so long as any other hope holds out.

Secretary Lane, being questioned whether the United States could do in Mexico what it has done in Cuba, replied that we could not.

That is a very common delusion, but the Mexican situation is not at all that which we met in Cuba. We went in there at the request of the revolutionists and after the *Maine* had been sunk in Habana Harbor and such authority as there was in Cuba had thus evidenced its hostility. We could go in and did go in there with some heart, fighting alongside of the revolutionists against a monarchy, but we could not go in with any heart to fight against the Mexicans, who are struggling to find a way to popular government.

We had sought to bring to our sympathetic support all of the South American countries. They also were anxious for a settlement of this trouble upon some basis that would safeguard the interests of Mexico and conserve that unity which is the soul of the great Pan American movement. Some of them thought that they saw a greedy hand from the north reaching down with no benevolent purpose, and if it laid hold of Mexico none of them knew but that it might be their turn next.

This fear of the big brother is a very real one in Latin America. They do not know us intimately; they are suspicious of our motives. They think of the Mexican War of 1846 as an unjustifiable aggression on our part; they think of the Panama incident as a robbery; they misconstrue our purpose in Santo Domingo, and in Nicaragua; and they do not trust us. They fear that the spirit of imperialism is upon the American people, and that the Monroe doctrine may be construed some day as a doctrine that will give the whole Western Hemisphere to the United States; that it is a doctrine of selfishness and not a doctrine of altruism.

MEDIATION ACCEPTED.

Those who are familiar with the feeling of the South and Central American countries toward the United States know that just at that time when our forces occupied Vera Cruz a very intense fear had seized upon Latin America. They believed in their hearts that we were on our march southward, and that the President's Mobile speech and other generous utterances of the same sort were to be taken in a Pickwickian sense.

When they presented a plan of mediation the United States had no choice but to accept it. Indeed, if we had refused to accept it, Latin America would have been justified in doubting our good faith. No one that I am aware of, either Republican or Democrat, has ever criticized the President for accepting the mediation of Argentina, Brazil, and Chile, and abiding strictly by the agreement reached at Niagara Falls.

By the protocols there signed on June 23, 1914, the United States agreed that the selection of a Provisional and a Constitutional President be left wholly to the Mexicans, and we guaranteed our recognition of them when chosen. This made clear our desire not to interfere in any way in the settlement of Mexico's domestic troubles, and as a further proof of our disinterested friendship for the Mexican people the United States agreed not to claim any war indemnity or other international satisfaction from Mexico. We had gone to Vera Cruz "to serve mankind." Our only quarrel was with Huerta, and Huerta got out on July 16, 1914. Our forces were withdrawn from Vera Cruz on November 23 following.

Three days after Huerta left Mexico Villa began levying taxes on his own authority, and it was plain that the successful revolutionists would soon be fighting between themselves. Both Carranza and Villa agreed to a conference at Aguascalientes, and it was stipulated that no soldiers were to be there; but Villa turned up with an armed force that terrorized the convention and prevented it from recognizing Carranza, and in a short while open warfare began between the two factions.

Villa and Carranza had broken, and there was a double sovereignty claimed even on our border in northern Mexico. Things were going from bad to worse, and it was suggested in the Cabinet that there should be some determination by the United States as to which of the rival claimants to power in Mexico as leader of a successful revolution should be recognized as a de facto government.

WHY WE ARE IN MEXICO.

Secretary of State Lansing thereupon called a conference of the representatives of Argentina, Brazil, Chile, Bolivia, Uruguay, and Guatemala and asked them, from their knowledge of the situation—for a considerable portion of the information in the hands of the United States came through the representatives of these countries in Mexico—to cooperate with him in the determination of the claimant to be recognized. These six Latin-American Catholic countries unanimously recommended the recognition of Carranza, and in furtherance of our Pan American policy this recognition was at once given by the United States and Latin America.

Since Carranza's recognition we have seen Americans who have gone into Mexico on peaceful errands murdered; we have seen our own towns upon the border raided and Americans slain on American soil.

These outrages prompted President Wilson to send our own troops into Mexico, and this course can not be otherwise construed than as a recognition of the fact that the de facto government in Mexico recognized by ourselves and by other nations is not fulfilling the duty which one government owes to another.

We are in Mexico to-day, and how long we shall stay and how far we shall go depends upon the policy and the power to keep the peace of the Carranza government, but we shall go no further than we have gone until every effort to secure effective Mexican cooperation fails.

Mr. Lane then proceeded to an examination of the principles governing the policy of the United States toward Mexico and of the needs of the Mexican people. He said:

"There are things that a democracy must always be willing to fight for. But what thing is there that any American can say we ought to be willing to fight for in Mexico? Is it because railroads built with American capital have been damaged, that mines have been shut down, or even that American citizens have been killed by outlaws and bandits?

"All those things we can and do very much regret, but who will say that they are great principles for which a democracy should be willing to sacrifice the blood of its sons? Who can formulate out of the whole history of the past six years any other determination than this: That we should resist the temptation to fight where pride and interest move us in that direction, and that we should and will fight when we are attacked and when we find no other means by which our interests can be safeguarded and Mexico be given any hope for itself?

"We have been on the edge of war with Mexico several times in the last three years, but each time, before the determination was made that we should discard our hopes, there has opened some way by which reasonable men might expect that Mexico could prove herself able to take care of her own problems. The one man who can justifiably criticize President Wilson for his Mexican policy is the man who honestly believes that Mexico can not be brought to stability of government and responsibility except through the exercise of outside force. That man is consistent, and the only criticism I have to make of him is a criticism of his judgment.

"SEEKING MEXICAN COOPERATION.

"There is no question that we could easily overrun Mexico. I believe we could do it with a comparatively few men, although we would have a united Mexico against us. There would be no glory in such a war, and there is not one man in ten thousand in this country who really wants such a war. It would be repugnant to every American tradition and would discourage the friendship of every other American nation. Of course we could conquer Mexico, and after a good deal of guerilla warfare we could bring Mexico to a state of quiet.

"Then we could hold her while we administered to her the medicine that we believe she needs. We could have what we call a general cleaning up, the rebuilding of her railroads, of her wagon roads, the construction of sewers for her cities, the enforcement of health regulations and all the other things that go to make up the outward and visible signs of order and good government.

"But don't you see that the peace we would bring would be a peace imposed by force, the government we would give to Mexico would be the kind of government that we have and which makes life tolerable to us in our communities? Its standards would not be Mexican standards, its ideals would not be Mexican ideals, its genius would not be Mexican genius. The moment we withdraw from Mexico there would be a return, after a very short time, to Mexican standards.

"What Mexico really needs and must be allowed to do is to raise her own standards; it is to give herself a cleaning up by herself. That is bound to take time, but in no other way can Mexico get a government that will be expressive of her own ideals, that will be expressive of some aspiration of her own as to what her civilization should be, and in this we want to be of help to Mexico if she will allow us to do so.

"The Mexican problem, as a problem, depends upon your attitude toward other peoples. Mexico is a land to conquer, and the Mexican people are a people to be conquered and subordinated, and the country and its resources made ours, if you look upon a smaller and less highly civilized country as a proper object of exploitation. On the other hand, Mexico is a country out of which something greater can be made, and the Mexican people are a people who have possibilities and can be helped to become a self-governing nation, and if you take that attitude toward Mexico you are bound to sympathize with their struggle upward.

"In other words, where we find that conditions justify revolution, if we think it our business to go in and work the revolution to our profit, we must condemn the President's policy; but if, where we find conditions justify revolution, we want to give that revolution a chance to work out from the inside, we must hold up his hands.

"The things that Mexico needs are few, but they are fundamental. A land-tax system which will make it impossible to hold great bodies of idle land for selfish reasons, and which will make is unnecessary for the Government to sell concessions in order to support itself. A school system by which popular education may be given to all the people as it is given in the United States. If Diaz had done this, as he promised, he would have created an active public opinion in Mexico which would have made present conditions impossible.

"Along with the primary schools should go agricultural schools in which modern methods of agriculture should be taught. The Army might well be used as a sanitation corps so as to insure against the recurrence of those plagues which so affect trade relations with Mexico and the health of her people. With these things Mexico would be well started on her way toward that better era which her more intelligent revolutionists thought she had reached in the early days of the Diaz administration, some 40 years ago.

"UNJUST LAND SYSTEM.

"Everyone in Mexico is united upon the proposition that the present land system is based upon privilege and is unjust. I have talked with 20 of the wealthiest and most intelligent men who belonged to the Diaz régime. All have admitted the fact. Some have even volunteered the statement that Mexico is in a feudal state and that the land belongs to great proprietors, who work the peons and keep them in a semislave condition. If the facts were better realized, the people of the United States would not stand for the labor conditions that exist in Mexico, and for the peonage, which is only a form of slavery. I have some personal knowledge of these conditions.

"One morning 10 years ago I was on a coffee finca—a great estate high up in the Sierra Madre—and I asked a peasant who labored from sunrise to sunset what he was getting for his day's work. His answer was 60 cents in Guatemalan money, which was equal to 10 cents gold. Here was a strong, able-bodied agricultural laborer earning 83 a month. I asked him why he did not go down to the railroad, where the American contractors would pay him 50 cents or more a day. His answer was: 'I would not be from here 1 mile before Don Porfirio would have reached out his hand and drawn me back to jail.' I said, 'Why could he arrest you?' and the answer, given me falteringly and in fear, was, 'Because I owe the store.'

"He had lived and worked on that finca for 12 years, and, alive or dead, he is there to-day, unless he has run away to join an army in the revolution. I asked that Mexican peon where he had come from, and he pointed across the mountains to a valley where his people had lived for a thousand years. 'Why did you leave there?' I inquired. His answer was that Don Porfirio had given the land where he was born to a Chinaman.

"From an investigation I made myself I found out that this was literally true; that the land, which was the hereditary possession of these Indians, had been taken from them by the Government and given to a greater 'company' on terms which one can only guess; that the 'company' had sold the land to a syndicate, in which there were no Americans, upon condition that it should be populated under a law somewhat similar to our homestead law, with the reservation that it was neither to go to Mexican natives nor to citizens of the United States, and the immigrants with which the syndicate was populating that part of Mexico were Chinamen.

"I crossed a bridge on the Camino Real. 'The last time I crossed that bridge,' said the peon who was with me, 'the governor of the State was lying there dead. He had become ambitious and presented to the people a program of reform. Doubtless he hoped to be another Juarez, and Don Porfirio had ended his ambitions.' The peon of Mexico—and out of possibly 15,000,000 inhabitants at least 12,000,000 are peons—is a kindly and gentle creature under normal conditions, disregardful of his own life, but not anxious to make war on anyone. The peon has it forced upon his mind that he belongs to a definite sphere of life, and so he is without ambition and without foresight, but he is not without intelligence, and he makes an excellent workman when taught. All he needs is a chance to live and a chance to learn, land to cultivate and schools to go to. Is it conceivable that to add to the miseries of these struggling people any American citizen would want to make war on them?

"AMERICAN IN MEXICO.

"We of the United States have the impulse that all virile people have. We feel conscious of our ability to do a job in nation making much better than anyone else. Read over Kipling's poem, 'The White Man's Burden.' It was not so much the white man's duty to clean up unsanitary conditions on the outskirts of civilization and to develop the backward peoples of the earth that he was expressing as it was our perfect, self-complacent appreciation of our supreme ability to do the cleaning up better than any other people on the face of the globe.

"There is a good deal of the special policeman, of the sanitary engineer, of the social worker, and of the welfare dictator about the American people. We are quite conscious that in the development of this great country of ours, in our march across the continent, we have done a perfectly good job, and the pioneering spirit is very much alive. It is one of the most fundamental instincts that have made white men give to the world its history for the last thousand years.

"As a great Nation, dedicated to democracy, we can not undertake a war of conquest against a people because their moral development has been neglected by their former rulers. We can, however, insist, and we must insist, that these people shall make safe our borders and give protection to the lives and property of our nationals who have settled in Mexico at her invitation.

"To directly offer help to Mexico would be looked upon by them as an insult, like slapping them in the face. This is a kind of pride that is purely Latin. It is an inheritance that comes to Mexico by way of Spain along with the ideals that Cervantes ridicules in Don Quixote; but it is so real a thing that no progress can be made without recognizing it. So I say that to tell Mexico what she shall do in our straight-out American fashion, to say to Mexico we are going to help you without being invited to do so, is equivalent under present conditions to a declaration of war.

"DOUBT OUR ALTRUISM.

"The Mexicans do not believe in our professions of altruism. We must say to Mexico one of two things. Either you must keep our border safe and protect the rights of our nationals in Mexico, which you have not done, or we will invade your country and restore order ourselves; or we must say to Mexico we understand the effort you are making to give the people a chance for life, liberty, and pursuit of happiness and we will gladly help you if you ask our help to accomplish this end.

"The last is the policy that the United States has been seeking to put into effect. The difficulty in doing this arises almost solely out of the difficulty we Americans have in persuading the peoples of Latin America that our intentions are really honest.

"Nor is this altogether to be wondered at: Latin America has known the American chiefly as a seeker after concessions, a land-grabber and an exploiter. Even where the American has bought property, as many have who to-day hold perfectly legal title to the land, they are absentee landlords, and every just criticism that the Irishman has had to make against the absentee English landlord can be made against the absentee American landlord in Mexico.

"He does not become a part of Mexico; he does not throw in his lot with the Mexicans. He is willing to spend his money there and employ labor, but he has nothing in common with the people of the country. The Mexican feels that the American goes there only to get rich out of the land and labor of Mexico; that he comes 'to exploit, not to develop.'

"There has never been a time since the United States established the present Mexican border under the treaty of Guadalupe Hidalgo when raids, small or great, have not taken place across that border, and sometimes Americans have been the raiders—we may as well acknowledge the fact. Furthermore, there never has been a time since the United States was founded when Mexico itself was as a whole in the control of any one Government. Even Diaz never had the Yaqui Indian country, never really controlled Sonora.

"A police force alone has been a failure in Mexico. A failure both as far as the Mexicans are concerned and in protecting American life and American property. American life and American property have both been repeatedly assailed and destroyed during every administration. The protection of our people there has always been a problem, and I believe always will be a problem. This hazard any foreigner takes who goes into a country filled with people who would risk their lives for a horse or a saddle.

"Further, I say this: That looking at Mexico solely from the standpoint of allowing our miners, our engineers, and our capitalists to develop that country for their own benefit, and only incidentally for the benefit of Mexico, a policy of force is all that Mexico needs. It is the only policy that has ever been tried upon the Mexican people, and it has proved a success for the exploitation of the country by outsiders. If, however, we look at the Mexican question from the standpoint of the Mexican, Is the policy of force adequate to the problem? No one who has studied it will say so. The truth is this:

"THE VERDICT OF MANKIND.

"Mexico will never be a nation in any real sense, nor will the Mexicans ever be a people of agricultural, commercial, industrial, or political consequence until the individual Mexican has had an economic and an educational chance. He must be tied to Mexico, and not to a landlord, by the ownership of a piece of land; he must be able to read and write so that he may know what the needs of civilization are. This policy is that which I characterized as a policy of hope and hopefulness. It is not founded on doubt and despair. It refuses to recognize the Mexican who can only be shot into keeping order.

"If we despair of these people, who is to be their friend? Are we Americans to see Mexico forever remain a land of a few rich and cultivated gentlemen, and 12,000,000 half-starved, ill-clothed, and illiterate peasants—men, women, and children—kept in slavery and subjection and ignorance, a people into whose lives comes nothing that raises them above the beasts of the field?

"The people of the United States can not conceive of such conditions. Is it not time to try another policy than that of force alone, which has failed so miserably and wrought such woe? Is President Wilson to be criticized because he believes that it is not idealistic, not outside the range of reasonable hope, to think of America as the helpful friend of Mexico? Why may not Mexico be led to see that we are honest in our willingness to help and that we can do it?

"President Wilson has clearly seen the end that he desired from the first, and he has worked toward it against an opposition that was cunning and intensive, persistent and powerful. If he succeeds in giving a new birth of freedom to Mexico, he most surely will receive the verdict of mankind."

---

## Hon. Wm. Schley Howard's Statement of Democracy's Achievements.

### EXTENSION OF REMARKS

OF

### HON. WILLIAM B. OLIVER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 17, 1916.*

Mr. OLIVER. Mr. Speaker, under leave granted me to extend my remarks, I wish to insert a very interesting, accurate, and informing statement of promises performed and deeds done by the present administration, as set out in a statement recently issued by my friend and colleague, the gentleman from Georgia, Mr. HOWARD, to his constituents asking for his renomination.

This is the record to which Gov. Glynn and Senator JAMES referred to kindle the pride and arouse the wild enthusiasm of that recent representative gathering of Democracy's hosts at St. Louis. This is the record on which the party to-day appeals to the people of the Nation for the renewal of their confidence. This is the record which led the Democracy of the Nation to call again, without a dissenting voice, Woodrow Wilson as its standard bearer in November.

Though the President has played an important part in the making of this marvelous record, yet we must not forget, as he himself has often reminded us, that his efforts would have been in vain had it not been for the loyal, patriotic, and able cooperation of those distinguished Democratic Members of Congress, who first framed and wrote into law these important measures, submitting them finally to the President for his signature and approval. Among these none has rendered more signal and capable service than the distinguished gentleman from Georgia [Mr. HOWARD], who, as a member of the important Committee on Appropriations, is in position to speak with exceptional knowledge of this record in the statement which I herewith set out from him:

"No matter what the critics of the Democratic Party may charge, no administration in 50 years has enacted as many constructive measures as has the present administration. It has proven its ability and willingness to legislate for the masses.

"Permit me to review briefly some of these measures:

TARIFF.

"We reduced the tariff upon necessities, increased it upon luxuries, and provided for one hundred millions of revenue by a tax upon incomes.

BANKING AND CURRENCY REFORM.

"The Federal reserve act supplanted the inelastic national banking act, which was created to meet a great emergency in time of war and was influential and powerful enough to go unmolested by any regulatory legislation for 50 years. Under the provisions of this financial monstrosity the volume of currency could only be expanded as the Government incurred additional liabilities, and the national-bank currency was predicated upon liabilities of the Government rather than upon assets. A panic could be created overnight. Clearing-house certificates were being frequently resorted to in the frantic efforts of honest bankers and respectable business to avoid bankruptcy and commercial stagnation.

"In the place of this financial freak the Democratic Party has given to the country a banking system that is panicless, a system by which any man with collateral and character can finance his capital demands. Crops can be moved at fair prices and the supply of currency necessary to meet unusual conditions is expanded and contracted automatically.

CLAYTON ACT.

"The Clayton Antitrust Act put real teeth into the Sherman law, affording a place of refuge for the small business enterprise that sought an opportunity to employ its capital. In other words, it threw the cloak of protection around competition and freed it from the effects of unlawful combinations that sought its destruction.

AGRICULTURE.

"The most liberal appropriations ever made in the history of the country have been made by this administration for the encouragement of the farmers.

"1. Agricultural extension act: In practical effect this bill undertakes to provide such machinery as will bring to the attention of the farmer, the farmer's wife and children, in the most striking manner such demonstrated truths and practices of successful agriculture which, lived up to, make rural life desirable and profitable. Georgia's share in this fund in 10 years, by annual increases each year, will amount to $182,020 per annum.

"2. Federal warehouses: This bill, when in full operation, will be of incalculable benefit to our cotton growers. The Federal Reserve Board has ruled that farm notes secured by proper warehouse receipts are rediscountable. The essential purpose of this bill is to provide machinery by which imperishable farm products may be brought into the most intimate contact with the commercial and banking world. The warehouse receipt as to weight and grade being of unquestionable integrity makes it prime collateral at any Federal reserve bank.

"3. Bureau of Markets: The purpose of this bill being to direct the truck and fruit grower and farmer in scientific shipping and crating, and to give information and direction as to the best markets at a given time, thus saving millions to the grower in avoiding a glutted market.

"4. Nitrate plant: The most expensive of all necessary ingredients entering into plant food is nitrates. The Army bill carries a provision for the establishment of a Government-owned nitrate plant. Necessarily a large surplus will be available for agricultural purposes, and this bill provides that the surplus shall be sold direct from the Government to the farmer. This will be of great value to the farmers of our section particularly.

"5. Good roads: As the first man to introduce a bill and deliver a speech in the Democratic Congress in advocacy of Federal aid to public highways, I am gratified to be a Member of the body that has passed a bill appropriating $75,000,000 to be expended in five years, prorated among the States. Georgia will receive approximately $780,000 per annum of this sum, and the fifth district about $100,000 per annum.

"6. Rural credits: It is also a source of much gratification to me to have been the author of the first rural-credits bill introduced in the American Congress. Many of its features are carried in the bill as finally passed. The bill as passed did not meet with my best judgment in many details, but it is a long step in the right direction, and creates for the first time in our history a system of land-mortgage banks solely for the farmer. Its defects will be corrected; its benefits will be manifold.

"7. Parcel post: This beneficent legislation is in its swaddling clothes, so far as its effectiveness has been realized. Good roads and rural-delivery extension will bring about its maximum usefulness to the farmer.

LABOR.

"We have given to labor a seat in the Cabinet and a department of Government for the uplift and betterment of the American wage earner. We have enacted into law much to bring about a more cordial relation between employer and employee. We have provided for a method of conciliation and arbitration in trades disputes. In other words, we have given the workingman a voice in the councils of the Nation.

MERCHANT MARINE.

"The European war has brought the American people face to face with our helpless and dependent condition with regard to

ships in which to carry our commerce. The shipping bill recently passed by the House is the first step in the rehabilitation of the American merchant marine and the reestablishment of the Stars and Stripes upon the seas. We must and will free the American manufacturer, merchant, and farmer from the uncertainties involved in a dependency upon foreign nations for bottoms in which to ship our commerce to the markets of the world.

THE ARMY AND NAVY.

"While we have materially increased the standing Army, we have taken the one step necessary to insure an adequate defense for our country by trained and equipped soldiers—encouragement to the National Guard and stimulation to the citizen to become a soldier. My judgment is that under the Army bill just enacted we will have in 10 years 750,000 trained citizen soldiers, representing the highest and most patriotic type of American citizenry.

"The Navy is our first line of defense. The Democratic Party inherited from the Republicans a top-heavy, unbalanced, ineffective, and inefficient Navy. When the present building program is completed we will have, irrespective of whether Germany and England meet again in battle, the second largest navy in the world and the best and most powerful navy, ship for ship, that ever plowed its way through the seas.

"These are the chief achievements of the Democratic administration. The humble part I played in their accomplishment is a source of pride to me, and I believe every Democrat will place the stamp of his approval upon this record.

IMMIGRATION.

"The European war and the overflowing dinner pail of the American wage earner vindicate my record as an advocate of restrictive legislation, preventing the great influx of undesirable immigrants. The liberality of existing law is becoming an alarming factor in our economic and political existence. It is my earnest hope that the Senate will concur in the action of the House and pass the Burnett bill. I firmly believe that the President will approve this bill in the light of European conditions."

In conclusion, permit me to say that Mr. HOWARD'S able résumé of Democracy's achievements make a splendid platform on which the party can well plead title to the suffrage of the American people, a platform which administers largely to the peace, prosperity, and welfare of the masses of our people and enables us to-day to truly say that, though the rest of the world is at war, we are at peace; though most of mankind is in want, we have plenty.

Who can doubt that the American people in November next will give very enthusiastic and glad indorsement to a record like this?

## The Revenue Bill.

### EXTENSION OF REMARKS
OF
### HON. JOHN R. CONNELLY,
OF KANSAS,
IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. CONNELLY. Mr. Speaker, there has been a seeming demand from over the country for larger expenditures of money to improve our Army, our Navy, and our coast fortification. There has been a demand that we have more guns, more soldiers, more marines, more battleships, more submarines, and a greater reserve in ammunition. I am free to say to you that we have made greater appropriations along this line than I can persuade myself to believe is expedient, and Congress and the country have each felt the effect of an organized effort to scare the people into a great expenditure along this line, but these expenditures were made by practically a unanimous vote of the Members on both sides of the House, and I think it a reasonable assertion to make to say that the matter of making appropriations for the so-called preparedness was in no sense a partisan measure. When the Army and Navy bills were being considered the Republican Members of the House voted almost unanimously to increase by amendments the amounts to be expended, and upon the final passage of the Army bill only one Republican voted against the bill.

The vote on the naval bill was almost as unanimous and only 10 Members voted against the bill out of a total of 435 Members. I say that the matter of making these appropriations was a matter of no partisan division and no man has a moral right to vote an appropriation onto the country and then refuse to vote for a tax to raise the money to defray the expense that he has voted to contract for. I can not permit myself to believe that there are any great number of men and women in this country who are so blinded by partisan prejudice that they will say that any Member is justified in voting for large appropriations and then, in hopes of making political capital out of the matter of raising money to pay these debts, vote against a reasonable and fair tax to raise the money. The only hope a Republican who has voted against this bill can have is that he can convince his people that the bill just passed was not a just and equitable tax measure, and if he can not do this then no fair man, regardless of what he believes politically and no matter what party he has affiliated with in the past, will excuse the Member who votes for great expenses and refuses to support a bill that has for its purpose the raising of the money to pay for the increase. The so-called preparedness measures have entailed an additional expense during this year of something over $300,000,000; these bills have, as I have said before, been supported by all Members of the House. This bill proposes to raise the money from the people of the country and it is just a question of how the money shall be raised. The Republican members have quite generally insisted that it should be raised by increased tariff, which would necessarily be paid by the people who consume the goods imported into the country, and the only thing that this system has to commend it from a revenue-raising standpoint is that the people unconsciously pay it and it is so hidden that they do not know when or how much they are paying. No one will seriously contend that in the final analysis the people do not pay this tax which is assessed and collected at the customhouses, whether the tax is laid either for protection or for revenue.

The Democrats have brought in a bill which has the approval of all the Democratic members of the Ways and Means Committee, and we are informed that four of the Republican members voted to report the bill favorably. Let us see what this bill proposes and where the Democrats want to place this tax that must be raised and which must be paid by some one. They first go to the people who have incomes of more than $50,000 and say to them, "You have more property to protect and more interests at stake than the day laborer and those who are merely existing in the country, and we are going to ask you to pay something over a hundred million dollars of this increased expenditure for national defense." Then the Democrats go to the munition makers, who have made fabulous fortunes in the few months just past and who will reap a great benefit from further expenditures of money by the Government, and we say to them, "You shall pay the sum of $70,000,000 of this money that is needed to increase the armaments." Then we go to the estates where they amount to more than $50,000 and we lay a graduated tax upon inheritances, and we say that these estates shall pay a tax of from 1 to 5 per cent, and this raises $17,000,000 for the year 1917, and after that it is estimated to bring into the Treasury something more than $50,000,000 per year. Thus it will be seen that for the first two hundred millions of this additional money that is needed for increased preparedness the Democrats have gone to those who have much and have asked for a small tax out of their plenty, rather than to have gone to the man who works for $2 a day and ask him to take from his meager store the wherewith to defray this expense. It is a matter of some pride to those of us who believe that the taxgatherer should call at the mansion of plenty rather than at the hovels of the poor that we note that every Democratic vote cast at this time was cast for this bill, while the Republicans by their actions in voting against the bill took the position that they are not in sympathy with the plan to take the bulk of the taxes from those best able to pay. We doubt that the man out in the precincts who wants to see right and fairness prevail, regardless of the theory of politics that he has embraced, will quite excuse the Republicans for voting millions of appropriations and then refusing to place the burden of taxation where it equitably and rightly belongs, and that he will accept the excuse given by a prominent Republican Member, who, during the discussion of the bill, said:

> I will not vote for this measure because I will not allow the Democrats under a claim of emergency to manufacture arguments against the protective system.

There you have the extreme partisanship that at least prompted some Members from giving this bill support.

This bill also created a nonpartisan tariff commission, which was promised the country by both the Progressive and Republican Parties in their platforms of 1912. There was no claim that the commission was not a fair one or that it was not nonpartisan; those who voted against it, after they had declared

for it in their platforms but a short time ago, did so on the flimsy excuse that it was Democratic legislation. I can not believe that such an excuse will fully satisfy the man who honestly believes that tariff legislation often disturbs business and that a tariff revision should be made only after a board of fair men from both political parties have recommended the revision. In refusing to vote for such a law, which no one claims does not provide for a fair tariff commission, does it not give some weight to the Democratic claim that the purpose for which the Republican leaders desired a tariff commission is to prevent an honest revision rather than to aid such a revision? All that any honest man, be he a Republican or a Democrat, can ask for in the way of a revision of the tariff is that it be revised honestly and fairly and after a board has given the revision on each article careful and honest consideration. The fact that such a tariff board had not, prior to this year, been demanded by any Democratic platform is no reason that the Democrats had not the right to create such a board, and it certainly is not a good reason that the Republicans should refuse to support such a measure because they had promised in their platform four years ago that they were in favor of such legislation. I will not believe that the honest and sincere men and women of the country will agree that a bill that has been advocated for a long time by both Republicans and Progressives should be defeated merely because it was proposed by the Democratic Party. That is the position that 139 Republicans took on the proposition, and in so doing I can not persuade myself that they honestly represented the thousands of Republican voters at home who have honestly voted for the Republican platform with promises for a tariff commission in it.

ANTIDUMPING LEGISLATION.

One of the claims that Republican speakers and newspapers over the country have persistently made is that when the war is over there will be great quantities of cheap goods sent into this country from the countries of Europe, and they have made this the basis for many long speeches and many editorials. Yet when they were given a chance to vote for a law which specifically forbade, under penalty of fine and imprisonment, this very thing that they had claimed to be so fearful of, they voted against that provision and against the bill. It may be that these Republicans have a constituency who they can inveigle into indorsing such political perfidy, but I am free to say to you that I have too much respect for both the intelligence and patriotism of the men and women whom I represent here to accuse any considerable number of them of being ready to approve of such votes. The whole procedure has smattered too much of an attempt to make an issue and find something out of which they might make some political capital in the coming campaign. The frantic efforts of the Republican politicians to find an issue with which they dare go before the country and make an appeal to the patriotism and intelligence of the voters have at times been pathetic. They have not dared to fight the regional banking and currency act passed by the Democrats; they have not cared to make an issue out of the fact that the country has been given a rural-credits law which will enable the farmer to hire money at a reasonable rate of interest and a long time for payments; and they have not relished the idea of going before the country in the attitude of being opposed to the many enactments of constructive, progressive legislation that this administration has placed upon the statute books; and yet, realizing that they must have some issue, they have refused to indorse the income tax, the inheritance tax, the tax on munitions, the tariff board, and the antidumping clause that forbids unfair competition, merely because the legislation was proposed by a Democratic Congress. In their efforts to find an issue they have found much fault with the administration for not going to war with Mexico, although they have carefully refrained from declaring that they would go to war if they are intrusted with the running of the Government.

Mr. Speaker, the Democratic Party goes to the country conscious of the fact that it has been a minority party for many years, but also with the consciousness of the fact that they are to make their plea to an honest and fair-minded people, and they will submit their claims to the people of the country fully conscious of the fact that they have given to the country such an honest and fair administration that they deserve to win in this campaign. They will take the commission of power that was given them four years ago back to the people and ask for a renewal of that commission, believing that they have been fair and have met the demands of the country in a fair and businesslike manner. They point to a country of well-employed and well-paid people, a people at peace with all the world, a people happy and contented. They can do nothing more toward winning at the coming election than to show the people that they deserve to win. If with this record the people still believe that honest and efficient administration does not entitle the party to the renewal of its commission to keep the reins of the Government for another four years, it will still be a matter of much satisfaction to those who have been given the one opportunity in many years to put Democratic laws and Democratic legislation in force to feel that to deserve to win and then lose is far better than to win without deserving to do so.

There will doubtless be much said during the coming months about the benefits to the farmers of a protective tariff. Every farmer who has reached the middle age in life will recall that the Republican Party passed every line of tariff legislation for 30 years after they came into power in 1861. Not a line of Democratic tariff legislation was placed upon the statute books from March 4, 1861, until August 24, 1894, and yet many times in the late eighties and the early nineties the farmer sold his corn for 20 cents per bushel and less, his wheat for 40 and 50 cents per bushel, his cows for $10 a head, and his hogs for 2 cents per pound. In the face of these facts, which will be verified by every man who lived on the farm in those days, we shall not expect the high protectionist to mislead any great number of intelligent farmers and make them believe in the face of the present good prices and his general good condition that he has been materially harmed by the Democratic revision of the tariff.

Of course, I would want to be fair enough to say that I do not claim that other causes than the tariff have had no influence upon the prices of what the farmer has to sell; every intelligent man knows that other causes have had an influence. But what I desire to emphasize is that some of the hardest times the farmers of this country have ever seen were during periods when the Republican Party was in power and after they had had ample time to show what a high tariff would do for the farming element of the country.

Finally, Mr. Speaker, let me say that there has never been a time since I could remember when there was less demand for partisan politics than at this hour. The greater part of the world has been for many months engaged in the most deadly conflict of all the ages. We have as a nation escaped any part in that dread catastrophe; we are to-day at peace with all the world. Those who have at times clamored loudest for war have shown the least inclination to enlist. The people are beginning to know who fights the wars and who pays the bills. They are willing to do both when it is necessary to preserve the honor of the country, but they will not be mislead. When the time comes there will be no divisions along party lines; every home will make the sacrifice. But the best men of all the ages have deprecated war and wished for the time when nations would cease the crime of conflicts. Every thinking man knows that when the nations of Europe have exhausted themselves they will then have to gather around a table of arbitration and find some grounds upon which all can agree to quit the fight and again live in peace. The question that good men and women all over the world are asking to-day is: Why could not these agreements be made before the war is waged rather than after the best blood and brawn of the nation is lost and future generations are mortgaged with a debt to pay the bills? So long as such problems are yet to be solved by the civilizations of the earth let us commend ourselves to the higher work of seeking a solution for these problems rather than to spend our time in carping criticisms or petty partisan politics.

## The Federal Workmen's Compensation Bill.

### EXTENSION OF REMARKS
OF
### HON. GUY T. HELVERING,
OF KANSAS,

IN THE SENATE OF THE UNITED STATES,

*Wednesday, July 12, 1916.*

On the bill (H. R. 15316) to provide compensation for employees of the United States suffering injuries sustained while in the performance of their duty, and for other purposes.

Mr. HELVERING. Mr. Speaker, we have before us to-day for consideration the Federal employee's compensation bill, a measure drafted in the interest of the men and women in the employ of our Federal Government, which extends compensation to all of our 400,000 employees who sustain injuries while on duty. This bill meets with my hearty approval, as I believe it is an advance step taken by the Federal Government toward industrial and humane justice for its own employees.

The protection of the life and health of employees against injury sustained while in the performance of duty is to-day recognized as one of the very vital schemes of the Government.

During my service in Congress I have earnestly advocated and supported every measure which has come before the House looking to the betterment and the safeguarding of the laboring classes, and I am much gratified to note the interest taken by the Members of the House in the bill now before us.

I shall not attempt to go into a lengthy discussion of this progressive legislation at this time, but I merely wish to state a few facts concerning its merits.

The Federal employees compensation bill, introduced in the House by the distinguished gentleman from Maine [Mr. McGILLICUDDY], provides compensation for disability or death of any employee of the United States resulting from injury sustained in the performance of his duty. It provides for a compensation at the rate of two-thirds the wages lost by such employee during his disability. In the event of his death the dependent wife will be allowed 35 per cent of his wages, and 10 per cent additional for each dependent child under 18 years of age. The act as submitted by the committee also provides for an administrative commission, consisting of three commissioners, appointed by the President, with the advice and consent of the Senate.

This commission would be authorized to make the necessary rules and regulations for the enforcement of this act and would have the power to decide all questions arising therefrom. The commission would also be empowered to employ physicians, nurses, and secure hospital treatment so that every opportunity may be given to the injured employee to recover from his injury.

We have a few Federal compensation acts on our statute books, but they are very inadequate and do not cope with the strides of progress made by the industrial world. The compensation act of 1908 offers protection to a small portion of the 400,000 employees of the United States, chiefly those engaged in hazardous occupations. Under the present system hundreds of our postal employees are denied protection on account of the loose construction placed on the provisions of the law of 1908, by some of our Post Office officials. "So large have become the works of industry, and so great has been their development through improved machinery and appliances that the necessity of safeguarding those who must operate these modern inventions has long been manifest."

Our Government demands high qualifications and first-class service of its employees, but it has not up to this time offered them any reliable safeguards or employment guaranties in return for their best services.

Up to this time the man in the employ of a private individual or corporation has seemingly enjoyed a greater advantage over the employee of the Government, because if the former sustained injury or disability while in line of duty he is assured of medical attention and knows that his dependent ones will be taken care of during the time of his disability.

Nearly all of our large factories and corporations of this country come under the provisions of some workmen's liability law, and we find that more than 21 States have enacted compensation laws for accident in employment, which have proved practical, thus they have recognized that each industry shall bear the burden of the disabilities caused by it. Inasmuch as the Federal Government is one of the largest employers of labor in the world, shall it be said of us that we have been unmindful of the protection and welfare of our own employees? Under the present law a Government employee who sustains an injury or accident while at work must bear the burden of his misfortune for which he probably was not responsible.

The bill before us, however, will take care of all civil employees of the United States and Panama, and while the proposed extension of the present law will cover four times as many employees, the number of accidents will not be proportionately increased since the accident risk in the added employments is much less than in the branches of the Government already covered.

The author of this meritorious legislation, as well as the members of the committee who unanimously reported the bill favorably to the House, are to be commended for the careful and exhaustive investigation they have given to this act. The recognition thus given to the protection of the life and health of our Federal employees against injury while in the performance of their duty shows conclusively that this House is placing all partisanship aside and taking into consideration the welfare of the working force that aids in turning the wheels of the machinery of our Government.

I realize, Mr. Speaker, the urgent necessity of this legislation if we intend to keep up with the rapid strides of progress. By giving to it our favorable consideration we show our readiness to work and vote for humanitarian measures. Since many of our individual States have enacted successful workingmen's compensation laws and most of our large factories offer protection and care to their employees, it behooves the National Government to set the finest example by granting the just laws to its own employees.

The Kern-McGillicuddy bill is a step in the right direction that will relieve Congress from hundreds of personal injury claims that come up at every session. This act as proposed by the committee will tend to create more cordial relations between the Government and result in greater efficiency in the work of our Government.

I sincerely hope that the Senate may give to this act the same liberal consideration that has been given to it by the House and have this act placed on our statute books before the close of this session.

---

## Prohibition Does Not Prohibit, but Increases Intoxication.

### SPEECH
OF
### HON. WILLIAM J. CARY,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,
*Wednesday, June 7, 1916,*

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 13383) making appropriations for the Diplomatic and Consular Service for the fiscal year ending June 30, 1917.

The Clerk, proceeding with the reading of the bill, read as follows:

Fifteenth International Congress Against Alcoholism: To complete the arrangements and provide for the entertainment of the Fifteenth International Congress Against Alcoholism to be held in the United States, to be expended under such rules and regulations as the Secretary of State may prescribe, $10,000, or so much thereof as may be necessary, together with the unexpended balance of previous appropriations for the holding of said congress in the United States.

Mr. SLAYDEN. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. SLAYDEN. If we are going to invite people to visit us, I believe we ought to extend hospitality like a prince.

Mr. CARY. Will the gentleman yield?

Mr. SLAYDEN. Yes.

Mr. CARY. Will the gentleman inform me how many delegates there would be?

Mr. SLAYDEN. I can only say to the gentleman that there are about 3,300 or 3,400 members of the Interparliamentary Union, and experience indicates that there will be approximately 10 per cent present.

Mr. CARY. Will the gentleman yield?

Mr. SLAYDEN. It is a long way, and they will have to pay their expenses here and back to their homes.

Mr. CARY. Does the gentleman think $40,000 would be too much to entertain them?

Mr. SLAYDEN. I said it would be too much to entertain them if it were confined to their stay in the city of Washington.

Mr. CARY. But it would be plenty if they remained in the city of Washington?

Mr. SLAYDEN. Forty thousand dollars is enough, if we care to do so, to transport them to Chicago or Milwaukee—that city made famous by certain enterprises—to St. Louis or Chicago; they all want to go to those great cities; and to entertain them handsomely and bring them back to New York, the usual port of embarkation.

Mr. CARY. Mr. Chairman, reserving a point of order on this section, I would like to ask the gentleman from Virginia a question. Is it not a fact that there is $40,000 now laid aside for this purpose?

Mr. FLOOD. Forty thousand dollars was appropriated, but some of it has been used. I do not know how much; probably three or four thousand dollars. There is a considerable sum remaining; over $35,000 certainly.

Mr. CARY. I asked the gentleman from Texas [Mr. SLAYDEN] a question in regard to the other convention coming here, if $40,000 would carry it through, and he said it would be a plenty. If $40,000 was enough to carry that convention through, surely $40,000 ought to be enough for this.

Mr. FLOOD. I will say to the gentleman that this is a great moral congress of unselfish, devoted men and women from all over the world, and it is apt to be more largely attended and more enthusiastically attended than a congress of the Interparliamentary Union that is principally for the purpose of bringing together the members of the different parliaments of

the world and having a good time. These gentlemen and ladies who attend this congress come here for serious work.

Mr. CARY. Mr. Chairman, in reserving the point of order or making the point of order, which I will do, it is not with the intent of embarrassing the committee or the Secretary of State or this Government. All I wish stricken out is the $10,000, not the law or section itself. If the gentleman is willing to do that, I will merely confine my point of order to the $10,000 in the section.

The CHAIRMAN. Is the gentleman's point of order to the section or to the $10,000?

Mr. HARRISON. Mr. Chairman, I make the point of order that he can not make it to the whole section now. It is too late.

Mr. FLOOD. He does not make it to the whole section, as I understand.

Mr. MANN. He made it to the paragraph. Now, just a word more on the point of order.

The CHAIRMAN. The gentleman from Wisconsin [Mr. CARY] has the floor.

Mr. FLOOD. Mr. Chairman, will the gentleman yield to me for a moment?

Mr. CARY. I will.

Mr. FLOOD. As I understand, the point of order is only made to the $10,000.

Mr. CARY. I make the point of order to the whole section, but the gentleman from Virginia [Mr. FLOOD] asked me if I would change it and restrict it to the $10,000, and I said I did not wish to strike out the whole section if it would embarrass him.

Mr. FLOOD. Then the gentleman will withdraw the point of order?

Mr. CARY. If you will guarantee that the $10,000 shall be stricken out, I will.

Mr. FLOOD. I will not guarantee anything. I can not tell what the Senate of the United States is going to do. I concede the point of order on the $10,000. I think the gentleman from Illinois [Mr. MANN] is right, and I take it that the Chair will rule that the point of order against the $10,000 is well taken. That is all I can guarantee.

Mr. MANN. I do not think he will, as it is not well taken.

Mr. FLOOD. He ought not to.

Mr. MANN. I can throw the gentleman's last argument out of the water so quickly that he would admit it himself.

Mr. FLOOD. If the gentleman concedes the point of order on the $10,000, it is not necessary for the Chair to rule.

Mr. CARY. Mr. Chairman, there seems to be a great deal of dispute in the minds of the parliamentarians here; so that, in order not to continue the agony longer, I make the point of order on the whole section.

Mr. HARRISON. I make the point of order, Mr. Chairman, that it is too late. I asked the gentleman if he made the point of order to the whole paragraph or to the $10,000, and he said he made it to the $10,000.

Mr. CARY. I said I made it to the whole paragraph, but would restrict it to the $10,000.

Mr. FLOOD. When the gentleman from New York [Mr. FITZGERALD] took the floor I had risen to say that my view of the parliamentary situation was that the point of order as to the $10,000 was well taken, but that it would not be well taken as to the whole paragraph. I concede the point of order as to the $10,000, if that is the point of order the gentleman makes.

Mr. CARY. As long as the chairman of the committee concedes the point of order as to the $10,000, I am satisfied to make it as to the $10,000 instead of to the section, so that the $10,000 will be stricken out.

Mr. FLOOD. The gentleman can move to strike it out.

Mr. FITZGERALD. Do not move to strike it out. It goes out.

Mr. CARY. What I want to accomplish is to have the $10,000 stricken out of the bill.

The CHAIRMAN. The Chair is ready to rule on the whole question.

Mr. FITZGERALD. The gentleman from Wisconsin makes the point of order to the $10,000, and the gentleman from Virginia concedes it.

The CHAIRMAN. Does the gentleman make the point of order only to the $10,000?

Mr. CARY. Yes; at the suggestion of gentlemen on that side.

The CHAIRMAN. The point of order is sustained.

Mr. CARY. Recent developments and occurrences, Mr. Chairman, have convinced me that before this session of Congress closes the usual attempt to foist prohibition of the manufacture and the sale of all kinds of intoxicating, and of even some non-intoxicating, beverages upon the people will be made by that small but resourceful band of self-constituted reformers who have haunted these legislative Chambers for many years and have made life miserable for those Members of Congress who think different than they do. If prohibition did prohibit, as these reformers claim it does, and as every observant citizens of the Republic knows it does not, there might be some reason for this periodical agitation of a question that endangers the fundamental principles upon which this great country has been founded. Personal liberty is guaranteed by the Constitution, but our prohibitionists, antisaloonists, and would-be reformers have no conception of personal liberty, and attempt to dictate to their fellow men what they should eat and drink.

To the prohibitionist the temperate man is an unknown quantity. Only the complete eradication of the liquor traffic will satisfy him; and he condemns even the use of beverages that have proven to be of benefit to the human body. The prohibitionists always claims that the medical profession condemns the use of liquor as deleterious to the human body, although nearly every doctor uses alcohol in his prescriptions. I admit that some members of the medical profession condemn the use of any and all alcoholic beverages. Most do not. Some doctors pronounce a man to be a crank, if not a lunatic, who is regarded by other doctors as a remarkably bright and able man. "You pays your money and you takes your choice," holds good with our scientists. The professional reforming prohibitionist, the kind we mostly come in contact with here at the Capitol, always lays great stress upon the moral side of the prohibition question. He never admits that prohibition, wherever it has been tried, has made liars and hypocrites out of men who formerly were honest and truthful. The prohibitionist prefers the hypocrite to the honest man who in openly taking a drink in a public place assumes the responsibility for his act.

But the hypocrite who takes his drink—and I firmly believe that all prohibitionists do drink, even if it be only patent medicine, containing 20 or 25 per cent alcohol—in the dark recesses of his cellar or closet places the responsibility upon the law he himself caused to be enacted. The professional reforming prohibitionist of the brand we see around here are not at all scrupulous as to the ways to carry on their propaganda for their pet and only idea—the abolition of liquor. They violate law as easily as they violate every dictate of common sense. Some years ago one of these professional reforming, acrobatic prohibitionists used the frank of a great United States Senator on many hundreds of thousands of inflammatory documents, thereby depriving the Post Office Department of several thousands of dollars. The Senator was sharply criticized for allowing the use of his frank, but as far as I know the Government has not yet recovered the money it lost by transporting the literature of the professional reforming prohibitionist. And does anybody believe that the reverend doctor himself paid the Government? Oh, no. All contributions made to this, that, or the other professional reforming business are used mainly to support a lot of white-necktied, well-fed, and sanctimonious-looking gentlemen, who have made reforming the business of their lives and who, I do not think, could earn an honest dollar at any other occupation. Only to-day, when the Diplomatic and Consular appropriation bill was before the House, we had occasion to observe some of the tricks of these professional reforming prohibitionists. I can describe this trick best by quoting the following editorial from the Washington Herald:

President Roosevelt some years ago appointed a society leader as an expert to investigate the sanitary conditions of the Chicago stockyards, and no one laughed louder than the President when asked to define the expert qualifications of his commissioner. That joke appears to have become a precedent. It was brought out in the House debate on the Diplomatic appropriation bill that for some years Congress had been appropriating money to send "scientists" abroad to attend a congress for the scientific study of alcohol, and that these American "scientists" have invited that congress of alcoholic scientists to hold its next session in Washington at the expense of the United States Government, so that an appropriation of $40,000 had to be made to keep our social engagement.

The whole affair illustrates the power of precedent. There are world congresses held somewhere almost every week in the year, but the delegates, whether scientists or plain citizens, pay their own way. But we now have the precedent for the Government footing the bills, and it will give an impetus to world congresses to be held in Washington. We will have no difficulty in arranging for a world congress every day in the year, and while Congress haggles over appropriations for legitimate diplomatic intercourse to place our ambassadors, ministers, and consuls on an equal footing with those of other nations the Treasury vaults will be opened to anyone who can arrange for a world congress of dancing masters or pigstickers who have influence enough to convince the Foreign Affairs Committee that it is for the scientific study of those great questions.

An interesting sidelight on this appropriation for the expenses of the alcoholic congress was given in the list of scientists who have for some years made these excursions abroad at the expense of the Government. The Rev. E. C. Dinwiddie heads the list of each delegation of "scientists," and has associated with him those other eminent "scientists" Wilbur F. Crafts, the Rev. S. E. Nicholson, Ernest R. Cherrington, the Rev. James K. Shields, and other gentlemen and their wives who have ordinarily been known as officers and agitators of the Anti-Saloon League. In fact, they have always advertised themselves as connected with that organization. Any Member of Congress can testify to the scientific attainments of Dr. Dinwiddie and Dr. Crafts as promoters of legislation for the extraction of money from the Treasury; but the irreverent have classed them with other gifted lobbyists, and not with

the men who patiently work over retorts in the laboratory to extract knowledge from nature's elements. It was a revelation to some of the Members of Congress that they had for years been appropriating money to send these "scientists" abroad to study the science of alcohol, and had also authorized them to invite other scientists, possibly with the same scientific attainment, to come to Washington and hold a congress at the expense of the Government. Chairman FITZGERALD cited the law that no one, not even the President, could, without the authority of Congress, invite anybody to come to Washington and be entertained at public expense; but what is the law as between such scientists as Dr. Dinwiddie and Dr. Crafts and the Foreign Affairs Committee. Chairman FLOOD insisted that one of the powers of the American Congress is to appropriate money to encourage the development of science, and the appropriation of $40,000 was made to entertain our scientific guests. Where will this congressional encouragement of science stop?

I am opposed to the whole procedure because it is one-sided. Would Congress appropriate $40,000 to entertain a body of scientists on the other side of this question? I think not.

National prohibition spells national financial ruin, as State prohibition has proven financial ruin for more than one State in the Union. Take the State of West Virginia, for instance. It has become bankrupt since it adopted prohibition. It is unable to pay a judgment rendered by the Supreme Court of the United States—a judgment that must be paid, even if every citizen of the State should have to sacrifice his individual property. There is not a dry State or a dry community in a State that does not feel the ruinous financial consequences of prohibition. Many States and many smaller communities would be only too glad to return to the old license system, but few will dare to do it. Their leading citizens are either fanatics themselves or they are moral cowards. Even my distinguished friend William Jennings Bryan, the inventor of the grape juice panacea against all the ills the human race is heir to—the apostle of peace, the peerless political flopper—has dropped prohibition, even if only until after the next national election. He fought war and he fought preparedness and he fought liquor. But now when he has discovered at St. Louis that he is indeed a Democratic "lame duck," he remains silent on prohibition, and in promising his most enthusiastic support to the presidential nominee of the Democratic Party—the party that has been the sponsor of prohibition in most of the States now dry—he repudiates himself.

In this Congress we have already appropriated more money than any prior Congress ever did, and before we can give an account of our stewardship to the people we will have to appropriate many millions more. Where is this money going to come from? Our professional reforming prohibitionists, our "Billy" Sundays, our Dinwiddies, and our Crafts have never shown any great willingness to pay any more than they are forced to pay. They are receivers of, not contributors to, the national wealth. National finances have never bothered them.

Now, look upon the moral side of the prohibition question. Wherever prohibition has been forced upon the people there has been an alarming increase of crime and disorder. Even in Maine, the oldest prohibition State in the Union, more drunkards are seen on the streets than in many States where the sale of intoxicants is permitted by license laws. I venture to say that no city in the United States is more orderly than the city of Milwaukee, Wis., which I have the honor in part to represent, and it should be remembered that the biggest and the best breweries are located in Milwaukee.

It is an indisputable fact that prohibition means an increase of drunkenness. A decrease in the consumption of beer and other mild beverages means an increase in the consumption of whisky and other strong liquors. The illegal moonshiner of the South is, without exception, an ardent prohibitionist; at least he is an advocate of prohibition. Under liberal license laws his occupation, like that of Othello, would be gone. Our prohibition friends have made some decided gains during the fiscal year now rapidly drawing to a close, and the result is a most decided increase in the production and consumption of whisky. According to the figures of the Internal Revenue Office, this increase by the 1st of July will amount to 10,000,000 gallons; and, of course, this is legitimate production, from which the Government derives great revenues. No man is able to estimate the increase in the output of moonshine, from which the Government derives no revenue. And these figures show a great decrease in the production and consumption of beer and other malt liquors, for the very good reason, as given by a newspaper published in my city the other day: If a man inclined to refresh himself has a chance to quench his thirst in company with friends in a public place, duly licensed, he is not very apt to lay in a large stock of liquor or of beer at his home; but if he is prevented from taking a drink in an orderly and licensed public place, as he is in all prohibition communities, he will carry alcoholic liquors to his home. He will not carry beer or other malt beverages, as they are too bulky to escape detection by the officers of the law.

Let no man imagine that your prohibitionist is a pacifist, an angel, or a dove of peace. He is a very different man. He is a militant fighter, who intolerantly wants to force his fellow men to swallow his ideas and who hesitates at nothing to force his views of temperance in eating or drinking upon whole States and communities.

The real motive of the fanatical prohibitionist or of the professional reformer has not yet been discovered; but in most cases, however, it will be found to be pure and unadulterated selfishness. The latest example of the pernicious effects of prohibition is furnished by Des Moines, the capital city of the great State of Iowa. On the 1st of January Iowa became as dry as the desert of Sahara, and at once a wave of drunkenness followed by a tidal wave of crime has made the streets of the town and the roads of the State unsafe. The treasurer of Des Moines has to guard his office with detectives, and the police of the city are unable to cope with armed bands of marauders roaming the streets at night. Timid citizens do not venture into the streets at night. Now, what do you think of that? Almost the same news comes from Denver, in Colorado, and from other centers of population wherein prohibition is being tried.

In closing perhaps I can do no better to prove that prohibition is a lie and a snare than by quoting the following item from the Washington Post, the author being a reliable business man residing in Kansas City, Mo., who travels very extensively in prohibition States:

"Prohibition in Kansas," said the visitor, "is not an economic or moral question, but a political one. It is the football of Kansas politicians. At times a town is wide open, and the stranger has merely to mention his desire for a little refreshment in order to have his choice of a score of brands. It will go on this way for a while until the reform element makes a loud outcry, and a new administration soon makes the town as dry as Sahara.

"There are certain districts in our land of the free where the dispensers of various forms of ethyl alcohol find it necessary to engage in uncongenial occupations in order to at least present an appearance of virtue. Business made it necessary for me to visit a certain medium sized town in Oklahoma, and while there I was unfortunate enough to sprain my ankle. Painfully limping into a near-by drug store, I called for a bottle of liniment which could be plainly seen in a show case. The clerk in charge looked at me in unconcealed disgust.

"'If I sell you that I'll have to buy another bottle,' he said.

"I was about to leave when an inspiration seized me.

"'Have you any peroxide?' I asked.

"'What in the dickens is peroxide?' asked the clerk.

"Lowering my voice and winking, I said, 'In my State they don't call it peroxide.' The clerk's smile instantly changed, and, going into an adjoining room for a brief space he reappeared with a wrapped package. This he handed over, and I put two good dollars into his hand. I had time during the return trip to my quarters in a rickety carriage to examine the 'peroxide.' It was a full quart of Kentucky bourbon, but I was never able to muster sufficient nerve to finish it, and the major portion ultimately tickled the palate of the hotel bootblack."

I also wish to insert the following resolution, which I presented to Congress:

Resolution.

Whereas prohibition, wherever it has been tried, has had a most baneful influence upon the life, health, conscience, morality, and liberty of the people; and

Whereas so-called prohibition not only threatens legitimate business, but also the employment of thousands of workers who are engaged in the production and dispensation of beer, light wines, and liquors, as well as the employment of thousands of workers engaged in supplying the needs of these industries and people therein; and

Whereas the organized labor movement by its insistent demand for higher wages, which is the means of a higher standard of living and better homes and surroundings, and by establishing a shorter workday, which affords the opportunity for the cultivation of better tastes, greater aspirations, and higher ideals—these will prove a more potent factor in establishing true temperance and temperate habits than the passage of sumptuary or prohibitory laws; and

Whereas there is now pending before Congress a number of similar joint resolutions, proposing an amendment to the Constitution of the United States, which reads: "*Resolved by the Senate and the House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein)*, That the following amendment to the Constitution be, and hereby is, proposed to the States, to become valid as a part of the Constitution when ratified by the legislatures of the several States, as provided by the Constitution:

"'ARTICLE —.

"'SECTION 1. That the sale, manufacture for sale, transportation for sale, and importation for sale of intoxicating liquors for beverage purposes in the United States and all territory, subject to the jurisdiction thereof, and exportation thereof, are forever prohibited.

"'SEC. 2. That Congress or the States shall have power independently or concurrently to enforce this article by all needful legislation'"; and

Whereas the manufacturing of beer and other beverages is a principal industry in the State of Wisconsin, and particularly in Milwaukee County, which is the means of employment that gives a livelihood to thousands of our people, and the adoption of such an amendment will be no less than a calamity to the people of this Commonwealth: Therefore be it

*Resolved*, That the Milwaukee Federated Trades Council stands opposed to the adoption of such an amendment to the Constitution of the United States or to the ratification by the legislature of such an amendment.

[SEAL.] FRANK J. WEBER,
*Secretary Federated Trades Council, Milwaukee, Wis.*

## Water-Power Bills.

### EXTENSION OF REMARKS
OF
# HON. WILLIAM KENT,
OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 25, 1916.*

Mr. KENT. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a comparative analysis of the Senate and House water-power bills as concerns navigable waters.

*Comparison of the provisions of the Shields bill (S. 3331), as passed by the Senate March 8, 1916, and the House substitute, as passed by the House of Representatives July 15, 1916.*

| SHIELDS BILL (S. 3331). | HOUSE SUBSTITUTE. |
|---|---|
| GRANTING AUTHORITY. | GRANTING AUTHORITY. |
| Authority given directly to Secretary of War to grant permit or permits for construction of dams, etc. (Sec. 1.) | Authority or consent to construct dams, etc., must first be obtained from Congress. (Sec. 1.) |
| | Comment: This proviso conforms to the present dam act (June 21, 1906), except that the word "consent" has been added. |
| GRANTEE. | GRANTEE. |
| Permits or grants may be acquired by municipal corporations, political subdivisions of States, by private corporations, companies, or associations (apparently not by States or by individuals for public-service use). | "To any persons." (Sec. 1, line 2.) |
| In addition, when any power under grant is used for public-utility purpose or purposes, "grantee must possess lawful qualifications under that State's laws." | |
| Comment: The proviso of section 1 states that whenever power is to be developed for a "public-utility purpose" within a State which has "made provisions for authorizing municipal corporations, political subdivisions, or other agencies of the State or public-utility corporations" to engage in the business of furnishing water, heat, or electric energy, permits or grants will be made only to such public or quasi public agents. There is not a single State in the Union in which there are not both public-service corporations and municipalities engaged "in the business of furnishing water, heat, or electric energy for public or private use." The sole effect of the proviso of section 1 is, therefore, to absolutely exclude individuals or associations of such individuals from engaging in the public-utility business. It is difficult to comprehend what reason, if any, there could be for discrimination against individuals or associations, since they would be as amenable to public regulation as would corporations. It can scarcely be for the purpose of giving preference to municipalities or public agencies, for public-utility corporations stand on precisely the same footing as municipal corporations, and nowhere in the bill, except in the case of leases of power rights at Government dams (sec. 10), is a preference right in favor of strictly public agencies expressed. | Comment: Nowhere in the bill is there a description of "persons." In the Adamson bill, passed by the House August 4, 1914 (sec. 16), the word "persons" was described to include "corporations, companies, and associations." This was taken from the present law (June 23, 1916.) The debate in the House on this substitute would indicate this proviso had been overlooked. |
| DURATION OF GRANT. | DURATION OF GRANT. |
| Two years' preparation. (Sec. 9.) Indefinite time of construction. (Time limit to be placed in original permit by Secretary.) | Two years' preparation. (Sec. 1.) Four years for construction. (Sec. 7.) Fifty years' tenure. (Sec. 9.) |
| Indefinite grant thereafter; unless taken over at expiration of 50 years "such rights shall continue until revoked for cause as provided in section 8 (penalty clause) of this act" or "until terminated and compensation has been made to such grantee for its property as provided in section 6 of this act" (recapture clause, sec. 5). | |
| Comment: The grants of rights to erect and maintain power structures on navigable streams and to utilize surplus power at Government dams are in the nature of easements, irrevocable except for breach of condition for 50 years and indeterminate thereafter. And not only is the grant indeterminate, but it is to continue under the original conditions, unaffected by any change in the law, until such time, if ever, as the United States may elect to take over the properties under the conditions named in the bill or authorize others who may be able to qualify to take them over under similar conditions. | Comment: The tenure clause in the House substitute was amended by committee to read that grant was to continue "from and after the completion of the dam, or diversion structure, or lock and dam or diversion structures." The bill passed by the House August 14, 1914, provided grant should begin "from and after original approval." |
| Since the United States would doubtless be limited to purchase for governmental purposes only; since the grant, if transferred to another, would be "upon the same terms and with the same restrictions and preferences provided in this act" (sec. 6)—that is, would be merely a transfer of the existing permit and property to another permittee "upon the payment of its (the property's) fair value in all things" (sec. 6); since the permit, if renewed to the original grantee, is also "upon the same terms and with the same restrictions and preferences" (sec. 6); and since in case neither of renewal nor of transfer are the terms of the new or renewal permit to be determined by then existing law, the grant for all practical purposes is perpetual. This condition is further emphasized by the fact that the bill provides no procedure by which even the United States may exercise its reserved right to purchase. In order to take action it will be necessary to pass additional legislation, either general or special. As far as the proposed bill is concerned, the public is given no greater rights than it would have if the grants were in perpetuity, for the rights to recover the properties and the conditions of recovery are not more favorable but less favorable, because deferred for at least 50 years, than they would be if no legislation at all were enacted. | The substitute proviso will allow grant to begin six years after original approval, making grant for 56 years in any event. |
| RECAPTURE. | RECAPTURE. |
| Grant shall extend until taken over by Government; and burden of termination is placed solely on Government, because it must assume "all the property of the grantee, dependent in whole or in part for its usefulness and acquired, necessary, appurtenant, valuable, or serviceable, in the distribution of water, or in the generation, transmission, and distribution of water." (Sec. 6.) | At termination of grant the United States "or any person authorized by Congress" may take over the property. |
| Comment: The bill provides that upon two years' notice after the expiration of the 50 years the United States may terminate the grant and take over all the properties of the grantee used in the generation, transmission, and distribution of power which have been constructed or acquired and which are necessary and appurtenant or valuable and serviceable in the business (sec. 6). No procedure is provided, however, by which the United States can take the proposed action. The bill provides merely a reserved right which could be exercised only in accordance with additional legislation. Since no provision therefor is made in the bill, and since the United States is not given the right to take over the properties for the purpose of transferring them to some other public agency, it can only be assumed that the United States may exercise the right of purchase in the event that the properties are desired for governmental ownership. | The Government will take over dam, locks, and properties appurtenant to navigation and properties used by grantee "for the generation and transmission of electrical energy which are dependent for their usefulness on the continuance of the grant." A definite description is made of "transmission." Upon taking over the Government may purchase (if Congress consents) lands and property necessary which have been purchased originally by grantee; but shall pay, first, only for the "reasonable value not exceeding the actual costs" of lands, and, second, for "the reasonable value" of property. (Sec. 10.) |
| The price to be paid for the properties includes every element of value that could possibly be brought forward, save only a price for the grant itself. Every other franchise of every form or nature, such intangible values as going values, anticipated profits, etc., as well as all increases in land and water-right values, would have to be paid for by the United States, as well as by every other purchaser. | |
| COMPENSATION. | COMPENSATION. |
| Provides for no compensation for the valuable privileges granted. | Provides for "reasonable annual charges" for benefits accruing to grantee; to be readjusted at |

Comment: When the Shields bill was before the Senate several amendments were offered to provide for compensation, but were defeated.

LEASES AT GOVERNMENT DAMS.

The Secretary of War may lease, on such terms as he may provide, the right to develop power from surplus water at dams owned by the United States and where the cost of construction is borne by the United States or jointly with lessee. No limit to the lease is made, and it assumes a grant similar to that in the bill. Preference is given to "utility corporations," and to the largest development and concern. (Sec. 10.)

Comment: This section, taken with the other parts of the bill, confers upon the grantee an easement which is indeterminate, and because of the recapture proviso is, in effect, a perpetual lease.

No preference is given to municipalities, although a utility corporation and the biggest concern is so favored.

PUBLIC LANDS JURISDICTION.

Provides that the Secretary of War may determine that any lands of the United States shall be subject to grants whether concerned with navigation or power. Former grants (like Hetch Hetchy) are excepted. (Sec. 2.)

Comment: This is designed to take jurisdiction from the Secretary of Agriculture and Secretary of the Interior as to water-power control on public lands and national forests. In 1912 Secretary Fisher intervened and protested approval by War Department of permit (which contained no safeguards) on Canyon of Pend Oreille River. (170,000 horsepower capacity.)

Withdrawals under the act (June 25, 1910) are open to private appropriation under the mineral-land laws for metalliferous minerals. To refer to that act in this bill would subject reservations for navigation lands to that kind of private appropriations; moreover, it would imply that all reservation for "any public purpose" (the words of the withdrawal act) is open to that kind of private appropriation.

TRANSFER AND ASSIGNMENT.

No assignment, except for purpose of financing, without approval of Secretary of War, "shall be made to any transferee not having the qualifications herein specified for a grantee." (Sec. 1.)

Comment: Grants may be transferred unlimitedly among transferees having the qualification of applicants under the act, while transfers may be made regardless of qualifications if the transfer is effected by a "trust, deed, or mortgage, issued for the bona fide purpose of financing the business."

APPROACHES, ETC., TO THE LOCKS.

Grantee shall construct, without expense to United States, lock or locks, booms, sluices, etc., "to the extent necessary to preserve and improve navigation facilities at least equivalent to those existing prior to the construction" and "in accordance with plans, etc. * * * made a part of permit." (Sec. 2.)

Comment: This provision is vague and indefinite. It means, if it means anything, that no navigation improvements would be made by grantee.

In this connection section 7 of the bill provides that the cost of locks or other aids to navigation and all other capital expenditures end of 20 years and every 10 years thereafter. (Sec. 2.)

Comment: The Ferris water-power bill, as twice passed by the House, and the Adamson bill, passed by the House August 14, 1914, contain a compensation feature. The failure of the general dam act (June 23, 1910) to contain this feature was set forth by both Presidents Roosevelt and Taft as vital grounds for their vetoes of general dam bills.

LEASES AT GOVERNMENT DAMS.

Provides that Secretary of War is authorized to lease surplus water and water power generated at Government dams for not to exceed 50 years upon terms provided by the Secretary, with periodical readjustment of rentals. Information regarding all leases shall be reported annually to Congress. Preference shall be given to the "bid solely for municipal use of any municipal corporation * * * not operated for profit." (Sec. 20.)

Comment: This section is similar to the proviso in H. R. 16053 (the Adamson bill). However, the House committee substituted in the portion regarding a preference for municipal development the words "other conditions being equal" and "the bid solely for municipal use." This limits the preference to municipal development for the consuming public.

PUBLIC LANDS JURISDICTION.

Provides that the grantee may use public lands certified by the Secretary of War and withdrawn by the President "for the sole purpose of promoting navigation," and, further, that the President shall have withdrawn them for that reason.

Comment: This proviso is identical with section 5 in the bill, H. R. 16053, Sixty-third Congress. It is an amendment which caused a great deal of debate, because a proviso similar to that in the Shields bill was thought by many Members of the House that it would take jurisdiction from the Ferris bill then pending. (H. R. 408.)

TRANSFER AND ASSIGNMENT.

No assignment or transfer made without the consent of Secretary of War. (Sec. 8.)

Comment: This provision is identical with similar language in H. R. 408 and H. R. 16053, as passed by the House.

APPROACHES, ETC., TO THE LOCKS.

The bill provides that the grantee shall provide, without expense, lock or locks, booms, sluices, etc., which the Secretary of War and the Chief of Engineers or Congress at any time may deem necessary in the interest of navigation.

In case Government constructs locks, grantee must convey land and furnish power to construct same free to Government; and, at discretion of Secretary, may be required to operate same. (Sec. 2.)

Comment: These provisions are somewhat smilar to the present law and to those in H. R. 16053. It is evident that the requirement to construct navigation facilities "at any time" is an unusual hardship on the grantee.

required by the Government may be considered as part of the operating property of the grantee in any valuations made for rate-making purposes.

RIGHTS RESERVED FOR NAVIGATION.

Control of level of pools to be regulated by Secretary. Regulation to include operation by grantee of lights and signals and fishways at expense of grantee. (Sec. 3.)

Comment: Similar to House substitute proviso.

PLANS, KIND AND CHARACTER.

Plans, specifications, etc., must conform to judgment of Secretary as to comprehensive improvement of waterways. (Sec. 2, second.)

RATES AND SERVICE.

Provides that interstate rates and services are conferred upon the Interstate Commerce Commission whenever the State authorities are unable to agree that rates, charges, or services are "reasonable, nondiscriminatory, and adequate to the public and to the ultimate consumer." (Sec. 7.)

Comment: According to this, section begins with the proviso that if the grantee engages in the public-utility business, all charges, rates, and service "shall be subject to regulation in accordance with the laws of the State in which the service is rendered." This provision is valueless, because Congress could not confer authority for such regulation upon a State if such authority did not otherwise exist, or take it away if it did exist. No attempt is made in this section to confer a right of regulation when the project under grant is used in intrastate business in a State which has provided no means of regulation. The part of the section providing regulation by the Interstate Commerce Commission "whenever the States directly concerned are unable to agree" is vague. There are a large number of companies now transmitting business across interstate lines.

EMINENT DOMAIN.

When grantee is a public-utility corporation right is conferred to condemn and damage any lands or property necessary in the construction or operation of the business. (Sec. 4.)

Comment: The bill does not specify that the right of eminent domain granted shall apply to the lands of the United States, but the words "lands or properties of others" could be held to include the public lands.

PENALTY.

Failure of grantee to comply with provisions of the act or any of the conditions of the permit issued, is to be a misdemeanor, subject to a fine of not exceeding $1,000; "and if the unlawful maintenance and operation continues after final judgment in either a civil or criminal proceeding, "the court may decree revocation of the grant and may either sell the property or appoint a receiver." (Sec. 8.)

Comment: By failure to place any effective control in the hands of the Secretary of War, it is clear regulation is made a court procedure.

REPEAL.

In reserving rights to alter, amend, or repeal it confers property rights upon any grantee who has exercised rights hereunder. (Sec. 13.)

PUBLICITY.

Grantee is required to maintain a system of accounting in accordance with rules and regulations of the Secretary of War to submit under oath statements, representation of reports, annual or special, including full information as to assets and liabilities, capitalization, cost of project, cost of op-

RIGHTS RESERVED FOR NAVIGATION.

Control of level of pools regulated by Secretary, to also include operation of lights, signals, and fishways at expense of grantee. (Sec. 6.)

Comment: This proviso nearly identical with section 3 in S. 3331. It is also similar to the present law.

PLANS, KIND AND CHARACTER.

Provision identical with those in S. 3331, which are similar to present law. (Sec. 3.)

RATES AND SERVICE.

Secretary of War given authority to regulate rates and service in interstate business and supervision of the issuance of stock and bonds. (Sec. 7.)

Comment: This proviso is similar to the section in Ferris bill (sec. 3) regarding interstate business.

EMINENT DOMAIN.

Under section 13 of the House substitute a right of eminent domain similar to that in the Shields bill is granted. (Sec. 13.)

Comment: The eminent-domain proviso of the House substitute was a committee amendment; it was not in the former bill (H. R. 16053), which passed the House in the Sixty-third Congress.

PENALTY.

Provides for penalties of violation somewhat along lines of Shields bill; but the penalties of law and lawful regulation are more specifically stated. In addition, authority is granted to remove structures if same is declared an unlawful obstruction by the courts. (Sec. 15.)

Comment: This proviso is somewhat similar to the present law; it also is identical with section 7 of H. R. 16053.

REPEAL.

Provision specifies that in reserving the right to alter, amend, or repeal the United States shall incur no liability. (Sec. 18.)

Comment: This is nearly identical with the present law and with H. R. 16053 as passed by the House.

PUBLICITY.

The Secretary of War may examine books and accounts, require statements or reports to be submitted, including information as to capitalization, cost of locks, dams, and other aids to navigation, "water rights, lands, easements, and other property acquired, production, use, distribution, and sale

eration, the production, use, transmission, and sale of power. (Sec. 7.)

Comment: This proviso was an amendment (Kenyon) accepted on the Senate floor.

REVOCATION FOR PUBLIC USE.

None.

ANTI-MONOPOLY.

Grantee is prohibited from permitting works constructed and maintained under act to be owned or controlled in such a way "that they form a part of or in any way effect * * * an unlawful trust or monopoly." (Sec. 12.)

NAVIGABLE WATERS DEFINED.

"Navigable waters" are defined as "streams or parts of streams * * * used for the transportation of persons or property in interstate or foreign commerce." (Sec. 14.)

EXTENSION OF PREVIOUS GRANTS.

All grantees under subsequent legislation, and including those now constructing projects on or along navigable waters, are permitted to become beneficiaries under this bill. (Sec. 11.)

PREFERENCE TO GRANTEES.

General preference is given to the largest concern and specific preference to the grantee having (a) a prior water right; (b) who has first complied with State laws; or (c) if no State laws, preference to the first applicant. (Sec. 2.)

Comment: This rule of preference makes the permit a bounty and favors unduly the great corporations who already have gathered in vast water rights, charters, and priorities in water rights and concessions.

of power or energy." This information to be under oath. (Sec. 16.)

Comment: This section is similar to section 11 of the Ferris bill (H. R. 408) and follows the Kenyon amendment in some respect.

REVOCATION FOR PUBLIC USE.

Provides when an emergency, war or otherwise, Secretary of War may take possession of all property and compensate grantee for same as provided in recapture clause. (Sec. 10.)

ANTI-MONOPOLY.

Combinations, agreements, arrangements, or understandings, express or implied, to limit the output of electrical energy or service. The Secretary of War may allow physical connection of plants. (Sec. 4.)

NAVIGABLE WATERS DEFINED.

None.

EXTENSION OF PREVIOUS GRANTS.

Grantee under previous grant for power development may surrender same and be given another grant to come under this bill. Does not apply to power projects under jurisdiction of Secretary of Interior and Secretary of Agriculture. (Sec. 21.)

PREFERENCE TO GRANTEES.

Left to judgment of Secretary of War to consider all factors. (Sec. 12.)

Comment: This is the present law (general dam act, June 23, 1910, sec. 1), and is likewise followed in the Ferris water-power bill.

NOTE.—There is a provision in both bills which provides for a charge to the Government for benefits derived from headwater improvements, including storage reservoirs, such charges "to be based upon a reasonable compensation proportionate to the benefits actually received by the grantee by reason of an increase of flow past or over the water-power structure artificially caused by such headwater power improvement." The Army engineers and experts have stated there is no way of estimating such benefits, and it is clear, even from the operation of the present law, that such a charge provision is worthless.

---

## How to Borrow Money Under Rural Credits Law.

## EXTENSION OF REMARKS

OF

## HON. DUDLEY M. HUGHES,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, July 27, 1916.*

Mr. HUGHES. Mr. Speaker, availing myself of the privilege granted by the House, I am extending my remarks in the RECORD by printing the following analysis of the new rural-credits law, which I trust will be helpful to my constituents in securing the benefits which may be had under this new system.

When this measure was before the House I endeavored to have it amended so the bonds would be underwritten by the Government, thereby insuring the lowest possible rate of interest when the securities were offered in the money markets. However, there were not enough of us of this mind to secure the adoption of the amendment.

The bill as it finally passed, though not perfect, is decidedly a long step in the right direction, and will undoubtedly prove of vast benefit to the farmers. Now that we have the system authorized it can be amended from time to time so as to meet the needs of those engaged in agriculture. I therefore urge the farmers of my district who desire loans to assist in placing the new system in operation by joining the local associations.

FARM LOAN BOARD.

The rural-credits law provides a Farm Loan Board of five members, four of whom are to be appointed by the President, the Secretary of the Treasury being an ex officio member. The expenses of this board are to be paid by the Government, and it is to be located in Washington. It will have general supervision over the entire rural-credits system, much like the Federal Reserve Board supervises the various reserve banks of the Nation.

LAND BANKS.

The United States is divided into 12 districts, in each of which is to be established a Federal land bank to make long-term loans on real estate. Each bank is to have a capital stock of $750,000. Unless this stock is subscribed for by the public within 30 days, it is to be subscribed for by the Government.

FEDERAL AID TO THE BANKS.

The sum of $9,000,000 is appropriated for use by the land banks in placing the system in operation. This money is ultimately to be repaid to the Government without interest. The Secretary of the Treasury is authorized to deposit as much as $500,000 in any land bank, so that its operation may not be hampered. In order to make the bonds and mortgages issued by the land banks more attractive to investors requiring low rates of interest these securities are exempted from all Federal, State, and municipal taxation. The lower the rate of interest paid on the bonds the better it will be for the farmer, for it is provided that the land banks shall lend the money to the farmer at a rate not to exceed 1 per cent more than the interest paid on the bonds, this 1 per cent being allowed for the expenses of the bank, and it is provided that in no case shall the farmer be required to pay more than 6 per cent.

FARM-LOAN ASSOCIATIONS.

Before a farmer can secure a loan he must be a member of a national farm-loan association. These are local associations composed of not less than 10 members, all of whom must be borrowers. Each association elects a president, vice president, secretary-treasurer, and a loan committee of three, none of whom shall receive a salary except the secretary-treasurer, who acts as the business manager. When an application for a charter for a local association is filed with the district land bank an appraiser is sent to the locality to appraise the lands represented by the application, and if the lands are found eligible for loans the charter is granted. These associations are organized to solicit loans, pass upon the character of the applicant for a loan, and make a final appraisement of the lands which he offers for security.

HOW LOANS ARE TO BE MADE.

The method of securing a loan after the organization of a local association will be as follows: The borrower is required to make application for membership in the association, his application being accompanied by a subscription for stock in the association to the amount of 5 per cent of the amount he desires to borrow. If a borrower wishes to borrow $1,000, he must subscribe for ten $5 shares, or $50 worth. When the loan is paid this stock money is refunded to the farmer. The stock purchase need not be a cash transaction, but the amount may be carried in the loan. The borrower's application is forwarded to the district land bank, together with the stock subscription. The land is appraised and the title investigated by the land bank, and if found satisfactory the loan is made, the money being sent to the secretary-treasurer of the local association for the borrower. All payments of principal and interest are made to the local secretary-treasurer.

PURPOSES FOR WHICH MONEY CAN BE BORROWED.

No person not engaged in farming, or who in good faith does not intend to become an actual farmer, is eligible to membership in a local association, nor can he secure a loan under this system. Loans may be secured to purchase land, equipment, live stock, general farm improvement, and to pay off indebtedness on farm. If the money is used for other purposes, a penalty attaches and the loan becomes due.

AMOUNT LOANED, INTEREST RATE, AND DATE OF MATURITY.

The farmer may secure as much as 50 per cent of the value of his land, exclusive of improvements, and 20 per cent of the value of improvements. The interest charges depend on the interest borne by the last bonds, but in no case shall exceed 6 per cent. As everyone recognizes, the two questions of prime interest from the standpoint of the borrower in any credit system is the availability of the required money and the interest charges thereon. It was to make it absolutely certain that the money would be forthcoming, and at the lowest possible rate of interest, that I offered my amendment to the bill which provided that these securities should all be underwritten by the Federal Government, for with the security of the Government written on the back of the bonds they would sell as readily, and bear as low a rate of interest, as do Government bonds.

The loan is made for a period of time from 5 to 36 years, in the option of the borrower.

LIABILITY OF BORROWER.

One borrower is not legally liable for the debts of other borrowers in his association. Each member is liable for the 5 per cent of capital stock subscribed for by him, and an additional 5 per cent on this stock. Therefore, if the Federal land bank should fail the borrower would only be responsible for the unpaid balance on his loan and 10 per cent of the original face value of his loan. The loss of the borrower in the event of the failure of the land bank would about equal the amount he now pays the local agent for floating his loan.

HOW LOANS ARE PAID.

The borrower, when he pays his interest each year, can pay a small sum in addition thereto to be applied on the principal. This method of payment is known as the amortization plan. An example of how the principal and interest on a loan of $1,000 for 20 years at 5 per cent can be paid is given in the following table:

*Amortization tables.*

| Annual periods. | Total annual payment. | Interest at 5 per cent. | Paid on principal. | Amount of principal still unpaid. |
|---|---|---|---|---|
| 1 | $80.24 | $50.00 | $30.24 | $969.76 |
| 2 | 80.24 | 48.48 | 31.75 | 938.00 |
| 3 | 80.24 | 46.90 | 33.34 | 904.67 |
| 4 | 80.24 | 45.23 | 35.01 | 869.66 |
| 5 | 80.24 | 43.48 | 36.76 | 832.90 |
| 6 | 80.24 | 41.64 | 38.59 | 794.31 |
| 7 | 80.24 | 39.71 | 40.52 | 753.79 |
| 8 | 80.24 | 37.68 | 42.55 | 711.23 |
| 9 | 80.24 | 35.56 | 44.68 | 666.56 |
| 10 | 80.24 | 33.32 | 46.91 | 619.64 |
| 11 | 80.24 | 30.98 | 49.26 | 570.39 |
| 12 | 80.24 | 28.51 | 51.72 | 518.67 |
| 13 | 80.24 | 25.93 | 54.31 | 464.36 |
| 14 | 80.24 | 23.21 | 57.02 | 407.34 |
| 15 | 80.24 | 20.36 | 59.87 | 347.46 |
| 16 | 80.24 | 17.37 | 62.87 | 284.60 |
| 17 | 80.24 | 14.23 | 66.01 | 218.59 |
| 18 | 80.24 | 10.93 | 69.31 | 149.28 |
| 19 | 80.24 | 7.46 | 72.78 | 76.50 |
| 20 | 80.24 | 3.82 | 76.50 | ..... |
| Total | 1,604.80 | 604.80 | 1,000.00 | ..... |

The following table gives the figures for the payment of a loan of $1,000 for 36 years at 6 per cent interest:

| Annual periods | Total annual payment. | Interest at 6 per cent. | Paid on principal. | Amount of principal still unpaid. |
|---|---|---|---|---|
| 1 | $68.39 | $60.00 | $8.39 | $991.61 |
| 2 | 68.39 | 59.49 | 8.90 | 982.71 |
| 3 | 68.39 | 58.96 | 9.43 | 973.28 |
| 4 | 68.39 | 58.40 | 9.99 | 963.39 |
| 5 | 68.39 | 57.80 | 10.59 | 952.80 |
| 6 | 68.39 | 57.16 | 11.23 | 941.57 |
| 7 | 68.39 | 56.49 | 11.90 | 929.68 |
| 8 | 68.39 | 55.79 | 12.60 | 917.08 |
| 9 | 68.39 | 55.02 | 13.37 | 903.71 |
| 10 | 68.39 | 54.28 | 14.11 | 889.60 |
| 11 | 68.39 | 53.37 | 15.02 | 874.58 |
| 12 | 68.39 | 52.47 | 15.92 | 858.66 |
| 13 | 68.39 | 51.52 | 16.87 | 841.79 |
| 14 | 68.39 | 50.50 | 17.89 | 823.89 |
| 15 | 68.39 | 49.43 | 18.96 | 804.93 |
| 16 | 68.39 | 48.29 | 20.10 | 784.83 |
| 17 | 68.39 | 47.08 | 21.31 | 763.52 |
| 18 | 68.39 | 45.81 | 22.58 | 740.94 |
| 19 | 68.39 | 44.45 | 23.94 | 717.00 |
| 20 | 68.39 | 43.02 | 25.37 | 691.63 |
| 21 | 68.39 | 41.49 | 26.90 | 664.73 |
| 22 | 68.39 | 39.88 | 28.51 | 636.22 |
| 23 | 68.39 | 38.17 | 30.22 | 606.00 |
| 24 | 68.39 | 36.36 | 32.03 | 573.97 |
| 25 | 68.39 | 34.43 | 33.96 | 540.01 |
| 26 | 68.39 | 32.40 | 35.99 | 504.02 |
| 27 | 68.39 | 30.24 | 38.15 | 465.87 |
| 28 | 68.39 | 27.94 | 40.45 | 425.42 |
| 29 | 68.39 | 25.52 | 42.87 | 382.55 |
| 30 | 68.39 | 22.95 | 45.44 | 337.01 |
| 31 | 68.39 | 20.22 | 48.17 | 288.84 |
| 32 | 68.39 | 17.33 | 51.06 | 237.78 |
| 33 | 68.39 | 15.26 | 53.13 | 184.65 |
| 34 | 68.39 | 11.07 | 57.32 | 127.33 |
| 35 | 68.39 | 7.63 | 60.76 | 66.57 |
| 36 | 70.56 | 3.99 | 66.57 | ..... |
| Total | 2,464.21 | 1,464.21 | 1,000.00 | ..... |

JOINT-STOCK LAND BANKS.

The act also authorizes individuals to organize joint-stock companies for the purpose of making farm loans. The banks are to be organized and financed by private individuals, and the Government does not contribute to their capital stock. They must have at least $250,000 worth of capital stock. These banks may issue bonds on mortgages the same as the Federal land banks. Their interest charge is limited to 6 per cent.

PRESENT FARM LOANS.

According to the census of 1910 there were 18,257 farms in Georgia on which there were loans to the total amount of $12,600,000. The average rate of interest paid was 8½ per cent, exclusive of commissions. These farmers therefore paid $1,071,000 in interest. If these loans were made under the rural credits system at 6 per cent the farmers of our State would be saved $315,000 annually in interest charges. At 5 per cent, the figure to which we hope to reduce the charges, the saving would be $441,000. These figures indicate the great good which it is possible to accomplish under the new law.

## General Revenue Act.

## SPEECH

OF

## HON. WILLIAM A. CULLOP,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, July 7, 1916.*

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 16763) to increase the revenue, and for other purposes.

Mr. CULLOP. Mr. Chairman, I am unable to understand the logic of the gentleman from Ohio [Mr. SWITZER], who has just addressed the House, and other Republicans opposing this measure. They have taken the anomalous position that the higher the tariff on an article the cheaper it is sold to the consumer. This theory is in opposition to every reason heretofore advanced in defense of the system. The chief reason always given for levying a high protective tariff was that it would enable the American manufacturer to sell his goods at a higher price and avoid the competition of low-priced foreign-made goods. If not levied for the purpose of increasing the price, of preventing competition of cheaper goods, then there could be no justification whatever for it. If it does not have that effect, then every tariff baron in the country would be found opposing it. If the doctrine be true that it lowers the price, then it would be pertinent to inquire, How high should it be made in order for the consumer to get for nothing the articles upon which it is levied? [Applause on the Democratic side.]

Will some one who asserts this strange doctrine inform us? No one will attempt it. This clearly illustrates the absurdity of the proposition and demonstrates the desperation of those who attempt to justify the indefensible policy.

Again, pressed in their desperation some of the "high priests" of protection have declared with much unction that the tariff costs the American consumer nothing because the foreigner pays it. This argument in its defense was abandoned years ago, the theory exploded, because the people know if the foreigner pays the tax he adds it to the selling price, and the ultimate consumer has it to pay as part of the cost. If this doctrine that it costs the American consumer nothing because the foreigner pays it were true, then it does not protect the home manufacturers against the low prices of the foreigner and it would be useless to levy it. [Applause on the Democratic side.]

If these two propositions advanced here in this debate are sound, no manufacturer in the United States would contend for the system, because it would not protect him, and hence would be of no avail in preventing foreign competition and therefore would fail to accomplish the purpose for which it was levied. [Applause on Democratic side.]

It is not surprising that the advocates of protection, driven from "pillar to post" in search of some reason to justify their position, employ every subterfuge which human ingenuity can devise and every sophistry the fertile imagination can invent, but the system is doomed and must go. The logic of events has completely demolished the propaganda of protection and exposed its fallacies.

The experience of the last three years has demonstrated to the people of this country, beyond cavil or doubt, that industry in this country can successfully operate without high protection, and that prosperity does not depend upon it. Existing

conditions in this country establish the fact that it is not essential to prevent foreign competition, and that without it we are producing more and better and selling more, both at home and abroad, than we ever did with it. That we can meet, and are doing so, in the open field of competition in the markets of other nations and capturing their trade; that our factories now are producing larger quantities of better-made goods, selling at better prices, and returning larger profits than ever known in our entire industrial history. If we can compete successfully as we are and have been doing with foreign countries in their own markets and capture their trade, then there is no reason for a high protective tariff to control our home market and hold our own trade. The enormous increase in our exports with a proportional decrease in our imports of foreign-made goods conclusively establishes this proposition to the satisfaction of every reasonable mind. The indisputable facts are convincing and must control.

Under existing conditions the country is enjoying the most marvelous era of prosperity hitherto known; factory, farm, and mine operating at full capacities, unable to supply the demand, realizing unprecedented profits; labor is universally employed at the best wages ever paid, and thrift and enterprise abound, resulting as a consequence largely because of the policies inaugurated and the constructive legislation enacted under the present national administration, which has established confidence, encouraged investment of capital, and emancipated business from the control of special privilege.

Contrast the conditions existing under the present administration with conditions under the previous Republican administration and witness the difference.

Under the last Republican administration idle and empty freight cars, with their wheels rusting on the rails, crowded every sidetrack of every railroad in the country until the number aggregated at one time more than 426,000, by far the largest number ever known before or since, a number sufficient, if coupled together in a solid train, to reach from New York City to the city of St. Louis, Mo., on any of the various railroads connecting those two points; locomotives, motionless and noiseless, filled the roundhouses of all the railroads, with nothing to do, nothing to haul; now every freight car and locomotive in the land is busy night and day hauling products to markets and every shipping point is congested with products awaiting transportation to markets where the demand is greater than the supply and where they are selling for the best prices ever paid. [Applause on the Democratic side.]

Under the preceding administration, during its most prosperous year or any previous year, our factories never produced more than $20,000,000,000 worth of products; but during the year just closed the factories of this country produced $30,000,000,000 worth of products, supplying home consumption and selling an enormous surplus abroad, realizing the best profits ever made, with the supply insufficient for the demand. Under former administrations the largest amount paid in wages to employees for any year was $3,400,000,000; last year it amounted to $5,200,000,000.

Under Republican control of public affairs reduction of wages for manual labor was the rule, but under this administration last year the 5,700,000 laborers employed in the industries of this country had their wages voluntarily increased in the enormous sum of $300,000,000. Under Republican control of the Government the capital invested in American manufactories amounted to $18,000,000,000, now it amounts to $26,500,000,000, showing the confidence capital has in a Democratic administration. Under Republican rule its best year was 1912, the corporate income of the country from private enterprise amounting to $3,200,000,000, but for the year just closed it amounted to the enormous sum of $5,000,000,000, a most gratifying increase.

Last year we exported and sold abroad a billion dollars worth more of manufactured products than in any previous year in our history, and imported less. As our exports increase our imports are proportionally decreasing, demonstrating the balance of trade in our favor is increasing by leaps and bounds, a splendid testimonial in support of Democratic policies. [Applause on the Democratic side.]

But the comparison is not yet complete. Under the Republican administrations the prevailing sign in every metropolitan city in the land was "Free soup and lodging houses" for the unemployed, but that sign has disappeared, and in its place has been substituted placards reading "Men wanted at high wages." [Applause on the Democratic side.]

Under the former administration an army of tramps lined the leading thoroughfares of the country, but under this administration they, too, have disappeared, and have been superseded by the swiftly moving luxurious automobile; under the former men begged for work and found it not, now work begs for men at high wages; under the former factories were compelled to stand idle because of overproduction, under this the plants are too small to supply the demand, and nearly every plant in the land either is being enlarged or has been, and has increased its number of employees in order to meet the requirements of its trade. Under the former capital hesitated and was reluctant to invest, under this it freely invests on profitable terms, because confidence is restored, business is upon a safe and sane basis, and prosperity abounds. Under the control of affairs by the Republican Party once every year the banks scoured the country to get sufficient gold to send to Europe to meet our annual obligations there, but now conditions have changed, the flow of our gold to Europe has ceased, the tide has turned, credit and debit have changed places, and European gold is flowing into our country in such enormous quantities that bankers are inquiring, "What are we to do with it?" In the changing of conditions our people are the beneficiaries, as the result clearly shows. We have become the richest nation in the world. Our national wealth amounts to $230,000,000,000—richer than England, Germany, and France combined, ten times as rich as Italy, eight times as rich as Austria, and four times as rich as France. We are now the greatest financial power in the world, and within the last 12 months the financial center of the world has been removed from London, England, where it has been for centuries, to New York City, the great metropolis of this country, where we hope it will remain as long as time endures. [Applause on Democratic side.]

The unprecedented prosperity the country now enjoys is not the result alone of conditions in foreign countries, but is mainly due to the wise, wholesome, and constructive legislation enacted by this administration and the splendid business policies it has inaugurated. Higher business ideals and better standards prevail in business affairs, and because of the new conditions the Nation has prospered beyond the expectations of the most optimistic.

Republicans charge the marvelous prosperity the country now enjoys is due to the European war, and for this reason is only temporary; but the facts refute this and show, war or no war, it is the result of our business policies adopted and remedial legislation enacted, domestic as well as foreign conditions, that it is permanent, and is the logical sequence of our necessary and favorable governmental regulation.

The Republicans told us if we reduced the tariff business stagnation would result, panic would ensue, and industry would no longer operate; but we revised the tariff downward, eliminated special privileges, and emancipated business from monopolistic control, and prosperity sprang up all over the land.

The passage of the Underwood tariff bill, revising the tariff downward, did not close down a single industry, reduce the wages of a single workman, or turn a single employee out of employment; but, on the contrary, manufacture increased, plants multiplied, additional workmen were employed, and wages were increased.

They told us if we put wool on the free list it would destroy the sheep industry in this country; but we did it, and prices have been higher since than ever known before, and the industry is in a most flourishing condition. Wool and sheep sell at better prices than ever. They told us if we put wheat, corn, and other farm products on the free list we would ruin the farmers and destroy agriculture in this the most favored country in the world; that Argentine corn, Egyptian wheat and cotton, and Australian live stock would be imported, supply our markets, and drive our farmers out of business; that they would desert the farms; and that it, the most important of all our industries, would languish and die. But we did it, and the industry has improved marvelously, the price of farm products has soared higher and higher, importations have not affected our markets, and the business has become more profitable than ever, and is now more attractive to investors than hitherto known and promises greater results in the future.

They told us if we reduced the tariff on manufactured products idleness would result, but we did it, and now the continual hum of busy machinery is heard night and day, better prices prevail, productions have increased, and want of capacity to supply the demand has required the building of additions to nearly every factory in the country, monuments erected in honor of Democratic prosperity. [Applause on the Democratic side.]

Their prophecies of evil failed to materialize, and their theory of protection is universally repudiated by the logic of events, reflected through the conditions witnessed daily by the people all over the country.

During their 16 years of control of the Federal Government more than two and one-half billion dollars was appropriated

and expended by them for the creation and equipment of an adequate Army and Navy to defend our Nation from assault upon land and sea; but they squandered the money, neglected the opportunity, and when they retired from power the country, for the want of these two great essentials of defense, would have been unprepared if attacked by a great foreign power; and the great responsibility of preparedness fell upon this administration. It is discharging that duty in an elaborate manner, commensurate with our standing as a world power, keeping in view "safety first," in order to command the respect of the nations of the world by our ability to repel all assaults upon the life, liberty, or property of our citizens. To meet this obligation and carry out this elaborate program large expenditures are required, and to meet these the great Ways and Means Committee have presented this splendid measure, which will receive the approval of this House and the American people as well. Its splendid work in this respect has earned it the gratitude of the country.

It does not tax the necessities of life, the breakfast table of the workingman, the food of the hungry, the wearing apparel of the toilers, or the consumption of the country, but it taxes the wealth of the country and places the burden on the people best able to bear it—upon incomes and profits. It reverses the method employed by the Republicans to raise revenues for public purposes. They always taxed the consumption of the country; this measure taxes the wealth. If a man wanted to raise money, he would not go to the poor, but to the rich; not to the poorhouses, but to the great financial institutions. [Applause on the Democratic side.]

That is just what has been done here, and the Republicans dare not criticize it. If the Republican Party during the last four years it was in power had carried out the same liberal program of preparedness we have adopted, under the Payne tariff law they would have had a deficit of more than $1,600,000,000. Where and how would they have raised the money? By this method and not otherwise. They are estopped by their previous conduct to oppose this method. Analyze the provisions of this measure and many of them will be found to comport with their doctrines. Listen to its provisions. It creates a tariff commission; their national platform demands that. It provides for a tax on dyestuffs to encourage and protect the American manufacturers; their platform demands that. It enacts an antidumping law to protect American manufacturers from competition with foreign-made goods; they have always stood for that. It repeals the emergency stamp-tax law, against the enactment of which they voted, and have ever since demanded its repeal. Surely they will not vote against this provision now. It levies an inheritance tax on estates amounting to over $50,000. Every Republican in the House but one, when the Payne law was passed, voted for a much more drastic inheritance tax law than this, and hence they are not consistent if they vote against this provision now. It increases the corporation tax provided for in the Payne law, a Republican measure, and consistency will require them to support it now. It increases the income tax, a law for which many Republicans voted when it was enacted, the wisdom of which experience has proven; they can not afford to oppose it now. The only other remaining provision is one for the taxing of profits on munitions of war, under certain limitations, and in view of the enormous profits made by the plants engaged in the manufacture of these products on account of war and preparedness, it is inconceivable, it seems to us, how any reasonable man could vote against this provision. If he did, he would merit and receive the rebuke of the American people, irrespective of party affiliation. [Applause on the Democratic side.]

I challenge any man to point out, if he can, any method for raising revenue which excels the one proposed here for fairness, equity, or justice. Any attempt made will be in vain. The ostensible objections now interposed to this measure by the Republican leaders is not because they are opposed to preparedness or the methods employed to raise the money to pay for it, but it is because their candidate for President opposed an income tax only a few years ago when governor of the State of New York, and if they voted for it now they would be antagonizing his position on this question and create discord in their party. This is the real reason for their opposition. It would array them against him and his public record. As governor of New York he opposed the taxation of the great incomes of the rich, the taxing of wealth to support the Government. This record confronts him now, and the people of this country will repudiate him at the ballot box at the coming election because of it. Many Republicans when the roll is called for the final passage of this measure will ignore the decree of "King Caucus," the "crack of the party lash," the subserviency to party expediency, and heed the desires of their constituents and vote for it in order to save their own political fortunes. They know full well that "he who serves his country best serves his party best." They know the people believe in this method of raising revenue, and they recognize its merit, fairness, and justice.

This Democratic administration in three years has enacted more progressive and constructive legislation than has been enacted in the last quarter of a century. Its record of splendid achievements has earned the approval of the people, and they will at the ballot box answer "Let well enough alone." They know a change of administration means a change of policies, and a change of policies means an interruption of business, which might arrest the marvelous era of prosperity sweeping over the country. Under the splendid administration of Woodrow Wilson the country is prosperous to a degree hitherto unknown, and peace has prevailed.

Europe presents an object lesson, a solemn warning of the horrors of war; the destruction of farm, factory, and mine; killing and crippling her producers; her cities laid waste; her finances exhausted; her commerce scattered to the winds; penniless widows and orphans bereft of loved ones appealing for aid; and on account of its folly it is executing a bond on posterity which will require more than a century to redeem, a burden under which it will groan for generations. As the war spirit sweeps over that ill-fated country, gathering in the vortex of death the brave men who answered the call to arms, our country enjoys peace, revels in prosperity, and has become the leading nation of the world in all that it requires to make a people great. This condition is due to the master mind, the splendid diplomacy, the unfaltering courage, and exalted patriotism of Woodrow Wilson, the great Chief Magistrate of this Republic. For him there is a shrine of love and affection in the heart of every father who has a son, of every mother who has a husband or boy, and every girl who has a brother or a sweetheart, because he has prevented war. To him is due the everlasting gratitude of the American people, who in this contest as a reward will carry his banner to victory. Above all things the people covet peace and prosperity; with him they have both, and with his reelection an assurance of their continuance. The slogan, "Wilson, peace, prosperity, and a full dinner pail" will bring to his support in the coming election voters of all parties who believe in good government, fair treatment, and a clean administration of public affairs. The splendid achievements of this administration challenge the thoughful consideration and admiration of every citizen in the Republic, and it will go down in history as marking a new epoch in our career as a Nation, symbolizing peace, progress, and prosperity, elevating the standard of Americanism, vitalizing the spirit of patriotism, and inspiring mankind to higher ideals of government in order that the people may one and all realize the benefits to be derived and share its manifold blessings, typifying the purpose for which governments are organized and should be administered. [Applause on the Democratic side.]

---

## Appeal of American Citizens, Refugees from Mexico.

### EXTENSION OF REMARKS
OF
### HON. JEFF: McLEMORE,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, July 27, 1916.*

Mr. McLEMORE. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an appeal of American citizens, refugees from Mexico, embodied in a resolution which was unanimously adopted by 300 of said American citizens at a meeting held in the courthouse at San Antonio, Tex., on July 18, 1916.

The resolution is as follows:

We, who are bona fide citizens of the United States of America, many of us who for a period of years have been residing in Mexico and represent practically every line of labor, or have property and other interests which have suffered as a result of more than five years of revolution and feudalism in the Republic of Mexico, many whose possessions have been completely wiped out by confiscation and destruction during the protracted era of anarchy throughout the major portion of the Republic, invoke this as our first organized movement of Americans representing practically every portion of the stricken Republic and labor and capital interest both there and along the borders of the United States side; and we united under our constitutional right for redress and take this method of laying the facts which have been so often and persistently perverted before the American Congress and people.

Reports have gone out to the world, through a portion of the press, promulgated from the stump and repeatedly asserted from the highest official sources of the United States Government, that American property holders in Mexico sought intervention in Mexico by the United States for the promotion of their interests in order that they might exploit the Mexicans. We have been denounced as grafters, exploiters, falsifiers, and other similar epithets applied.

We feel confident that we, many of us who have lived in Mexico for a large period of our lives, have been identified with the people of Mexico, and have had our interests in common with the Mexicans, are better prepared to speak the facts than those who have not had such privileges.

To a unit we resent these imputations. For a period of more than 80 years previous to the administration of President Diaz, a period of feudalism corresponding with that of the past five years existed in Mexico. A condition of peonage existed in that Republic before the advent of American capital and industry more obnoxious and repugnant than any system of slavery that ever existed in the States of the South in the United States before the Civil War. The wages paid the natives were not adequate for their existence. Under the peonage system there the men, women, and children were without intrinsic value, as there were millions to take the place of those whom disease carried away. An epidemic was often considered a blessing among the laboring classes.

Upon the emancipation of the peons, in order to provide means for their employment and existence, President Diaz, whose country was bankrupt, invited foreign capital and ideas for the development of the country and advancement of the people. As a result of the absence of transportation facilities thousands of valuable mining properties, productive farming and grazing lands, and other interests were rendered valueless. American capital and citizenship was the first to respond to the urgent call for aid. Feeling that they were entitled to the protection of the treaty between the two countries, the constitutional guarantees and pledges of both the United States and Mexico, with their money and persons the Americans went to the unlimited field for a great work. No country under similar conditions ever underwent a more marked evolution in the same period of time. Instead of being exploited, as they were so mercilessly by some of their own people before the invasion of American capital and citizenship, the general wage scale throughout the Republic was increased from three to twenty or more fold. Opportunities were opened up that gave employment to practically all who wanted work with the railways, mines, factories, foundries, smelters, farms, and hundreds of other fields of employment. Where there were no industrial and educational facilities schools, churches, and industrial institutions sprung up as if by magic.

Throughout nearly 30 years the relationship between the Americans and Mexicans was as congenial and cordial as ever existed between any two peoples in the world. The President and duly constituted authorities of the Mexican Republic had the united support and cooperation of the American citizenship of that country. Any suggestion of intervention would have been resented universally by the Americans there, as was evidenced in the petition of Americans to President Taft in the beginning of the Madero revolution against President Diaz. The American press and American people stood as a unit by the constituted authorities of the Mexican Government. These facts are incontrovertible. Through misrepresentation, which found its way through a portion of the press of the United States, an uprising, then restricted to a small portion of the most illiterate section of northern Mexico and extending in no more than one State, was given aid in its inception by many Americans of the United States and discountenanced by the Americans of Mexico.

Arms, money, ammunition, and men were furnished against the urgent protest of the Americans of Mexico who knew conditions and could forecast the inevitable results. Prominent Americans of Mexico, supported by capitalists and laboring Americans of that country, were sent to Washington to protest, but their prayers were unheard by our Government.

The retirement of President Diaz resulted largely from aid of Mexicans and Americans of the United States to the universal disappointment and profound regret of the Americans of Mexico. Army supplies, money, and men went over the United States border to Juarez, thence south, resulting in the most unfortunate disaster in Mexico's history.

Francisco I. Madero succeeded President Diaz. Nearly universally Americans rallied to his support, while they saw conditions grow from bad to worse largely as a result of influences from the United States side of the river. Money and moral aid were tendered him by the Americans of Mexico. Another revolution was fostered largely by Mexicans who had placed him in power, and it assumed proportions as the result of aid tendered by Mexicans and Americans in the United States, the latter who made large money in the supplies of arms and ammunition. Once more the Americans of Mexico protested. Supplied as they were from the American side, the second time the army went south from Juarez, which ultimately resulted in the overthrow of the second President.

Victoriano Huerta was the third successor. The Americans of Mexico deplored the manner of his succession, but being familiar with the methods through which so many of the Latin Americans bring to bear their political aspirations they stood ready to acquiesce. The part this country played in his overthrow need not be recited.

For three years past the Americans of Mexico have stood ready to give their financial and moral support through the continued reign of feudalism and anarchy to any faction or individual who held out any hope for a restoration of conditions. In our solemn opinion the outlook is indefinitely hopeless.

DRIVEN FROM HOMES.

We have seen and read, with unparalleled tolerance in American history, the murder of hundreds of our men, women, and children by irresponsible bandits on this and the other side of the border; of the ravishing and otherwise outraging of our women; of the burning of the homes and bodies of the victims; of the destruction of our property; of insults to the American flag and people; the ambushing of our soldiers; the raiding of our homes; the theft of our property, and unlimited fiendish outrages that would take volumes to recite.

Never in history have an advanced people borne with more fortitude, patience, and endurance a continued era of outrages similar to those endured by more than 60,000 Americans who have been driven from their properties in Mexico, as well as hundreds of thousands who have property there and homes along the border.

They have hoped against hope for relief. They have deplored and even now deeply regret the necessity of strenuous action on the part of our Government. They have tolerated not only the outrages of the Mexican feudalists, but the unjust reflection of some of the people of the United States, who have impugned their motives and misrepresented facts through either malice or unpardonable ignorance. They have even declined to hear our statement of facts.

Those who went to Mexico in years gone by, men of small and large means, went there in good faith, believing that they, like the people of other nations, had a country that would protect them in such extraordinary and unheard-of emergencies that have existed there for years past. The people of no other country have suffered as have the Americans. Those who bought homes in the vicinity of the United States border had the same faith in their country's protection. In the fiscal year 1909–10 more than $150,000,000 from Mexico were spent in the channels of trade in the United States as a result of the American development of Mexico.

In the international obligations between this country and Mexico we have more than complied with our part, while for five years past Mexico has persistently ignored practically every detail of the treaty and constitutional obligations to the citizens of the United States.

It is estimated that approximately a million of her people have sought refuge in the United States during the past five years, and an inestimable number have taken the places of American labor in the various channels on railways, mines, factories, and all kinds of public and private work. Tens of thousands of Mexican children of refugees whose parents have signified no intention of becoming citizens are in the public free schools of our country availing themselves of the school funds left as a heritage to our children. Los Angeles, Cal., recently sent an appeal asking that the immigration of Mexicans in this country be restricted, alleging that they had over 5,000 under public charities in that city alone. San Antonio, El Paso, and practically every town and city within 150 miles of the 1,800 miles of border have their hospitals and charity departments burdened with the afflicted unfortunates of that country. Epidemics of smallpox, threatened epidemics of typhus and other kindred diseases have kept the people along the border in constant dread, cost innumerable lives and vast amounts of money. Venereal diseases, which have reached a stage of deplorable magnitude in that country, are being spread by them throughout the land. The burning of the 18 prisoners in the El Paso jail was directly the result of precautions against disease from Mexico. Our jails along the entire area are filled with Mexicans charged with every conceivable crime, and the court and jail costs are an immense tax upon our people. The people along the border live in perpetual dread of these murderers and robbers.

FAMINE AND DISEASE EXIST.

In Mexico chaotic conditions beggar description. Famine, disease, and pestilence stalk throughout the land and thousands are stricken daily. The suffering is indescribable and inconceivable to those who have not witnessed it. Feudism has prevailed between innumerable irreconcilable factions until crystallization among them for relief is hopeless. Arms and ammunition have been distributed to bandits and feudists practically throughout the entire Republic, mainly through agencies in the United States. The best type of citizenship who pray for peace are either shot down or forced to join these bands of robbers, who affiliate first with the one side and then with the other. The de facto president and his officers have virtually no control over a large contingent of their army.

Tens of thousands of the better class of Mexican citizenship are inwardly praying for outside assistance and at the opportune time will render aid, but to so publicly express themselves now would invite certain death.

From a study of Mexico's history for nearly four centuries the evidences are conclusive in our minds that the outlook bears no semblance of hope, and we believe no internal individual or collection of individuals of that country can bring the desired relief.

We feel that the time has come when these facts should be presented to the American Congress and to the people of the United States. That any procrastination in firmly dealing with conditions there in prompt and decisive action on the part of this Government will only add to the tribulations that have overburdened the endurance of the American people of Mexico along the United States border, and the thousands of representatives of other nations who feel that in these trying times they have some claims to protection of this country as a result of the promulgation of the Monroe doctrine. We feel also that from a humane point of view the distressing appeals of the millions of Mexicans who are helpless should be heard; that we would be serving the Mexican people in aiding them in ridding the country of these roving bandits.

For five years past Mexicans and Americans have stood in dread of expressing their opinions either on this or the other side of the river for fear of injury to their person or property, but we feel that the time has come when we should courageously speak our sentiments and in so doing will meet with a hearty response from the people of other nations in Mexico, a strong contingent of the suffering peons, as well as the highest type of Mexican citizenship.

QUESTION OF AMERICANISM.

This should not be a question of politics but Americanism. Four years ago the Democrats, Progressives, and Republicans pledged themselves in their party platforms for the protection of American citizenship at home and abroad. Fifteen million voters approved these declarations at the ballot. With present and prospective future conditions in Mexico, operating from only the American side of the river, the entire American Army, Regulars and militia, could not insure safety from depredations along the border, and it would impose an unreasonable hardship upon our soldiers and incalculable burden and expense to our people.

We, who with our labor, money, skill, experience, and education have aided Mexico in the emancipation of millions of her peons who 30 or more years ago were mercilessly exploited by a very small contingent of her own people who had the power; we, who have seen the wage scale lifted from 10 or 12 cents to a dollar or more per day within a single decade; we, who have invested our money and given our labor at the urgent solicitation and guarantee of protection of that country and of the United States in railways, mines, smelters, foundries, farms, ranches, and hundreds of other industries that have given employment to us and to those impoverished people; we, who have seen countless schools, churches, and educational institutions established where none existed, as a result of money we put in the channels of industry there; we denounce as absolutely, without foundation for truth the imputations that we were in any way responsible for the feudalistic conditions in Mexico. And we insist that, rather than exploiting the Mexican people, we lifted them from a shameful state of exploitation that existed before our advent there.

We feel that it is inopportune now to discuss how these conditions were brought about or how they might have been averted. The conditions exist and must be met fearlessly, courageously, and firmly. Every day of unnecessary delay will add to the deplorable complications for which the nations of the world, under the Monroe doctrine, look to the United States for ultimate relief. The time has come for prompt, specific, and decisive action in Mexico, and not merely along the border. American and Mexican citizens are being forced to sacrifice their holdings to the moneyed powers in order that they may exist. Americans have been ordered out of Mexico by their own Government, which has announced that they may expect no further protection there, which is forcing them to sacrifice their interests and holdings to the British, French, Germans, Chinese, and Japanese, whose governments insist they remain there and promise them protection, irrespective of the European complications.

By force of arms we are protecting the American interests in Haiti, Santo Domingo, Nicaragua, Cuba, and the Philippine Islands, and by threatening ultimatums we have demanded the American right of high seas to the European powers. We can see no reason why our constitutional and treaty rights should not be similarly extended to the Americans in Mexico and along the border of the United States in our own country.

To the American Congress and people we submit this appeal with the prayer that the remedy be applied as speedily as practicable.

## The Democracy of the Postal Service.

## EXTENSION OF REMARKS

OF

# HON. J. WILLARD RAGSDALE,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, July 27, 1916.*

Mr. RAGSDALE. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address by Hon. Daniel C. Roper, First Assistant Postmaster General, to the postmasters of the State of New York.

The address is as follows:

THE DEMOCRACY OF THE POSTAL SERVICE.

[An address by Hon. Daniel C. Roper, First Assistant Postmaster General, to the postmasters of the State of New York, Alexandria Bay, June 27, 1916.]

Mr. President, postmasters of New York State, ladies and gentlemen, it is always a pleasure for me to confer with postmasters, and hence unnecessary that I express gratification at being with you to-day, especially as your association represents so large and important a section of the entire Postal Service. The postmasters of the great State of New York serve more than one-tenth of all the people of the United States and transact one-sixth of the postal business of the country. The postal revenues of this State are equivalent to three times those of the entire Dominion of Canada.

That this beautiful place should have been selected for your convention is indeed a compliment to the taste and judgment of your association. This locality is so enshrined by nature and history in the minds and hearts of the American people that to visit it is to receive inspiration for better citizenship and better service to our country. To be here to-day as representative citizens, honored as postmasters with the privilege of rendering important service to the people of this great Commonwealth, is a boon that should inflate your hearts with pardonable pride and genuine patriotism. No one can reflect upon the history and importance of this great American service without recognizing the important part it has played in the dissemination of democratic ideas for which this Government was established and in the interest of which it must be maintained. This thought has so borne in upon me as I have applied myself to the problems involved in its administration that I have decided to review with you to-day some of the features of this service and our relations thereto as public servants under the head of

THE DEMOCRACY OF THE POSTAL SERVICE.

The history of civilization is the record of the struggle of the people for justice against oppression; for equal rights for all against special privileges for the few. Democracy is the supreme ideal sought in establishing correct relationships among men in society, in commerce, and in government. The most potent factor in securing this end is the dissemination of knowledge, and the most potent agency in disseminating knowledge is the postal function and facility. The isolation and antagonism of communities are overcome by trade and the interchange of ideas.

Democratic ideas were first promulgated in systematic form in France about the middle of the eighteenth century through a series of remarkable writers, of whom Rousseau was the most important. These writers interpreted the feelings of the people and voiced a passionate desire in all for those "inalienable rights" which kings and autocratic rulers had withheld from them. These ideas, though first proclaimed as theories in France, were to find their first practical interpretation and embodiment in America. Thus France by her ideas influenced the American Colonies in their struggles for self-government, and as if by reciprocation the reflex influence of the American democracy encouraged and hastened the French Revolution, out of which finally came the French Republic. The success of democracy in the United States has been the real propelling force in securing recognition for the people and in interpreting such rights in the constitutions of society throughout the world.

It is not an accident that the greatest intellectual and material progress of the ages has been in evidence since the American and French Revolutions. These two upheavals marked the beginning of modern democracy as we know it. The change which they brought about was not only political but affected the thought of the whole world. They operated to give men not only self-government but self-confidence and self-respect, and thus increased individual initiative, invention, and progress in all lines, both individual and social.

AMERICAN POSTAL SERVICE A DEMOCRATIC FACILITY.

The success of the efforts for popular rights here and abroad is in a most important manner measured by the development of postal facilities. For example, the earliest postal systems were established and maintained for the use of rulers without regard to the convenience and comfort of the people and were restricted in their development and usefulness. The wise founders of our Government realized that the progress and security of society depends upon the preparation of its members for patriotic and intelligent cooperation from the humblest to the highest citizen. It is therefore not insignificant that the framers of the Constitution for a Government established by and in the interest of the people should place in that first declaration of principles a special postal provision in order that the Postal Service should be made a democratic facility. To-day, as never before, the Postal Service is recognized as a fundamental educational necessity, the promoter of mutual acquaintance, of peace and good will among men and nations, and the enlarger of the common life.

RESPONSIBILITIES OF POSTMASTERS.

No more important responsibilities can be imposed on men under our form of government than that of maintaining a service so fundamental to the welfare and happiness of the people. For the time being these responsibilities rest upon our shoulders and our success in meeting them will be measured by the extent to which we make the service democratic, eliminate graft and special privilege, and treat all individuals and communities alike. If we accomplish this, we will be accepted as successful administrative officers; otherwise we will be unsuccessful.

I believe that our present postmasters understand that past standards of efficiency in management do not answer for to-day and will be less useful for to-morrow. They therefore are responding more intelligently and willingly to the demands of the service.

RECORD OF PRESENT ADMINISTRATION.

It will be interesting, in this connection, to make a brief review of what has been accomplished during our administration to make the Postal Service more democratic and effective. Having learned to do by doing, we shall find ourselves the better prepared to understand what remains to be done to give the American people the ideal Postal Service to which they are entitled.

During the last three years the parcel-post law has been effectually administered. Mailing conditions have been simplified, rates reduced, limits in size and weight of packages increased, thereby developing a traffic of a billion parcels a year and thus extending the best express facilities not only to cities and towns on steam transportation lines, but also to the people along a million miles of rural routes. Unnecessary restrictions in the postal savings system have been removed and its purposes of encouraging thrift and bringing into circulation the hoarded savings of the poor, under the protection of the National Government, has been made effective by an active propaganda. The Rural Delivery Service, established in October, 1896 (just 20 years ago), has been developed under this administration by the establishment of more than 2,500 new routes and the extension of more than 9,000 old routes for the benefit of 3,000,000 people in the rural districts. The City Delivery Service has been extended to 3,000,000 additional residents in towns and cities, according free delivery of mail by carrier, in all, to 6,000,000 people heretofore denied this service. Surely this does not indicate a curtailment of postal facilities. In every way during the last three years the postal needs and demands of the country have been anticipated and provided for. The appreciation of the people is shown, among other ways, in the per capita expenditure for postal service, which has increased from $2.58 in 1912 to nearly

$3 in 1916. This expansion has gone hand in hand with an unparalleled financial achievement; the Postal Service has become self-supporting. Following an unbroken succession of 29 annual deficits of from $3,000,000 to $17,000,000, Postmaster General Burleson returned to the Treasury in 1913 and in 1914—and will in 1916—surpluses aggregating more than $8,000,000 for the four years. This splendid record has been achieved in spite of the fact that the low rate accorded to second-class matter creates a deficiency of $80,000,000 on this one class of mail, and the liberal extension of rural-mail delivery is a further drain in the postal receipts which must be made up by the efficient management of the service as a whole. The surpluses from first-class and fourth-class matter under this administration have more than made good the losses in the rural service and in the handling and transportation of second-class mail. These nonrevenue services are contributions to the educational uplift of the people and hence truly democratic in principle. To specify in further detail the democratic breadth recently given to the Postal Service there may be mentioned:

The elimination of the sharp division lines between the different kinds of vehicle service in cities and the combining of all vehicle service under one common control, thus securing more economical contract terms and eliminating wasteful slack by interchangeability in equipments.

The adoption of the principle of Government ownership of vehicle equipment and the substitution of Government-owned for contract equipments wherever improvements and economies in operation are possible.

Practical aid in development of the parcel-post movement between producer and consumer, producing a means of eliminating waste in agricultural products and contributing to the better living of the people.

Inclusion of books in parcel-post classification, thus materially reducing postage rates on such matter and facilitating the dissemination of knowledge among the people.

Energetic campaign to eliminate the use of the general-delivery window service for purposes of fraud and immorality.

Establishment of standards of work in the City Delivery Service so as to facilitate the application of efficiency rating system to carriers.

Facilities of letter, money-order, and parcel exchange with South American countries vastly improved, stimulating commercial relations with those countries.

One thousand new steel cars placed in the Railway Mail Service for the protection of railway mail clerks and liability law put on the statute books for the protection of Uncle Sam's employees engaged in this hazardous work.

In discovering the best method of road building and in cooperating with the United States Department of Agriculture and with States and counties in constructing post roads.

Reorganization of the large post offices along standardized and business-like lines has been successfully accomplished.

Swindling by mail greatly reduced by relentless enforcement of the fraud-order statutes.

Competition encouraged and secured in the awarding of contracts for post-office quarters and supplies, effecting huge economies which in one instance of the four-year contract for stamped envelopes amounted to more than $1,000,000.

With these things accomplished, are you not the better prepared to continue the work of Democratic postal reforms in the interest of the people?

INEQUALITIES TO BE REMOVED.

A number of inequalities in the service remain, and these must have our thought and constructive endeavor in the near future.

Let me give a few illustrations:

Of the 591 postmasters of the presidential grade in the State of New York, 368 are of the third class. The administration of the Postal Service rests in an inequitable manner in many instances upon these third-class offices. The legislation effecting these offices was enacted many years ago and provides for clerk hire under conditions which no longer exist. Living expenses have so increased that it is impossible to get efficient people at the old rates of from $10 to $20 per month. Consequently, postmasters of this class are frequently compelled to expend their personal funds for clerical assistance.

Recognizing this condition, the department increased its estimates for 1916 by $75,000 for regular clerk hire and by $35,000 for clerical assistance in separating transit mail.

If these recommendations are approved, the department will be able to extend some relief to postmasters of this class.

The salaries of fourth-class postmasters should be placed on an equitable basis. The law has restricted the salaries of fourth-class postmasters according to the volume of outgoing mail at their offices, whereas the salaries of rural carriers have been fixed with no reference to the revenue derived from their services. The result, in general, is that the position of postmaster is relatively less desirable than that of the carrier, who works under the postmaster's direction. Such a condition is subversive of discipline and the best interests of the service and should be remedied.

As an illustration of the conditions under which a fourth-class postmaster is compelled to work, I cite an actual case which has been brought to my attention in a letter written by the postmaster.

During the past several years, this postmaster states that his compensation has averaged about $780 a year, which, together with $75 for money-order fees, made his total income $855. Out of this his rent, light, and incidentals amounted to about $200, leaving him $655 for 12 hours' work daily, except holidays and Sundays, when he works about a half day. This postmaster gets no leave of absence except, of course, when he puts somebody in his place, to whom he would have to pay, perhaps, as much as the fees would amount to during that time.

On the other hand, the postmaster states that the rural carrier from his office gets $1,200 for seven hours' work daily, exclusive of Sundays and holidays, and two weeks vacation with full pay. Out of this, however, he must provide for the upkeep of his machine or horse and wagon, which may amount to $20 or $30 a month, but from which he should get some personal advantage, at least on Sundays and holidays.

FARM-TO-TABLE MOVEMENT.

Thus far the Parcel Post Service has been developed principally through mail-order houses, which results in about ten times as much parcel-post matter being sent from the cities to the country as is brought from the country into the city. The result is that fourth-class postmasters are compelled to handle a much larger percentage of incoming matter, for which they receive no compensation, than outgoing matter, on which their compensation is based. The natural remedy should occur to the fourth-class postmaster. It is this: Develop the parcel post in line with the intention of Congress when the organic act was passed so that more mail of this character will originate at the smaller offices for dispatch than is received for local distribution. In this connection I would suggest that postmasters in the large cities may come to the relief of the fourth-class postmasters by encouraging the farm-to-table movement, in the manner repeatedly suggested by the department. Postmasters who have given this their serious persistent attention have accomplished a great deal by stimulating the ordering by city patrons of farm produce to be shipped by mail. This recompenses the fourth-class postmasters for handling the great volume of mail-order goods sent from the city by parcel post, and is a distinct benefit to those in the city who can be induced to undertake marketing by mail. The department has proposed to Congress legislation standardizing the number and salaries of supervisory officers in post offices and fixing the salaries of station superintendents according to the volume of postal business. The adoption of this recommendation would more evenly distribute the supervision and give the supervisory employees salaries more nearly commensurate with the duties performed by them.

The policy of an interchangeable personnel should be still further extended until every barrier is removed to transfers, details, and promotions from any position in the service to any other position without regard to geographical lines. In this way the service at every post office will be properly recognized as a part of one composite service and be constantly improved and invigorated by the introduction of new ideas and personalities from other post offices, and the whole service benefited through the broadening of the opportunity for advancement opened to all from the lowest to the highest employee.

To accomplish this objective the civil-service classification of at least second and third-class postmasters is necessary. Eventually all postmasters should be permanently attached to the service. The care observed by this administration has brought into the service postmasters of a high degree of business and executive ability. Each year of their service should add to their value and efficiency, and their retention should depend only on their capacity and willingness to perform acceptable service.

RAILWAY MAIL PAY.

An unfortunate impression has gone abroad that this administration wishes to treat unjustly the transportation companies of the country. This is wholly erroneous. What is desired is the just thing to the companies and to the people. The Postmaster General's recommendation to Congress of a space basis for compensating transportation companies for carrying the mail is, in his opinion, the best and most equitable, and for this he has corroborative evidence from other countries. Canada, for instance, has for more than two years paid its railroads for

transporting the mails upon a basis of space and has had no difficulty whatever in administration. I am advised that first-hand information from the postal officials of that country is to the effect that the space plan is most simple and practicable and that it will be continued. Furthermore, it is stated that the two largest companies operating in that country petitioned the postmaster general of Canada for a revision upward of their rates to the level of the rates proposed to be paid the railroads of the United States under the Moon space bill now pending in our Congress, stating that they can reasonably agree to accept these rates in Canada.

SUPERANNUATION.

The increased exactions of the Postal Service because of the parcel post and other business features, necessitating the employment of able-bodied and alert persons, makes a practical method of dealing with superannuates in the service a vital and urgent problem. It is known that the loss sustained by the Government on account of superannuation of its employees in all departments aggregates many millions annually. A canvass of first and second class post offices seems to indicate that this loss is probably proportionately less in the Postal Service than elsewhere in the Government. I use the word "proportionately" in this connection because the Postal Service carries about 80 per cent of all the civil-service employees in the Government service. It is believed that in the other departments the question is even more acute than in the Postal Service, and hence it hardly seems likely that Congress will overlook this and approve of a retirement plan that does not comprehend civil-service employees in all the departments of the Government.

My careful study of this subject has led me to conclude that there is no advantage to be gained in supporting a straight pension plan or any plan that involves large annual appropriations by Congress. The practicable plan to be adopted would appear to be contributory, and should impose only a small direct burden on the employees and on the Public Treasury. The mutual feature can not seriously be objected to in view of the fact that the Government is a peculiarly permanent institution, with a natural tendency to increase from year to year. The compulsory contributions of the employees could be made as low as 1 per cent of the monthly salary, which will impose no undue burden on anyone. Much thought has been given in the last three years to this problem, and its solution should not be longer delayed. In the language of the St. Louis platform, it is necessary "to the end that a higher standard of efficiency may be maintained."

POSTAL SERVICE COMPARED WITH PRIVATE CORPORATIONS.

These service problems continually remind us that our postal institution has reached the business proportions of the largest corporations. The modern business corporation is one of the most remarkable institutions developed by our American civilization. The control of business by this form of association of individuals is peculiar to America, and has given rise to the greatest economic problems with which our Government has had to deal. The benefits of the corporation in consolidating capital and devoting it to the development of the country along the lines of large and efficient production and distribution must be recognized. The evils of the corporations have been banished and the teeth of predatory wealth drawn by the establishment and development of the Interstate Commerce Commission, the Federal Reserve Board, and the Federal Trade Commission, to which will soon be added a Rural Credits Commission, to assist the farmer, and a Federal tariff commission, to cooperate with Congress in studying customs, industrial, and tax problems. These institutions are the umpires of democracy that will see to it that there is fair play between the humblest citizen and the greatest corporation.

Recognizing, then, that the corporation is the most efficient organization for the conduct of big business, and that it is, when properly controlled, neither undemocratic nor un-American, let us see what comparison may be made between the big business of the Postal Service and that of the private corporations.

The American Postal Service is the only branch of the National Government that bears a striking resemblance to the great business institutions which are owned and operated by private citizens. In fact, a specious comparison may be drawn between the Postal Service and any of the great corporations through which huge amalgamations of capital are nowadays made effective in the activities of private business. The proceeds of taxation is our capital, the people are our stockholders, Congress is our board of directors, the President of the United States is the president of our enterprise, the Postmaster General is our general manager, the officers of the department are his staff lieutenants, the department is our head office, the post offices are our local branches, and the great army of clerks and carriers is the labor force of the postal organization. The raw material of this public utility is the mailed letter and parcel; its finished product is the letter and parcel delivered. Its business is the communication of intelligence and the transportation of commodities.

The Postal Service resembles a profit-sharing corporation, for its employees are all stockholders, and so are its patrons.

In so far as the Postal Service may be compared with the private corporations, it is in some respects the greatest of them all. It operates more branches, utilizes more agencies, completes more transactions, serves more people, employs more labor, and is more vital to the welfare and happiness of all the people than any of them.

The Postal Service has become a wonderful organization, transacting an average of $1,000,000 worth of business a day, through about 300,000 human agents, at 56,000 post offices, to which must be added about 6,500 stations of all kinds, handling annually about 1,000,000,000 parcels, 10,000,000,000 pieces of first-class mail, and more than 1,000,000,000 pounds of second-class matter, serving 100,000,000 people in America, and conveying mail to all parts of the world.

In so far as the monopolistic tendency of the private corporations is concerned, the Postal Service is the most complete of all trusts and yet the most democratic of all our institutions.

A deeper study, however, of the analogy which we have drawn will show conclusively that the apparent similarity of the Postal Service to private corporations is only superficial. There is a fundamental difference running throughout the entire comparison. It is a difference of origin, ideals, policy, and purpose; and this difference colors every function and activity, changes the relationship of every patron, and alters the status of every employee of the Postal Service as compared with the private corporation.

Corporations, it is said, have no soul. The genius of the American Government is the soul of the Postal Service, which is a common cooperative endeavor of the people. It has its origin, not in an act of Congress nor in the private bill of a State legislature, but in the Constitution of the United States; its ideal is not dividends, but the preservation of the Union and the advancement of civilization by the establishment and maintenance of means of communication; its policy is to operate its service, not for profit, but for the convenience of the public; and its purpose is in every way democratic, purely and entirely unselfish.

NATIONAL POLICIES AND PROSPERITY.

In principle there is all the difference in the world between working for some of the people and working for all of the people. Any plan of action affecting the Postal Service that does not take this principle into account is erroneous and, if not doomed to failure, will be pernicious in its effects.

It has always been properly considered an honor and a privilege to be intrusted with the commission of postmaster, but you have been called to serve during one of the most epochal periods of our country's existence and your responsibilities are correspondingly greater than those of your predecessors. The heart of every true American swells with gratitude over the fact that during the titanic struggle raging in Europe the peace of our country has been maintained with honor. This country has thereby attained first place among the great nations of the world, but as such must assume the greatest responsibilities in maintaining proper conditions at home and in bringing order out of chaos for the future generations of the countries involved in the war cataclysm.

The result of the policy thus far pursued is that, as we have sown peace, not war, our country is to-day reaping the harvest of prosperity. No one can deny that this is the greatest era of prosperity in American history. Prosperity permeates every corner of our land. Every kind of business is pulsating with it; labor is employed throughout the land at the highest wages ever known and the demand for labor in all parts of the country is in excess of the supply. We have a full dinner pail and all should stand for peace, plenty, and prosperity.

The national wealth of the country has increased since 1912 from $187,000,000,000 to $228,000,000,000; the money in circulation from about $3,250,000,000 to $4,000,000,000; bank surplus from $170,000,000,000 to $260,000,000,000; railroad receipts from $2,900,000,000 to $3,250,000,000; the value of agricultural products from $9,250,000,000 to $10,500,000,000; the American railroads have this fiscal year earned the enormous sum of $1,000,000,000 net; and the debt of the United States to Europe has this year been decreased from $4,000,000,000 to $3,000,000,000.

There is no reason to suppose that this fortunate condition is the high-water mark of our national prosperity. The constructive program of the national administration has just begun, and the splendid successes already achieved have given all classes and parties a remarkable confidence in the projects

now under consideration. After years of fruitless agitation and discussion of the complicated subject of rural credits it has remained for this administration to propose a practicable measure on which all can unite. In connection with rural credits the following editorial from the Washington Post is interesting and instructive:

The fact that a majority of the Republicans in both branches of Congress have voted for the administration's rural credits bill is an assurance that the measure will bring about a real reform in the interest of the farmers of the country. The unanimity with which Congress put through this measure presages the same success for it that attended the establishment of the new banking and currency system.

The rural credits bill and good roads bill, both of which will now go to the President for his signature, should make the lot of the farmer much easier. The farmers have been obtaining good prices for their products and are generally prosperous, but the fact must be faced that the percentage of farmers who own their own land without incumbrance is extremely small.

When Germany put her rural credits system into effect, the percentage of farmer tenants was about as large as is the case in the United States. Under the German credit system, however, nearly 90 per cent of the German farmers now own their own land.

With Federal aid to road construction and this new rural credits law it should not be long before the same fortunate condition is brought about in the United States.

The gratifying prosperity of the country and the still more gratifying prospect of continued and increased prosperity are not the result of chance, but have been promoted by well-defined causes which are both legislative and administrative. However, as important as are these causes, economically and commercially, they are secondary to those responsibilities which this country must assume as the guardian of the hopes of humanity throughout the world. America is the great lighthouse toward which shipwrecked Europe is looking for peace and happiness. Our flag, as never before, must represent justice and fair dealing, both at home and abroad.

Democracy respects, encourages, and protects the individual citizen and prompts love of country and the highest evidences of good citizenship. It accordingly always expects the individual citizen to assume his proper responsibilities and awakens in him keen interest in his country and its government. It was never intended that government service should curtail or interfere with the exercise of a person's proper duties as a citizen. Hence it was that the Postmaster General in his interpretation of political activity on the part of unclassified postmasters has stated that no objection is interposed to unclassified postmasters contributing political news articles or otherwise discussing public issues provided the postmasters do not engage in personalities or by word or act give rise to criticism or complaint that might reflect on the service. Detrimental effects would naturally result from postmasters holding official positions on political committees or becoming candidates for elective offices or using their offices to control political movements, and hence such activities are properly prohibited and discouraged.

HYPHENATED AMERICANS.

Much has been said of the problem of the hyphenated American. The counterpart of this problem is found in our private lives. When our sons and daughters establish homes for themselves we can no longer expect their obedience and support. Holy Writ is their authority for relinquishing the old bonds and cleaving to the new. It is not that they should love the old home less, but that they must love the new home more. This is the way of nature and of all right-thinking people. We must admire the American who cherishes with affection the memories of the land of his birth, but may we not expect that when this view is properly presented in the hour of trial every foreign-born American will unhesitatingly declare his undivided allegiance to the land of his choice. The acid test of the foreign policies of our President in maintaining peace with honor is that every country involved in the European war would to-day gladly exchange places with us and weld the broken links of international friendships and home circles. The difference between the conditions here and in Europe is the difference between an aeroplane with and without its stabilizer. The stabilizer is the instrument which keeps the airship equipoised. This is what Woodrow Wilson has been for the internal and external relations of our country and has prepared the United States for its position to become the stabilizer of the world.

POSTMASTER MAY CONTRIBUTE TO PEACE AND PROSPERITY.

What Woodrow Wilson has been and is in the United States is what it is desired that you be in your respective postal districts, educating your patrons to the most intelligent and effective methods of using the Postal Service and of cooperating with you and the department in both postal and civil duties to the end that our people may be more prosperous, more virtuous, happy, and contented.

The commanding and paramount characteristic in our constructive civic work is the spread of intelligence. The fundamental factor in this progress is the Postal Service. The education and enlightenment of the people may truly be said to be the sure panacea of democracy for every social and political evil. Literally, by the extension and utilization of postal facilities this Nation will accomplish the destiny of democracy, the principles of which ever cherish and maintain the sacredness of justice to all and special privileges to none.

---

**Address by Dr. Edward G. Acheson.**

## EXTENSION OF REMARKS
OF
## HON. J. WILLARD RAGSDALE,
OF SOUTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,

*Thursday, July 27, 1916.*

Mr. RAGSDALE. Mr. Speaker, on the occasion of the recent visit of the Foreign Affairs Committee to Niagara Falls, N. Y., we had an opportunity to learn much as to the proper utilization of the enormous power of Niagara River. Among the most pleasant and instructive incidents was an address delivered by Dr. Edward G. Acheson—at a beautifully appointed lunch given to the committee by the Niagara Board of Trade and presided over by its chairman, that "prince of good fellows," Mr. Salt—the real merits of which can only be appreciated by those who read it and which I now offer with the hope that it be printed in the CONGRESSIONAL RECORD.

ADDRESS DELIVERED BEFORE THE FOREIGN AFFAIRS COMMITTEE OF THE HOUSE OF REPRESENTATIVES, NIAGARA FALLS, N. Y., JULY 13, 1916, BY DR. EDWARD G. ACHESON.

Mr. Chairman and gentlemen of the Foreign Affairs Committee of the House of Representatives, I understand the purpose of your present visit to Niagara Falls is to give you an opportunity to form a clear and accurate judgment for or against the advisability of permitting a further diversion of water from the Niagara River for power purposes, and, further, its bearing upon the international relations between the United States and Canada.

I have been honored with an invitation to address you, and it is with great pleasure I grasp the opportunity to place before you a few facts which, I hope, you will consider of sufficient importance to bear weight in the formation of your decision.

With your kind permission, I will give you a brief glance at my own activities in and about Niagara Falls and the results I have been able to accomplish, my excuse for presenting my own affairs to you being that I know them better than my neighbors. There are, however, many other manufacturers who could advance equally strong arguments as those I am about to place before you.

In 1894 I was located in Monongahela City, in the very heart of the bituminous coal fields of Pennsylvania. I was operating a small plant manufacturing carborundum, the production during that year amounting to 52,190 pounds. The electrical power for the operation of the furnace, in which carborundum was produced, cost too much money to permit of the material being sold for general grinding purposes. The first electric-power plant erected in Niagara Falls was approaching completion. I came to this city and contracted for 1,000 electrical horsepower, built a plant, and during the year 1896 the production of carborundum jumped up to 1,100,000 pounds. During the following years the business grew until, during 1913, the production amounted to 20,033,000 pounds. Since 1913 the business has shown considerable fluctuation, having dropped to 16,410,100 pounds in 1915, but during the present year, 1916, it is running at the rate of 22,433,600 pounds, this being the maximum possible production of the plant under the present curtailed condition of power production. While you will notice that the production in 1916 shows an increase of 38 per cent over 1915, during this year the orders have been coming in to the carborundum company at such a rate as to represent an increase of 120 per cent over that of 1915. Notwithstanding these facts, the company has not increased the price of its goods. It will not be necessary for me to comment upon the great value of this grinding material in the manufacturing world, it now being practically a necessity in many lines of manufacture.

My second venture in commercial manufacture at Niagara occurred in 1900, 16 years ago. It consisted of the manufacture

of artificial graphite. The development of this new business has been as follows:

In 1900 the production amounted to 860,750 pounds. The following year it had jumped to 2,500,000 pounds, and in 1913 it was 13,633,342 pounds. This business, you will notice, was developed before the European war had taken form; hence it had not been influenced by these world disturbances. Since the beginning of this present year, 1916, the orders for graphite received by the Acheson Graphite Co. have been at the rate of approximately 50,000,000 pounds per year. The company's present plant has a maximum capacity of 40,000,000 pounds per year; while owing to the unfortunate curtailment of power production only sufficient power can be obtained to produce approximately 20,000,000 pounds, and the company faces the further unfortunate condition of possibly being reduced to two-thirds its present output, or 14,000,000 pounds, by reason of the Canadian Government having called for a large amount of power now being utilized in the United States.

Let us more closely examine these orders for 50,000,000 pounds of artificial graphite. They are for a material that did not exist 16 years ago. The coming into being of this material has permitted the creation of vast enterprises previously impossible. For instance, as an example, we will take the manufacture of caustic, bleach, and chlorine, all important to our present-day life. Competent authorities have stated that their efficient manufacture would not be possible did the artificial graphite not exist. The existence of the Niagara-made graphite has been of incalculable value in hastening the liberation of the United States from the necessity of buying foreign-made products essential to our welfare and growth.

Alongside of and coincident with the growth of these domestic values is the fact that no less than 29 per cent of this year's business of the Acheson Graphite Co. is export trade. Further, these orders from abroad would have been vastly greater had it been possible to fill orders that could be had for the mere asking, and this is happening at the very time Norway, with her great water powers, is becoming restless and shows signs of wishing to enter the world's market with an artificial graphite.

Is it not worth while caring for this export trade? We are at this moment witnessing a great movement of the American manufacturing world toward the creation of a vast export trade. The Government is taking a friendly interest in this movement. Are these Niagara Falls interests too small to be taken into account?

You are perhaps thinking and may say I am an interested party and am only hoping to advance my own interests, but it is possible you may not think so badly of me when I tell you the Acheson Graphite Co. has not advanced its selling price one cent since this onrush of orders. No advantage has been taken of the present great demand for its products.

My purpose in giving you statistics regarding these enterprises is not with the hope of your rendering me assistance to advance my own interests, except as they may be advanced with others. I am presenting them to illustrate what may be done with Niagara Falls power in furthering the interests of our country at large. Many of the products produced in this city are absolutely essential to the successful operation of industries in cities and towns far removed from Niagara Falls.

You may say this is all very good, but why not manufacture these materials somewhere else and preserve the Falls? This brings us to the very heart of this whole matter. Previous speakers have already answered this question better than I am prepared to do. The subject is, however, very much greater than the simple matter of supplying more power and greater facilities to the factories of Niagara Falls. It is nation wide in importance. You, as a committee of the National Congress, have a duty to perform and a great responsibility rests upon you.

While you are with us, you will not fail to be impressed with the fact that this is a novel industrial community. Niagara Falls is no longer the pleasure resort of former years. The scenic beauty of the Falls is still with us, but the true value of the Falls and this community, in so far as the country at large is concerned, consists in the vast quantities of manufactured products distributed throughout the world from our local factories, many of which were only made possible of commercial production by the generation of electricity through the diversion of water from the Niagara, and in the invisible, vibrating current of power sent out on radiating threads of copper to cities, towns, and villages within a radius of 100 and more miles. Many of the factories located here on account of the power being cheaper. They have grown to large magnitude, and it is not an easy matter to move them to other localities.

I wish I had the gift of ready language, that I might better impress you with what to me appears to be your opportunity to use your great influence and directing power in bringing about a movement which would be of incalculable benefit to our entire country and more particularly our posterity. Would that I might make one small remark that would cause you to depart from what, to me, seems a wicked course, the failure to properly use our great natural resources. We are at the present moment within hearing of the roar of one of the most stupendous forces in the world. Magnificent and grand from the scenic point of view, it certainly is, but to me it would be much grander and more impressive were a larger portion of this vast power being utilized for the present and future welfare of man.

I consider it a veritable crime against our posterity to preserve this great natural, inexhaustible resource in its entirety, or as it now is, for reason of its scenic beauty while we at the same time press forward to the exhaustion of the coal deposits of our country.

We are advised our coal supply will be exhausted in another century. Certainly a goodly time but still not great as we measure the life of nations. There is nothing visionary or fanciful about this early exhaustion of our coal supply. True, we are told of immense coal fields in Alaska, but one can not readily imagine the factories of New York, Pennsylvania, Ohio, or in fact any of the States being supplied from these deposits in the frozen north. Let me impress upon you the fact that a century is not a long period. Three generations will more than cover it. An instance in my own family will well illustrate this: Among the treasures of the family is an invitation from President Washington to one of my grandfathers to dine with him, my grandfather at that time being a member of the Pennsylvania Legislature, and this was more than a century ago. Our own grandchildren may witness the practical exhaustion of our coal, if no steps are taken to conserve it.

I have here a few statistics coming from the United States Geological Survey: The production of anthracite coal in 1913 was 91,524,927 metric tons. Compare these figures with the production in 1820, which I find was no more than 365 tons, and this was two years after the birth of my father. Here are figures on the production of bituminous coal in the United States: In 1895 it amounted to 124,627,000 metric tons. In 1900 it had increased to 191,256,000 tons and in 1913 it had jumped to the great figure of 478,523,000 metric tons. You will not find it difficult to see the exhaustion of the coal deposits a century hence.

Perhaps you are not interested in the welfare of the people who will live a century hence, but I assure you that if those people find that a great natural inexhaustible resource for power, as is the Falls of Niagara, has been preserved to them on account of its scenic beauty, while at the same time the country has been denuded of its coal supply to produce power, these far-away people will be very, very much interested in what you and all of us, of this present generation, have been doing. Unless we have already done so, they will find themselves under the necessity of diverting the water from the river for power purposes; hence they will have neither coal, which we will have used, nor scenic beauty, which we are trying to preserve.

In closing, gentlemen, permit me to leave with you the question, "What is the true, the real conservation of our natural resources? Is it not the full and economic use of the inexhaustible for the preservation of the exhaustible?"

---

## The Real Reason for the Opposition to the Child-Labor Bill.

### EXTENSION OF REMARKS

OF

### HON. ISAAC SIEGEL,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 25, 1916.*

Mr. SIEGEL. Mr. Speaker, the question has been frequently asked why there is opposition in some of the States to the enactment of the child-labor law. We have frequently heard the statement made here that the sole opposition to it was based upon the fact that southern manufacturers would sustain great financial loss. The same argument has been advanced in every State before the enactment of similar laws, and with readjustment of conditions in compliance with the mandate of similar

statutes the same manufacturers have successfully conducted their business and grown prosperous.

There is, however, another reason for the opposition to this measure. We find it in the hearings given before the Committee on Labor when witnesses were being heard both in favor and in opposition to this bill.

One of the gentlemen who testified in opposition to the bill was Mr. David Clark, of Charlotte, N. C., editor of the Southern Textile Bulletin. At page 4 of the hearings he testified as follows:

Mr. CLARK. My position is that I am in close touch with the textile industry of the South, and have been for 16 years—8 years a cotton manufacturer and 8 years the editor of two publications, and for the last 5 years editor of the present publication, which I own.

At page 5 he stated that there were 8,450 children under 16 years employed in the mills of South Carolina, or one-sixth of the total number of employees.

At page 20 we find the following testimony:

Mr. CLARK. When these people come from the mountains they do not believe in education. That is the reason we do not have compulsory education in North Carolina, because the isolated mountain districts would go Republican if we forced compulsory education on them.

At page 23 we have the following astonishing testimony:

Mr. NOLAN. You state that the question of compulsory education in North Carolina is a political question?

Mr. CLARK. It is optional; yes.

Mr. NOLAN. What do you mean by a political question?

Mr. CLARK. Well, the State is Democratic—most of it—and our western counties are largely isolated communities. Those people are on the balance of power, and if we put on a State-wide system of compulsory education it would swing the balance the other way, because people of the isolated rural sections do not want compulsory education.

Mr. NOLAN. Do you not think you are giving a mighty lot of consideration to the minority down there?

Mr. CLARK. If it will make them the majority; yes, sir. They have been in the majority in our tenth district. We often elect a Republican Congressman from there. We have one in this Congress.

Mr. COOPER. You people in North Carolina blame your condition on the Republicans?

Mr. CLARK. Oh, no; they blame it on a certain class of people who live in the mountains.

Mr. NOLAN. They do not want to educate the Democrats, because they are afraid that they might vote the Republican ticket if they were educated. [Laughter.]

Mr. CLARK. They vote the Democratic ticket now. If you force on them compulsory education, they might change around and vote the other way for spite.

In other words, we are informed by Mr. Clark that if a child-labor law is enacted the children of North Carolina will have forced upon them compulsory school education, and, in return, they might learn sufficient to vote the Republican ticket.

Mr. Speaker, the people of this country are constantly learning why illiteracy continues in some parts of our Republic, and particularly so in those States where laws for the protection of children from labor in mills are unknown. Now, for the first time they learn that the enactment of this child-labor bill means the saving of thousands of children from ignorance and illiteracy, opening the doors of the schoolhouse to them, and giving them an opportunity to learn to think for themselves; and, so thinking, eventually casting their votes at majority for the Republican Party, that freed the slaves and now is determined to free the country from child labor and give the child an opportunity to fit himself, mentally, morally, and physically, to properly assume his duties of citizenship, determined to do his duty to his country at all times. I have voted for this bill, and every American citizen who believes in equal opportunity for all men and has a spark of love for America's growing children will take real pride in seeing it become a law.

## The Rural-Credit Law and Suggestions as to How Farmers May Secure Loans.

### SPEECH

OF

### HON. PATRICK D. NORTON,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, June 27, 1916.*

The House had under consideration the bill (S. 2986) to provide capital for agricultural development, to create standard forms of investment based upon farm mortgage, to equalize rates of interest upon farm loans, to furnish a market for United States bonds, to create Government depositaries and financial agents for the United States, and for other purposes.

Mr. NORTON. Mr. Speaker, the Committee on Banking and Currency is to be congratulated on the results that have been reached in framing this legislation. The members of the committee have done much hard and trying work and have, as I know, employed a great part of their time for many months in the consideration and the preparation of this bill. I believe that every member of the committee has labored most earnestly and honestly in endeavoring to present to the country legislation on this most important subject, that in its operation will be of lasting assistance and encouragement to the great agricultural interests of the Nation. While as it is well known to the Members of the House that the bill does not conform to my own idea of the best system of rural-credit legislation that might be adopted for this country, still, believing as I do that this bill, when enacted into law will give to the country a rural-credit system that will be of far-reaching benefit to the improvement of agricultural and rural-life conditions in the Nation, I feel free to vote for the report of the conference committee on the bill as I voted for the bill when it passed the House.

The farmers of this Nation in the past have not had equal advantages with the commercial interests of the country in securing credits to carry on their business. While farm realty is among the best and safest security on earth, heretofore our laws and our systems of finance have neither been adapted to conditions under which our farmers labor nor to the period of time when they are best able to meet their loan or credit obligations.

The system proposed by this bill aims to standardize and safeguard the issuance of farm-loan bonds so that they will be attractive to investors at low rates of interest and so that their sale will supply ample funds for extending long-time land-mortgage loans to farmers at reasonable interest rates, the principal and interest of these loans being made payable on the amortization plan. It is most gratifying to me to know that this legislation is now safely on its road to final passage and that it will within a short time be written upon our statute books.

In my judgment this is epoch-making legislation and will mark a great progress both in farm development and in the ownership of farm homes in this Nation. While I expect much good to come from this legislation, I have no extravagant expectations of the results to follow from it. Closely acquainted as I have been since my childhood days with farm life and farm conditions, I realized that interest rates, however low they may be, will never be a substitute for thrift and industry on the farm. The careless, indifferent, lazy, or spendthrift farmer will not and can not be expected to make a success of his occupation if credit were afforded him at practically no interest charge at all. This system, however, will, I am confident, help and aid the thrifty and industrious farmer and make it more easy for him to provide a comfortable home and a comfortable living for himself and his family and a competence for his old age.

It will help and enable the thrifty and industrious young man who has accumulated savings of a few hundred dollars to purchase a tract of farm land on which he can make a comfortable and happy permanent home for himself and those dear to him and pay in full for his farm home out of the profits of the live stock, grain, fruits, or other products produced upon it.

I feel what I hope is a pardonable pride in the activity I have taken during this and the Sixty-third Congress in advocating the early enactment of a helpful and beneficial Federal rural-credit system for the Nation. No other legislation that has been before this Congress in a half century has been so much needed or promises greater possibilities to aid in the development of the greatest of all industries of this country than does legislation for a sound and workable Federal system of rural credit. So that a concise and clear understanding of the bill may be had, I desire to briefly call attention to its salient provisions.

On the whole, the bill provides for an organization somewhat similar to that of the Federal Reserve Banking System, but modified to meet the needs of the particular character of credit required by the agricultural interests of the country.

FEDERAL FARM-LOAN ACT.

The law is to be known as the Federal farm-loan act.

FEDERAL FARM LOAN BOARD.

The administration of the Federal farm-loan act is to be under the direction and control of the Federal Farm Loan Board. This board is to consist of five members. The Secretary of the Treasury is to be an ex officio member of the board and its chairman. The other four members are to be appointed by the President, with the advice and consent of the Senate. Not more than two of the four members to be appointed by the President may be members of the same political party. Each of the appointed members is to receive a salary of $10,000 a year and necessary traveling expenses. At the beginning, one of the members appointed by the President is to be appointed for two years, one for four years, one for six years, and one for eight

years. Thereafter each member of the Farm Loan Board is to be appointed for a term of eight years. No member of the Farm Loan Board is permitted, during the time he holds office on the board, to be an officer or director of any other institution, association, or partnership in banking or in the business of making land-mortgage loans or selling land mortgages.

FEDERAL FARM-LOAN BANKS.

The continental United States, exclusive of Alaska, is to be divided into 12 districts, each to be known as a Federal land-bank district. The districts are to be apportioned with regard to the farm-loan needs of the country, but no district shall contain a fractional part of any State. In each district a Federal land bank is to be established by the Federal Farm Loan Board. Each Federal farm-land bank is to be temporarily managed by a board of five directors appointed by the Federal Farm Loan Board. The permanent management of each farm-loan bank is to be under the direction of a board consisting of nine directors. Six of these shall be known as local directors, and are to be chosen by and be representatives of national farm-loan associations. The other three directors are to be known as district directors, and are to be appointed by the Federal Farm Loan Board.

CAPITAL STOCK OF FEDERAL LAND BANKS.

Every Federal land bank must have a capital of not less than $750,000. The capital stock of each Federal land bank is divided into shares of $5 each. These shares may be subscribed for and held by any individual, firm, or corporation or by the government of any State or by the Government of the United States. Stock owned by the Government of the United States in Federal land banks is not to share in or receive any dividends. All other stock is to share in dividend distributions without preference. It becomes the duty of the Farm Loan Board, as soon as practicable after the passage of this law, to open books of subscription for the capital stock of the Federal land bank in each Federal land-bank district. If within 30 days after opening the stock subscription books any part of the minimum capitalization of $750,000 shall remain unsubscribed, it then becomes the duty of the Secretary of the Treasury to subscribe and to pay for the balance thereof for the United States Government. I might say here that it is the consensus of opinion of those who have given the most study to this bill that practically all, if not all, the original stock subscription to the Federal farm-land banks will necessarily have to be made by the Federal Government.

RETIREMENT OF ORIGINAL CAPITAL OF FEDERAL FARM-LAND BANKS.

When the subscriptions of capital stock by national farm-loan associations shall amount to $750,000 in any Federal farm-land bank the bank shall then apply semiannually 25 per cent of all sums thereafter subscribed to capital stock to the payment and retirement of the shares of stock which were issued to represent the subscriptions to the original capital of the bank. Thus when all the original capital stock is paid for and retired, the then capital stock of the bank would all be owned by farmer borrowers.

GOVERNMENT DEPOSITARIES.

The Federal land banks and joint-stock land banks, when designated for that purpose by the Secretary of the Treasury, shall be depositaries of public money, except receipts for customs, and they may also be employed as financial agents for the Government and must perform all such reasonable duties as depositaries of public funds and financial agents of the Government as may be required of them. No Government funds deposited, however, are to be invested in mortgage loans or farm-loan bonds.

NATIONAL FARM-LOAN ASSOCIATIONS.

Any 10 or more persons who are the owners, or who are about to become the owners, of farm land qualified as security for a mortgage loan under this act, may subscribe to articles of incorporation and organize a national farm-loan association and secure a charter for the same from the Federal Farm Loan Board. In making application for a charter, the subscribers or organizers of the national farm-loan association must make application to secure for themselves from the farm-land bank of their district farm loans in the aggregate amount of not less than $20,000, no loan to be for less than $100 and none for more than $10,000. The charter granted each national farm-loan association designates the territory in which the association may operate and make loans. Every national farm-loan association must elect a board of directors of not less than five members, each of whom shall, during the term of his office, be a bona fide resident of the territory within which the association may be authorized to do business. The board of directors shall then choose a secretary-treasurer, who shall receive such compensation as the board of directors shall determine. The secretary-treasurer of every national farm-loan association shall act as custodian of its funds and deposit the same in such bank as the board of directors may designate, and pay over to borrowers all sums received for their account from the Federal land bank upon first mortgages.

The secretary-treasurer shall collect, receipt for, and transmit to the Federal land bank payment of interest, amortization installments, or principal arising out of loans made through the association. He shall be the custodian of the securities, records, papers, certificates of stock, and all documents relating to or bearing upon the conduct of the affairs of the association, and is required to furnish a suitable surety bond, to be prescribed and approved by the Federal Farm Loan Board.

THE POWERS OF NATIONAL FARM-LOAN ASSOCIATIONS.

Every national farm-loan association shall have power to indorse and thereby become liable for the payment of mortgages taken from its shareholders by the Federal land bank of its district and to receive from the Federal land bank of its district funds advanced for first-mortgage loans and to pay over these funds to its shareholders on receipt of duly and properly executed first mortgages.

RESTRICTIONS OF LOANS BASED ON FIRST MORTGAGES.

All loans shall be secured by first mortgages. Every mortgage shall contain an agreement providing for the repayment of the loan on the amortization plan. Loans are to be made for a period of not less than 5 years and not more than 40 years. Additional payments of $25 or any multiple thereof may be made on the principal after the loan has run for a period of five years. On any installment due after five years from the making of the loan the entire principal of the loan may be paid under rules and regulations prescribed by the Federal Farm Loan Board.

RATE OF INTEREST.

The rate of interest, exclusive of amortization payments, shall not exceed 6 per cent on any loan, and in no case shall it exceed a rate of more than 1 per cent greater than the interest rate of the last issue of farm-land bonds sold by the farm-land bank of the district. For illustration, if the last issue of the land-bank bonds sold at a rate of 5½ per cent per annum, the rate on the mortgage to the farm borrower could not then exceed 4½ per cent per annum.

No loan shall exceed 50 per cent of the value of the land mortgage and 20 per cent of the value of the permanent insured improvements. No loan shall be made to any person who is not at the time or shortly to become engaged in the cultivation of the farm mortgaged. In case of the sale of the mortgaged land the Federal land bank may permit the mortgage and the stock interest of the vendor to be assumed by the purchaser. In case of the death of the mortgagor, his heirs or his legal representatives have the right, within 60 days after his death, to assume the mortgage and stock interest of the deceased.

POWERS OF FEDERAL LAND BANKS.

Every Federal land bank is given, among other powers, the power to issue, subject to the approval of the Federal Farm Loan Board, and to sell farm-loan bonds, to invest such funds as it may have in the purchase of qualified first mortgages on farm lands located within the Federal farm-land district within which it is organized or for which it is acting, and to acquire and dispose of such real or personal property as may be necessary or convenient for the transaction of its business.

RESTRICTIONS OF FEDERAL LAND BANKS.

Federal land banks shall not accept deposits of current funds payable on demand except from its own stockholders, nor shall it transact any banking or other business not expressly authorized in the act. A Federal land bank has no right or authority to accept other than first mortgages on real estate, and its outstanding farm-loan bonds can not at any time exceed twenty times the amount of its capital and surplus.

AGENTS OF FEDERAL LAND BANKS.

Whenever after this act has been in effect for one year national farm-loan associations have not been formed and are not likely to be formed in any particular community the Federal Farm Loan Board may, in its discretion, authorize the Federal farm-land bank of the district to make loans on farm lands in that community through a designated agent. Such agent must be a duly incorporated bank, trust company, mortgage company, or a savings institution chartered by the State in which it has its principal office. All loans made through designated agents shall be subject to the same restrictions as if made through national farm-loan associations, and each

borrower must contribute 5 per cent of the amount of the loan to the capital of the Federal land bank, and he will receive a stock certificate from the Federal land bank for the amount of his contribution.

JOINT-STOCK LAND BANKS.

Corporations, to be known as joint-stock land banks, may be formed by any number of persons, not less than 10, for the purpose of carrying on the business of lending on farm-mortgage security and issuing farm-loan bonds. The joint-stock land banks are private profit-sharing institutions and are distinct and separate from the system of Federal farm-land banks. A joint-stock land bank must have a capital stock of not less than $250,000. These banks are to be under Federal supervision. Each bank is authorized to issue farm-loan bonds in an amount not to exceed fifteen times its capital and surplus. A joint-stock land bank shall in no case charge a rate of interest on farm loans exceeding by more than 1 per cent the rate of interest on the last series of farm-loan bonds issued by the bank.

EXEMPTION FROM TAXATION.

Every Federal land bank and every national farm-loan association, including the capital and surplus and the income derived therefrom, is exempt from Federal, State, municipal, and local taxation, except taxes on real estate held, purchased, or taken by the bank or association in the course of carrying on its regular business. First mortgages executed to the Federal land banks or to joint-stock land banks and all farm-loan bonds issued under provisions of this bill are held to be instrumentalities of the Federal Government, and they and the income derived from them are exempt from Federal, State, municipal, and local taxation. The exemption as provided in this bill of mortgages and farm-loan bonds from taxation is a most important feature of the bill. This exemption from taxation will greatly add to the popularity of these securities among investors and result in the sale of the bonds at a considerably lower rate of interest than they would otherwise sell for if they were subject to taxation.

HOW A BORROWER SECURES A LOAN.

A borrower can only secure a loan through being a member of a national farm-loan association, if one is organized in the community in which he resides. If there is no such organization in his community within one year after the passage of this bill he may then be able to secure a loan through some agent in the district designated by the Federal Farm Loan Board to negotiate loans for the Federal land bank of his district.

The farmer desiring to make a loan makes application for the loan to the secretary-treasurer of the national farm-loan association in his community. In this application the borrower agrees to take 5 per cent of the amount of the loan in stock in the Federal land bank of the district. His application for a loan gives a full description of the premises to be mortgaged and recites the purpose for which the loan is to be made. The application when received by the secretary-treasurer of the national farm-loan association is referred to the loan committee of the association. The land on which security is to be given is examined and appraised by the loan committee, and if the application is found to be satisfactory the loan is approved by the board of directors of the national farm-loan association and the applicant then becomes a member of the national farm-loan association and secures his loan from the Federal land bank of the district. For illustration: If a man having a tract of land worth $1,600, with improvements upon it of the value of $1,000, desired to make the maximum loan allowed to be made on such property under the terms of this bill, he would first make application to the secretary-treasurer of the local national farm-loan association. If his application is found satisfactory by the examining committee of the national farm-loan association, and is approved, he would be entitled to a loan of 50 per cent of the value of the real property, or 50 per cent of $1,600, which would be $800, and he would be entitled to a loan of 20 per cent of the value of the improvements on the land, which in this case would be 20 per cent of $1,000, making $200. He would thus be entitled to make a maximum loan upon his property of $1,000. After his loan application has been approved he would execute a mortgage for $1,000 to the Federal farm-land bank of the district. He would then receive as proceeds of this mortgage from the national farm-loan association $1,000 less the cost of appraising the land, the recording fees, the cost of abstract of title, and 5 per cent of the amount of the loan, which would be applied for the purchase of stock in the farm-land bank. This stock in the Federal land bank, amounting in this case to $50, would be held by the national farm-loan association as part security for the payment of the loan, but the borrower would be entitled to all dividends and profits on the stock. The result of the application for a loan of this kind would be approximately as follows:

| | |
|---|---|
| Security offered by borrower: | |
| Land valued at | $1,600 |
| Improvements valued at | 1,000 |
| Total value of borrower's land and improvements | 2,600 |
| Estimated cost to borrower: | |
| Subscription to stock in land bank | 50 |
| Cost of abstract of title (estimated) | 6 |
| Cost of examining abstract (estimated) | 3 |
| Cost of appraisement (estimated) | 10 |
| Cost of recording mortgage (estimated) | 3 |
| Total cost to borrower | 72 |
| Total loan borrower can obtain | 1,000 |
| Cash to be paid borrower | 928 |

If, as it is fair to do, his stock in the farm-land bank is considered as an investment, it is seen that the borrower obtains a loan of $950 at an approximate cost of $22.

REPAYMENT OF THE LOAN.

Having given a brief analysis of the manner in which the borrower makes the loan, the next important step is the repayment of the loan. The borrower, at the time he makes his application, determines according to his circumstances the period of time for which the loan is to run. As before stated, this period can extend for not less than five nor more than 40 years. The repayment must be made upon the amortization plan. The rate of interest will be the same whether the borrower chooses a long or a short period of repayment, but the annual installments will vary. A larger annual installment will of course be required to repay the loan in 20 years than that required to repay the loan, say, in 40 years.

If the loan of a thousand dollars that I have just taken for an illustration is to bear interest at the rate of 5 per cent, and the borrower desires to have the loan run for a period of 20 years, he will then be required to pay an annual installment of $80.24. The following table shows the manner in which an annual installment of $80.24 made on a loan of $1,000 at 5 per cent interest will mature the loan in 20 years:

| Annual periods. | Total annual payment. | Interest at 5 per cent. | Paid on principal. | Amount of principal still unpaid |
|---|---|---|---|---|
| 1 | $80.24 | $50.00 | $30.24 | $969.76 |
| 2 | 80.24 | 48.48 | 31.75 | 938.00 |
| 3 | 80.24 | 46.90 | 33.34 | 904.67 |
| 4 | 80.24 | 45.23 | 35.01 | 869.66 |
| 5 | 80.24 | 43.48 | 36.76 | 832.90 |
| 6 | 80.24 | 41.64 | 38.59 | 794.31 |
| 7 | 80.24 | 39.71 | 40.52 | 753.79 |
| 8 | 80.24 | 37.68 | 42.55 | 711.23 |
| 9 | 80.24 | 35.56 | 44.68 | 666.56 |
| 10 | 80.24 | 33.32 | 46.91 | 619.64 |
| 11 | 80.24 | 30.98 | 49.26 | 570.39 |
| 12 | 80.24 | 28.51 | 51.72 | 518.67 |
| 13 | 80.24 | 25.93 | 54.31 | 464.36 |
| 14 | 80.24 | 23.21 | 57.02 | 407.43 |
| 15 | 80.24 | 20.36 | 59.87 | 347.60 |
| 16 | 80.24 | 17.37 | 62.87 | 284.46 |
| 17 | 80.24 | 14.23 | 66.01 | 218.59 |
| 18 | 80.24 | 10.93 | 69.31 | 149.28 |
| 19 | 80.24 | 7.46 | 72.78 | 76.50 |
| 20 | 80.24 | 3.82 | 76.50 | |
| Total | 1,604.80 | 604.80 | 1,000.00 | |

An annual installment of $60 a year would mature a loan of $1,000, bearing 5 per cent interest, in a little over 36 years, as is shown by the table following.

| Annual periods. | Annual installment. | Interest at 5 per cent. | Part of installment paid on principal. | Amount of principal still unpaid. |
|---|---|---|---|---|
| 1 | $60.00 | $50.00 | $10.00 | $990.00 |
| 2 | 60.00 | 49.50 | 10.50 | 979.50 |
| 3 | 60.00 | 48.97 | 11.03 | 968.47 |
| 4 | 60.00 | 48.42 | 11.58 | 956.89 |
| 5 | 60.00 | 47.84 | 12.16 | 944.73 |
| 6 | 60.00 | 47.24 | 12.76 | 931.97 |
| 7 | 60.00 | 46.60 | 13.40 | 918.57 |
| 8 | 60.00 | 45.93 | 14.07 | 904.50 |
| 9 | 60.00 | 45.22 | 14.78 | 889.72 |
| 10 | 60.00 | 44.49 | 15.51 | 874.21 |
| 11 | 60.00 | 43.71 | 16.29 | 857.92 |
| 12 | 60.00 | 42.90 | 17.10 | 840.82 |
| 13 | 60.00 | 42.04 | 17.96 | 822.86 |
| 14 | 60.00 | 41.14 | 18.86 | 804.00 |
| 15 | 60.00 | 40.20 | 19.80 | 784.20 |
| 16 | 60.00 | 39.21 | 20.79 | 763.41 |
| 17 | 60.00 | 38.17 | 21.83 | 741.58 |
| 18 | 60.00 | 37.08 | 22.92 | 718.66 |

| Annual periods. | Annual installment. | Interest at 5 per cent. | Part of installment paid on principal. | Amount of principal still unpaid. |
|---|---|---|---|---|
| 19 | $60.00 | $35.93 | $24.07 | $694.59 |
| 20 | 60.00 | 34.73 | 25.27 | 669.32 |
| 21 | 60.00 | 33.47 | 26.53 | 642.79 |
| 22 | 60.00 | 32.14 | 27.86 | 614.93 |
| 23 | 60.00 | 30.75 | 29.25 | 585.68 |
| 24 | 60.00 | 29.28 | 30.72 | 554.96 |
| 25 | 60.00 | 27.75 | 32.25 | 522.71 |
| 26 | 60.00 | 26.13 | 33.87 | 488.84 |
| 27 | 60.00 | 24.44 | 35.51 | 453.28 |
| 28 | 60.00 | 22.66 | 37.34 | 415.94 |
| 29 | 60.00 | 20.80 | 39.20 | 376.74 |
| 30 | 60.00 | 18.84 | 41.16 | 335.58 |
| 31 | 60.00 | 16.78 | 43.22 | 292.36 |
| 32 | 60.00 | 14.62 | 45.38 | 246.98 |
| 33 | 60.00 | 12.35 | 47.65 | 199.33 |
| 34 | 60.00 | 9.97 | 50.03 | 149.30 |
| 35 | 60.00 | 7.46 | 52.54 | 96.76 |
| 36 | 60.00 | 4.84 | 55.16 | 41.60 |

The annual installment necessary to mature in 10, 20, 30, 40, or any other period of years, any loan bearing a given rate of interest can easily be calculated. The long periods allowed for the payment of a loan under the amortization plan will do away with the great burden of expenses and commissions now connected with the renewal of farm-land loans made for short periods, as for three or five years.

The amortization plan provided for in this act will relieve the borrower of the old fear and worry of foreclosure for the nonpayment of the entire principal at the end of the loan period and will afford him an easy method for the payment of his loan, which the ordinary profits of his farm will enable him to do.

---

**On Taxing Copper Smelting and Refining Industries.**

---

## EXTENSION OF REMARKS

OF

# HON. JAMES H. MAYS,

OF UTAH,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, July 27, 1916.*

Mr. MAYS. Mr. Speaker, under the general leave to extend remarks upon the revenue bill, I herewith insert in the RECORD various protests against the tax on copper smelting and refining and answers thereto.

The matter referred to is as follows:

SALT LAKE CITY, UTAH, *July 7, 1916.*

Hon. J. MAYS,
*House of Representatives, Washington, D. C.:*

Please use every effort to defeat proposal in revenue bill reported by House Ways and Means Committee to impose tax on copper smelting and refining. Such tax will revert to producers and consumers and affect our entire mining industry. We regard it unjust to single out this industry because it happens to be enjoying temporary prosperity. Tax burden should be equitably distributed.

SILVER KING CON. MFG. CO.,
By SOLON SPIRO, *President.*

—

JULY 12, 1916.

Mr. SOLON SPIRO,
*President Silver King Consolidated Mining Co.,*
*Salt Lake City, Utah.*

MY DEAR MR. SPIRO: I acknowledge receipt of your telegram protesting against the tax on copper smelting and refining. I received a number of protests from constituents against this feature of the revenue bill and have taken occasion to discuss the question with the members of the Ways and Means Committee and with others interested in the copper industry.

Congressman HAYDEN, of Arizona, introduced an amendment striking out that provision in the bill entirely. His amendment was defeated in the House when in Committee of the Whole, being opposed by both Republicans and Democrats from noncopper-producing States. The argument was made in opposition to his amendment by eastern Members that the income tax was largely paid by the great eastern cities, and that the West and South paid an unreasonably small proportion of the taxes necessary to provide the desired military and naval preparedness. They argued, therefore, that copper-producing States, being most benefited by war prices, should bear their proper share of the burden, and the amendment offered by the Congressman was therefore voted down. The subject may come before the House again, however, upon the question of adopting the conference report; and if so, the request you make will receive due consideration.

With kind regards, I remain,
Very truly, yours,

JAS. H. MAYS.

SALT LAKE CITY, UTAH, *July 7, 1916.*

Hon. J. H. MAYS,
*House of Representatives, Washington, D. C.:*

We note that Ways and Means Committee has reported favorably on a proposed bill to tax copper smelting and refining for additional revenue. We, representing the mining interests of Utah, seriously object to the passage of such a bill classing the copper business as war industry. If law is enacted, it will seriously injure mining companies and be a great blow to mines in the Western States. Utah Chapter of the American Mining Congress solicits your earnest efforts to defeat this provision of the revenue act.

UTAH CHAPTER AMERICAN MINING CONGRESS,
A. B. APPERSON, *Governor.*
A. G. MACKENZIE, *Secretary.*

—

JULY 12, 1916.

Messrs. APPERSON and MACKENZIE,
*Utah Chapter American Mining Congress,*
*Salt Lake City, Utah.*

GENTLEMEN: Upon receipt of your telegram protesting against the tax upon copper smelting and refining I took the matter up with the Ways and Means Committee, but found them laboring under some difficulty in securing the vast amount of revenue required by the Military and Naval Establishments, and they had selected the copper-production industries as being more properly subject to taxation than any other, because of the theory that they had enjoyed excess profits during these war times, and it was more upon the theory of an excess property tax that they singled out this industry.

Congressman HAYDEN, of Arizona, introduced an amendment seeking to amend the bill by striking out that feature entirely. His amendment was defeated by the votes of Republicans and Democrats from noncopper-producing States, the eastern Members representing that the income tax generally was largely paid by the Eastern States and that the West should bear its share of the burden.

Wishing your congress continued success, I remain,
Yours, truly,

JAS. H. MAYS.

—

LOS ANGELES, CAL., *June 28, 1916.*

JAMES H. MAYS,
*House of Representatives, Washington, D. C.:*

The Senate amendment to Post Office bill eliminating space basis of pay, providing for annual weighing of mails and reference to interstate commerce are very vital matters to all small western railroads, and they will receive justice if the amendment becomes law. We will consider it a great favor if you can conscientiously give this amendment your hearty support.

BINGHAM & GARFIELD RAILWAY CO.,
JOHN M. HAYES, *Secretary.*

—

JULY 12, 1916.

Mr. JOHN M. HAYES,
*Secretary Bingham & Garfield Railroad Co.,*
*Salt Lake City, Utah.*

DEAR MR. HAYES: Your telegram from Los Angeles has been received, and the advice you give will receive consideration when the bill to which you refer is before the House.

With kind regards, I remain,
Very truly, yours,

JAS. H. MAYS.

—

SALT LAKE CITY, UTAH, *July 10, 1916.*

Hon. J. H. MAYS,
*Washington, D. C.:*

We trust that you are doing everything possible to defeat proposed tax on copper smelting and refining in revenue House bill reported by Ways and Means Committee. The copper business is not a war industry and certainly should not be taxed as such just because it is temporarily prosperous.

R. C. GEMMELL.

—

JULY 12, 1916.

Mr. R. C. GEMMELL,
*Salt Lake City, Utah.*

DEAR MR. GEMMELL: Before receiving your telegram a number of others of the same tenor had come to the office, and I had discussed the question of the proposed tax on copper smelting and refining with members of the Ways and Means Committee and with Members from the copper-producing States.

It seemed to be the general opinion that an emergency existed; that it was necessary in order to carry out the military preparedness program demanded by the Congress that large additional revenues be collected. It was the desire of the Ways and Means Committee as expressed to me that the revenues be collected from those best able to pay and from those most benefited by the state of war which generally prevails. It was argued that this tax was more in the nature of an excess-profit tax than anything else, that the price of copper had been increased very largely because of the war in Europe, and that a very large per cent of the same was going into the manufacture of munitions.

Congressman HAYDEN, of Arizona, offered an amendment entirely striking out this provision in the bill. This was defeated in the House by Democrats and Republicans from noncopper-producing States, the eastern Members representing that as the income-tax law generally was much more burdensome to the East than to the other parts of the country, the West should not object paying its proper share; that wealth should be taxed wherever it is found, and those most able to pay without hardship should be reached.

Thanking you for the information contained in your telegram, I remain,
Very truly, yours,

JAS. H. MAYS.

—

SALT LAKE CITY, UTAH.

Hon. J. H. MAYS,
*United States Representative, Washington, D. C.:*

Commercial Club unites in vigorous protest against proposed legislation taxing copper smelting and refining as reported by Ways and Means Committee in revenue bill. Consider measure vicious which

singles out copper industry and only affects copper-producing States. Strenuous objection to classing copper business as war industry. Business interests ask that you render protest behalf of Utah.

COMMERCIAL CLUB,
F. C. RICHMOND, *President.*

JULY 12, 1916.

Mr. F. C. RICHMOND,
*President Commercial Club, Salt Lake City, Utah.*

MY DEAR MR. RICHMOND: Upon receipt of your telegram protesting against proposed legislation taxing copper smelting and refining I took the matter up with the Ways and Means Committee and with other Members of Congress especially interested in the copper industry. The Ways and Means Committee have labored under some difficulty in securing revenue to meet the extraordinary expenses required by the Military and Naval Establishments. This money had to come from somewhere, and upon the theory that those who have been benefited most by war prices should bear a proper share of the burden and taxation copper has been given especial attention. They argued that partially due to the war copper has more than doubled in price, the income of the copper producers has been greatly increased, and that they are better able therefore to pay taxes than others less favored.

Congressman HAYDEN, of Arizona, introduced an amendment striking out entirely this feature of the revenue bill. It was defeated in the House by the votes both of Republicans and Democrats who come from noncopper-producing States, the eastern Members arguing that the income tax was largely paid by citizens of the Eastern States, that the West should bear its part of the burden which the preparedness program imposes upon the country.

With kind regards, I remain,
Very truly, yours,

JAS. H. MAYS.

DEMOCRATIC COUNTY COMMITTEE,
*Salt Lake City, Utah, July 17, 1916.*

Hon. JAMES H. MAYS,
*Representative in Congress, Washington, D. C.*

DEAR MR. MAYS: Recently Mr. Jackling telegraphed to Mr. Hayes that there was likelihood that Congress would put a revenue tax on copper, and for Mr. Hayes to have the Commercial Club, the manufacturers' association, and other civic bodies telegraph their Representatives in Congress urging them to prevent, if possible, this tax. The board of governors of the Commercial Club promptly sent the telegram, as they do absolutely what the "interests" want here in Utah. The Rotary Club did the same thing, as they, too, for the most part, are representatives of "big business." Mr. Hayes spoke to President George S. McAllister, of the manufacturers' association, and says that Mr. McAllister promised to send a telegram for the manufacturers' association. In the meantime he was called away and the secretary of the association called the board of directors, of which I am a member and vice president, together, and put the proposition up to them. The board refused to send such a telegram, believing that to eliminate the tax on copper would be simply transferring the burden to someone else who could not afford to pay it, perhaps, as well as the copper industry. When the secretary reported the action of the board of directors to Mr. Hayes he was very indignant. He threatened that unless the secretary send the telegram immediately that he himself would send one and sign the manufacturers' association's name to it. The idea that anybody in Utah should not do just exactly what the Utah Copper wanted them to was, of course, preposterous.

I am writing this to learn, if I can, whether or not Mr. Hayes did carry out his threat and sent the telegram over the signature of the manufacturers' association. If he did, I believe I can use the information to good advantage.

Yours, very truly,

BAYARD W. MENDENHALL, *Chairman.*

JULY 24, 1916.

Mr. BAYARD W. MENDENHALL,
*Chairman Democratic County Committee,*
*Salt Lake City, Utah.*

DEAR MR. MENDENHALL: The House adjourned over three days waiting for the Senate to catch up with the work, and during this time I went away from town. Upon my return I find your favors of the 17th and 19th instant.

With reference to the pressure brought to bear upon the Utah delegation by the copper interests, would say that I have had many telegrams on the subject. The Commercial Club of Utah, the Utah Chapter American Mining Congress, the Bingham & Garfield Railway Co. by John M. Hayes, secretary, R. C. Gemmell, the Silver King Consolidated Mining Co., and other individuals wired me instructions to oppose vigorously the proposed tax. I do not see any from the Manufacturers' Association here. Notwithstanding these many requests, I could not see my way clear to offer any protest against the tax. Many of these same people and others have wired me, urging me to support larger appropriations toward the upbuilding of the Naval and Military Establishments. I have also been importuned to work unceasingly for the removal of the obnoxious stamp tax. We are appropriating some six hundred millions this year toward preparedness. Altogether, there must be raised a total of over $1,500,000,000, and it is my belief that this vast sum should be secured from those most able to bear the burdens of taxation. As you say, if we remove the tax from copper smelting and refining, it will be necessary to impose the burden upon those less able to bear the same. We might extend the stamp-tax law and put a tax on bank checks, gasoline, etc. I believe, however, that such tax would be more burdensome, more obnoxious to business and would yield less revenue at a much greater hardship.

I see the Herald Republican and the Deseret Evening News have both denounced the tax upon copper smelting and refining. I believe that the terms of the bill have not been thoroughly understood by the Deseret Evening News. Of course, the Herald Republican would denounce any Democratic or Progressive measure.

For your information I am sending you a copy of the bill—as it passed the House—under separate cover, and will call your attention to sections 200 to 211, inclusive. In this you will observe that a net profit of 10 per cent upon the amount invested in the United States in such manufacture must be realized before any tax is proposed.

These great copper industries have been exceedingly fortunate during this crisis in the affairs of the world, and the Ways and Means Committee were inclined to impose this tax more in the way of an excess-profit tax, feeling that those enterprises that have profited so greatly by the state of war should help to bear the burdens of preparing our country against the disasters that might follow a war waged upon us.

This tax, of course, will be temporary, remaining in force during the continuance of the war in Europe, when so much of the copper produced is going into the manufacture of munitions. Personally, I would see no objection to placing a tax also on zinc, lead, steel, antimony, and other materials used in the manufacture of munitions. The committee constructing this bill, however, considered that the copper industry had been especially favored and was enjoying profits far beyond other metals and should therefore receive special attention.

It occurred to me that it was in bad taste for the Salt Lake Commercial Club, after urging larger appropriations for Fort Douglas, for military training camps, for militia aero squadrons, as well as for vast general expenditures for the Army and the Navy, to offer vigorous protests against a measure seeking to raise the revenue required from the sources best able to pay.

The Du Pont Powder Co. is making protests against the tax on munitions. Also the Steel Trust. The citizens of the East generally are crying that an injustice has been done them by the imposition of the income tax. They would all prefer to place the burdens upon the backs of the working people, as has been the habit of the Republican Party in the past. Even their highest tariff laws would produce less than 25 per cent of the vast sums required by this year's program.

My first work here was to assist in every way possible in creating a sentiment against the stamp tax. Worked with Members, made a little speech, wrote to the chairman of the committee, and so forth, on the subject. I then advocated an income tax instead, and could not, therefore, in good faith, protest when the wealth of my State is asked to bear its proper portion of the burden.

We have asked that good roads be provided for our State. More than $1,000,000 for the next five years is available. We have asked that good roads be constructed through the forest reserves, and a million a year for 10 years has been provided. We have asked for $250,000 to destroy predatory animals in and about the forest reserves of the West, and that request was granted. At the solicitation of many of these people now protesting we asked for $2,000,000 for military training camps, and that figure is carried in the military bill. We asked and voted for a rural credits law in the interests of our farmers whose welfare had been too long ignored, and an appropriation of $9,000,000 to inaugurate that system has been made. We voted for the workmen's compensation measure requiring an appropriation of funds from the National Treasury. We voted for a national park service appropriation. We voted an increase in the pensions received by the old soldiers, and for a provision granting the long deferred recognition of the rights of the Utah veterans of the Black Hawk Indian wars. These and many other measures enacted by this Congress extend peculiar and signal benefits to Utah. They all require sums, vast in the aggregate, of the National Government. The Treasury is not self-supplying as some would wish, but must be replenished by taxation. Personally, I have a few copper shares and may be privileged to pay a small share of the taxes required by that provision of the bill. If the properties will first pay a net interest of 10 per cent upon the investment I shall cheerfully contribute in order that our country might be defended and improved.

With kind regards and best wishes for your success, I remain
Yours, truly,

JAMES H. MAYS.

P. S.—We will send under separate cover the documents requested in yours of the 19th.

## Infantile Paralysis in New York City.

### EXTENSION OF REMARKS
OF
### HON. GUY T. HELVERING,
OF KANSAS,
IN THE HOUSE OF REPRESENTATIVES,

*Thursday, July 27, 1916.*

Mr. HELVERING. Mr. Speaker, the resolution offered by the gentleman from New York [Mr. SIEGEL] authorizing the Secretary of Labor to utilize the available hospital facilities at the immigration station at Ellis Island, N. Y., for the purpose of caring for and housing all persons afflicted with the dread disease commonly known as infantile paralysis, should receive the prompt and immediate action of the House.

We have been reading of the appalling number of victims of this dread disease in New York City alone, where it has reached the form of an epidemic, particularly prevalent among infants and young children. Mr. Speaker, it is estimated that one child dies of this disease every 30 minutes of the day in New York alone, where the situation is more serious to-day than in any other city of this country. If we can believe the figures given in the press the total number of deaths in New York up to date are 560, and the number of cases reported nearly reach the 3,000 mark. On July 22 there were 40 deaths and 135 new cases reported with this deadly disease. Not only do we find a prevalence of infantile paralysis in New York City, but in numerous States. In my own State we find numerous cases, but it has not yet reached the form of an epidemic.

Mr. Speaker, the dread disease is spreading throughout the United States, but the metropolis of our country has reported a regular plague, the number of victims being greater than at any previous time. Not only is the health department of New York City endeavoring to control the spread of infantile paralysis, but the police department has been called to assist in quarantining homes that have patients infected with the dis-

ease, and the United States Public Health Service has been called upon for aid. We also read of stringent prophylactic measures taken by the boards of health of other States in preventing and controlling this disease among its population.

The ravages of this disease have made greater gains in New York City than in any other section of the country, and this city is only asking permission to use some of the vacant public buildings formerly used for the quarantine of immigrants, in an endeavor to adequately care and house its many victims and also to relieve the congestion in some of the city hospitals. Men of the medical profession tell us that sanitation and isolation are the two essential means of combating this dread disease, and inasmuch as the Government owns several buildings in the vicinity of New York that could be used to great advantage in this connection, I believe that we should readily and willingly comply with such a request, since it concerns human life.

We have not been indifferent to the protection and welfare of our citizens in other respects, but we have an opportunity today to legislate liberally for the protection and care of millions of our little ones, and as representatives of the people we are in duty bound to do our part toward combating a disease that is so widespread in its ravages. What could be more appealing to our sympathies than the sufferings of little children?

By the recent appropriations for additional funds for the Public Health Service we will be able to establish an interstate quarantine service and give the Government Public Health Service authority to cooperate with the State and municipal health boards in the control and prevention of contagious and infectious diseases. Protection to the public can be best secured through the discovery and isolation of persons already afflicted with the disease and the sanitary control of those who have associated with the victims. Inasmuch as scientists as yet have been unable to discover any safe method of preventive inoculation and know of no reliable cure, it is absolutely essential that the prevention of this disease be accomplished by sanitation.

The disease, I understand, is by no means a new one, as epidemics have occurred at frequent intervals in the United States since 1905. It is not a new infection due to modern methods of living; but, having appeared in form of epidemics, it has begun to attract the attention of the medical world as well as the boards of health and the people at large. The fact that this disease is strikingly selective in its incidence, being most prevalent among young children, causes men to wonder at its origin and its possible cure.

Mr. Speaker, since an epidemic of infantile paralysis has appeared in such widespread form in the metropolis of the United States, a city that is known as the gateway of this country, it greatly endangers the health and the lives of citizens living in all parts of the Union. We have always promptly responded to call for aid in times of great crises, and I am therefore gratified to see the willingness expressed by the Members of this body to lend their aid in combating one of the worst epidemics that has ever swept over our land.

---

## The President's Policy in the Mexican Matter.

### EXTENSION OF REMARKS

OF

### HON. PAT HARRISON,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, July 21, 1916.*

Mr. HARRISON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an interview given by Franklin K. Lane, the Secretary of the Interior, on the President's policy in the Mexican matter.

The interview is as follows:

[From the New York World, Sunday, July 16, 1916.]

THE PRESIDENT'S MEXICAN POLICY—PRESENTED IN AN AUTHORIZED INTERVIEW BY SECRETARY OF THE INTERIOR FRANKLIN K. LANE.

(By Henry N. Hall.)

"President Wilson's Mexican policy is one of the things of which, as a member of his administration, I am most proud. It shows so well his abounding faith in humanity, his profound philosophy of democracy, and his unshakable belief in the ultimate triumph of liberty, justice, and right. He has never sought the easy solution of any of the difficult questions that have arisen in the last three years. He has always sought the right solution.

"Mr. Wilson's Mexican policy has not been weak and vacillating. It has been definite and consistent, firm and constructive. How firm is already known to those who have sought to force American intervention in Mexico; how constructive will best be appreciated 50 years from now by the whole world. It was to Mexico perhaps more than to anything that the President referred the other day when he said that he was playing for the verdict of mankind.

"The policy of the United States toward Mexico is a policy of hope and of helpfulness; it is a policy of Mexico for the Mexicans. That, after all, is the traditional policy of this country—it is the policy that drove Maximillian out of Mexico."

THE DOCTRINE OF SYMPATHY.

Secretary of the Interior Lane made this statement to me at his summer camp on the shores of Lake Champlain, and then he launched out into a forceful declaration of the principles underlying President Wilson's Mexican policy and proceeded to give the reasons for his conviction that the President was right when he refused to recognize Huerta, and declared that the murderer of Madero must go, right when he occupied the port of Vera Cruz, right when he accepted the offer of mediation extended by the A B C, right when he abided by the agreement reached at Niagara Falls, right when he withdrew from Vera Cruz, right when he recognized Carranza as head of the de facto government, and right when he sent the United States Army into Mexico after the bandit raid on Columbus. Mr. Lane said:

"The doctrine of force is always fighting with the doctrine of sympathy, and the trouble with the two schools of warism and pacifism is that neither one will recognize that both philosophies have a part to play in the life of every individual and of every nation and in the production and advancement of that strange thing we call civilization.

"Now, the doctrine of force has been worked to its limit in Mexico. President Wilson believes that the doctrine of sympathy should have its chance in that country and this is the foundation of his Mexican policy. Not that Mexico wants our sympathy. It does not—and that is one of the great difficulties we have to contend with. Another is that it takes a long while to make a Mexican believe that we intend his country good and not evil. The people of Mexico have inherited the pride of Arragon, and the thing above all others that they do not want and will not stand for is that kind of sympathy which is nothing but pity.

"The sympathy that Mexico needs is the sympathy of understanding. The United States should be what the Latin Americans call 'muy sympatico.' We have no exact English equivalent for that expression, but if there is one thing it does not mean it is sympathy as we Americans use the word. Uncle Sam will be 'muy sympatico' to the Mexican people only when he has a conscientious regard for and realization of the feelings and the desires of the Mexican and understands his best side, his aspiring nature.

MEXICO IS A BAD NEIGHBOR NOW.

"Mexico is a bad neighbor now. There is no use in denying this. We live at peace with Canada on our northern border, without a soldier along 3,000 miles of land, while, as a matter of necessity, we are obliged to keep an armed force on our Mexican border all of the time, and have now gathered there the largest army assembled in the United States since the Civil War. The superficial reason for this is that Mexico can not settle her own troubles at home and that the de facto government has been unable to prevent bandits from harassing us.

"Our neighbor's sewage is running over into our lot, and we must find some way to stop it even if we have to go over the boundary line and stop the pipes ourselves. This is the easiest thing in the world to say, but to respect the letter of the law and at the same time abate a nuisance that is not on your own property is one of the most difficult things in the world.

"Mexico will always be a nuisance to us until a few fundamental reforms are put into effect there. If it is to be lasting, however, some one inside of Mexico must do it. It can not be done by us unless we are prepared not only to conquer Mexico but to annex Mexico. We should not only have to make war on Mexico and impose peace by force, but after giving it a preliminary cleaning up we should have to establish and maintain indefinitely a government there."

I asked Secretary Lane to go over the history of the past six years in Mexico with me and to tell the World the reasons which had governed the policy and actions of the United States Government as each emergency arose. In complying with this request Mr. Lane said:

"Diaz was a great man, a very great man. I doubt if, with the possible exception of Bismarck, there was a greater man alive in his day. After the Czar of Russia he was the most absolute despot of modern times. He built a monument to him-

self, which I believe is still standing, to celebrate 30 years of peace in Mexico, and all the nations of the earth sent representatives to its unveiling. Within two years he was an exile because that monument represented order alone and the aspirations of only a very small portion of his people.

"The peace that he had maintained was an imposed peace not coming from the people themselves. Diaz ruled by fear. He had gone into office with promises upon his lips, and I am willing to believe that he meant to keep them. But once in power he was appalled by the span of years necessary for the slow process of constructive civilization, and he determined that to gain time Mexico was to be saved by two things, force and wealth.

"And so, while observing to some extent the letter of the constitution he cynically avoided its spirit. He always placed property rights before human rights. Although he sought to improve, and did improve, Mexico's material condition it was without even so much as a thought of her moral progress. He kept the masses of the people in subjection by keeping them in ignorance. When he died 83 per cent of the people could neither read nor write, and as far as her political development went Mexico was no further forward and no more fitted for self-government than in 1821, when, having wrested her independence from Spain, she was first recognized as a sovereign nation by the United States.

A DESPOT'S RULE OF MEXICO.

"During Diaz's time I had a very interesting talk with a great lawyer in Mexico City who was an officeholder in the Diaz régime. I asked him the current question: 'After Diaz, what?' To my surprise the man said: 'I am a Constitutionalist. Either before Diaz dies or immediately upon his death a revolution will break out in Mexico having for its purpose three things—the restoration of the land to the people, the establishment of public schools throughout the country, and a judicial system in which the courts will decide according to law and not according to executive desires.'

"The Madero revolution followed exactly on these lines, but Madero was a dreamer, an idealist, a man who took his constitution seriously and who failed for two reasons, or rather because of two weaknesses of his own character. He was not strong enough to suppress the rapacious rascals who surrounded him, and he was not practical enough to deliver the goods that he had promised. Men in Madero's own government saw in his revolution only another opportunity for getting rich quick, and they ruined him while he was still dreaming.

"Huerta was his commander in chief, a soldier trained by Diaz and dominated by Diaz's friends. He, too, believed in saving Mexico by force and wealth; he was in complete sympathy with the philosophy expressed in the Diaz administration. There is no truth in the oft-repeated allegation that all the trouble with Mexico would have been avoided if President Wilson had recognized Huerta. I ask anyone who wishes to be fair to this administration to look back three years and read the newspapers of that day and the debates in Congress in which the murder of Madero and Suarez was denounced.

WHY WE SAID "HUERTA MUST GO."

"Had we recognized Huerta or had we not taken a positive stand against him, the criticism this administration has received for the policy we have pursued would be as nothing to what would now overwhelm us. Who were the American statesmen who demanded Huerta's recognition? What one of our leaders of either party set forth the principles upon which a better feeling between this country and all of our sister Republics of the South could be simulated by taking a position that was abhorrent to our American conscience?

"We know what we have suffered in the past three years, and it is too easy now to say that all this would have been avoided if Huerta had been recognized, but the only demand made at that time by the more solid of our men of affairs who were antagonistic to the administration's policy was that we should intervene; that we should bring order to Mexico by force.

"No one then believed and no one really believes now that the recognition of Huerta would have solved the Mexican problem. We do know, however, one thing that we were not conscious of then, that Huerta himself had so slight a hold upon Mexico that he did not dare to leave the capital and that he was to all intents and purposes a prisoner of the reactionaries, able only to reach the sea at its nearest point.

"Although it is self-evident that this country, as the champion of constitutional government in America, can never recognize a military despotism based upon assassination, it is not necessary to call Huerta an assassin in order to justify our refusal to recognize him. His attempted dictatorship was but a fiction of government. With the elected President and Vice President murdered and the minister of state, who was their lawful successor, cowed into submission, Huerta took the reins of power at the best as a temporary stop-gap.

"The revolution against Huerta broke out immediately upon the news of Madero's death. The correspondence between Huerta and Carranza recently published shows that every practical inducement was held out to Carranza to put an end to his revolutionary movement. To Carranza's credit, be it said, he refused to come to terms with those who he believed had been the cause of the President's death and who had set to one side the laws of his country.

A NEW WORLD CIVILIZATION.

"It is not to be forgotten that Huerta did not pretend even to be a constitutional ruler. He sent word to the United States that he had taken the Government of Mexico into his own hands and that he was all the law that was to be found in Mexico. His statement was so bold that even the Supreme Court of Mexico uttered a feeble protest, which was somewhat more loudly echoed in the Mexican Senate.

"In the face of this Huerta asked for recognition from the United States, but President Taft felt that he could not conscientiously grant it, and he left the problem to be dealt with by his successor, who had already been elected. That was the situation when President Wilson took office. Could President Wilson have recognized Huerta? Surely there can be but one answer to that question—No!

"To have recognized Huerta would have been a twofold injustice. First, to the people of Mexico, and, secondly, to all the people of South and Central America. To give to the commander in chief of an army recognition as President under such circumstances would have been to announce to all ambitious military officers that they had but to ally themselves with a successful junta, seize the Government by force, murder the lawful incumbents, and announce the overthrow of all law and a supreme military dictatorship in order to gain the recognition of the United States, we being thoroughly aware of all that had happened.

"Americans are justified in the pride that through the operation of the Monroe doctrine there is gradually growing up in the New World a civilization that will make old-time revolutionary methods impossible, that will carry forward all of the 21 Republics to the unification of our international interests in the true spirit of Pan Americanism. We have so amplified the Monroe doctrine that we are virtually the copartners of the Republics to the south of us, and to proclaim that the violation of their constitutional laws would not in the slightest interfere with our recognition of a conspiracy to murder lawful executives and overthrow their established republican forms of government would have been rightly considered by the American people as the most cowardly and shortsighted policy imaginable. Condemnation would have arisen not only from the people of the United States but from all the nations of the Pan American Union.

HIS FACE SET AGAINST INTERVENTION.

"During Huerta's régime we learned much of the ability of the Mexican as a casuist. The notes that came from Mexico were models of the seventeenth century style of diplomatic state paper. President Wilson attempted, it will be remembered, to find a basis upon which there could be set up in Mexico a government that we could recognize. There was nothing peremptory about our attitude in the beginning of the diplomatic exchanges.

"Our whole effort was to the obtaining of a republican form of Government in Mexico which would have the people back of it, and guaranties against the establishment of an absolutism on our southern border under which the people of Mexico would so chafe that we should have a constant state of revolution there.

"Many of the best Mexicans were in sympathy with the attitude that the United States took toward Huerta. They knew that stability of government was not to be hoped for under a man of his temperament and disposition. After it became evident, by continued negotiation which ended nowhere, that Huerta was standing, so to speak, in the City of Mexico heaping insolence on the United States, President Wilson gave notice that Huerta must go.

"Then followed the Tampico incident. Our sailors landed at Tampico and were arrested, marched through the streets in ignominy, and eventually returned to their boat. The admiral in charge was so incensed at their treatment that he immediately made upon Huerta a demand that a national salute should be fired in atonement for the insult to the flag. Again the

Mexican Government attempted to continue its policy of diplomatic quibbling.

"Meanwhile the revolution had gained such headway in the north that it was difficult from day to day to say which force had or occupied the greatest portion of Mexican territory. Huerta was keeping up his resistance because he was being supplied with ammunition from abroad. A ship was reported ready to land at Vera Cruz with a cargo of arms, and as a warning to Huerta and in proof of the seriousness of our purpose to bring Huerta to a recognition of our attitude, the order was given to seize the customhouse and occupy the port of Vera Cruz.

"We did not go to Vera Cruz to force Huerta to salute the flag. We did go there to show Mexico that we were in earnest in our demand that Huerta must go, and he went before our forces were withdrawn. The occupation of Vera Cruz was carried out without difficulty, with the loss of 19 of our brave sailors and marines, and if aggression and intervention had been our aim we could have easily seized the railroad to Mexico City and occupied the capital.

"The menacing attitude of the Mexican troops surrounding our force of occupation at Vera Cruz made hostilities appear imminent, and again the strongest kind of pressure was brought to bear upon the President to intervene, that we should go into Mexico and take matters into our own hands. This is the one thing that the President has set his face against from the first. It is the thing to which this administration is opposed so long as any other hope holds out."

"But, Mr. Secretary," I asked, "could not the United States have done in Mexico what it did in Cuba?"

SUSPICIOUS OF OUR MOTIVES.

"No," said Mr. Lane, "we could not. That is a very common delusion, but the Mexican situation is not at all that which we met in Cuba. We went in there at the request of the revolutionists and after the *Maine* had been sunk in Habana Harbor, and such authority as there was in Cuba, had thus evidenced its hostility. We could go in and did go in there with some heart, fighting alongside of the revolutionists against a monarchy, but we could not go in with any heart to fight against the Mexicans who are struggling to find a way to popular government. But to return to the facts:

"We had sought to bring to our sympathetic support all of the South American countries. They also were anxious for a settlement of this trouble upon some basis that would safeguard the interests of Mexico and conserve that unity which is the soul of the great Pan American movement. Some of them thought that they saw a greedy hand from the north reaching down with no benevolent purpose, and if it laid hold of Mexico none of them knew but that it might be their turn next.

"This fear of the big brother is a very real one in Latin America. They do not know us intimately; they are suspicious of our motives. They think of the Mexican War of 1846 as an unjustifiable aggression on our part; they think of the Panama incident as a robbery; they misconstrue our purpose in Santo Domingo, and in Nicaragua, and they do not trust us. They fear that the spirit of imperialism is upon the American people and that the Monroe doctrine may be construed some day as a doctrine that will give the whole Western Hemisphere to the United States; that it is a doctrine of selfishness and not a doctrine of altruism.

MEDIATION ACCEPTED.

"Those who are familiar with the feeling of the South and Central American countries toward the United States know that just at that time, when our forces occupied Vera Cruz, a very intense fear had seized upon Latin America. They believed in their hearts that we were on our march southward and that the President's Mobile speech and other generous utterances of the same sort were to be taken in a Pickwickian sense.

"When they presented a plan of mediation, the United States had no choice but to accept it. Indeed, if we had refused to accept it, Latin America would have been justified in doubting our good faith. No one that I am aware of, either Republican or Democrat, has ever criticized the President for accepting the mediation of Argentina, Brazil, and Chile, and abiding strictly by the agreement reached at Niagara Falls.

"By the protocols there signed on June 23, 1914, the United States agreed that the selection of a provisional and a constitutional president be left wholly to the Mexicans, and we guaranteed our recognition of them when chosen. This made clear our desire not to interfere in any way in the settlement of Mexico's domestic troubles, and as a further proof of our disinterested friendship for the Mexican people the United States agreed not to claim any war indemnity or other international satisfaction from Mexico. We had gone to Vera Cruz 'to serve mankind.' Our only quarrel was with Huerta, and Huerta got out on July 16, 1914. Our forces were withdrawn from Vera Cruz on November 23 following.

"Three days after Huerta left Mexico Villa began levying taxes on his own authority, and it was plain that the successful revolutionists would soon be fighting between themselves. Both Carranza and Villa agreed to a conference at Aguascalientes, and it was stipulated that no soldiers were to be there; but Villa turned up with an armed force that terrorized the convention and prevented it from recognizing Carranza, and in a short while open warfare began between the two factions.

"Villa and Carranza had broken, and there was a double sovereignty claimed even on our border in northern Mexico. Things were going from bad to worse, and it was suggested in the Cabinet that there should be some determination by the United States as to which of the rival claimants to power in Mexico as leader of a successful revolution should be recognized as a 'de facto' government.

WHY WE ARE IN MEXICO.

"Secretary of State Lansing thereupon called a conference of the representatives of Argentina, Brazil, Chile, Bolivia, Uruguay, and Guatemala and asked them, from their knowledge of the situation—for a considerable portion of the information in the hands of the United States came through the representatives of these countries in Mexico—to cooperate with him in the determination of the claimant to be recognized. These six Latin-American Catholic countries unanimously recommended the recognition of Carranza, and in furtherance of our Pan American policy this recognition was at once given by the United States and Latin America.

"Since Carranza's recognition we have seen Americans who have gone into Mexico on peaceful errands murdered; we have seen our own towns upon the border raided and Americans slain on American soil. These outrages prompted President Wilson to send our own troops into Mexico, and this course can not be otherwise construed than as a recognition of the fact that the de facto Government in Mexico, recognized by ourselves and by other nations, is not fulfilling the duty which one Government owes to another.

"We are in Mexico to-day, and how long we shall stay and how far we shall go depends upon the policy and the power to keep the peace of the Carranza Government, but we shall go no further than we have gone until every effort to secure effective Mexican cooperation fails.

Mr. Lane then proceeded to an examination of the principles governing the policy of the United States toward Mexico and of the needs of the Mexican people. He said:

"There are things that a democracy must always be willing to fight for. But what thing is there that any American can say we ought to be willing to fight for in Mexico? Is it because railroads built with American capital have been damaged, that mines have been shut down, or even that American citizens have been killed by outlaws and bandits?

"All those things we can and do very much regret, but who will say that they are great principles for which a democracy should be willing to sacrifice the blood of its sons? Who can formulate out of the whole history of the past six years any other determination than this: That we should resist the temptation to fight where pride and interest move us in that direction, and that we should and will fight when we are attacked and when we find no other means by which our interests can be safeguarded and Mexico be given any hope for itself?

"We have been on the edge of war with Mexico several times in the last three years, but each time, before the determination was made that we should discard our hopes, there has opened some way by which reasonable men might expect that Mexico could prove herself able to take care of her own problems. The one man who can justifiably criticize President Wilson for his Mexican policy is the man who honestly believes that Mexico can not be brought to stability of government and responsibility except through the exercise of outside force. That man is consistent, and the only criticism I have to make of him is a criticism of his judgment.

SEEKING MEXICAN COOPERATION.

"There is no question that we could easily overrun Mexico. I believe we could do it with a comparatively few men, although we would have a united Mexico against us. There would be no glory in such a war, and there is not one man in ten thousand in this country who really wants such a war. It would be repugnant to every American tradition and would discourage the friendship of every other American nation. Of course we could conquer Mexico, and after a good deal of guerilla warfare we could bring Mexico to a state of quiet.

"Then we could hold her while we administered to her the medicine that we believe she needs. We could have what we call a general cleaning up, the rebuilding of her railroads, of her wagon roads, the construction of sewers for her cities, the enforcement of health regulations, and all the other things that go to make up the outward and visible signs of order and good government.

"But don't you see that the peace we would bring would be a peace imposed by force, the government we would give to Mexico would be the kind of government that we have and which makes life tolerable to us in our communities. Its standards would not be Mexican standards, its ideals would not be Mexican ideals, its genius would not be Mexican genius. The moment we withdrew from Mexico there would be a return after a very short time to Mexican standard.

"What Mexico really needs and must be allowed to do is to raise her own standards; it is to give herself a cleaning up by herself. That is bound to take time, but in no other way can Mexico get a government that will be expressive of her own ideals, that will be expressive of some aspiration of her own as to what her civilization should be, and in this we want to be of help to Mexico if she will allow us to do so.

"The Mexican problem, as a problem, depends upon your attitude toward other peoples. Mexico is a land to conquer, and the Mexican people are a people to be conquered and subordinated and the country and its resources made ours, if you look upon a smaller and less highly civilized country as a proper object of exploitation. On the other hand, Mexico is a country out of which something greater can be made, and the Mexican people are a people who have possibilities and can be helped to become a self-governing nation, and if you take that attitude toward Mexico you are bound to sympathize with their struggle upward.

"In other words, where we find that conditions justify revolution, if we think it our business to go in and work the revolution to our profit, we must condemn the President's policy; but if, where we find conditions justify revolution, we want to give that revolution a chance to work out from the inside, we must hold up his hands."

"What are the things that Mexico needs, Mr. Secretary?" I asked. "What is necessary for a return to peace and order?"

Mr. Lane said:

"The things that Mexico needs are few, but they are fundamental. A land-tax system which will make it impossible to hold great bodies of idle land for selfish reasons and which will make it unnecessary for the Government to sell concessions in order to support itself. A school system by which popular education may be given to all the people as it is given in the United States. If Diaz had done this, as he promised, he would have created an active public opinion in Mexico which would have made present conditions impossible.

"Along with the primary schools should go agricultural schools in which modern methods of agriculture should be taught. The army might well be used as a sanitation corps, so as to insure against the recurrence of those plagues which so affect trade relations with Mexico and the health of her people. With these things, Mexico would be well started on her way toward that better era which her more intelligent revolutionists thought she had reached in the early days of the Diaz administration, some 40 years ago.

UNJUST LAND SYSTEM.

"Everyone in Mexico is united upon the proposition that the present land system is based upon privilege and is unjust. I have talked with 20 of the wealthiest and most intelligent men who belonged to the Diaz régime. All have admitted the fact. Some have even volunteered the statement that Mexico is in a feudal state, and that the land belongs to great proprietors, who work the peons and keep them in a semislave condition. If the facts were better realized, the people of the United States would not stand for the labor conditions that exist in Mexico, and for the peonage, which is only a form of slavery. I have some personal knowledge of these conditions.

"One morning 10 years ago I was on a coffee finca—a great estate high up in the Sierra Madre—and I asked a peasant who labored from sunrise to sunset what he was getting for his day's work. His answer was 60 cents in Guatemalan money, which was equal to 10 cents gold. Here was a strong, able-bodied agricultural laborer earning $3 a month. I asked him why he did not go down to the railroad, where the American contractors would pay him 50 cents or more a day. His answer was, 'I would not be from here 1 mile before Don Porfirio would have reached out his hand and drawn me back to jail.' I said, 'Why could he arrest you?' and the answer given me, falteringly and in fear, was, 'Because I owe the store.'

"He had lived and worked on that finca for 12 years, and, alive or dead, he is there to-day, unless he has run away to join an army in the revolution. I asked that Mexican peon where he had come from, and he pointed across the mountains to a valley where his people had lived for a thousand years. 'Why did you leave there?' I inquired. His answer was that Don Porfirio had given the land where he was born to a Chinaman.

"From an investigation I made myself I found out that this was literally true; that the land, which was the hereditary possession of these Indians, had been taken from them by the Government and given to a greater 'company' on terms which one can only guess; that the 'company' had sold the land to a syndicate, in which there were no Americans, upon condition that it should be populated under a law somewhat similar to our homestead law, with the reservation that it was neither to go to Mexican natives nor to citizens of the United States, and the immigrants with which the syndicate was populating that part of Mexico were Chinamen.

"I crossed a bridge on the Camino Real. 'The last time I crossed that bridge,' said the peon who was with me, 'the governor of the State was lying there dead. He had become ambitious and presented to the people a program of reform. Doubtless he hoped to be another Juarez, and Don Porfirio had ended his ambitions.' The peon of Mexico—and out of possibly 15,000,000 inhabitants at least 12,000,000 are peons—is a kindly and gentle creature under normal conditions, disregardful of his own life but not anxious to make war on anyone. The peon has it forced upon his mind that he belongs to a definite sphere of life, and so he is without ambition and without foresight; but he is not without intelligence, and he makes an excellent workman when taught. All he needs is a chance to live and a chance to learn, land to cultivate, and schools to go to. Is it conceivable that to add to the miseries of these struggling people any American citizen would want to make war on them?

AMERICAN IN MEXICO.

"We of the United States have the impulse that all virile people have. We feel conscious of our ability to do a job in nation making much better than anyone else. Read over Kipling's poem, 'The White Man's Burden.' It was not so much the white man's duty to clean up insanitary conditions on the outskirts of civilization and to develop the backward peoples of the earth that he was expressing as it was our perfect, self-complacent appreciation of our supreme ability to do the cleaning up better than any other people on the face of the globe.

"There is a good deal of the special policeman, of the sanitary engineer, of the social worker, and of the welfare dictator about the American people. We are quite conscious that in the development of this great country of ours, in our march across the continent, we have done a perfectly good job, and the pioneering spirit is very much alive. It is one of the most fundamental instincts that has made white men give to the world its history for the last thousand years.

"As a great Nation, dedicated to democracy, we can not undertake a war of conquest against a people because their moral development has been neglected by their former rulers. We can, however, insist, and we must insist, that these people shall make safe our borders and give protection to the lives and property of our nationals who have settled in Mexico at her invitation."

"But is there no way, Mr. Secretary, in which the United States can help Mexico on the road to progress?" I asked. Mr. Lane said:

"To directly offer help to Mexico would be looked upon by them as an insult, like slapping them in the face. This is a kind of pride that is purely Latin. It is an inheritance that comes to Mexico by way of Spain along with the ideals that Cervantes ridicules in Don Quixote; but it is so real a thing that no progress can be made without recognizing it. So I say that to tell Mexico what she shall do in our straight-out American fashion, to say to Mexico, We are going to help you without being invited to do so, is equivalent under present conditions to a declaration of war.

DOUBT OUR ALTRUISM.

"The Mexicans do not believe in our professions of altruism. We must say to Mexico one of two things: Either you must keep our border safe and protect the rights of our nationals in Mexico, which you have not done, or we will invade your country and restore order ourselves; or we must say to Mexico, We understand the effort you are making to give the people a chance for life, liberty, and pursuit of happiness, and we will gladly help you if you ask our help to accomplish this end.

"The last is the policy that the United States has been seeking to put into effect. The difficulty in doing this arises almost solely out of the difficulty we Americans have in persuading the peoples of Latin America that our intentions are really honest.

"Nor is this altogether to be wondered at. Latin America has known the American chiefly as a seeker after concessions, a land grabber and an exploiter. Even where the American has bought property, as many have who to-day hold perfectly legal title to the land, they are absentee landlords, and every just criticism that the Irishman has had to make against the absentee English landlord can be made against the absentee American landlord in Mexico.

"He does not become a part of Mexico; he does not throw in his lot with the Mexicans. He is willing to spend his money there and employ labor, but he has nothing in common with the people of the country. The Mexican feels that the American goes there only to get rich out of the land and labor of Mexico; that he comes to exploit, not to develop."

POLICY OF FORCE INADEQUATE.

Mr. Lane had risen. He was standing on the raised veranda of his camp overlooking the placid waters of Lake Champlain. "There are just two more things that I want to say," he continued.

"There has never been a time since the United States established the present Mexican border under the treaty of Guadaloupe Hidalgo when raids, small or great, have not taken place across that border, and sometimes Americans have been the raiders—we may as well acknowledge the fact. Furthermore, there never has been a time since the United States was founded when Mexico itself was as a whole in the control of any one Government. Even Diaz never had the Yaqui Indian country, never really controlled Sonora.

"A police force alone has been a failure in Mexico. A failure both as far as the Mexicans are concerned and in protecting American life and American property. American life and American property have both been repeatedly assailed and destroyed during every administration. The protection of our people there has always been a problem, and I believe always will be a problem. This hazard any foreigner takes who goes into a country filled with people who would risk their lives for a horse or a saddle.

"Further, I say this: That looking at Mexico solely from the standpoint of allowing our miners, our engineers, and our capitalists to develop that country for their own benefit, and only incidentally for the benefit of Mexico, a policy of force is all that Mexico needs. It is the only policy that has ever been tried upon the Mexican people, and it has proved a success for the exploitation of the country by outsiders. If, however, we look at the Mexican question from the standpoint of the Mexican, is the policy of force adequate to the problem? No one who has studied it will say so. The truth is this:

THE VERDICT OF MANKIND.

"Mexico will never be a nation in any real sense, nor will the Mexicans ever be a people of agricultural, commercial, industrial, or political consequence until the individual Mexican has had an economic and an educational chance. He must be tied to Mexico, and not to a landlord, by the ownership of a piece of land; he must be able to read and write, so that he may know what the needs of civilization are. This policy is that which I characterized as a policy of hope and hopefulness. It is not founded on doubt and despair. It refuses to recognize the Mexican who can only be shot into keeping order.

"If we despair of these people, who is to be their friend? Are we Americans to see Mexico forever remain a land of a few rich and cultivated gentlemen, and 12,000,000 half-starved, illclothed, and illiterate peasants—men, women, and children—kept in slavery and subjection and ignorance, a people into whose lives comes nothing that raises them above the beasts of the field?

"The people of the United States can not conceive of such conditions. Is it not time to try another policy than that of force alone, which has failed so miserably and wrought such woe? Is President Wilson to be criticized because he believes that it is not idealistic, not outside the range of reasonable hope, to think of America as the helpful friend of Mexico? Why may not Mexico be led to see that we are honest in our willingness to help and that we can do it?

"President Wilson has clearly seen the end that he desired from the first, and he has worked toward it against an opposition that was cunning and intensive, persistent and powerful. If he succeeds in giving a new birth of freedom to Mexico, he most surely will receive the verdict of mankind."

## H. Snowden Marshall.

### EXTENSION OF REMARKS
OF
### HON. EDWIN Y. WEBB,
OF NORTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, July 21, 1916.*

Mr. WEBB. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I insert in the RECORD the able and exhaustive opinion of Judge Learned Hand, of the United States district court for the southern district of New York in the habeas corpus case of H. Snowden Marshall, in which Judge Hand remands Mr. Marshall to the custody of the Sergeant at Arms and to direct him to be brought before the House.

The opinion is as follows:

"UNITED STATES DISTRICT COURT, SOUTHERN DISTRICT OF NEW YORK.

"United States of America ex rel. H. Snowden Marshall against Robert B. Gordon, Sergeant at Arms of the House of Representatives.

"This is a writ of habeas corpus sued out by the relator to relieve him from an arrest made by the respondent, the Sergeant at Arms of the House of Representatives. The relator was arrested on June 26, 1916, and is still in custody. The respondent justifies in his return by virtue of a warrant issued by the Speaker of the House under the seal of the House, attested by the Clerk, on the 22d day of June, 1916. This warrant recited a resolution of the House on June 20, 1916, directing the Speaker to issue his warrant directed to the Sergeant at Arms to take the relator in custody and bring him to the bar of the House to answer the charge that on March 4, 1916, he violated the priviliges of the House by writing and publishing a letter. The letter in question was incorporated into the resolution, and is as follows:

"DEPARTMENT OF JUSTICE,
"UNITED STATES ATTORNEY'S OFFICE.
"*New York, March 4, 1916.*

"SIR: Yesterday afternoon, as I am informed, your honorable committee ordered the arrest of Mr. L. R. Holme, a representative of a newspaper which had published an article at which you took offense. The unfortunate gentleman of the press was placed in custody under your orders. He was taken to the United States marshal to be placed in confinement (I do not understand whether his sentence was to be one day or a dozen years). The marshal very properly declined to receive the prisoner. This left you at a loss, and I am advised that you tried to work your way out of the awkward situation by having Mr. Holme brought back and telling him that you were disposed to be 'kind' to him and then discharge him for the purpose of avoiding unpleasant consequences to yourselves.

"You are exploiting charges against me of oppressive conduct toward a Member of your honorable body who is charged with a violation of law and of oppressive conduct on my part toward shysters in the blackmailing and bankruptcy business.

"I may be able to lighten your labors by offering to resign, if you can indicate anything I ever did that remotely approximates the lawless tyranny of your order of arrest of Mr. Holme.

"The supposed justification of your order that Mr. Holme be placed in custody was his refusal to answer the question you asked as to where he got the information on which was based the article which displeased you.

"It is not necessary for you to place anyone under arrest in order to get the answer to the question which you asked Mr. Holme, because I can and will answer it. I gave Mr. Holme information, part of which he published, and from which he made deductions, so that if your honorable committee has a grievance it is against me and not against him.

"What I told him was about as follows:

"I said that your expedition to this town was not an investigation conducted in good faith, but a deliberate effort to intimidate any district attorney who had the temerity to present charges against one of your honorable body.

"I said that your whole proceeding here was irregular and extraordinary; that I had never heard of such conduct of an impeachment proceeding; that charges of this sort were not usually heard in public until the House of Representatives had considered them and were willing to stand back of them.

"I pointed out to him that you, contrary to the usual practice, had come here and had held public hearings; that among your witnesses you had invited every rogue that you can lay your hands on to come before you and blackguard and slander me and my assistants under the full privilege of testifying before a congressional committee.

"I told him that you had called one of my junior assistants before you and had attempted to make it publicly appear that his refusal to answer your questions as to what occurred in the grand-jury room in the Buchanan case was due solely to my orders.

"I said that at the time you attempted to convey this public impression you knew that it was misleading, because I had been asked by you to produce the minutes of the grand jury and had been instructed by the Attorney General not to comply with your request, as you well know. I showed him the telegram of the Attorney General to me and showed him a copy of my letter to you, dated February 29, 1916, in which I sent you a copy of the telegram of the Attorney General instructing me not to give you the grand-jury minutes.

"I told him that you were traveling around in your alleged investigation of me with BUCHANAN'S counsel, Walsh, and David Slade, in constant conference with you. I said that I believed that every word of the evidence, whether in so-called secret sessions or not, had been placed at the disposal of these worthies, and that I would be just as willing to give the grand-jury minutes to a defendant as to give them to your honorable subcommittee.

"I told him that I did not share the views which seemed to prevail in your subcommittee on this subject.

"I said that I regarded a Member of Congress who would take money for an unlawful purpose from any foreign agent as a trader, and that it was a great pity that such a person should only be indicted under the Sherman law, which carried only one year in jail as punishment.

"I said it was incomprehensible to me how your honorable subcommittee should rush to the assistance of an indicted defendant; how you had apparently resolved to prevent prosecution by causing the district attorney in charge to be publicly slandered.

"I told him that I would not permit the prosecution of the persons whose cause you had apparently espoused to be impeded by you; I said that if you wanted the minutes of the grand jury in any case you would not get them as long as I remained in office.

"You will observe from the foregoing statement that what Mr. Holme published may have been based on what I said. If you have any quarrel, it is with me, not with him.

"It is amazing to me to think that you supposed that I did not understand what you have been attempting to do during your visit here. I realized that your effort was to ruin me and my office by publishing with your full approval the complaints of various persons who have run afoul of the criminal law under my administration. Your subcommittee has endeavored by insulting questions to my assistants and others, by giving publicity and countenance to the charges of rascals, and by refusing to listen to the truth and refusing to examine public records to which your attention was directed to publicly disgrace my office. I propose to make this letter public.

"Respectfully,

"H. SNOWDEN MARSHALL,
"*United States Attorney.*

"Hon. C. C. CARLIN,
"*Chairman Subcommittee of the Judiciary*
"*Committee of the House of Representatives,*
"*323 Federal Building, New York, N. Y.*

"The resolution further went on to find that in writing and publishing the letter the relator was guilty of a contempt of the House of Representatives, and that when brought to the bar the Speaker should cause to be read to him the findings of fact and law of the special committee of the House charged with the duty of investigating into the contempt, and that the relator should at that time be heard.

"The return then stated the circumstances as follows:

"On the 14th day of December, 1915, one FRANK BUCHANAN, a Member of the House, preferred charges against the relator herein of the commission of certain high crimes and misdemeanors. On the 28th day of December, a grand jury in the southern district of New York, which had been in deliberation at the time the said BUCHANAN made his charges, brought in an indictment against the said BUCHANAN and others charging them with a violation of the provisions of the Sherman antitrust law. On the 12th day of January, 1916, the said BUCHANAN submitted a resolution to the House that the Committee on Judiciary be directed to inquire into the alleged misconduct of the relator in certain particulars, authorizing the committee to send for persons and papers, take testimony, etc., in pursuance of such inquiry. This resolution was referred to the Committee on Judiciary, which proceeded to act upon it. Thereafter, on the 27th day of January, 1916, the chairman of the Judiciary Committee offered a resolution in the House that said committee be authorized to appoint a special committee to act on behalf of the whole committee to take testimony, with the same powers respecting testimony as the committee of the whole. This resolution of January 27, 1916, was passed by the House, and on the 1st day of February, 1916, the chairman of the Judiciary Committee appointed three members, constituting a subcommittee, to investigate said charges.

"Subcommittee, when organized, heard the testimony of certain witnesses and determined to take testimony of other witnesses in the city of New York, which they did, among them, one Leonard B. Holme, a reporter, who, on being questioned about a certain statement derogatory to the committee published in a newspaper and emanating from him, declined to answer as to the source of his supposed information. On the 4th day of March, 1916, the relator wrote the letter heretofore set forth and delivered it to the chairman of the subcommittee. Shortly thereafter on the same day he delivered it to the newspapers in the city of New York, wherein it obtained a large and wide circulation, not only in that city but in the District of Columbia and other parts of the United States. The House took action upon this letter on the 5th day of April, 1916, by a resolution appointing a select committee of five to consider the conduct of the relator in writing and publishing the letter. This committee invited the relator to appear before them at the Capitol in Washington, which he did, at which time he admitted that he wrote the letter and stated that all of it was true, and that under the said circumstances he would write it again.

"The committee reported to the House that in their judgment the letter as a whole and in detail was defamatory and insulting, and that the relator had been guilty of a contempt of the House in publishing it; whereupon the resolution of June 20, heretofore stated, was passed, and warrant issued as aforesaid.

"The report of the select committee to investigate the contempt, which was made to the House on April 14, 1916, is annexed to the return. It contains its findings of fact as already stated, and also the consideration of the law and facts, including a review of the authorities.

"The relator did not traverse the return.

"JOHN C. SPOONER,
"CHARLES P. SPOONER,
"*For the Petitioner.*

"D. CADY HERRICK,
"MARTIN W. LITTLETON,
"HENRY M. GOLDFOGLE,
"*For Respondent.*

"LEARNED HAND, *D. J.:*

"It was early settled that a commitment by the House of Commons for a contempt and breach of privilege was not examinable by any court. (Reg. *v.* Paty, 2 Ld. Ray, 1105; Alexander Murray's cases, 1 Wils., 299; Brass Crosby's cases, 3 Wils., 188; Rex *v.* Hobhouse, 2 Chit. Rep., 207; Burdett *v.* Abbott, 14 East, 1; Case of the Sheriff of Middlesex, 11 Ad. & E., 273.) These cases came up in two ways, either by action of trespass against the sergeant at arms, as Burdett *v.* Abbott, supra, or more generally by habeas corpus, either after judgment, as Brass Crosby's case, or after arrest, as Reg. *v.* Paty, supra, Alexander Murray's case, supra, and the Case of the Sheriff of Middlesex, supra. It was even unnecessary to state, so high did the Commons carry their prerogative, the grounds of the commitment (Reg. *v.* Paty, supra, p. 1106, per Gould, J.). Indeed, the contempt in that case was precisely the same act which the House of Lords had declared to be legal, in Ashby *v.* White (2 Ld. Raym., 938). Perhaps the strongest assertion of the immunity of the Commons in their judgments for the contempt was to be found in the litigation of which the great case of Stockdale *v.* Hansard (9 Ad. & E., 1) was the beginning. There the Queen's Bench decided that a resolution of the Commons directing Hansard, their printer, to distribute generally their proceedings would not protect him in an action of libel. The question was argued and considered at great length, in the judgments of all the judges, how far the resolution of the House of Commons was beyond their scrutiny and whether their prerogative was exempt from judicial control. After judgment the Commons did not appeal, and the sheriff levied and collected from Hansard, but had not paid over to the plaintiff, when the Commons issued a warrant for the sheriff

of Middlesex as for a contempt of making a levy, and committed both gentlemen to the tower. The unhappy sheriff applied to the court thereupon for habeas corpus, to which the lieutenant of the tower returned that he held them by warrant of the speaker for contempt and a breach of privilege. He set out the warrant, which did not specify the nature of the contempt, and after full consideration the same court, with one exception, that decided Stockdale *v.* Hansard, supra, remanded the prisoners to the Tower. (Case of the Sheriff of Middlesex, supra.) Certainly the prerogative of the House had been vindicated.

"The grounds repeatedly given for this immunity from control are that the House is a court and a high court, with whose judgments no other court can interfere. At times the prerogative is merely put upon traditional custom of the House—lex et consuetudo parliamenti. Some judges, as De Grey, C. J., in Brass Crosby's case, supra, went so far as to say generally that the Commons were a final judge of all their prerogative, a dictum clearly overruled in Stockdale *v.* Hansard, supra. I do not, however, understand the language, which rests the power of the House of Commons in contempt to indicate that they need be in the discharge of a judicial duty when the contumacious act occurs. The passages in Mr. Justice Miller's opinion in Kilbourn *v.* Thompson (103 U. S., 168), which referred to this language, are not to be so understood. It is rather that in the exercise of their power to punish for contempt they act as a court, and as such can not be reviewed by another court. In none of the cases does it appear that the House was engaged in judicial duties, except perhaps in Reg. *v.* Paty, supra. The right of the House to be regarded itself rests upon immemorial customs.

"That the power to punish for contempt is not inherent, according to English notions, in any legislative assembly is, however, shown by the treatment of contempts of provincial assemblies by the privy council. At first it seems to have been supposed that they had such powers. An editor in the island of Jamaica published matter which was held by the assembly to be a 'breach of privilege.' Just what does not appear. For this he was committed by the body, and afterwards sued the sergeant at arms and the speaker. Baron Parke, who delivered the judgment upon the appeal—Beaumont *v.* Barrett (1 Moo. P. C., 59)—rested the power, which the court upheld, upon the inherent right of all legislative assemblies to protect themselves not only against direct impediments to the exercise of their duties but against libels reflecting upon their authority. This decision was overruled, however, in Kielly *v.* Carson (4 Moo. P. C., 63), where Baron Parke also delivered the judgment of the court. In that case Kielly had threatened a member of the Newfoundland House of Assembly outside the meeting place itself. When brought before the house he repeated his contumelious conduct, and indeed seems to have redoubled it. He was committed, and he sued in trespass on his release. Baron Parke excluded from consideration so much of the contempt as occurred before the house, because the justification was in bar, and if the original arrest was illegal it was no bar. He thought that such an assembly had the power to protect themselves against impediments to their proceedings, but not to punish past misconduct. This decision was followed in Fenton *v.* Hampton (11 Moo. P. C., 347), where the supreme legislative assembly of Van Diemen's Land had committed for contempt a witness who refused to testify at an inquiry, instituted, apparently, with full authority by that body. It was also followed in Doyle *v.* Falconer (L. R., 1 P. C., 328), where the Assembly of the Island of Dominica had committed a member for abusive language before the house directed to the speaker. The right of a provincial assembly to protect itself from "direct impediment' would seem, therefore, to go hardly further than to remove the offender.

"The first case in this country appears to be Anderson *v.* Dunn (6 Wheat., 204), wherein an action of trespass against the Sergeant at Arms of the House of Representatives the Supreme Court held good a plea in bar justifying under the warrant of the Speaker directing the arrest of the plaintiff generally for a breach of privilege of the House and for a contempt of its dignity and authority. The plea recited that the imprisonment under the warrant continued till the House had concluded its inquiry and had found the plaintiff guilty, after which he was reprimanded and discharged. The plea did not show the nature of the contempt, and the decision is open to several possible explanations, one of which may be that since the House had the power of a court to punish for some contempts, and in doing so act judicially, no other court could examine the judgment. If so, it is certainly overruled by Kilbourne *v.* Thompson (103 U. S., 168). In that case, however, the plea stated the nature of the contempt, and possibly Anderson *v.* Dunn is to be therefore distinguished, as indicated on page 229 of the opinion, upon the theory that the plea was consistent with a contempt in the presence of the House. Whether the plea ought not to have been invalid, unless it is alleged a good defense under all the possible cases covered by its broad language, is a question of pleading, which is, with deference, extremely doubtful, but nevertheless that may have been the basis for the decision. In any case the power, however broad, was sustained upon its inherent necessity to protect the House in the exercise of its duties. I do not regard it as deciding more than that there are more cases in which such a power exists.

"Ex parte Nugent (18 Fed. R., 10, 375) was a case of habeas corpus, to release the relator under the following circumstances: The Senate was deliberating upon a treaty in secret session and some one unknown disclosed certain particulars to the relator, a reporter on the New York Herald. The reporter was summoned before the bar of the Senate, was sworn, and refused to answer certain questions relevant to the discovery of the person from whom he had got his information. For this he was committed to the Sergeant at Arms without further notice. The court, the Circuit Court of the District of Columbia in banc, held that commitment of the Senate was not reviewable by the court, an analogy with the practices of the Houses of Parliament, but that if it were at least it appeared that the Senate was acting in a matter over which it had full powers, and that the inquiry and contempt as a means of effecting the inquiry were incidents to the discharge of its constitutional powers.

"Kilbourne *v.* Thompson (103 U. S., 168) was an action of trespass against the Sergeant at Arms, the Speaker, and several Members of the House of Representatives. The House had instituted an inquiry into the existence of a 'real estate pool' which it thought to be connected with a debt due the United States. The debtor, Jay, Cooke & Co., had become bankrupt, and its trustees had effected a settlement of its affairs. The House passed a resolution appointing a committee to inquire into the settlement in question and into the relation of the 'pool' with the debtor's property. The committee summoned the plaintiff before them and asked him the names of the 'pool' members and to produce certain records. He refused, and was committed to the Sergeant at Arms, who held him for about six weeks and then delivered him to the marshal of the district court. These facts being set up in bar, the plaintiff demurred. The Supreme Court sustained the demurrer, in an opinion by Mr. Justice Miller.

"The exact scope of the decision is no more than to hold that the House's commitment was not conclusive on the court, at least it appeared that the House was engaged upon an inquiry within its constitutional powers, and that the inquiry in question was not such. In a discussion it was said that the privileges of the House were not to be gathered in any way from English parliamentary proceedings, which, dependent upon the customs of several houses, and especially upon the fact recited in many of the opinions of the English judges that the House of Commons, as well as the House of Lords, was a court, and as such enjoyed the immunity from review of its proceedings by another court, which was always accorded to judicial proceedings.

"The question whether the House of Representatives had any powers to commit, as for a contempt in the exercise of its legislative duties, was expressly reserved from consideration (p. 189), but it was thought (p. 190) that in proceedings for impeachment either House would have the same powers as a court in relation to the production of testimony, and perhaps also if engaged in a contested election of its Members, as to which it was given full judicial powers. That the court supposed the action of the House in preferring articles of impeachment, including the preliminary inquiry for that purpose, to be judicial in its character seems to me clearly indicated in the opinion (pp. 184, 190, 191). This ought, perhaps, to foreclose any further discussion, but as the language was certainly obiter, I shall discuss the question later.

"In Interstate Commerce Commission *v.* Brimson (154 U. S., 447, 483) the court, obiter, likewise said that the powers of Congress to impose a fine and imprisonment were confined to the exercise of either House of its right to punish disorderly behavior of its Members and to procure testimony in election and impeachment cases, and in cases which might involve the existence of themselves. In In re Chapman (166 U. S., 661) it was said, obiter (pp. 671, 672), that both Houses had the unquestioned right to treat as contempt a refusal to answer proper questions put to a witness in a constitutional inquiry instituted by them.

"The state of the law, so far as decided, therefore, seems to be only this: That the House of Representatives has not inherited the prerogative in matters of contempt of the House of Commons, and that its commitments are open to inquiry, at least

to the extent of discovering whether the commitment was an incident to the exercise of some constitutional power. Nevertheless, it has limited power to commit, and in the exercise of that power it enjoys immunity from review by a court, which necessarily has no appellate jurisdiction. The last statement is entirely the law if any part of Amsterdam against Dunn, supra, survives, which I think it does. The question in this case, therefore, is of first impression in spite of all decisions which have been cited. It turns, I think, upon three considerations: First, whether the House was engaged upon constitutional duty; second, whether in that duty it had any power to punish for contempt; third, whether that power went to compulsion to produce testimony and include the power to punish contumacious language directed against itself and published while the matter was still under consideration.

"That the House was in fact engaged in a constitutional inquiry admits of no doubt. The resolution submitted to the Judiciary Committee was aimed at the impeachment of the relator and the subcommittee was charged with duties ancillary to that inquiry. Of course, the manner of the discharge of these duties by the subcommittee is not relevant to the case now at bar as long as they assume to be acting under the resolution. It was faintly suggested upon the argument that contumelious language directed toward the subcommittee was different from that directed to the House as a whole, but I scarcely think that question deserves much discussion, and I pass it by.

"The next question is whether the House has any powers of punishing contempts, and that I deem settled by the uniform expressions of the Supreme Court. It is true that except Anderson *v.* Dunn, supra, there has been no decision upon that question, but the power has always been presupposed in all the discussions and the question throughout has concerned its limitations. Therefore, it would altogether misconceive the effect of those decisions to take them as going so far as Fenton *v.* Hampton, supra, or Doyle *v.* Falconer, supra. There may, indeed, be some question even of the power to compel the production of evidence when engaged in a purely legislative matter, though even then the reservation made in Kilbourne *v.* Thompson, supra, seems matched by the language in In re Chapman, supra. When in an impeachment, however, there can be no question that the House has some such power, at least for the production of evidence, unless the language is to be disregarded even of Kilbourne *v.* Thompson, supra, which most straitly confined its powers.

"The case at bar does not, however, concern the House's power to compel the production of evidence, but the power to protect itself against the pressure which may arise from insult, abuse, or clamor while deliberating upon the findings of articles of impeachment. It will not, I think, be questioned that at common law it was a contempt of court to assail the motive and conduct of a court, at least while the matter was pending and open. Such was early held to be the rule in Federal courts, Hollingsworth *v.* Duane (12 Fed. Cas., 6816), United States *v.* Duane (25 Fed. Cas., 14, 997), and such, indeed, has been held even after Revised Statutes, section 725, United States *v.* Toledo Newspaper Co. (220 Fed., R. 458), provided the publications be calculated to obstruct the administration of justice. I should not doubt that if Revised Statutes, section 725, do not apply, a court has such a power. The question here is, therefore, whether the House, while so engaged, has the power of a court. Suppose, for example, that during the trial of an impeachment in the Senate some one should publicly threaten the Members unless they decided as he thought just, and suppose such threats were spread broadcast and greatly inflamed public feeling. I should have no question of the Senate's power to inquire into the case and punish the offender. The Senate in such a case is clearly a court, and by analogy would have the common powers of a court when not legally abridged. If so, the letter of the relator addressed to the Senate or to a Senator while engaged in such a trial would be cognizable in the same way, because the question as to how far it in fact touched the court in the exercise of its duties would be involved in the power to decide the question at all, nor would a coordinate court undertake to determine whether the gravity of the aspirations upon the Senate was enough to affect its conduct, assuming that that is the heart of the evil.

"Now, there is no difference between the case supposed and that at bar, except that the House was not engaged in a trial, but in considering the preferring of articles. The relator insists that in that capacity they have none of the powers of a court, for their function is not judicial. I take it that when trying their own Members for expulsion or admission or for misconduct there can be no doubt unless they are not to have the common-law powers of a court, but the case at bar is not quite that. It is, indeed, unwise to attempt any rigid definition of what is executive, legislative, or judicial. The distribution of such functions has in no country, not even our own, been by a priori rules of political dogmatism. Executives make ordinances and try and dismiss their inferiors; legislatures determine facts from evidence and try their members; judges constantly make new rules of law with prospective validity. Yet it is true that in the main courts are concerned with the determination of existing facts and with deciding how far they fit into existing authoritative rules. But it by no means follows that courts must always dispose of the controversy before them; that they may at times do no more than determine that a trial must go on elsewhere. A judge who hears a criminal complaint and decides only that the defendant shall be held for trial, acts as much as a court as when later he sits with the jury and both finally dispose of the matter. He hears the evidence, decides what it proves, and whether the facts count in law. A grand jury performs exactly the same duties as a petit judge, except that its hearing is usually ex parte and need not be so clear in its convictions. It has always been treated as a part of the court, and its presentments lay the foundation for contempts. An impeaching body is in this class. Its duties require it to do what the tribunal of trial must do though the consequences be different. It is true that it only may put the respondent to a trial, but it is not always the limit of its powers. There is, for example, in the constitution of the State of New York (Art. VI, sec. 137) a provision which suspends an impeached judge until he is acquitted. It would be an extreme position to assert that a House whose impeachment had that result was not acting judicially, yet it would be capricious to say that if the judge was not suspended but must only stand trial, the character of the duties is changed.

"That the finding of such articles is a judicial undertaking, indeed, seems to me too clear for question. Still it does not follow that the House has the powers of a court whenever it acts judicially. As suggested by the relator, a district attorney who is examining into a proposed prosecution may be acting judicially, but he certainly has not the power of a court. In the absence of any precedents, it might indeed be a matter of doubt, though I confess that it would seem to me arbitrary to deny the powers customary to courts to a body of equal dignity with any court while it is acting judicially. But the case is not bare of precedents, because the presupposition in all cases is that the House when judicially engaged has the powers of a court.

"The question about which differences have arisen is only whether there can be any scrutiny of the nature of the duties upon which it is engaged. I can see no reason for curtailing the customary extent of the power to commit in the case of the House below what courts themselves enjoyed at common law, unless it were based upon suspicion of the possible greater abuses of such powers. That would be, of course, an inadmissible consideration if it were true, and it is happily not justified in history. While, therefore, as I have said, there is no actual decision upon the point raised, it seems to me that there is both reason and precedent for the position that the House, while deliberating upon articles of impeachment, has jurisdiction to determine whether a publication is a contumacious assault upon its freedom of action. If so, the warrant in the case at bar was within its jurisdiction. I should have no right to express any opinion upon the letter or whether it justifies any punitive action by the House; that lies within its own exclusive determination. It certainly touched the conduct of certain of its Members in their judicial duties and it may be judged to be of a character likely to affect them in the discharge of those duties. The questions whether the conduct of those Members was such as justified the comment, and, if so, whether the dignity of the House suffers more by the punishment of a just indigation than by a recognition of its justice, are quite within the scope of this inquiry; once the power be recognized they are comprised in its exercise.

"I am, of course, aware that the implications of such a holding are to make it possible for the House to treat as a contempt criticism of its conduct pending impeachments by the press generally. Such a power involves the possibility of abuse, like every other power, especially when in the hands of one who is at once the judge and the victim. On the other hand, it must be conceded that the absence of such power puts the House at the mercy of a public pressure that may at times actually prevent a fair and impartial determination of an individual's rights. It may be better that such offense should come before a separate tribunal, unaffected by the sting of personal insult, but there is at present no such tribunal. It has been the traditional method of the law we have inherited to trust to the magnanimity of courts to disabuse themselves of such motives. Perhaps that policy is too trustful of human nature, but I certainly have no right to assume that the House of Representa-

tives are less capable of exercising as much self-restraint as any other official charged with kindred duties. Indeed, the public resentment which an abuse of such powers is apt to bring may well be a more effective means of control upon a popular body than upon courts, whose tenure exempts them from the immediate effects of their conduct.

"Finally, it must be remembered that public criticism of courts has in any event no propriety until the case be decided. The ruling in the case at bar does not imply the right of the House to treat as a contempt statements made while legislative questions are pending before it. At such times discussion and criticism are indispensable; it is useful that the conflict of public interests, of which legislation is a legitimate resultant, should be vocal and free. Where, however, the duty is judicial, the case is quite different. In such cases a habit of public appeal reads a state of mind in the tribunal at variance with the first duties of a judge, and any value it could have, even in extreme cases, is not a counterweight to the dangers of its recognition as lawful.

"In fact, however, all such matters are beside the point, if the power be fairly deducible from the existing law. This I think it is, and if so, speculation upon its value is irrelevant.

"The relator will be remanded to the custody of the Sergeant at Arms and the writ dismissed.

"Dated July 19, 1916.

"L. H., *D. J.*"

## The Mexican People.

### EXTENSION OF REMARKS

OF

### HON. ROBERT M. McCRACKEN,

OF IDAHO,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, July 21, 1916.*

Mr. McCRACKEN. Mr. Speaker, since the assassination of Madero I have read with great interest everything which I could find treating of the Mexican people, and I want to submit to the House some things about these people which I hope may be of assistance to some of the Members of this body in forming an acquaintance at long distance with that interesting and unhappy people.

History tells us that Cortes "conquered" Mexico nearly 400 years ago. He made his memorable expedition from the island of Cuba and landed on Mexican soil on the spot which marks the location of Vera Cruz. For 300 years after the advent of Cortes the Spaniards were in full control of Mexico, and during that time there were no revolutions. During this time about 70 men were sent out by Spain to govern Mexico. History shows that only seven or eight of them had any sympathy or feeling for the people whom they were supposed to rule. For the most part they were cruel and hard-hearted, regarding Mexico as only a means of replenishing the coffers of the Spanish treasury. They made slaves of the Aztec population; they cared nothing for the hopes or interests of the Mexican people. For three centuries Mexico was the victim of the rapacity, avarice, and cruelty of these men who ruled for the enrichment of a country 3,000 miles away. The looting of these defenseless people must have been most profitable to the adventurers of that time, for one writer says that many of the common soldiers returned to Spain with great wealth. On one occasion a returned soldier celebrated his wedding by throwing $600,000 out of the window to a crowd who had come to serenade him.

It is not surprising that years of oppression and extortion should cause these people to become suspicious of all rulers and indifferent to any kind of government. For so long had they been exploited that it is only natural that any ambitious man among them could easily lead large numbers of them in a revolution against any government, good or bad, which might be instituted. About 100 revolutions have taken place in Mexico in the last 100 years. In most cases each new ruler caused the death or banishment of his predecessor.

About 1808 an independence party was formed in Mexico. It was made up of poorly equipped little bands which, under the leadership of two priests, Hidalgo and Morelos, carried on a ceaseless warfare with Spanish troops until 1821, when it gained so much power and influence among the Mexican people that the last representative of Spain found the City of Mexico in a state of siege and Spanish rule in that country at an end.

When we read the pages of history it seems that no people, however deteriorated they may become, fail to produce a few great men. During the turbulent career of Mexico two men stand out as great leaders. These men were Benito Juarez and Porfirio Diaz. Juarez was a pure-blooded native Mexican Indian. It was not until he was 14 years of age that he learned to speak Spanish. He was poor, but he had a wonderful personality, which appealed to a good priest, who educated him. He studied law and was later elected governor of Oaxaca, and afterwards was elected President of his country. With his reign, beginning with 1859, Mexico was modernized. Following Juarez came Diaz, whose reign covered 34 years, and was a perpetual drama of strife and bloodshed.

We should not be surprised that the internal political affairs of Mexico are now in a deplorable state when we consider that in a short period of 65 years after Spanish rule there were 53 presidents, 2 emperors, and 1 regency; and that with only about four exceptions all these changes were marked with violence and bloodshed. We can not but admire such men as Juarez and Diaz when we observe the forces with which they had to contend.

Consider the Indian, for example, the original inhabitants, whose pure-blooded descendants to-day form probably 80 per cent of the population. They were slaves under Spain for 300 years. Is it reasonable that in the space of 100 years they would change all their mode of living or that they would be lifted from their ignorance and superstition? If the people of Mexico could have lived at peace with themselves for the last century, something could have been done for them. Schools and all other methods of civilization can not thrive among a people engaged in destruction of one another; hence there has been no change for the better among the Indians of Mexico since the days of Cortez. Indeed, it would seem that they have retrograded. They profess Christianity, but they probably have little religion. Travelers tell us that many go off to the mountains where they can practice their old Aztec rites, and it is reported that at one of these festivals the authorities were called upon to stop a human sacrifice. While no one knows, yet it is estimated that there are about 75 different languages spoken, and all are totally different. The Indians of northern Mexico are quite like our own—treacherous and warlike. They are filthy in their personal habits, oftentimes wearing their clothing until it drops off of them. A few years ago, when public bathing places were opened in Mexico City, the police were called upon to arrest many of the natives and compel them for the first time in their lives to take a bath. Therefore, when we consider that the greater part of the population of Mexico is made up of Indians, is it any wonder that the Mexican soldier is disloyal to the Government and is easily induced to take sides with bandits like Villa and Zapata and turn upon their own Government? Is it any wonder that elections in Mexico are mere farces?

People who have lived in Mexico tell us that the Indians and lower classes do not know what an election means, and that whole villages have fled to the mountains and remained for weeks in order to avoid the census enumerator. Those who know anything of the Mexican farmer tell us that he still prefers to plow with the same kind of crooked stick that was used in Egypt 5,000 years ago, and that the foreign manufacturer of agricultural implements has been obliged to make plows with only one handle in order to secure a large part of the Mexican trade.

While I have described the lower classes of the Mexican people, it must be remembered that the remainder of the population make up the wealthy, educated, landowning aristocracy. I can not find that there is any middle class made up of farmers, traders, and artisans with a fair average of real estate holdings; and herein lies the reason for the slow development of the Mexican people. It is apparent to me that a stable government will never exist in Mexico until there is developed a large number of intelligent farmers, artisans, and tradesmen, similar to those we have in the United States, who know how to apply the principles of self-government.

I am satisfied that this Congress wants to help Mexico, but the great question is, "How shall we go about it?" It is only natural that the American who has large interests there should desire intervention. And intervention on our part may be the way to help the mass of the Mexican people. But intervention will cost blood and treasure. Is the welfare of Mexico a matter which we should accomplish by sending thousands of our young men to death, or shall we patiently abide the time when some strong man among them shall lead them into the blessings of a peaceful government? The strong man of Mexico is not likely to appear soon, and therefore I hope that our duty toward our neighbor on the south will soon be made plain to all of us.

Treaties.

## EXTENSION OF REMARKS
OF
# HON. W. FRANK JAMES,
OF MICHIGAN,
IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 25, 1916.*

Mr. JAMES. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD, I wish to insert the following statements containing correspondence between Hon. Robert Lansing, Secretary of State, and myself regarding the status of Italian subjects who have become American citizens, and their sons. It also contains correspondence regarding the status of former subjects of Russia, Germany, and Austria-Hungary, who have become American citizens:

JANUARY 10, 1916.

Hon. ROBERT LANSING,
*Secretary of State.*

MY DEAR SIR: Among my constituents are several thousand people of Italian birth. Many of them are American citizens, and hundreds more have taken out their second papers. Many of them have been asked to come back to Italy to fight under the Italian flag. Very few have gone because they consider themselves American citizens. Seeing that they have not responded to the call to arms they are afraid that in case they went back to Italy they would be tried for desertion. They have asked me to write you and see what their standing would be in case they went back for a visit. They would also like to know in case they do not respond (if they are American citizens) if any property or money they might have in Italy could be confiscated. I should appreciate it very much if you would kindly let me hear from you fully regarding this matter as soon as possible.

Yours, respectfully,
W. FRANK JAMES.

JANUARY 13, 1916.

The Hon. W. FRANK JAMES,
*House of Representatives.*

SIR: The department has received your letter of January 10, inquiring as to the status of persons of Italian birth residing in this country. You state that many of these persons have acquired American citizenship through naturalization, while others have merely declared their intention to become citizens of this country; that many of them have been notified to return to Italy for the performance of military service in the Italian army, and that you desire to obtain definite information as to their standing in case they return to their native land.

Inclosed herewith are copies of the department's printed letter of August 18, 1915, to Messrs. Hubbard & Hubbard, entitled "Liability for Military Service in Italy of Italians in this Country who Have Obtained or Intend to Obtain Naturalization," and of a printed circular of August 14, 1914, entitled "Liability for Military Service in Foreign Countries of Persons Residing in the United States." It is believed that the information which you desire will be found in the inclosed printed matter.

I have the honor to be, sir,
Your obedient servant,
ROBERT LANSING.

### ITALY.

NOTICE TO AMERICAN CITIZENS FORMERLY SUBJECTS OF ITALY WHO CONTEMPLATE RETURNING TO THAT COUNTRY.

The information given below is believed to be correct, yet is not to be considered as official so far as it relates to the laws and regulations of a foreign country.

Italian subjects are liable for service in the army between the ages of 18 and 39 years. Relief from the performance of military service may be granted in the case of an only son or where two brothers are so nearly of the same age that both would be serving at the same time, in which event only one is drafted, or where there are two sons of a widow, when only one is taken. When the elder of two brothers desires to have the younger substituted for him he must submit a formal application confirmed by the younger.

Naturalization of an Italian subject in a foreign country without consent of the Italian Government is no bar to liability to military service.

A former Italian subject may visit Italy without fear of molestation when he is under the age of 16 years, but between the ages of 16 and 39 he is liable to arrest and forced military service if he has not previously reported for such service. A former Italian subject who returns to Italy after the age of 39 is not liable for service. However, his exemption from punishment for past failure to appear is contingent upon his having complied with certain formalities which may be performed at an Italian embassy or consulate.

A petition for pardon of the offense of desertion or evasion of military service should be sent to the Italian Government directly, as this department does not act as the intermediary in presenting such a petition.

There is no treaty between the United States and Italy defining the status of former Italian subjects who have become American citizens.

Attention is called to the following provisions of the second section of the expatriation act of March 2, 1907:

"That any American citizen shall be deemed to have expatriated himself when he has been naturalized in any foreign state in conformity with its laws or when he has taken an oath of allegiance to any foreign state.

"When any naturalized citizen shall have resided for two years in the foreign state from which he came or for five years in any other foreign state it shall be presumed that he has ceased to be an American citizen, and the place of his general abode shall be deemed his place of residence during said years: *Provided, however,* That such presumption may be overcome on the presentation of satisfactory evidence to a diplomatic or consular officer of the United States under such rules and regulations as the Department of State may prescribe: *And provided also,* That no American citizen shall be allowed to expatriate himself when this country is at war."

All persons going to Italy must hold passports viséed by an Italian diplomatic or consular officer.

American citizens in Italy should apply for registration in the nearest American consulates.

DEPARTMENT OF STATE,
*Washington, January 12, 1916.*

LIABILITY FOR MILITARY SERVICE IN FOREIGN COUNTRIES OF PERSONS RESIDING IN THE UNITED STATES.

The Department of State has recently received numerous inquiries from foreign-born persons residing in this country as to whether they may be compelled to perform military service in their native lands and as to what penalties, by way of fines, confiscation of property, or imprisonment in case of return, they will incur if they fail to report to the authorities of their countries of origin for military service. Some of the inquiries refer to persons who have obtained naturalization as citizens of the United States, others to persons who have made declarations of intention to become American citizens, and still others to persons who have taken no steps toward acquiring American citizenship. Misconception and confusion concerning this matter appear to be current.

The United States is not a party to any treaties under which persons of foreign origin residing in this country may be compelled to return to their countries of origin for military service, nor is there any way in which persons may be forced into foreign armies against their will so long as they remain in the United States.

The department can not undertake to give authentic, official information either, in general, as to the requirements of the military service laws of foreign countries and the penalties provided therein for evasion of military service, or, in particular, as to the status and present or future liabilities of individuals under such laws. Information of this kind must be obtained from officials of the foreign countries concerned.

The department issues printed circulars concerning the status in their native lands of naturalized citizens of the United States, natives of certain European countries, and these will be furnished to interested persons upon request. It is specifically stated in these circulars that the information contained in them is not to be considered as official so far as it relates to the laws and regulations of foreign countries.

The United States has concluded treaties of naturalization with the following European countries: Austria-Hungary, Belgium, Denmark, the German States, Great Britain, Norway, Sweden, and Portugal. Copies of these treaties are to be found in "Treaties, Conventions, etc., between the United States of America and Other Powers" (Government Printing Office, 1910), and separate copies may be furnished by the department upon request. Under these treaties the naturalization of persons concerned as citizens of the United States and the termination of their former allegiance are recognized, with the reservation, in most of them, that such persons remain liable to trial and punishment in their native lands for offenses committed prior to emigration therefrom, including offenses of evasion of military duty. The United States holds that no naturalized citizen of this country can rightfully be held to account for military liability to his native land accruing subsequent to emigration therefrom, but this principle may be contested by countries with which the United States has not entered into treaties of naturalization. The latter countries may hold that naturalization of their citizens or subjects as citizens of other countries has no effect upon their original military obligation, or may deny the right of their citizens or subjects to become naturalized as citizens of other countries, in the absence of express consent or without the fulfillment of military obligations. More specific information as to the department's understanding of the laws of these countries concerning nationality and military obligations may be found in the department's circulars mentioned above.

It is important to observe that an alien who declares his intention to become a citizen of the United States does not, at the time of making such declaration, renounce allegiance to his original sovereign, but merely declares that he intends to do so. Such a person does not, by his declaration of intention, acquire the status of a citizen of the United States.

W. J. BRYAN.

DEPARTMENT OF STATE,
*Washington, August 1½, 1914.*

STATUS OF PERSONS BORN IN THE UNITED STATES OF ALIEN PARENTS AND OF FOREIGN-BORN PERSONS NATURALIZED IN THIS COUNTRY.

DEPARTMENT OF STATE,
*Washington, June 9, 1915.*

MY DEAR SENATOR LODGE: I have received your letter of June 5, 1915, in reply to my letter of June 2, concerning the detention in Italy for military service of Ugo Da Prato, who was born in Boston August 25, 1895, and went to Italy in 1912 to study architecture, and whose father, Antonio Da Prato, a native of Italy, obtained naturalization as a citizen of this country in the district court of the United States at Boston March 19, 1892—that is, before the son's birth. Accompanying your letter are the birth certificate of Ugo Da Prato and the naturalization certificate of his father.

The department has telegraphed to the American ambassador at Rome, directing him to call the attention of the Italian Government to the facts mentioned above, ask for the immediate release of Ugo Da Prato, and report the result. As Ugo Da Prato was born in this country after his father had obtained naturalization as a citizen of the United States it does not appear that he can be considered an Italian subject under Italian law, and I have no doubt that he will be released. I shall be glad to inform you of the ambassador's report.

In the department's letter of June 2 you were asked to forward not only the birth certificate of Ugo Da Prato, but the naturalization certificate of his father, and in this connection the following statement was made:

"The department is being called upon to take action in a good many cases similar to that of Ugo Da Prato. The Italian law concerning naturalization of Italians in foreign countries is peculiar. Article 11 of the Italian Civil Code contains the following provision:

"'ART. 11. Citizenship is lost by the following persons:

"'1. * * *

"'2. He who has acquired citizenship in a foreign country.'"

"Article 12, however, reads as follows:

"'ART. 12. The loss of citizenship in the cases mentioned in the foregoing article does not work exemption from the obligations of the military service nor from the penalties imposed on those who bear arms against their country.'"

"Under the provisions of law mentioned the Italian Government recognizes the naturalization of Italians as citizens of other countries, but holds them liable for military service in Italy unless they have been expressly excused therefrom. In view of article 11 persons born in this country of fathers naturalized before their births are not considered Italian subjects or held liable for military service in Italy. It is very important that in each case of this kind the department should be furnished with the best documentary evidence procurable of the naturalization of the father and the subsequent birth in this country of the son, so that necessary assurances may be given to the Italian Government."

In your letter under acknowledgment you make the following observations:

"I note what you say in regard to the Italian law, which obviously does not apply to young Da Prato, but, speaking generally, I can not assent for a moment to the proposition that such a thing as dual citizenship is possible. As you well know, we constituted ourselves as champions against the doctrine of indefeasible allegiance and have succeeded in compelling the acceptance of our view by all the nations with the exception, I think, of Russia and Turkey. The abandonment of indefeasible allegiance is in itself the establishment of the principle that there can be no such thing as dual citizenship, either in whole or in part, and to attempt to retain the right over a boy born in this country of parents not naturalized—which is not the case with Da Prato—for military service in the country of origin of the parents is absurd on its face and is something to which we should never assent for a moment."

After making some observations concerning the provision of the German law of nationality of June 1, 1914, according to which Germans who obtain naturalization as citizens of other countries may, under certain conditions, retain their German nationality, and after observing that any alien who endeavors to retain his original allegiance when he takes an oath of allegiance to the United States and becomes naturalized as a citizen of this country commits perjury, you say:

"Italy * * * has no possible claim on the children of Italian parents, not naturalized, born in this country, especially if they have exercised all the rights of citizenship as they are entitled to do under the fourteenth amendment to the Constitution. Such a child has never been an Italian subject for one minute. Italy has no more claim on him than she has on one of my children or one of yours. I believe that there is also something similar to this in French law. We shall find ourselves in a very awkward position with our large body of naturalized citizens and their children if we do not take the strongest position against article 12 of the Italian Civil Code which you quote."

The argument contained in your letter is similar to that in an article which appeared in the June number of the Metropolitan Magazine, in reference to the department's letter of April 2 to Mr. P. A. LeLong, jr., of Louisiana, concerning his citizenship. In the department's letter to Mr. LeLong his attention was called to the fact that, although having been born in this country, he was an American citizen under American law, it appeared that he was also born a French citizen under French law, because of the fact that his father was a French citizen. The department therefore observed that he appeared to have been born with "a dual nationality."

As this general subject has been the cause of considerable comment, I venture to discuss the matter at some length.

Dual nationality is not a theory or doctrine promulgated by the department, but is the unavoidable result of the conflicting laws of different countries. Under the American law of nationality, which is derived from the English law, American nationality is based primarily upon the fact of birth within American territory and jurisdiction, under what is known as the jus soli, whereas in the countries of continental Europe nationality is acquired primarily through descent, under the jus sanguinis. This follows naturally from the basis of jurisdiction which in the common law is the locus and in the civil law the persona. The Revised Statutes of the United States, however, contain the following provision in section 1993 (act of Feb. 10, 1855):

"All children heretofore born or hereafter born out of the limits and jurisdiction of the United States, whose fathers were or may be at the time of their birth citizens thereof, are declared to be citizens of the United States; but the rights of citizenship shall not descend to children whose fathers never resided in the United States."

A provision substantially similar to the above was added to the original British law of nationality. Also the laws of some, although not all, countries of continental Europe contain provisions under which nationality is acquired, under certain conditions, through birth within their territory. The status of a person who is born a citizen of one country under the jus soli and a citizen of another country under the jus sanguinis is commonly termed "dual nationality." Whether or not this term is considered apt, the fact remains that many persons are born citizens or subjects of two countries under their respective laws.

Thus, a person born in Italy of American parents is born a citizen of the United States, provided his father has resided in this country; but, under certain conditions, he may also be considered an Italian subject. Also a person born in the United States of Italian parents is born a citizen of the United States under the law of this country, and a subject of Italy under the law of Italy.

The fact of dual nationality has been recognized by the department for many years. Secretary of State Fish, in a report to the President dated August 25, 1875, said:

"The child born of alien parents in the United States is held to be a citizen thereof and to be subject to duties with regard to this country which do not attach to the father.

"The same principle on which such children are held by us to be citizens of the United States, and to be subject to duties to this country, applies to the children of American fathers born without the jurisdiction of the United States, and entitles the country within whose jurisdiction they are born to claim them as citizens and to subject them to duties to it.

"Such children are born to a double character: The citizenship of the father is that of the child so far as the laws of the country of which the father is a citizen are concerned and within the jurisdiction of that country; but the child, from the circumstances of his birth, may acquire rights and owes another fealty besides that which attaches to the father." (Moore's International Law Digest, vol. 3, p. 520.)

I desire to call your attention to the following statement in the report of the Citizenship Board which was appointed during the administration of President Roosevelt "to inquire into the laws and practice regarding citizenship of the United States, expatriation, and protection abroad, and to report recommendations for legislation to be laid before Congress," which report was forwarded to the Speaker of the House of Representatives by Secretary of State Elihu Root, with a letter of approval and commendation dated December 18, 1906:

"Inasmuch as our Government declares that all persons born in the United States are citizens of the United States, and also recognizes, as well as adopts, on its own part, the rule that children of citizens resident abroad are citizens of the country to which the parents owe allegiance there arises, as will be seen, a conflict of citizenship, broken of usually as dual allegiance." (H. Doc. No. 326, 59th Cong., 2d sess., p. 74.)

A full discussion of the subject of dual allegiance may be found in Moore's Digest of International Law, Volume III, pages 518–551.

For the reasons mentioned above it is obviously important for the department, in dealing with the case of a person who was born in this country and had a father of Italian birth, to ascertain whether his father had previously acquired naturalization as a citizen of the United States. This is especially important when it is a case such as that which you have presented—of a person who has not yet reached his majority. The extent to which this Government may go, and the arguments which it may use, in the actual protection of persons who were born in the United States of alien fathers and who may be molested while temporarily visiting the countries of origin of the latter must necessarily depend upon the particular facts and circumstances of each case. In no case, in the absence of conventional arrangements, can the department assure such persons in advance that they will not be held liable, under the laws of other countries concerned, for the performance of military or other public service attaching to citizenship. In the department's letter of May 5 to Mr. P. A. LeLong, jr., the following statement was made:

"If at any time in the future you should find it necessary to visit France and should there be molested upon the ground that you are a French citizen, you should inform a diplomatic or consular officer of the United States, who would report the matter to the department in order that it might take such measures in your behalf as would seem warranted by the peculiar facts and circumstances of your case."

The department, having advised American citizens generally "to avoid visiting unnecessarily countries which are at war," did not encourage Mr. LeLong to choose the present time to make an unnecessary test of his political position in France.

The cases of persons born in the United States of alien parents should not be confused with the cases of persons born abroad who have obtained naturalization as citizens of this country. In the former cases the department recognizes now, as it always has heretofore, that the persons concerned are born with a dual nationality. In the latter cases the department does not recognize the existence of dual nationality in view of the fact that persons who obtain naturalization as citizens of this country are required to renounce their original allegiance.

While this Government holds that naturalized American citizens can not rightfully be called upon to perform military or other obligations which had not actually accrued before their emigration, the department has always deemed it advisable to call the attention of naturalized Italians to the position in which they will be placed in case they voluntarily return to Italy. During and since the administration of President Roosevelt, the Department of State has accordingly issued a circular warning them to this effect, entitled "Notice to American citizens formerly subjects of Italy who contemplate returning to that country," which contains the following statement:

"Naturalization as an Italian subject in a foreign country without consent of the Italian Government is no bar to liability to military service."

Similar circulars have been issued during and since the administration of President Roosevelt calling attention to the status in their native lands of naturalized citizens of the United States born in France and other European countries. In the circular concerning naturalized Germans attention is called to the fact that naturalization of such persons in this country is recognized by the German Government under the treaties concluded with the German States in 1868, commonly known as the "Bancroft treaties." In this connection I may say that the United States has concluded naturalization treaties with the following countries of Europe besides Germany: Austria-Hungary, Belgium, Denmark, Great Britain, Norway, Sweden, and Portugal.

With reference to your remarks concerning the status of Germans who acquire naturalization in this country, and particularly to the provision of the new German law of nationality according to which German allegiance may be retained, under certain conditions, by Germans naturalized abroad, I may say that it is quite true that no alien can lawfully acquire American citizenship through naturalization and at the same time voluntarily retain his original nationality; for the third section of the nationalization act of June 29, 1906, makes the following requirement of every alien applying for naturalization as a citizen of this country:

"He shall, before he is admitted to citizenship, declare on oath in open court that he will support the Constitution of the United States, and that he absolutely and entirely renounces and abjures all allegiance and fidelity to any foreign prince, potentate, state, or sovereignty, and particularly by name to the prince, potentate, state, or sovereignty of which he was before a citizen or subject; that he will support and defend the Constitution and laws of the United States against all enemies, foreign and domestic, and bear true faith and allegiance to the same."

It is obvious that any person who takes the oath just quoted and at the same time voluntarily retains or attempts to retain his original allegiance is guilty of perjury and dishonor. Moreover, the naturalization of such a person would be open to cancellation as fraudulent, under the provision of section 15 of the naturalization law.

The Department of State has not been informed of any case in which a German has attempted to acquire American citizenship through naturalization and at the same time retain his German nationality under the provision of section 25 of the German law of nationality.

In closing, allow me to say that this Government has not receded from the position taken many years ago as to the natural right of men to make a voluntary change of nationality, commonly known as the right of expatriation. Nevertheless, the Department of State deems it proper to continue the practice which it has followed for many years of informing naturalized American citizens of the position in which they will find themselves in case they voluntarily visit their native countries. For the same reason the department deems it proper to warn persons having a dual nationality of the claims which may be made upon them by the other countries concerned. It is believed that the department would not be performing its full duty in this matter if it should fail to give this information.

Very truly, yours,

ROBERT LANSING.

The Hon. HENRY CABOT LODGE,
*Nahant, Mass.*

JANUARY 18, 1916.

Hon. ROBERT LANSING,
*Secretary of State, Washington, D. C.*

MY DEAR SIR: I wish to thank you very kindly for your letter of January 13 regarding persons of Italian birth residing in this country. I wish you would also let me know if any property or money they might have in Italy could be confiscated in case they did not come back to serve in the army when called by the Italian Government.

There are quite a few persons born in this country of Italian parents, many of them were born between the time that the father applied for his first papers and when he received his full papers. These men of American birth of Italian parents have been given to understand that they are also liable to call to serve in the army for the reason that at the time they were born their fathers were still citizens of Italy and not of the United States. I wish you would also advise me what the rules of the State Department are regarding this matter, or if there is anything mentioned in the treaty between the United States and Italy.

I should appreciate it very much if you will kindly send me five additional copies of the department's letter of August 18, 1915, to Messrs. Hubbard & Hubbard, entitled "Liability for military service in Italy of Italians in this country who have obtained or intend to obtain naturalization" and of printed circular of August 14, 1914, entitled "Liability for Military Service in Foreign Countries of Persons Residing in the United States."

Thanking you in advance for your courtesy in this matter, I am,
Yours, very sincerely,

W. FRANK JAMES.

JANUARY 25, 1916.

The Hon. W. FRANK JAMES,
*House of Representatives.*

SIR: The department has received your letter of January 18, replying to its communication of January 13 concerning the status and citizenship of persons born in this country of parents who are Italian subjects.

In accordance with your request the department is sending you, under separate cover, five copies of its letter of August 18, 1915, to Messrs. Hubbard & Hubbard, entitled "Liability for military service in Italy of Italians in this country who have obtained or intend to obtain naturalization," together with an equal number of its printed circular of August 14, 1914, entitled "Liability for Military Service in Foreign Countries of Persons Residing in the United States."

There is no naturalization treaty between the United States and Italy defining the rights of citizens or subjects of either country who may obtain naturalization in the other country. It may be stated, for your information, that in the absence of a naturalization treaty between the United States and Italy the Italian Government has taken the position that children born abroad to Italian subjects must be considered subjects of Italy and liable for the performance of military service in the army of that country.

As a general rule persons born in this country of Italians who had, however, acquired American citizenship by naturalization prior to the birth of such children, are not held liable by the Italian Government for the performance of military service, unless the facts show that they have voluntarily enlisted in the Italian Army and served therein without claiming exemption from such service on the ground of American citizenship. The department does not admit the contention of the Italian Government with respect to the status of children born in this country of Italian parents, and this matter has been the subject of a considerable amount of correspondence with the Italian authorities at Rome.

With reference to whether or not any property, which the persons mentioned above might have in Italy, could be confiscated or levied upon by the Italian Government for failure to return to Italy and perform service in the Italian Army, you are informed that so far as is known no case has as yet arisen on this subject. For this reason the department can not state in advance what position this Government or the Italian Government would take.

I have the honor to be, sir,
Your obedient servant,

ROBERT LANSING.

FEBRUARY 1, 1916.

Hon. ROBERT LANSING,
*Secretary of State.*

MY DEAR SIR: I have many former subjects of Great Britain in my district. This includes Cornish, English, Welsh, Irish, Scotch, and Canadian. The majority of them have become full American citizens. Seeing that England has now adopted the compulsory military service, and these men should be called back to fight for Great Britain, in case they did not go could they be arrested in case they ever went to Great Britain for a visit, on the ground that they were deserters of the army of Great Britain?

Thanking you for your courtesy, I am,
Yours, very sincerely,

———— ————.

FEBRUARY 3, 1916.

The Hon. W. FRANK JAMES,
*House of Representatives.*

SIR: I have the honor to acknowledge the receipt of your communication of February 1, concerning the status and citizenship of naturalized American citizens of British origin. You ask to be informed whether such persons may be required to perform military service in the British army in case they return to British territory.

I desire to invite your attention to the letter of even date, which is being sent you, with which is inclosed a copy of a notice entitled "Liability for military service in foreign countries of persons residing in the United States," from which it will be observed that there is a naturalization treaty between the United States and Great Britain, and that under this treaty the naturalization in the United States of British subjects is recognized by the British Government.

I have the honor to be, sir,
Your obedient servant,

ROBERT LANSING.

FEBRUARY 1, 1916.

Hon. ROBERT LANSING,
*Secretary of State, Washington, D. C.*

MY DEAR SIR: I have in my district several thousand former inhabitants of Russia. The majority of them are natives of Finland, but there are also hundreds of Poles, Ruthenians, Jews, and other people of different nationalities. Many of these have become American citizens and have no intention of going back to Russia to stay permanently. However, should they be called back to fight for Russia and did not go, they would like to know whether or not they could be arrested in case they went back for a visit.

I wish you would kindly advise me also the status of sons of these men who were born before their fathers became full American citizens. Can they be considered by Russia as subject to call to serve in the Russian Army?

Kindly advise me also as to whether their property could be confiscated in case they did not go back.

Thanking you in advance, I am,
Yours, very respectfully,

W. FRANK JAMES.

FEBRUARY 3, 1916.

The Hon. W. FRANK JAMES,
*House of Representatives.*

SIR: I have the honor to acknowledge the receipt of your letter of February 1, concerning the status and citizenship of persons who are natives of Russia and reside in the United States at the present time. You state that many of these persons have become American citizens and that they desire to ascertain whether they may be required to return to Russia for the performance of military service. You ask to be informed with reference to the citizenship of children born in this country whose fathers were not American citizens at the time of their birth.

Inclosed herewith for your information is a copy of the department's printed circular entitled "Notice to American citizens formerly subjects of Russia who contemplate returning to that country," together with a copy of the department's printed letter of June 9, 1915, to the Hon. HENRY CABOT LODGE, entitled "Status of persons born in the United States of America of alien parents and of foreign-born persons naturalized in this country." There is also inclosed herewith a copy of the department's notice entitled "Liability for military service in foreign countries of persons residing in the United States," the second paragraph of which reads as follows:

"The United States is not a party to any treaties under which persons of foreign origin residing in this country may be compelled to return to their countries of origin for military service, nor is there any way in which persons may be forced into foreign armies against their will so long as they remain in the United States."

It is believed that the inclosed circulars will furnish the information which you desire. I have the honor to be, sir,
Your obedient servant,

ROBERT LANSING.

RUSSIA.

NOTICE TO AMERICAN CITIZENS FORMERLY SUBJECTS OF RUSSIA WHO CONTEMPLATE RETURNING TO THAT COUNTRY.

The information given below is believed to be correct, yet is not to be considered as official so far as it relates to the laws and regulations of Russia.

Under Russian law a Russian subject who becomes a citizen of another country without the consent of the Russian Government is deemed to have committed an offense for which he is liable to arrest and punishment if he returns without previously obtaining the permission of the Russian Government.

This Government dissents from this provision of Russian law, but an American citizen formerly a subject of Russia who returns to that country places himself within the jurisdiction of Russian law.

The Department of State holds that a naturalized American citizen of Russian origin who returns to his native country as a Russian subject, concealing the fact of his naturalization in order to evade Russian law, thereby so far relinquishes the rights conferred upon him by his American naturalization as to absolve this Government from the obligation to protect him as a citizen while he remains in his native land.

No one is admitted to Russia unless his passport has been viséd, or indorsed, by a Russian diplomatic or consular representative.

Attention is called to the following provisions of the second section of the expatriation act of March 2, 1907:

"That any American citizen shall be deemed to have expatriated himself when he has been naturalized in any foreign State in conformity with its laws, or when he has taken an oath of allegiance to any foreign State.

"When any naturalized citizen shall have resided for two years in the foreign State from which he came, or for five years in any other foreign State, it shall be presumed that he has ceased to be an American citizen, and the place of his general abode shall be deemed his place of residence during said years: *Provided, however*, That such presumption may be overcome on the presentation of satisfactory evidence to a diplomatic or consular officer of the United States, under such rules and regulations as the Department of State may prescribe: *And provided also*, That no American citizen shall be allowed to expatriate himself when this country is at war."

American citizens in Russia should apply for registration in the nearest American consulates.

DEPARTMENT OF STATE,
*Washington, January 9, 1914.*

FEBRUARY 21, 1916.

Hon. ROBERT LANSING,
*Secretary of State, Washington, D. C.*

MY DEAR SIR: I have in my district several thousand former inhabitants of Austria-Hungary. The majority of them are Austrians and Hungarians, but there are also hundreds of Croatians, Bohemians, Poles, Jews, and other nationalities. Many of them have become American citizens and have no intention of going back to Austria-Hungary to stay permanently. However, should they be called back to fight for Austria-Hungary, and did not go, they would like to know whether or not they could be arrested in case they went back for a visit.

I wish you would kindly advise me also the status of the sons of these men who were born before their fathers became full American citizens. Can they be considered by Austria-Hungary as subject to call to serve in the Austrian Army?

Also advise me if their property could be confiscated in case they did not go back.

Thanking you in advance, I am,
Yours, very respectfully,

W. FRANK JAMES.

MARCH 2, 1916.

The Hon. W. FRANK JAMES,
*House of Representatives.*

SIR: I have the honor to acknowledge the receipt of your letter of February 21, in which you inquire concerning the liability in Austria-Hungary under the military-service laws of naturalized citizens of the United States who were born in Austria-Hungary and of persons who

were born in the United States and whose fathers, natives of Austria-Hungary, have obtained naturalization as citizens of this country.

I inclose herewith, for your information, a copy of the department's circular entitled "Notice to American citizens formerly subjects of Austria or Hungary who contemplate returning to either of those countries." In the third paragraph of this notice you will find a statement as to the conditions under which a naturalized American citizen, formerly a subject of Austria or Hungary, may be arrested and punished under the military laws in case he returns to Austria or Hungary. Extra copies of this circular will be sent to you if you so desire and inform the department as to how many you want.

With reference to the status of persons born in the United States of Austrian or Hungarian parents before the naturalization of the latter, I may say that the naturalization treaty of 1871 between the United States and Austria-Hungary makes no specific mention of such persons. This Government has always held, however, that the naturalization treaty covered cases of persons of Austrian and Hungarian origin who were naturalized during minority through the naturalization of their own right. It is not understood that the Government of Austria-Hungary denies the application of the treaty in such cases, provided the persons concerned maintain their residence in the United States, and it is not believed that the Government of Austria-Hungary would make a claim to the allegiance of persons born in the United States of Austrian or Hungarian fathers before the naturalization of the latter, unless such persons should go to Austria or Hungary to reside.

I have the honor to be, sir,
Your obedient servant,
ROBERT LANSING.

---

AUSTRIA-HUNGARY.

NOTICE TO AMERICAN CITIZENS FORMERLY SUBJECTS OF AUSTRIA OR HUNGARY WHO CONTEMPLATE RETURNING TO EITHER OF THOSE COUNTRIES.

The information given below is believed to be correct, yet is not to be considered as official, so far as it relates to the laws and regulations of Austria-Hungary.

Liability to perform military service in Austria and in Hungary arises on January 1 of the calendar year in which an Austrian or Hungarian reaches his twenty-first year and ceases on the 31st of December of the year in which he ends his thirty-first year.

Under the terms of the treaty between the United States and Austria-Hungary a former subject of Austria or Hungary who has resided in this country five years and has been naturalized as a citizen of the United States is treated upon his return as a citizen of the United States. If he violated any criminal law of his original country before the date of emigration he remains liable to trial and punishment, unless the right to punish has been lost by lapse of time as provided by law. A naturalized American citizen formerly a subject of Austria or Hungary may be arrested and punished under the military laws only in the following cases: (1) If he was accepted and enrolled as a recruit in the army before the date of emigration, although he had not been put in service; (2) if he was a soldier when he emigrated, either in active service or on leave of absence; (3) if he was summoned by notice or by proclamation before his emigration to serve in the reserve or militia and failed to obey the call; (4) if he emigrated after war had broken out.

A naturalized American citizen of Austrian or Hungarian origin on arriving in his original country should at once show his passport to the American consul, or at least to the local authorities; and if, on inquiry, it is found that his name is on the military rolls he should request that it be struck off, calling attention to the naturalization treaty between this country and Austria-Hungary published in 1871.

The laws of Austria-Hungary require every stranger to produce a passport on entering.

A native of Austria or Hungary will probably experience difficulty in establishing his status if he returns to his original country bearing an American naturalization certificate and passport issued in a name different from his original name. Such a person, if his name has been changed by order of a court, should take with him a properly authenticated copy of the order of the court; if the change of name was not legally made, he should obtain from the court in which he was naturalized a new certificate of naturalization in his lawful name, and his passport application should agree therewith.

Attention is called to the following provisions of the second section of the expatriation act of March 2, 1907:

"That any American citizen shall be deemed to have expatriated himself when he has been naturalized in any foreign state in conformity with its laws, or when he has taken an oath of allegiance to any foreign state.

"When any naturalized citizen shall have resided for two years in the foreign state from which he came, or for five years in any other foreign state, it shall be presumed that he has ceased to be an American citizen, and the place of his general abode shall be deemed his place of residence during said years: *Provided, however*, That such presumption may be overcome on the presentation of satisfactory evidence to a diplomatic or consular officer of the United States, under such rules and regulations as the Department of State may prescribe: *And provided also*, That no American citizen shall be allowed to expatriate himself when this country is at war."

American citizens in Austria-Hungary should apply for registration in the nearest American consulates.

DEPARTMENT OF STATE,
*Washington, August 2, 1915.*

---

FEBRUARY 21, 1916.

Hon. ROBERT LANSING,
*Secretary of State, Washington, D. C.*

MY DEAR SIR: I have in my district several thousand former inhabitants of Germany. Many of them have become American citizens and have no intention of going back to Germany to stay. However, if they should be called back to fight for Germany and did not go, if they went back for a visit, would they be liable to arrest?

I should also appreciate it very much to have the status of the sons of these men, provided they were born before their fathers become full American citizens. Could they be considered by Germany as subject to call in the German Army?

Kindly advise me also if their property could be confiscated in case they did not go back.

Thanking you in advance for this courtesy, I am,
Yours, very respectfully,
W. FRANK JAMES.
MARCH 2, 1916.

The Hon. W. FRANK JAMES,
*House of Representatives.*

SIR: I have the honor to acknowledge the receipt of your letter of February 21, in which you inquire concerning the liability in Germany under the military service laws of naturalized citizens of the United States who were born in Germany and of persons who were born in the United States and whose fathers, natives of Germany, have obtained naturalization as citizens of this country.

I inclose herewith, for your information, a copy of the department's circular entitled "Notice to American citizens formerly subjects of Germany who contemplate returning to that country," calling particular attention to the statement in the fourth paragraph as to conditions under which Germans naturalized in the United States may be held liable for trial and punishment upon returning to Germany for offenses against the German military law committed before emigration.

With reference to the status of persons born in the United States of German fathers before the naturalization of the latter, I call your attention to the department's letter to you of this day concerning the status of persons born in the United States, under similar conditions, of Austrian or Hungarian parents. The same principle applies in both cases.

If you desire to obtain extra copies of the inclosed circular, I shall be glad to send them to you.

I have the honor to be, sir,
Your obedient servant,
ROBERT LANSING.

---

GERMANY.

NOTICE TO AMERICAN CITIZENS FORMERLY SUBJECTS OF GERMANY WHO CONTEMPLATE RETURNING TO THAT COUNTRY.

The information given below is believed to be correct, yet is not to be considered as official so far as it relates to the laws and regulations of Germany.

A German subject is liable to military service from the time he has completed the seventeenth year of his age until his forty-fifth year, active service lasting from the beginning of his twentieth year to the end of his thirty-sixth year.

A German who emigrates before he is 17 years old, or before he has been actually called upon to appear before the military authorities, may, after a residence in the United States of five years and after due naturalization, return to Germany on a visit, but his right to remain in his former home is denied by Germany, and he may be expelled, after a brief sojourn, on the ground that he left Germany merely to evade military service. It is not safe for a person who has once been expelled to return to Germany without having obtained permission to do so in advance. A person who has completed his military service and has reached his thirty-first year and become an American citizen may safely return to Germany.

The treaties between the United States and the German States provide that German subjects who have become citizens of the United States shall be recognized as such upon their return to Germany if they resided in the United States five years. But a naturalized American of German birth is liable to trial and punishment upon return to Germany for an offense against German law committed before emigration, saving always the limitations of the laws of Germany. If he emigrated after he was enrolled as a recruit in the standing army; if he emigrated while in service or while on leave of absence for a limited time; if, having an unlimited leave or being in the reserve, he emigrated after receiving a call into service or after a public proclamation requiring his appearance, or after war broke out, he is liable to trial and punishment on return.

Alsace-Lorraine having become a part of Germany since our naturalization treaties with the other German States were negotiated, American citizens, natives of that Province, under existing circumstances, may be subjected to inconvenience and possible detention by the German authorities if they return without having sought and obtained permission to do so from the imperial governor at Strassburg.

The authorities at Wurttemberg require that the evidence of the American citizenship of a former subject of Wurttemberg which is furnished by a passport shall be supplemented by a duly authenticated certificate showing five years' residence in the United States in order that fulfillment of the treaty condition of five years' residence may appear separately as a fact of record.

A former German subject against whom there is an outstanding sentence for an offense against German law may petition the sovereign of his native State for relief, although the department can not act as an intermediary in presenting such petition; and anyone who wishes to return to his native State in Germany may avoid possible annoyance or arrest if, in advance of his going, he will submit to the authorities of his former home an authenticated copy of his certificate of naturalization, with the request that his American citizenship be recognized and his paper returned to him.

Travelers are not required to show passports on entering or leaving Germany, but they are likely to be called upon to establish their identity and citizenship at any time, and especially so if living in boarding houses or rented apartments. They are consequently recommended to provide themselves with passports. They do not usually require to be viséed or indorsed, but the local authorities sometimes demand a German translation.

Attention is called to the following provisions of the second section of the expatriation act of March 2, 1907:

"That any American citizen shall be deemed to have expatriated himself when he has been naturalized in any foreign State in conformity with its laws or when he has taken an oath of allegiance to any foreign State.

"When any naturalized citizen shall have resided for two years in the foreign State from which he came, or for five years in any other foreign State, it shall be presumed that he has ceased to be an American citizen, and the place of his general abode shall be deemed his place of residence during said years: *Provided, however*, That such presumption may be overcome on the presentation of satisfactory evidence to a diplomatic or consular officer of the United States, under such rules and regulations as the Department of State may prescribe: *And provided also*, That no American citizen shall be allowed to expatriate himself when this country is at war."

American citizens in Germany should apply for registration in the nearest American consulates.

DEPARTMENT OF STATE,
*Washington, March 29, 1912.*

MARCH 8, 1916.

Hon. ROBERT LANSING,
*Secretary of State, Washington, D. C.*

MY DEAR SIR: Article 25 of the German laws concerning nationality reads as follows: "Whoever, before acquiring a foreign nationality, shall, on application to the competent authorities of his native State, have obtained the written permission to retain his German nationality, does not lose it."

Kindly advise me if any of the other countries of Europe have a similar provision. Also kindly let me know if the language I have quoted above is correct.

Thanking you for your courtesy, I am,
Yours, very respectfully,
W. FRANK JAMES.

MARCH 11, 1916.

The Hon. W. FRANK JAMES,
*House of Representatives.*

SIR: I have received your letter of March 8, 1916, in which you ask to be informed as to the true wording of section 25 of the German law of nationality, and inquire whether "any other countries of Europe have a similar provision."

Section 25 of the German law of nationality, which went into effect January 1, 1914, reads, according to a translation received by the department from the consul general in Berlin, as follows:

"Citizenship is not lost by one who, before acquiring foreign citizenship, has secured on application the written consent of the competent authorities of his home State to retain his citizenship. Before this consent is given the German consul is to be heard.

"The imperial chancellor may order, with the consent of the Federal council, that persons who desire to acquire citizenship in a specified foreign country may not be granted the consent provided for in paragraph 2."

The department is not informed that a provision similar to the provision of section 25 of the German law of nationality is found in the laws of any other country.

I have the honor to be, sir,
Your obedient servant,
ROBERT LANSING.

This matter is a very important one not only to the former subjects of Italy, Russia, Germany, Austria-Hungary, but also former subjects of France, Holland, and many other countries, as the situation is practically the same in a majority of the important nations with whom we have treaties.

In order to attempt to take care of this matter I have introduced several resolutions. The one regarding former subjects of Italy is printed herewith. The ones regarding former subjects of Russia, Germany, and Austria-Hungary are along the same lines.

The people of foreign birth of my district are very much interested in this matter, and they sincerely hope that Congress will take favorable action in this matter.

IN THE HOUSE OF REPRESENTATIVES,
*July 15, 1916.*

Mr. JAMES submitted the following resolution; which was referred to the Committee on Foreign Affairs and ordered to be printed.

House resolution 307.

Whereas the naturalization of an Italian subject in the United States without the consent of the Italian Government is no bar to military service in the army of Italy; and

Whereas a former Italian subject between the ages of 16 and 39 who returns to Italy for a visit is liable to arrest and forced military service if he has not previously reported for such service; and

Whereas a person born of Italian parents who visits Italy is also subject to arrest and forced military service; and

Whereas there is no treaty between the United States and Italy defining the status of former Italian subjects or their sons who have become American citizens: Therefore be it

*Resolved*, That the Secretary of State be, and he is hereby, directed to open negotiations immediately with the Government of Italy to conclude a treaty defining the status of former Italian subjects and their sons who have become American citizens, and that in particular he be requested to endeavor to conclude a treaty that will exempt former Italian subjects who have become American citizens, and their sons, from service in the army or navy of the Government of Italy.

---

**An Ominous Triumph.**

---

## EXTENSION OF REMARKS

OF

## HON. MARTIN B. MADDEN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, July 21, 1916.*

Mr. MADDEN. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD, I wish to insert the following article from the Philadelphia North American of July 10, 1916:

[From the Philadelphia North American, Monday, July 10, 1916.]

AN OMINOUS TRIUMPH.

Concerning the latest "settlement" of the Mexican difficulty, which fills Washington with contentment and complacence and causes administration organs to emit symphonies of praise, we find ourselves rather at a loss for adequate comment. The apparent belief that something admirable has been accomplished, and that there has at last been evolved a well-ordered plan of action backed by definite, logical purpose, is a stupefying phenomenon. Perhaps a hypothetical question will serve to stimulate discussions.

If some mad philanthropist or speculator should offer $1,000,000 for a coherent, satisfying exposition of President Wilson's Mexican policy to date, is there any person living who believes that the prize or the wager would be won?

Let imagination carry us a step further. Suppose that some skilled solver of riddles should devise an intelligible answer to a problem in which the only available factor is minus x, and should reveal the policy as it is to-day; and suppose he should agree upon the basis of "doubles or quits," to explain what the policy will be the day after to-morrow or week after next—would he be richer by $2,000,000 or poorer by the time lost in exhausting divination?

We ask these questions in no spirit of idle detraction; we are simply illustrating a fact we have emphasized a score of times—that President Wilson has never had a Mexican policy. It is mere reiteration to say that he has none now, and more commonplace to remark that he is temperamentally and intellectually incapable of having one at any time.

In support of these assertions there is the record of three years of paltry shifts and worthless expedients, of vacillation unparalleled and incompetence without compare; of alternating bluster, bungling, and bunk; there are the graves of men slain and the despair of those living; and there is, finally, this utter abandonment of national right and duty at the demand of an irresponsible and insolent adventurer.

With the widespread relief over one result we can feel a genuine sympathy. The administration, by the simple device of submission, has brought to an inglorious but definite termination the war which its own folly had created.

Nearly three months ago we declared that the expedition flung into Mexico heedlessly and inadequately prepared should be withdrawn "without argument or delay." Such a course, we admitted, would involve humiliation but would avert disaster. Now, it is to be consummated with additional degradation, after the sacrifice of a score of lives, and with less promise than before that the security of the United States and the rights of its citizens are to be established. Nevertheless, a respite has been given, and we rejoice with thousands of families that the anxiety and terror of an interminable conflict have been lifted from them.

Against this lies the inexplicable and depressing fact that the result is hailed by partisan newspapers as a triumph for President Wilson's firmness, patience, and sagacity, while in the same issues they carry dispatches showing that Carranza has flouted every American protest and imposed his will upon the United States, and that the administration withdraws not only its armed forces, but the protection which every Government owes to its citizens.

Throughout all this astonishing acclaim runs the persistent delusion that the present situation, with its mythical advantages, is the product of a farseeing, consistent statesmanship. Once more, therefore, we must undertake the baffling inquiry, What is the Wilson policy regarding Mexico?

The early part of the record is too familiar to need detailed examination. The denunciation of Huerta was arbitrary interference. "Watchful waiting" was inertia. Secret partnership with bandit leaders was intrigue. The Vera Cruz invasion was war. The withdrawal was surrender. The hearing before the Latin-American tribunal was mediation. The announcement that it was "none of our business" how long Mexican anarchy continued was evasion. The ultimatum to the factions a few months later was dictation. Recognition of Carranza was political intervention. Dispatch of the forces to "get Villa" completed the circle by a return to the expedient of war. And now there is to be a repetition of the Vera Cruz withdrawal.

It is by no means our purpose to suggest that all of these devices were wrong; in fact, it would be difficult to believe that so many different moves could be made without occasionally being right. But our point is the obvious one that the records reveal an utter absence of plan, program, or policy.

Those who think, however, that the administration's course during the first three years reached the limit of feebleness, ineptitude, and vacillation can not have examined the events of the last few weeks. These constitute in themselves a chapter of hopelessness. Let us recite them in order:

After the murderous raid of Villa's band on Columbus, President Wilson had no recourse but to order armed forces to pursue him. Prodigious effort succeeded in starting the expedition within six days, and it was announced that the enterprise was undertaken with the cordial acquiescence of Carranza.

This was false, and the hostility of the dictator became daily more menacing; yet the ill-prepared and ill-supported troops

were pushed hundreds of miles into Mexican territory, until it became only a question of days when the native garrisons would be ordered to attack them.

On May 31 Carranza sent an arrogant demand for withdrawal of the expedition, which he called a force of invasion; and on June 18 he dispatched an ultimatum, threatening that unless the troops were recalled within seven days a state of war would be recognized.

On the same day President Wilson summoned for border service the National Guard from every State in the Union. The Secretary of War announced that this was done "in order to assure complete protection for all Americans." Meanwhile, Carranza had issued orders that "any movement by the American troops to the south, east, or west will be the signal to open hostilities."

President Wilson, on June 20, sent him a note which filled five or six newspaper columns. It recited "outrage after outrage, atrocity after atrocity," committed against this Nation and its citizens during the last three years, and explicitly charged the Carranza Government with responsibility and even with complicity.

The note declared that the demand for withdrawal of the troops "can not now be entertained"; any interference with them would "lead to the gravest consequences"; the United States Government, it solemnly averred, "can not recede from its settled determination to maintain its national rights and perform its full duty."

Two days later, in pursuance of this uncompromisingly proclaimed policy, American troops moved eastward from their advanced base. They were promptly challenged by Carranza forces, an encounter followed, several of the troopers were killed, and 17 taken prisoners.

The existing condition thereupon was officially recognized as preliminary to war. A circular note to the Latin-American Governments explained that if hostilities resulted they would constitute "a state of international war," but without any other purpose than "to end the conditions which menace our national peace and the safety of our citizens."

Despite the fact that Carranza boldly avowed that he ordered the attack and would repeat it under like circumstances, the Wilson "policy" suggested an inquiry as to whether the action was "deliberately hostile." On June 25 that question was put, together with a demand for release of the prisoners and for a statement from the Mexican Government "as to the course of action it wishes the Government of the United States to understand it has determined upon."

Carranza waited five days, and then delivered the most resounding broadside of insult ever aimed at a responsible government. With a precision which mocked at the labored discursiveness of the first Wilson note, and with a malignity which made his words hardly less offensive than the treacherous attack upon the American troops, he flung at the Government of the United States charges of mendacity, incompetence, false pretense, and shameless aggression, and reiterated in set terms his purpose to expel the "invaders" if they were not speedily withdrawn.

But with characteristic craft he did not make this outrageous defiance a diplomatic communication. It was merely a "memorandum," published throughout Mexico along with the American note. Thus it could not be answered or rebuked from Washington; the administration which had recognized him and seated him in authority was powerless to respond, while he achieved the result of inflaming Mexican public opinion with the idea that he had browbeaten and cowed the American Government just as he had punished its troops.

And on the very day that this blistering affront was perpetrated President Wilson put forth his unofficial response. In a speech in New York he sternly rebuked the suggestion of carrying through the enterprise upon which he had started. He declared himself against "a war of conquest in Mexico," against "any act of violence," against any defensive procedure that might appear like "dictation." With American soldiers lying slain in Mexico, with American troops surrounded by hostile forces, and with Carranza publishing to the world his contempt for American rights, the President gave notice that further insistence on the part of this country would be unjustifiable and immoral.

We must not omit to remark that the prisoners had been released—as an act of magnanimity by Carranza to his defeated foe. But while this concession was gratefully received, not a word of complaint emanated from Washington concerning their comrades who had been killed.

Demand for liberation of the prisoners implied that the attack was an act of brigandage and treachery, while the ignoring of the victims who were slain amounted to an acknowledgment that their killing was an incident of war. No excuse would be accepted for the detention of soldiers still living; no representation whatever was considered worth while concerning those who were dead.

The "settlement" was finally dictated by Carranza. Having done his malevolent worst in the way of insulting the United States before the world and destroying the last fragments of its prestige among Mexicans, he sent a brief note which partisans of the administration hail as "pacific, almost beseechingly pacific." In this he acceded to suggestions for mediation and agreed to discuss plans for joint patrolling of the border.

But the proffer had one trifling proviso—the American expedition must be withdrawn. And this demand, which Carranza made on May 31 and repeated in every official and unofficial utterance thereafter, is to be obeyed. The one thing for which he contended he has won; the long list of "outrage upon outrage, atrocity upon atrocity," presented to him by President Wilson is dismissed into the limbo of things forgotten. On June 20 the administration formally notified him that it would not even entertain his demand; on July 8 it agreed to submit to his terms.

What possible construction can be placed upon this appalling record except that the "Mexican policy" is a myth; that the interests of this country have been sacrificed by ignorance, muddling, and inconstancy. Yet this judgment does not cover the most degrading feature of the situation. In order that there may be no question concerning the latest decision we quote from a Wilson organ, the New York World:

WASHINGTON, *July 6.*

In reply to questions Secretary Lansing to-day declared that American citizens who elect to remain in Mexico need not expect protection from the United States. If they come to grief after having been repeatedly warned to leave the country, the fault will be their own, according to Mr. Lansing, who said he desired that this be clearly understood.

The same dispatch told of Government moves looking to the extension of an American loan to the Carranza government.

This, then, is the present phase of that "Wilson policy" whose pacific triumph evokes loud acclaim: The American forces in Mexico are to bring away their dead and their returned captives, having accomplished nothing except the inflaming of the territory they were sent to pacify, in order to comply with the demands of the Executive who ordered them attacked; the United States renews and amplifies its recognition of the man whom it has charged with permitting and inciting gross outrages; it will favor the régime which three weeks ago it denounced as worthless with financial assistance; and it formally abdicates the chief function of government, which is the protection of the rights and lives of its citizens.

Whether the policy has "kept us out of war," let Vera Cruz and Carrizal testify. Whether it has saved us from any other evil in the category of national abasement, let the shame of the past, the humiliation of the present, and the menaces of the future declare.

## Our Merchant Marine.

### EXTENSION OF REMARKS
OF
### HON. THOMAS D. SCHALL,
OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 3, 1916.*

Mr. SCHALL. Mr. Speaker, in the referendum of nonpartisan questions laid before the voters of my district last December the ship-purchase bill was the one least understood and receiving the fewest votes. But of those who did vote on the question, the result was overwhelmingly in favor of this ship-purchase bill.

The bill is not partisan and will be passed through the votes of Progressive Democrats and Progressive Republicans, one of which votes I shall cast. Both parties are agreed upon these two points—that ships are necessary and the Government should help—which constitute the backbone of this bill.

A great railroad king once said:

Let me control the transportation facilities and I will own the country and the people who inhabit it.

It has taken a world war to finally rouse us to the necessity for a merchant marine of our own, to demonstrate that this is a national question, vital to the commercial life of every section, every class, every worker, no matter where he lives or what he does; every farm, mine, and mill, and every home dependent on them. Gradually, during the grinding years of the war, the

ships of commerce are disappearing from the seas. German and Austrian ships lie interned in foreign ports; ships of every nation lie at the bottom of the ocean, torpedo torn. The lists have been further depleted by converting every available ship of peace into a ship of battle. Our ports are choked with commodities, our terminals are glutted with shipments that can not be delivered for lack of ocean bottoms. Forty-five thousand freight cars were tied up in New York at one time, and the railroad companies are refusing to haul freight to the seaboard. The export products that do secure passage and run the gantlet of sea danger are levied upon by a foreign shipping trust six to twelve times the rate in ordinary peace times. Take, for example, the ocean rates on the principal staple products of which Minnesota has an export surplus.

Grain, New York to Liverpool, on which the ocean rate in June, 1914, before the war, was 2 pence per bushel, or about 4 cents, is now charged 51 cents, being increased twelvefold. Flour, New York to Liverpool, has been boosted from 10 cents per hundred in June, 1914, to $1 in March, 1915. Lumber, Boston to Liverpool, which at the opening of the war paid 18½ cents for the principal classes produced in Minnesota, is now assessed $1.10. Provisions, including live stock and dairy products, which bore an ocean rate of 20 to 25 cents per 100 before the war, are now taxed via the leading New York line $1.25 per 100, or five to six times a normal rate. Oil cake, oat meal, and the various cereal products of which Minneapolis is one of the largest producers and shippers in the world, are now taxed six to eight times the normal rate.

One of the leading officials of the United States Bureau of Navigation said, "A vessel pays for its first cost on the profits of one cargo." On that basis it is no wonder that the Pacific Mail fleet, which for years has enjoyed a mail subsidy from the United States, threw up its job and sold out to the shipping trust, which will use the vessels for carrying farm and mill products at six to twelvefold ocean rates.

That ought to be notice to Congress that no ship mail subsidy which Congress grants could compete as an attractive bonus to an ocean freight line with the robber rates now levied upon American farms, mills, and factories. It proves that the petitions of chambers of commerce, boards of trade, and various commercial and corporate interests, praying Congress to aid the building of an American merchant marine by subsidy grants from the United States Treasury are, besides the question of principle involved, idle and impracticable even from the standpoint of expediency to gain a business end. If present ocean rates enable an ocean freight line to earn or rather extort a margin of profit in the course of a year 8 to 10 times the entire capital investment of the company, of what effective use as an additional sop would be a petty donation from the Government Treasury in the form of a mail subsidy? Furthermore, the line which receives the subsidy simply joins the ranks of the ocean shipping combine—as witness the subsidized fleets under various flags now operating on the sea—and levies upon the producer, shipper, and consumer what the traffic will bear. This country has had its fill of subsidized transportation lines, the grants of land in Minnesota alone being nearly equal in acres to the total farm acreage of the State under cultivation, and including valuable timber and iron-ore lands valued at hundreds of millions of dollars; and the usual result has been that the companies which have enjoyed at the hands of the people the greatest subsidies in the way of bond issues and land grants have been the chief offenders in levying upon the public extortionate freight rates.

The alternative of subsidy is that which the Government employed in building the Panama Canal and railroad, the Alaskan railroad, in the operation of the Post Office Department, in improving rivers and harbors and the Great Lakes, and the Government fleet used to carry supplies for building the canal—namely, Government ownership and control.

Certainly, if the people of the United States are called upon to finance a fleet, either by subsidy or any other method, they are entitled to a property interest in the vessels which their money pays for and also to a voice in the control of the operations of the fleet for which they pay, because they will then have an asset to show for the money invested.

This bill provides for the creation of a practical shipping board of civil experts, the best available talent in merchant shipping, composed of five members selected by the President.

The naval auxiliaries and Army transports and other vessels belonging to the Navy may be transferred to this board. The board may construct or buy suitable vessels. These vessels may be leased, chartered, or sold; but if an emergency exists, the President may make requisition of these vessels for naval or military purposes, the person owning such vessel shall be paid its fair value, or shall be paid a fair charter value if the Government does not keep the ship.

A corporation may be formed by the board, with capital not to exceed $50,000,000. Personally, I wish an amendment might be added making it several times that amount. This would be true preparedness. The small amount of capital is the weakness of this bill. The board must keep the majority of the stock on behalf of the United States. Panama bonds to the amount of $50,000,000 are to be issued, the proceeds of which will give the Government a direct interest in a merchant fleet which in peace times can serve commerce and in war times serve the battle fleet. A few years ago the American battle fleet went around the globe as a demonstration of our naval power. Our Government was the laughingstock of the world because it had to hire a fleet of foreign merchant vessels, sailing under foreign flags, to accompany our battle cruisers as colliers and supply ships.

Apart from the commercial side of this question, the war has demonstrated that success in arms is dependent upon adequate naval preparedness. The battle line upon the sea must be augmented, aided, and enforced by an auxiliary fleet that can supply the tenfold wants of a nation at war. Then, more than ever, when industrial ranks are depleted and the strain upon production is abnormal, must the fleet forage for the nation. Immediately the merchant marine could be transformed into hospital ships, transports, munitions and horse ships. Besides that, on the merchant marine seamen would be training in all branches needful in time of war.

In order to make effective even our present battle fleet, the Government now needs 400 additional freight carriers to use as transports. Our Government shipyards, capable of much greater output, are to be set to work under the operations of the proposed measure, constructing the needed merchant vessels, and these vessels, absolutely necessary in case of war, are to be put to practical use in time of peace and made to earn a dividend on the cost of construction and operation, while at the same time serving the great industrial interests of the American people as a carrier of their freight burdens on the sea and as a guaranty of the freedom of the sea against the exactions of a foreign shipping trust. A naval investment in a fleet which will give the American people direct and valuable service in both peace and war is a good investment. It is one which will pay for itself in practical and useful results, and not benefit simply a small interest on the seaboard and ultimately add to the junk pile of defunct and derelict battleships.

The ship-purchase feature of the proposed bill will enable the Government, by taking over the Hamburg-American and other first-class freight carriers interned and lying idle in American harbors, to meet the emergency and furnish American vessels for American products, and give American producers independence of foreign control on the high seas. We would have little respect for the business sagacity of a groceryman who depended upon the delivery wagon of his competitor to carry his sales.

America has been the pioneer nation in the conquest of the air. One of her adopted sons, of Norwegian birth, led the way to ironclad monitors. It was Fulton who first trained steam to aid navigation. Sixty years ago we held first place among the merchant marine of the world, and our "clipper-built yachts" were a proverb for swiftness. It is not for us to take a back seat now. The trade opportunity of the century is before us and we lack the shipping facilities to grasp it. Now is the time to develop our trade with South America, but we can not do it without ships.

The Outlook of May 17 says that our mills can make in 6 months as much as it will take the country 12 months to consume. In order to keep our workers busy we must build up a vast export trade to consume this surplus.

Minnesota is now paying a foreign fleet enormous subsidies in order to get its surplus to market. The result is a depression in the farm and mill price of every staple production of Minnesota, as is plainly shown by comparison of present prices with those of one year ago.

But we are now threatened with conditions even worse. The following official statement was published in the London Economist of November 13 last:

> In future the Government may requisition for the carriage of grain and other merchandise any ship registered in the United Kingdom, and after December 1 no British ship of over 500 tons may carry cargo from one foreign port to another without first obtaining a license from a committee in London. All British shipping is liable to be requisitioned for commercial purposes, all trade in British bottoms between foreign ports is to be under direct Government control.

When foreign shipping is under direct Government control and our producers and shippers are not only subject to the mercy and extortion of foreign fleets, but are faced with the ruin of their foreign trade by withdrawal of even the ships now available, it is in poor grace for our boards of trade and public utility interests to set up the bogy of "socialism" and complain against the principle of Government ownership. When private capital fails to meet the emergency, the American people can

employ their public function of cooperative action, and protect the Nation. The American people must be promptly freed from the domination of a foreign shipping trust to which we pay an annual shipping bill of over $200,000,000. If a $50,000,000 bond issue will help cut the knot of this colossal foreign octopus, who is he that would stop progress by the cry of "Government ownership"?

## The Live-Stock Industry.

## EXTENSION OF REMARKS
OF
# HON. WILLIAM P. BORLAND,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, July 18, 1916.*

Mr. BORLAND. Mr. Speaker, under the unanimous consent extended to me, I desire to insert the following pertinent letters:

MARKET COMMITTEE, AMERICAN
NATIONAL LIVE STOCK ASSOCIATION,
*Omaha, Nebr., July 11, 1916.*

Hon. WILLIAM P. BORLAND, M. C.,
*Washington, D. C.*

DEAR SIR: Referring to Mr. A. E. de Ricqles's letter to you of the 8th, of which he sent me a copy, I wish to confirm what he said regarding the activities of the packing interests, in bringing pressure to bear on Congress to prevent the passage of the Borland resolution. Since the hearing was concluded, the packers have gone systematically to work to create an impression in Congress that there has been a change of sentiment here in the West regarding the necessity for this investigation. On Friday and Saturday of last week the managers of the leading packing houses here made an effort to get the South Omaha Exchange to send telegrams to Washington opposing the Borland resolution. Similar effort was made at Kansas City and St. Joe, and at all of these points they met with failure as far as the exchanges were concerned. It is possible they were able to persuade certain individuals to comply with their request. I understand both at Sioux City and Denver the local exchanges yielded to the pressure brought to bear on them and sent telegrams to Washington opposing the Borland resolution.

As you are probably aware, at the meeting of the National Live Stock Exchange at Cincinnati the latter part of May it was unanimously decided to favor the Borland resolution and to indorse the statement made at the preliminary hearing at Washington by M. L. McClure, the president of the National Exchange. A telegram to this effect was sent to you at that time by Sedgwick, the secretary. The 18 leading live-stock exchanges of the country belong to the National, and all those referred to above had representatives at this meeting, so that the present action at Sioux City and Denver is a reversal of their position in May. As you probably know, the Denver and Sioux City markets are what might be termed "packer" markets, where the stockyards, live stock journals, and practically all of the facilities are owned by three or four of the leading packers, and at which points their control is more complete than at some of the bigger markets. Yesterday I wired our Congressman, DAN STEPHENS, along these lines, and asked him to see that Congressmen were properly posted regarding packers' actions.

I sincerely hope you will follow up your resolution actively and push it in every possible way, as its passage means much to the men of the West.

Very sincerely, EDWARD L. BURKE,
*Vice Chairman.*

JULY 15, 1916.

Mr. H. B. BROUGHAM,
*Editorial Department, Public Ledger, Philadelphia, Pa.*

MY DEAR MR. BROUGHAM: In response to your letter of the 14th, I avail myself with pleasure of the opportunity to give you some of the basic facts relating to the Beef Trust resolution.

The proposal originated, so far as I am concerned, with a very prominent organization of my own State—the Missouri Cattle, Swine, and Sheep Feeders' Association. In the fall of 1915 they passed a series of resolutions calling attention to the demoralized condition of the live-stock market. Prices for cattle on the hoof ready for slaughter had ruled nearly $1 a hundred lower in 1915 than in 1914, and hogs had gone down in still greater proportion. In 1915, however, there was an increased demand for beef for export and for all pork products, caused by the European war. There was a decreased importation of live stock because a Mexican revolution had cleared the northern States of Mexico, and Canada was finding a profitable market for her meat animals in England.

The live-stock men therefore were confronted with this situation: Importations had ceased, the supply in this country was confessedly short, and an unprecedented demand had occurred in the foreign markets. We had become again an exporting country of meat animals, and yet, contrary to every principle of economic law, the price of live animals was going down and the price of meat products was going up.

Manipulation of some kind was evident. I introduced the original resolution in the middle of January, 1916, after giving the matter some study as to what form of remedy would be best under the circumstances, most helpful, and least apt to miss fire or do harm. I came to the conclusion that a thorough investigation of the entire meat situation by the Federal Trade Commission was the best course; that a congressional investigation might cause a great deal of agitation without tangible result, and that an investigation by any of the bureaus of the Agricultural Department would not be far-reaching enough and would result probably in mere collection of statistics.

The Federal Trade Commission, as you know, is empowered by law to do precisely this thing. It can investigate into alleged violations of the antitrust laws; it can also investigate into unfair methods of competition; it has the power of summoning witnesses and compelling the production of testimony, as well as the power of collecting evidence by special examiners. As the result of this work, it can either institute criminal prosecutions or make a rule against the offending companies to cease or desist from certain unfair practices or it can recommend remedial legislation to Congress.

After my resolution was introduced the Texas Cattle Raisers' Association took up the question and indorsed the resolution by a very decided vote. The Panhandle Cattle Association did the same, and numerous State and local organizations. The most prominent action, however, was taken by the American Live Stock Association, which is the largest live-stock body in the world. This organization appointed a committee on markets and authorized it to employ an attorney and to take all steps necessary to see that an investigation was had in a most thorough manner. All of the State and local organizations cooperated with the national association and with its committee on markets.

Of course, there was not lacking during this time violent efforts on the part of the packers and some of their friends among the live-stock men to impede or defeat this action. The packers and their representatives were present at nearly all of the State conventions, and were uniformly defeated. At the Fort Worth convention of the Texas association, at which a resolution was adopted specifically favoring the investigation, the packers succeeded on the last day of the session and at its closing hours, when less than a score of men were in the room, in getting an additional resolution passed suggesting that the association attempt to cooperate with the packers before pursuing any Federal action. Nothing was known about this resolution—even by most of the officers of the association—until it was suddenly sprung by the packers' attorney at our hearing in Washington before the Judiciary Committee. It was offered as evidence that the Texas association had reversed itself. After some difficulty we discovered what the facts were; discovered that the committee of cooperation had actually been appointed, had conferred with the market committee of the national association and with the packers, and had made a report that investigation by private action was impossible, and recommended the support of the action of the market committee of the national association.

This is one of the numerous fiascoes which the packers have attempted in the course of these hearings. The National Live-Stock Exchange, a body composed of the commission merchants of the various central regions, immediately took action favoring the resolution. This shows how wide the demand is in the cattle trade for an investigation, because the commission men are in a very difficult position between the packers, who are their only customers in most cases, and the cattle feeders and shippers, who are their clients. No commission man likes to be blacklisted by the packers, and many of them are individually afraid of the packers, although collectively, in a national body, they are willing to act for the best interest of the industry.

The hearings began before the Judiciary Committee in March, and the packers appeared by their attorneys. It must be remembered that the Agricultural Department had attempted to hold a cooperative hearing in regard to the beef situation in Chicago in October, 1915. All branches of the meat industry appeared at that hearing and attempted to aid in the solution of the problems before the Agricultural Department except the packers. They snapped their fingers at the Agricultural Department because it had no power to compel them to appear. The record of this hearing in Chicago will be of interest to you if you secure a copy. However, the packers did appear at the hearing on my resolution before the Judiciary Committee and fought it vigorously from the start.

The American Live Stock Association employed as its counsel Hon. Walter L. Fisher, of Chicago, former Secretary of the Interior. Mr. Fisher came to Washington and examined into my resolution and two others which were then pending, and finally, after much investigation, definitely decided that the association should support my resolution.

The hearings before the Judiciary Committee dragged along because they were interfered with to some extent by the impeachment case against H. Snowden Marshall, then pending before the same subcommittee. The packers also requested numerous delays that they might study the testimony and produce further evidence. The evidence was overwhelming that among all ranks and classes interested in the production of meat animals the conviction was general that four or five big packers were able to control the markets.

It was shown that the number of meat animals in this country had constantly decreased, in spite of the fact that our population had increased. It was shown that the packers are engaged in establishing lines of packing houses in Argentina, Uruguay, Australia, and elsewhere, by means of which they can control the export price. It was shown that there was practically no competition between the buyers of the packing houses and the great live-stock centers of the entire country, and that competition by independent concerns had almost ceased. There are two notable exceptions to this fact—Cincinnati and Indianapolis, where independent concerns existed which have practically driven the big packers out of the local business.

Packers lay great stress upon the fact that a big business, well organized, which saved all the by-products was better economically for the consumer and could do business on a smaller margin. It seemed, however, that they were not able to compete with the local concerns in Indianapolis and Cincinnati, who did not have the advantages in the preserving of their by-products and offal that the big packers had.

It was also shown that the packers owned or controlled most of the stockyards, transportation lines, feed lots, refrigerator cars, storage plants, etc., and are also interested largely in the banks and loan companies which lend money to cattle feeders. It was shown that they have a large number of subsidiary enterprises, such as cottonseed-oil mills that furnish part of the oil cake used for feeding stock; fertilizer works; tanneries; storage plants for poultry, fruit, and vegetables; docks and shipping facilities, and other enterprises, which have evidently been built up out of the receipts and earnings of the parent plant, which is the packing house. At the same time that this enormous capitalization has been going on with the cattle industry and its brood of industries the cattle feeder and cattle raiser has, even in the best of instances, been doing no more than holding his own, and in many cases has been utterly unable to produce live stock with the growing cost of production and added value of land. The packers on their part presented a number of witnesses—cattlemen and others—who decided that the packers were fair in their dealings, that agitation would demoralize the business, and that there was no help by legislation or otherwise for the cattle industry. It was industrial warfare to the death, they thought.

With the agitation, however, caused by the hearings the cattle market improved at a very rapid rate, although there had been practically no change in the visible amount of meat animals and no pronounced change in the demand for foreign consumption. There had, however, been a considerable increase in the demand for local consumption, caused by

the large number of wage earners who were at work. Whatever the conditions were, it was apparent that the manipulation which had occurred in 1915 was not being attempted in the face of the hearings on this resolution in 1916, and that the cattlemen for the first time in some years were getting some advantage of the natural law of supply and demand. If the cattle market had been good before the resolution was introduced and became demoralized during the hearings, the agitation might be accused of demoralizing the market; but the very reverse was true. The market was utterly demoralized in 1915, but became considerably better as the hearings progressed. However, the same power which can put the market down in 1915 or can put it up in 1916 can put it down again if Congress adjourns without passing the resolution. The packers have urged and received repeated delays, and seem to feel that with the approaching end of the session they had the resolution on the shelf. By some vigorous action of the cattlemen we got the resolution up before the committee for a final hearing on July 6, and the packers were compelled to close their case.

The matter is now before the Judiciary Committee for action, and the packers have begun a country-wide propaganda to defeat it. They have flooded Congress with telegrams from bankers, railroad managers, commission men, politicians, State officials, and some cattle raisers, all to the same effect, that business conditions in the cattle market are now good and any action by Congress would demoralize the industry.

In the course of the negotiations between Mr. Fisher, counsel for the American Live Stock Association, and the attorneys for the packers, they repeatedly stated that if the resolution were broadened to include all the economic features and not made simply a semicriminal prosecution, they would support it for the benefit of the industry at large. It was broadened, largely following the suggestions of Mr. Veeder, attorney for the packers, but they are still fighting it, and it is evident that no resolution will go through if they can prevent it.

They also urged that the investigation be made by the Department of Agriculture as a substitute for the Federal Trade Commission, knowing that the Department of Agriculture has no power to compel evidence under oath and no power to pursue the subsidiary companies, like stockyards, terminals, tanneries, banks, etc. The Secretary of Agriculture, Mr. Houston, wrote a letter to me, which I submitted to the subcommittee, and which is now of record, saying that the department is not able to undertake the investigation and recommending the Federal Trade Commission. He offered to cooperate fully in furnishing all information.

This is the entire situation, of which you can collect such facts as you need for your editorial expressions. It is apparent that the meat industry of this country touches directly more people as producers and consumers than any other industry, and we are confronted with a vanishing meat supply and increased population. The western people expect that the business will be put on some stable basis which will enable it to grow with the growth of the country and to have the usual advantage of the law of supply and demand. There is no just reason why the packers should stand in the way of this or cast any suspicions on the action of the Federal Trade Commission.

Yours, very truly,

WM. P. BORLAND.

## Government Armor-Plate Factory.

## EXTENSION OF REMARKS

OF

# HON. THOMAS D. SCHALL,

OF MINNESOTA.

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 15, 1916.*

Mr. SCHALL. Mr. Speaker, I am in favor of a Government-owned armor-plate factory, because I believe it is a measure looking to real defense, a measure which removes the motive of those would-be patriots, who raise the cry for a false and pumped-up preparedness. Here is an opportunity, while spending the people's money for defense, to make a good and paying investment for them. The people as a whole are for preparedness, but they want a dollar's worth for every dollar they spend.

In hearing read the answers to my inquiry upon the question of preparedness in my district, I was deeply impressed by the fact that even those who were opposed to preparedness opposed it upon the ground of the extortionate prices demanded by the War Trust. They feared the inadequacy of our state of defense was being grossly exaggerated through the public press and the impetus given it by the munition makers. When they take into consideration the vast amount that has been spent for preparedness, it is no wonder they think we should be prepared; while, in fact, we are hideously unprepared. It is time that we should take note of the cause and stop the robbery.

According to figures of the gentleman from Wyoming [Mr. MONDELL], the cost of preparedness for the three leading nations during 12 years is as follows:

| | |
|---|---|
| Great Britain | $166,000,000 |
| United States | 110,000,000 |
| Germany | 30,000,000 |

We have spent more than any nation save one, yet are worse prepared. It is not the fault of Congress, for Congress has appropriated money enough so that we should have more adequate preparedness.

Whose fault is it? It is in great part the fault of the companies who through all these years have held up the Government, yet are now so insistently invoking patriotism. We are all familiar with the costly, desperate struggle the Bethlehem Steel Co. is making in their lobbying here and through page advertisements all over the country in the daily papers, and countless reprints sent broadcast in letters—a propaganda open and shameless, but ill timed and apparent.

Two years ago, in November, 1914, a special committee of Congress appointed to investigate the cost of making armor plate endeavored to obtain from armor-plate manufacturers information on the cost of this product. Answers were in all cases refused, nor would they permit a Government expert to look over their books with the purpose of obtaining that information. It ill becomes them to try to cloak in patriotism their present overtures to the Government. It is not so very long ago that the patriotic Bethlehem Steel Co. was selling armor plate to Russia for $249 a ton, while at the same time charging our Government $616.14 a ton. In 1897 the Bethlehem and Carnegie companies refused to bid at $300, the price fixed by Congress, because they knew they held us by the throat, and forced them to raise it to $400 a ton. In 1911 Italy bought armor plate for $395 a ton, but this wonderfully patriotic concern charged its own country $420. That further confirmation of their disinterest may not be lacking, we find them selling to Japan for $406.35, while prices to us ran from $440 to $540. As a last act of arrogant desperation, they even threatened the Senate this winter, if they persisted in establishing a Government armor-plate plant, to raise steel to a prohibitive price. And we have not forgotten the scandal of a few years ago of guaranteed armor plate sold to the Government which contained great blow-holes, such that to arm a vessel therewith would imperil the lives of our brave marines, and as for encountering an enemy, it would be wholesale murder.

This is patriotism for revenue only. And now, when brought to bay, these three "competitive" companies all slump to an identical price! The evil of their overcharge bars them from any claim that their rights have been trampled. The whips that we cut for ourselves are hardest to bear, and they have only their own high-handed piracy to blame.

Armor plate, they say, is only 2 per cent of their whole output. Therefore, we take it that they will not be largely injured. Besides, they claim that this business, on whose life they are putting forth such terrific struggles, only yields them 1¼ per cent profit. All things considered, our duty is to the whole people first, even if this particular interest should suffer.

If the munition makers have stirred up the strife for preparedness, they have done a good thing. But in their wonderful zeal to grab more and yet more wealth they have overreached themselves and are "hoist by their own petard." They could not be content with moderate gains. No one would think of disturbing private industry that conducted itself within reason. It is only when they outrage all patience that the trodden worm turns.

The establishment of a Government-owned armor-plate factory would remove the element of plunder. The country at large would not view requests for battleships, most heavily armored of all vessels, with such suspicion if tremendous profit were not to pour into the patriotic and receptive maw of private plants.

Our Government should manufacture at least a part of everything it uses, that it may have a check on the cost of production and be in a position thereby to demand fair prices.

We are absolutely helpless in the hands of the munition makers without a plant of our own. They can do as they please as to cost, and we have no means of figuring to arrive at whether or not their charge is equitable. They can and do permit valuable secrets of manufacture to be distributed among possible future enemies. Only this year it is a matter of common knowledge that, had not the Navy Department called the courts to their aid, private enterprises would have sold torpedoes to the warring nations, these torpedoes embodying improvements devised by our own naval officers.

The armor-plate companies would not cease to manufacture, that is certain, but they would be forced to competition, which they have now manipulated out of existence.

They have followed the course of all tyrants. Their increasing and insatiable greed and arrogance has been their own undoing. They can not complain of injustice when their whole dealings with the United States have been marked by unfairness and iniquity.

While they manage to conceal the cost of armor plate, it has been variously estimated by three different nonpartisan commissions at $230 to $262 a ton, as against $616 a little while ago, or the $395 which they now offer to supply it for. Even on the basis of this difference the saving on battleships and cruisers called for in the naval bill would be between three and four million dollars.

Profits of the private manufacturers on other articles sold to the Government, where similar articles are made in the navy yards, have run as high as 300 per cent. It is a certainty that the armor plate produced by the Government would be of uniform excellence, not just good enough to get by. The Government could in its production of plate make use of all modern knowledge and conduct experiments for improving the quality. There would be no tendency, as in private shops, to cling to antiquated styles because the shops were equipped to make old styles. Delay in delivery would be diminished. Sites could be located in the interior of the country, safe from invasion, instead of, as at present, too convenient to shore. The gentleman from Pennsylvania who claims that 8,000 men would be thrown out of work can not sustain that proposition, because whatever portion is thrown out in one place would be equalized in employment by the Government.

They say the Government will make mistakes. That may be true. That the experiment will prove expensive. So it may at first, but the Government will evolve efficient methods. I hope the time will come when the Government will make not only its own armor plate but more of its munitions of war. The burden upon the people would be lessened, our patriotism would be purified and heightened, and there would be entirely removed from war preparation the charge of graft.

## How President Wilson Has Kept Us Out of War.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM B. McKINLEY,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 29, 1916.*

Mr. McKINLEY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a short statement by Congressman GREENE, of Vermont, on how President Wilson has kept us out of war.

The statement is as follows:

HOW PRESIDENT WILSON HAS KEPT US OUT OF WAR.

[By Hon. FRANK L. GREENE, Member of Congress, first district, Vermont.]

"Thank God for Wilson! He has kept us out of war!"

Unless the signs of the times are utterly misleading, that is about the only political asset with which the Democratic Party to-day expects to go before the people of the United States in the campaign soon to open and appeal for a vote of confidence in the administration and itself. Indeed, practically the whole fabric of its propaganda for continuance in power in time of peace rests upon the ingenious hypothesis that we might all this time have been experiencing war instead of peace, and that President Wilson has prevented such a calamity.

COVER FOR GENERAL DEMOCRATIC FIZZLE.

This kind of sophistry makes it easy to avoid any serious reference to the miserable fizzle of the Democratic economic policy with its hopeless Underwood tariff that, designedly not for protection, is manifestly not even "for revenue only."

It renders it unnecessary to refer above a whisper to a so-called income-tax law that compels a limited section of this country to pay into the National Treasury not only a disproportionate assessment upon its own industry and thrift but also the share that other sections of the land do not pay. And yet these sections that pay little or nothing under the income-tax law, most of them, are the very ones that refused the benefits of a protective tariff to the section that does pay, simply because they did not want a protection tariff themselves, albeit Republican protection would have made it unnecessary for anybody to pay any income tax at all. Moreover, the prosperity fostered under such protection in former years well-nigh alone makes it possible for the section that does pay to have any money saved with which to pay the tax now.

This Democratic campaign cry also conveniently sidetracks the question why the United States is obliged to sweat under a "war" tax when it is the only first-class nation on earth that is at peace.

And, skipping many other pleasant little opportunities it affords for graceful sidestepping of annoying queries, it blandly overlooks any necessity whatever for explaining why a Treasury that had $165,000,000 surplus in it when turned over by the outgoing Republican administration March 4, 1913, has since been able to keep practically nothing except its books, and even they so cleverly balanced that the ablest financiers and expert accountants in the land are in dispute as to whether the money they show is actually in the vaults as a national asset or should be charged off as a national liability, agreeing, however, on the one all-important proposition that, whatever the figures say, the fact is that the Government is "broke."

In fine, by throwing into the air the slogan, "Thank God for Wilson! He has kept us out of war!" the Democratic Party hopes to escape responsibility for the dreaded question that comes to the lips of every thoughtful American, "If President Wilson has kept us out of a war in which we had no part, what in the name of common sense has been his philosophy in also keeping us out of a prosperity that we actually had when he took his office?" Perhaps he has overdone this keeping-out business; has "kept us out" not wisely but too well.

President Wilson is a student of psychology. He has declared certain distressful conditions experienced by his countrymen under his régime to be merely psychological. True to the book, he and his supporters now invoke psychology to substitute for a real condition of misfortune the hypnotic and compelling suggestion of a beatific national blessing that "never was and no man ever saw."

THE PHANTOM WAR SUGGESTION.

But this phantom "war" suggestion is a clever device of our Democratic friends in more ways than one. In the language of the sports, it permits of playing both ends against the middle. Not only has President Wilson, as they say, kept us out of war that might have been, and so we should be grateful to him, but, if war should happen to come, it would be manifestly unwise to "swap horses while crossing a stream." So President Wilson should be reelected, also, on the hypothesis that we may have war some day, and, if we do while he is in office, we shall be glad we did not turn him out before it came.

This proposition might fit the campaign for reelection of any man that ever lived in the White House at any time. It is based upon that supreme and sublime argumentative premise "If," and is, therefore, wholly unanswerable. As our old friend Touchstone says, "Much virtue in if." Just where the logic of this "swapping-horses-while-crossing-a-stream" proposition lies I leave to the celebrated jury in "Alice in Wonderland" to decide. This jury, we recall, were endowed with the remarkable ability of hearing the evidence in the case, writing it down on their slates, and reducing it to pounds, shillings, and pence. As this is the way all Democratic financing is done, and in just such a dream, too, as came to Alice, our friends can not consistenly plead to the character and capacity of such a jury.

So, after all is said about it, the fact is that this "Wilson-has-kept-us-out-of-war" appeal rests wholly upon the incontrovertible argument that is eternally presented by "might have been" on the one hand, and "may be" on the other.

Could anything be more practical or convincing?

HAS WILSON KEPT US OUT OF WAR?

Now let us see whether or not President Wilson has "kept us out of war." And at the outset let us endeavor to be fair and give him full credit where we may for the performance of his strict and unequivocal duty under the Constitution and his oath of office, remembering, at the same time, that it is the obligation of every President to keep us out of war when it can be done honorably, and that most of them did it. Indeed, the only instance in our history where a President failed to keep us out of war, and the honor and justice of that war are still reasonably disputed, is afforded by the administration of President Polk, a Democrat of Democrats. Oddly enough Polk, like Wilson, was nominated by a Democratic national convention in pursuance of a plan to prevent the nomination of a popular candidate that had already on several ballots polled a majority of the delegates and would have been the winner but for the absurd "two-thirds rule."

In so far as President Wilson has manfully met the many unusual and perplexing diplomatic crises that have arisen in his time as results of the great war now raging in Europe, and has so ably presented and firmly insisted upon the rights of this country as a neutral under international law that those rights have been formally acknowledged and respected, he is entitled to credit. His burden of responsibility certainly has been great. But let us ask ourselves in all fairness right here: Just what particular and essential rights of this character that we assert as against the world have thus far been formally recognized by any of the belligerents on either side of the struggle as the result of his protests and representations? And just what ones of those rights have not only been acknowledged but respected so that the wrong that was done to us is not only apologized for but has been compensated for agreeably to the practice of nations, and the violation we complained of stopped?

NOTHING AS YET SETTLED.

Is it not true that, saving here and there an incidental concession to our demands in some degree or detail, the stubborn fact remains that at this writing the crux of even the *Lusitania* case, for instance, remains unsettled? Is it not true that, whatever yielding any of the belligerents have made form of doing so far as our demands are concerned, has been apparently prompted by the policy of temporizing with us as a powerful neutral simply because of the all-absorbing pressure of more powerful foes at home, and that the underlying principles we have contended for are still unacknowledged, unobserved?

President Wilson has written many notes to the belligerents in Europe. He has argued learnedly and even threatened much. What has come of it all save unsatisfactory, incomplete responses and mere temporizing? Is the issue at rest, has our position been conceded as sound and just and based upon universally accepted ideas of international law? Or, on the other hand, have we ourselves made good our threats because these concessions have not been made?

That thus far we have not been brought to actual war in our disputes is true, but there is not an American with a single corpuscle of good red blood dancing in his veins but that knows that under any other circumstances than those of the past 18 months we would have been humiliated beyond measure by the fruitless policy of protest upon protest that President Wilson has pursued and would feel that we had lost our caste among the civilized peoples of the earth because of it.

But is the fact that we have meanwhile kept out of the war due to President Wilson's policy, or has it been in spite of it? President Wilson may have given the idea that the American people are "too proud to fight," but peace upon such terms to the world is merely a meek concession of shameless defeat without a struggle. Is it not the fact, rather, that we have been kept out of the European war not because of what President Wilson has done to keep us out but because none of the European powers wanted us to come in?

Every pertinent lesson of history tells us that if the European nations to whom President Wilson has dispatched notes of protest over violations of our rights had not been too busy with more pressing affairs at home they would have given far more serious attention to his repeated defiances. Even as it is, they do not acknowledge or concede the justice of his protests, generally speaking, but simply decline to accept his implied dare to fight, because they have fighting enough on hand already. This is not being kept out of war by President Wilson; it is being denied a chance to get in.

But admitting that in such a world crisis as now confronts us diplomatic negotiations of this character are essentially delicate and national nerves are sensitive, and that there has been all the time the possibility of our embroilment in the struggle, what, then, can be claimed for President Wilson as the preserver of the peace save that by not deliberately waging war or putting us by positive action into unavoidable share in it he has simply followed a plain sense of duty, the sense any plain man might have had under the same circumstances?

Not a rational adult citizen in all the United States has wanted this country needlessly to become engaged in the war. What credit can be given President Wilson for keeping his country out of a mess that his countrymen would not willingly have gone into if they could?

CONDITIONS THAT MIGHT HAVE BEEN.

Champions of President Wilson on this "war" slogan want the people to overlook the fact that before he could have made effective war against any country he would have been obliged to ask the Congress for its consent and for the money and for troops. And while such a project was pending the voice of a mighty Nation against needless war would have made such an uproar around the White House as had never been heard by any President before, and would have sadly disturbed the blissful Nirvana of "watchful waiting."

If President Wilson had been struggling against adverse public sentiment here at home, if the American people or a large and influential part of them had been day and night teasing him into the strife, if pressure had been put upon him to get in some way, by hook or by crook—if all this were true, and he had bravely resisted and fought out his duty fight with the solemn responsibility of his high office and his sacred duty to the American people and to civilization burdening his very soul—if he had struggled with this problem well-nigh alone and with no help, but rather opposition, from his people here at home—that would have been different. If his had been the one great exalted superillumined mind that saw duty where the multitude was blind and had calmly, patiently, heroically kept to that duty with a tremendous pressure of public opinion against him, then President Wilson might have proved the savior of his country in an awful crisis, perhaps.

But he simply did nothing of the kind.

And we all know it, and so does he.

HAS WILSON NOT MADE WAR?

But escape from the European horror is not the only test of this Democratic slogan, "Wilson has kept us out of war."

How about the capture of Vera Cruz and the slaughter of American marines on Mexican soil whither they had gone by order of the President as invaders of a country with which we were at peace?

Was that an act of war?

Who was responsible for it?

What act of Congress authorized it before it had been begun?

Who would have been responsible if an actual war with Mexico had resulted from it, as well it might?

Did not a former Democratic President, who had been nominated in a national convention over the popular majority candidate by the two-thirds rule, once upon a time invade Mexico, too, and thus bring on a war?

If Mexico had been a more powerful and more highly developed nation she would have fought us to the finish for that act of President Wilson, as everybody knows, and the insult to her sovereignty he perpetrated would have been avenged in long and bloody strife. But Mexico was well-nigh incapable of effective resistance and must tamely submit for the time being, albeit she might and will nurse the odious memory of the deed for generations to come.

Even "watchful waiting" lost its temper once and actually made war in Mexico. For the remainder of the time it has stood by supinely and permitted Mexicans to make worse than war upon thousands of helpless American men, women, and children within the very sight of their country's flag and appealing daily in vain for its protection.

Bully helpless Mexico? Yes. Actually intervene in Mexico with force and arms—and keep out of war.

Threaten mighty Europe, too busy with other wars to accept our dare—and keep out of war.

"God bless Wilson! He has kept up out of war!"

OUT OF POCKET, TOO.

He has kept us out of pocket, too, and all the frantic appeals of platform mechanics and inspired spellbinders to distract the attention of the American people to the overflowing battle fields of Europe will not tempt them to forget the empty pocketbooks at home or the empty statesmanship of the administration at Washington.

And such a statesmanship! A statesmanship that, with all the possibilities of being involved in the greatest war of history now raging about us, has left us practically without an available dollar in the Treasury with which to put sufficient Army into the field or even supply it guns and ammunition with which to protect itself and us!

## EXTENSION OF REMARKS

OF

## HON. WILLIAM C. ADAMSON,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 29, 1916.*

Mr. ADAMSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an opinion recently rendered by the Hon. Henry D. Clayton, judge of the United States court of the State of Alabama, which settled certain questions in the Canal Zone.

The opinion is as follows:

United States of America. Panama Canal. In the district court of the Canal Zone, Balboa division. William H. Jackson, relator, *v.* H. A. A. Smith, auditor of the Panama Canal, respondent. Civil No. 107. C. P. Fairman and William C. MacIntyre, of Colon, Republic of Panama; Harmodio Arias and Stevens Ganson, of Panama City, Republic of Panama, attorneys for the relator. Charles R. Williams, district attorney, Ancon, Canal Zone, attorney for respondent.

OPINION OF THE COURT.

Henry D. Clayton, United States district judge, middle and northern districts of Alabama, presiding by designation of the President under act of Congress approved August 24, 1912.

Under the appointment by the President and confirmation by the Senate, William H. Jackson, the relator, duly qualified as district judge of the Canal Zone on May 1, 1914, and has ever since continuously discharged the duties of his office. He became and is entitled to the same salary as that paid a district judge of the United States. (Sec. 8, act supra.)

The relator avers "that the Congress of the United States has heretofore appropriated funds for the payment of the salary of your petitioner, and has appropriated funds for salaries and expenses necessary for the civil government of the Canal Zone, including the expenses of your petitioner herein while engaged in the performance of his official duties, and that the funds appropriated as aforesaid are now available for the payment of said salary and expenses." And this allegation is admitted by the respondent in his answer to the petition.

H. A. A. Smith, the respondent, is the auditor of the accounting department of the Panama Canal, and is charged with the collection, custody, and disbursement of funds for the Panama Canal and the Canal Zone, including the funds appropriated by Congress for the relator's salary. The respondent has paid to the relator his salary monthly and from time to time, but now withholds from him of his salary the sum of $1,131.76 for the payment of the following items of alleged indebtedness to the Panama Canal, namely:

From the salary due the relator for the month of December, 1914, $170.97, for rent of residence, house No. 118, Ancon, Canal Zone, from May 1 to October 17, 1914, 5 months and 17 days, at the rate of $25 per month, and electric current for the same period at the rate of $5.55 per month; from the salary due the relator for the month of January, 1916, $66.66, on account of alleged absence for a period of four days during said month of January beyond the six weeks' leave referred to in the Panama Canal act; from the salary due the relator for the month of March, 1916, $500, to apply on account of rent for use of residence No. 311, Ancon; from the salary due the relator for the month of April, 1916, $341.97, alleged balance due for rent of house No. 311, Ancon, to April 30, 1916, and account of one day's alleged absence beyond the six weeks' leave referred to in the Panama Canal act; and from the salary due the relator for the month of May, 1916, $53.06, account of rent for house No. 311, Ancon, and electric current; or a total sum of $1,131.76.

The relator avers that he is not indebted to the Panama Canal or the United States in any sum or sums whatsoever, and denies specifically every item of the above-mentioned claim of indebtedness, and alleges that the before-mentioned sum of $1,131.76 of his salary is being unlawfully withheld from him by the respondent.

The prayer is that the respondent, the auditor of the Panama Canal, be compelled by peremptory mandamus to audit, approve, issue, and deliver to the relator warrants, vouchers, or pay checks for his salary as district judge of the Canal Zone, as required by law and the practice, without regard to said claim of indebtedness set up by the respondent, which, as before stated, is denied by the relator.

The respondent admits the appointment and service of the relator as district judge of the Canal Zone, but he claims that he has the right and that it is his duty to withhold the said sums described on the ground of the relator's alleged indebtedness for house rent and electric lights, and the sums deducted and withheld on account of five days' alleged absence from the Canal Zone in excess of the six weeks' leave of absence specially provided for in section 8, act of August 24, 1912.

1. This act is entitled "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal, and the sanitation and government of the Canal Zone." It is sometimes referred to as the Panama Canal act, but is commonly called the Adamson Act after its distinguished author.

It is provided in this act—

"SEC. 2. That all laws, orders, regulations, and ordinances adopted and promulgated in the Canal Zone by order of the President for the government and sanitation of the Canal Zone and the construction of the Panama Canal are hereby ratified and confirmed as valid and binding until Congress shall otherwise provide. The existing courts established in the Canal Zone by Executive order are recognized and confirmed to continue in operation until the courts provided for in this act shall be established."

And it is pertinent to quote the following section of the act:

"SEC. 8. That there shall be in the Canal Zone one district court with two divisions, one including Balboa and the other including Cristobal; and one district judge of the said district, who shall hold his court in both divisions at such time as he may designate by order, at least once a month in each division. The rules of practice in such district court shall be prescribed or amended by order of the President. The said district court shall have original jurisdiction of all felony cases, of offenses arising under section 10 of this act, all causes in equity, admiralty, and all cases at law involving principal sums exceeding $300, and all appeals from judgments rendered in magistrates' courts. The jurisdiction in admiralty herein conferred upon the district judge and the district court shall be the same that is exercised by the United States district judges and the United States district courts, and the procedure and practice shall also be the same. The district court or the judge thereof shall also have jurisdiction of all other matters and proceedings not herein provided for which are now within the jurisdiction of the supreme court of the Canal Zone, of the circuit court of the Canal Zone, the district court of the Canal Zone, or the judges thereof. Said judge shall provide for the selection, summoning, serving, and compensation of jurors from among the citizens of the United States, to be subject to jury duty in either division of such district, and a jury shall be had in any criminal case or civil case at law originating in said court on the demand of either party. There shall be a district attorney and a marshal for said district. It shall be the duty of the district attorney to conduct all business, civil and criminal, for the Government, and to advise the governor of the Panama Canal on all legal questions touching the operation of the canal and the administration of civil affairs. It shall be the duty of the marshal to execute all process of the court, preserve order therein, and do all things incident to the office of marshal. The district judge, the district attorney, and the marshal shall be appointed by the President, by and with the advice and consent of the Senate, for terms of four years each, and until their successors are appointed and qualified, and during their terms of office shall reside within the Canal Zone, and shall hold no other office nor serve on any official board or commission nor receive any emoluments except their salaries. The district judge shall receive the same salary paid the district judges of the United States, and shall appoint the clerk of said court, and may appoint one assistant when necessary, who shall receive salaries to be fixed by the President. The district judge shall be entitled to six weeks' leave of absence each year with pay. During his absence or during any period of disability or disqualification from sickness or otherwise to discharge his duties the same shall be temporarily performed by any circuit or district judge of the United States who may be designated by the President, and who, during such service, shall receive the additional mileage and per diem allowed by law to district judges of the United States when holding court away from their homes. The district attorney and the marshal shall be paid each a salary of $5,000 per annum."

By the reading of this section it is seen that the district court of the Canal Zone has original jurisdiction in all cases at law involving principal sums exceeding $300 and that jurisdiction of all other matters and proceedings not specially provided for in the act were by the terms of the act itself retained in the district court or the judge thereof, including jurisdiction of all matters and proceedings of which the Supreme Court, the circuit courts, and the district courts of the Canal Zone had jurisdiction at the time the Adamson Act was passed. And it must be remembered that the Code of Civil Procedure of the Canal Zone was, by the authorized order of the President dated May 1, 1907, made a part of the law governing the Canal Zone; and this, too, it will be observed, was continued in force by the Adamson Act. This code provides as follows:

"SEC. 552. Procedure in mandamus.—The Supreme Court shall have concurrent jurisdiction with the circuit courts in all cases where any inferior tribunal, corporation, board, or person unlawfully neglects the performance of an act which the law specially enjoins as a duty resulting from an office of trust or station, or unlawfully excludes the plaintiff from the use and enjoyment of a right or office to which he is entitled, and from which he is unlawfully excluded by such inferior tribunal, corporation, board, or person, and also shall have original jurisdiction over circuit courts, and judges thereof, wherever said court or judge unlawfully neglects the performance of a duty which the law specifically or specially enjoins as a duty imposed upon such court or judge. The procedure of the Supreme Court in mandamus proceedings shall be the same as those provided for mandate in this code.

"SEC. 554. Preliminary injunctions in certiorari, mandate, prohibition proceedings.—In certiorari, mandamus, and prohibition proceedings an injunction may be granted by any judge of the Supreme Court, if in his judgment such injunction is necessary for the preservation of the rights of the parties pending litigation.

"SEC. 555. Expediting such proceedings.—The court may, in its discretion, make such orders as it deems necessary for expediting proceedings in petitions for certiorari, mandamus, or prohibition proceedings."

Thus we find the district court of the Canal Zone has jurisdiction in all cases where any inferior tribunal, corporation, board, or person unlawfully neglects the performance of an act which the law specifically enjoins as a duty resulting from an office or position of trust, or unlawfully denies to or excludes one entitled to the use and enjoyment of a right or office from the use or enjoyment of such right or office or any right which is unlawfully denied by an inferior tribunal, corporation, board, or person.

It was never heretofore contended that the former circuit and supreme courts of the Canal Zone did not have authority to issue a writ of mandamus, or that the district court as now constituted does not have such power. Manifestly Congress legislated, in passing the Adamson Act, with reference to the code of civil procedure, supra, and presumably with knowledge of and reference to proceedings in the courts, circuit and supreme, of the Canal Zone. As now constituted, the jurisdiction and power of the district court of the Canal Zone was not abridged by the Adamson Act, but, on the contrary, this court was invested by the act with all the powers heretofore exercised by the circuit and supreme courts of the Canal Zone. As before said, it must be presumed that Congress knew the power and jurisdiction of such courts and the proceedings had in them, and, on admitted elementary principle, the act of Congress is to be considered in the light of what was done by and in the courts of the Canal Zone. Let me refer to some of the adjudged cases.

On page 134, volume 1, of the published Reports of the Supreme Court of the Canal Zone, case No. 45, decided on September 19, 1908, the supreme court held that a writ of mandamus would lie, and, in fact, issued a writ of mandamus to E. M. Goolsby, clerk of the circuit court of the second judicial circuit.

In Canal Zone ex rel. Seixas v. Gudger, volume 2, Canal Zone Supreme Court Reports, page 39, the Supreme Court of the Canal Zone refused to issue a writ of mandamus, not because it did not have jurisdiction so to do, but because the relator in that case sought by mandamus to compel the judge of the second circuit court to grant an appeal when no bill of exceptions had been prepared and presented to him. The closing paragraph of that decision is as follows (l. c. 71):

"Since, therefore, the petition herein fails to show that the relator made any proper attempt to perfect his bill of exceptions, and since it also fails to show that the respondent unlawfully neglected the performance of any duty specifically or specially enjoined upon him as acting judge of the circuit court for the second circuit, it is considered by the court that the alternative writ heretofore issued should be quashed, that the stay granted therein should be vacated and the petition dismissed with costs against the relator. It is so ordered."

In Canal Zone, ex rel. Wm. H. Knox & Co., v. Goolsby (vol. 2, Canal Zone Supreme Court Reports, 64) a peremptory writ of mandamus did issue to the respondent, commanding him to pay to the relator the sum of $4,434. The syllabus in this case is manifestly erroneous, as the body of the decision on page 65 shows that a writ of mandamus did issue.

In Canal Zone, ex rel. Suere, v. Owen (vol. 2, Canal Zone Supreme Court Reports, 66) the supreme court refused a writ of mandamus directing a judge of the circuit court to sign a bill of exceptions when it appeared that the bill of exceptions was tendered solely for the purpose of saving an exception taken to a ruling of the court on May 23 overruling a motion to vacate a judgment that had been rendered at the March term. The supreme court held that the circuit court had lost control over the judgment and was powerless to set aside at the May term of court a judgment rendered at the March term, and that, therefore, even though a bill of exceptions had been signed, it would not have benefited the party applying for the writ of mandamus. For this reason the writ was refused.

In the case of Kong Ching Chong v. Wing Chong (vol. 2, Canal Zone Supreme Court Reports, p. 25, l. c. 29) the supreme court, in defining the jurisdiction of circuit courts in the Canal Zone said, as follows:

"What is a circuit court of the Canal Zone? A court limited in its jurisdiction by the substantive law of Panama? Not so. They are courts of equal plenary jurisdiction with the court of King's Bench in Great Britain and the circuit courts of the States of the Union and the United States.

"Courts of the highest jurisdiction in the world. Nothing jurisdictional is withheld from them. Over the life, the property, and liberty of the litigants before them they possess all jurisdictional power."

These cases are cited for the purpose of showing that never heretofore was the authority of the circuit and supreme courts of the Canal Zone questioned; and further to show that as a matter of fact writs of mandamus have been issued by those courts.

As we have said the present district court of the Canal Zone is vested with all the jurisdiction of the former circuit and supreme courts of the Canal Zone, which lawfully exercised the power to issue writs of mandamus.

It is clear that Judge Jackson is entitled to his salary of $6,000 per annum in monthly payments of $500 just as in case he were a district judge of the United States. And it appears to be equally clear that the district court of the Canal Zone has authority to issue a peremptory mandamus if a proper case is presented.

2. Let us now consider whether mandamus can be rightfully issued against the auditor of the Panama Canal. The Adamson Act provides as follows:

"SEC. 4. That when in the judgment of the President the construction of the Panama Canal shall be sufficiently advanced toward completion to render the further services of the Isthmian Canal Commission unnecessary the President is authorized by Executive order to discontinue the Isthmian Canal Commission, which, together with the present organization, shall then cease to exist; and the President is authorized thereafter to complete, govern, and operate the Panama Canal and govern the Canal Zone, or cause them to be completed, governed, and operated through a governor of the Panama Canal, and such other persons as he may deem competent to discharge the various duties connected with the completion, care, maintenance, sanitation, operation, government, and protection of the canal and Canal Zone. If any of the persons appointed or employed as aforesaid shall be persons in the military or naval service of the United States, the amount of the official salary paid to any such person shall be deducted from the amount of salary or compensation provided by or which shall be fixed under the terms of this act. The governor of the Panama Canal shall be appointed by the President, by and with the advice and consent of the Senate, commissioned for a term of four years and until his successor shall be appointed and qualified. He shall receive a salary of $10,000 a year. All other persons necessary for the completion, care, management, maintenance, sanitation, government, operation, and protection of the Panama Canal and Canal Zone shall be appointed by the President or by his authority, removable at his pleasure, and the compensation of such persons shall be fixed by the President, or by his authority, until such time as Congress may by law regulate the same, but salaries or compensation fixed hereunder by the President shall in no instance exceed by more than 25 per cent the salary or compensation paid for the same or similar services to persons employed by the Government in continental United States. That upon the completion of the Panama Canal the President shall cause the same to be officially and formally opened for use and operation."

Thereafter, in pursuance to the provisions of section 4 above quoted under date of January 27, 1914, the President promulgated an Executive order, section 6 of which reads as follows:

"6. There shall be an accounting department under the supervision and direction of the auditor, with an assistant in the United States. The duties of the department shall include all general bookkeeping, auditing, and accounting, both for money and property, cost keeping, the examination of pay rolls and vouchers, the inspection of time books and of money and property accounts, the preparation of statistical data, and the administrative examination of such accounts as are required to be submitted to the United States Treasury Department; and the collection, custody, and disbursement of funds for the Panama Canal and the Canal Zone.

"These same duties shall be performed for the Panama Railroad Co. on the Isthmus when not inconsistent with the charter and by-laws of that company. The department shall be charged with the handling of claims for compensation on account of personal injuries and of claims for damages to vessels. Within the limits fixed by law the duties and financial responsibilities of the officers and employees charged with the receipt, custody, disbursement, auditing, and accounting for funds and property shall be prescribed in regulations issued by the governor, with the approval of the President. The auditor shall maintain such a system of bookkeeping as will enable him to furnish at any time full, complete, and correct information in regard to the status of appropriations made by Congress, the status of all other funds, and the amounts of net profits on all operations, which are to be covered into the Treasury as required by the Panama Canal act."

The act conferred a very broad power upon the President. It authorized him to "complete, govern, and operate the Panama Canal and govern the Canal Zone, or cause them to be completed, governed, and operated through a governor of the Panama Canal and such other persons as he may deem competent to discharge the various duties connected with the completion, care, maintenance, sanitation, operation, government, and protection of the canal and Canal Zone." Of course, such Executive orders as the President promulgated for the purpose of putting said act into effect became a part of the act itself. Moreover, by its very terms the act did not become operative until the Executive order put it into effect. It is plain, therefore, that these Executive orders are to be interpreted and treated by this court as a part of the congressional enactment.

It will be observed that section 6 of the Executive order, supra, provided that there should be an auditor, with an assistant in the United States. He was authorized to have charge of the collection, custody, and disbursement of funds for the Panama Canal and the Canal Zone, including all moneys appropriated by Congress for the Panama Canal and the civil government, etc., of the Canal Zone. He was made at once the custodian, the auditor, and disburser of the funds to be expended on the Isthmus.

This Executive order further provided that the auditor shall maintain such a system of bookkeeping as will enable him to furnish at any time full, complete, and correct information in regard to the status of appropriations made by Congress, and the status of all other funds and the amounts of net profits on all operations which are to be covered into the Treasury as required by the Panama Canal act.

The last sentence of section 6 of the Panama Canal act, to which this section of the Executive order refers, is in this language:

"Monthly reports of such receipts and expenditures shall be made to the President by the persons in charge, and annual reports shall be made to Congress."

Now, the person in charge of these funds was the auditor, which position or office was created by the President under the Executive order above quoted. It is true that the auditor has an assistant in the United States, but he was no more than an assistant there. The auditor in the Canal Zone had charge of the funds and exclusive control over their disbursement. This is manifest from that portion of section 6 of the Panama Canal act heretofore quoted; and it was necessary for him to make reports monthly to only one department or official—namely, the President—and to make reports to only one body—namely, Congress. The act of Congress and the Executive orders thereunder placed the auditor of the Panama Canal under the President and the Congress of the United States and under no other official, body, or department.

Again, section 5 of the Executive order of March 2, 1914, in amplification of section 6 of the Executive order above quoted, is in the following language:

"SEC. 5. That the assistant auditor provided for in Executive order No. 1885, dated January 27, 1914, shall be appointed April 1, 1914. His salary shall be fixed by the governor. He shall perform such duties of the accounting department to be performed in the United States, as may be assigned to him by the auditor, and also such other duties of a general nature as may be assigned to him by the chief of the Washington office of the Panama Canal.

"On and after April 1, 1914, there shall be transferred to the assistant auditor, and he shall be charged with the custody, care, and preservation of, all records and property of the disbursing officer and of the assistant examiner of accounts of the Isthmian Canal Commission with which those officers shall be charged on March 31, 1914.

"The chief of the Washington office may, however, transfer to and place in the custody of the disbursing clerk, hereinafter provided for, such of the property and records above described as he may deem to be essential to enable the disbursing clerk to properly perform his duties under this order, but the disbursing clerk shall not be permitted, without specific authority from the chief of office, to keep a separate set of records and files. He shall be required to rely upon, and consult when necessary, the records and files in the office of the assistant auditor in verifying the legality of claims and accounts submitted to him for payment or to verify the details of any collection for which he is required to account. Disbursement will be made by the disbursing clerk only after examination of the claim or account in the office of the assistant auditor.

"Such of the officers and employees employed in the office of the assistant examiner of accounts and the disbursing office of the Isthmian Canal Commission on March 31, 1914, as the governor determines to retain, shall be transferred to and employed in the accounting department in the United States, and their salaries fixed at such amounts as the governor deems just and reasonable.

"There shall be a disbursing clerk for that part of the accounting department in the United States who shall perform similar duties to those that are required to be performed by the collector and paymaster on the Isthmus, in so far as there are such duties to be performed in the United States, and shall be subject to the same supervision by the assistant auditor as the collector and paymaster on the Isthmus are by the auditor. He shall give bond in such amount as may be fixed by the governor or by his authority.

"Such of the officers and employees as are transferred to and employed in the accounting department in the United States shall be distributed between the office of the assistant auditor and that of the disbursing clerk, respectively, as the needs of the service require. They shall perform such duties as may be assigned to them by proper authority. They shall be subject to similar financial responsibilities and to the same general rules and regulations that have been prescribed for like officers and employees in the accounting department on the Isthmus.

"It is the purpose of this order, and it shall be construed as to require the assistant auditor of the Panama Canal to examine all claims and accounts before their payment by the disbursing clerk; to carry on all general correspondence in relation to claims and accounts required to be conducted by the accounting department in the United States; to prepare all vouchers and certify to the validity of all claims and accounts before they are submitted to the disbursing clerk for payment; to furnish to the disbursing clerk all necessary data to enable that officer to make reply to any exceptions that may be taken to his account by the Auditor for the War Department; to keep all general records to be kept in the accounting department in the United States; to make all reports as to statistical data required to be sent to the auditor on the Isthmus; to give an administrative examination to all accounts of the disbursing clerk before they are transmitted to the auditor; to make an administrative examination of all claims which are to be submitted to the auditor for direct settlement; to keep a complete record of all collections to be made and all moneys received by the disbursing clerk; to certify to the correctness of the disbursing clerk's accounts for collections; to see that bills collectible are issued and collections made in all proper cases; to have charge of all general files which are required to be kept by the accounting department in the United States; and to perform such other duties as may be assigned to him by the auditor or the chief of the Washington office."

The Executive order of March 2, above quoted, is as much the law as the act of Congress or the Executive order of January 27, hereinbefore referred to. It is an enlargement or explanation of section 6 of the order of January 27. It clearly defines the duties and functions of the assistant auditor and conclusively shows that such assistant in the United States is under the direction of the auditor on the Isthmus, who is the final auditor. And it will be observed this section last quoted states that the disbursing clerk under the assistant auditor in Washington shall be subject to the same supervision by the assistant auditor as the collector and paymaster on the Isthmus are by the auditor. It is plain that this section accentuates the fact that the assistant auditor at Washington is under the supervision of the auditor on the Isthmus, and this assistant is specifically directed to report to such auditor.

It seems that nothing further need be said to demonstrate that this auditor, the respondent in this case, is the final auditor. But he is more than an auditor, because by the very provisions of the Executive order creating his office he not only audits but he orders the disbursement of all funds, for the language of the act charges him with the disbursement of the funds. It is a reasonable and consistent interpretation to say that the Executive order shows that the disbursing clerks and paymasters under the assistant auditor in Washington and under the auditor on the Isthmus, the final auditor, are no more than pay clerks, who are required to pay the vouchers as they have been audited by the assistant auditor in Washington and by the auditor on the Isthmus who is vested with the power of disbursement.

It seems to be incontrovertible that the two provisions of the two Executive orders above quoted, one putting the canal act into operation and the other amplifying and explaining the terms of the first order, are as much a part of the Panama Canal act itself as if these two sections had been embraced in the act. I think the conclusion necessarily follows that the respondent is the final auditor so far as Judge Jackson's salary is concerned.

And I think, also, that it is not to be doubted that the auditor, under the provisions of the canal act, needs only to report to the President and to Congress. It is not believed if it had been the intention of Congress that the final auditor should be in Washington, and that the auditor on the Isthmus should be under some other official, that the office of assistant auditor would have been created whereby the assistant at Washington is to act under the auditor on the Isthmus. It is entirely consistent to say that the Panama Canal maintains what may be termed a branch office at Washington, with the assistant auditor there to audit the accounts of that branch office; and as a part of his duty under section 5 of the Executive order of March 2, 1914, he is required to send data to the auditor on the Isthmus and to transmit the examination of accounts to the auditor on the Isthmus.

Recurring to the duties of the Auditor of the Panama Canal, it is to be borne in mind that under the Adamson Act and Executive orders in pursuance thereof he is charged with "the collection, custody, and disbursement of funds for the Panama Canal and the Canal Zone," as I have attempted to show. (Sec. 4 of the Adamson Act and sec. 6 Executive order, Jan. 27, 1914, supra.) And in the so-called sundry civil act of March 3, 1915 (Stat. L., 63d Cong., 3d sess., 883–884), the appropriation is made "for expenditures requisite for and incident to the construction, maintenance and operation, sanitation, and civil government of the Panama Canal and Canal Zone, including the following: Compensation of all officials and employees * * * and for such other expenses, not in the United States, as * * * necessary to best promote the construction, maintenance, operation, sanitation, and civil government of the Panama Canal, * * * as follows: * * * For civil government of the Panama Canal and Canal Zone: Salaries of the district judge, $6,000; district attorney, $5,000; and marshal, $5,000; etc.

It is seen that expenses not in the United States, including the civil government of the Panama Canal, embrace the specific sum of $6,000 appropriated by the act of Congress for the payment of the salary of the district judge up to June 30, 1916. It is my opinion that in legal contemplation this fund is on the Isthmus and is subject to disbursement there under the direct authority of the Auditor of the Panama Canal, who must report with reference thereto to the President and to the Congress, and who is not otherwise required to report.

Under the law and the practice obtaining in the Canal Zone in such case, it is the duty of the auditor to make and deliver the pay voucher to relator for his salary at the end of each month, and under the same law and practice it is the duty of the paymaster, who is no more than a paying teller of the respondent, to pay the salary upon the certificate or voucher of the auditor there. Nothing is left to the judgment or discretion of the auditor in the matter of such disbursement. He is required to perform a ministerial duty and no more.

3. In his answer the respondent says that he has sought the advice of the Comptroller of the Treasury under the following provision of the Dockery Act (R. S., vol. 2, 1892–1901, p. 216, act of July 31, 1894):

"Disbursing officers, or the head of any executive department or other establishment not under any of the executive departments, may apply for and the Comptroller of the Treasury shall render his decision upon any question involving a payment to be made by them or under them."

And he insists that the comptroller has rendered a decision against Judge Jackson that precludes any action by this court.

Now, the only question involved in the payment of the judge's salary is the one raised by the respondent, who withholds $1,131.76 of the salary where the services and identity of Judge Jackson are admitted. The pleadings in the case and the briefs submitted by counsel in behalf of the respondent, as well as the testimony and oral argument, show that the respondent did not submit to the comptroller a question of payment to be made by him as auditor, but rather that he did submit to the comptroller the question as to whether or not he as auditor had the right to retain portions of the relator's salary for the satisfaction of alleged indebtedness of relator to the United States or the Panama Canal.

The relator's salary does not fall under the category of a claim against the United States. It is fixed compensation earned by him and for which a specific appropriation has been made and the manner of disbursement provided for. It requires no argument to show that the case at bar is different from one where a claim is made against the United States and judgment and discretion is vested in an accounting officer authorized by law to adjust and settle the claim. In such case as that the Comptroller of the Treasury shall, upon application, render his decision upon any question involving a payment to be made.

Here the salary was ascertained or fixed by law and the money for its payment appropriated by Congress, as before stated. In legal effect it was on the Canal Zone, or in the hands or under the control of the disbursing officer, who is the respondent here. There was nothing left to the judgment or discretion of the respondent, whose duty it was to disburse the money appropriated for the salary. Being satisfied of the identity of Judge Jackson, it was the plain duty of the respondent to issue his warrant for the salary.

The salary of a judge who has served and for whose compensation specific appropriation has been made is not such a claim that affords any field for the operation of the Dockery Act. We are not without a guiding precedent. In the case of Benedict v. United States (176 U. S., 257–361), it was said:

"The case in reality turns upon the meaning of the word "salary," as used in section 714. The word "salary" may be defined generally as a fixed annual or periodical payment for services, depending upon the time, and not upon the amount, of services rendered * * * as applied to district judges in general, and, indeed, to every district judge except the judge of the eastern district of New York, it doubtless refers to the salary of $5,000 fixed by the act of February 24, 1891.

"Such salary is an annual stipend payable in sickness as well as in health, for duties much more onerous in some districts than in others, and regardless of the fact whether such duties are performed by the judge in person or by the judge of another district called in to take his place. It is a compensation which can not be diminished during the continuance of the incumbent in office and of which he can not be deprived except by death, resignation, or impeachment."

There the Supreme Court of the United States distinctly declared that a Federal judge can not be deprived of his salary in whole or in part except by death, resignation, or impeachment. Of course the appointment and qualification of a Territorial judge who did not act as such but was removed from office by Executive order would not entitle him to a salary. That was the case in United States v. Guthrie (17 How., 284, 302–334), which is hereinafter considered and differentiated from the present case.

If the judge can be deprived of a part of his salary for alleged indebtedness for house rent when such rental charge was fixed arbitrarily, that is to say, without his consent and without any authority of law, such charge could by the same token or assumed authority have been made $500 per month and thus so adjusted as to absorb the entire salary of the judge. I do not think that such a conclusion would be more absurd than the contention of the respondent that how much of and for what purpose he can withhold the salary of the judge is a matter entirely in the judgment and discretion of the respondent, and that his action in such matter can not be reviewed by a court. There can not be such an autocrat.

Our Government can not be reduced to a bureaucracy. Chief Justice Marshall said that the Government of the United States has been emphatically termed a government of laws and not of men; and it is emphatically the province and duty of the Judicial Department to say what the law is. (Marbury v. Madison, 1 Cranch, l. c. 165 and 177.) And as pertinent here it may be added that the Judicial Department must be allowed to continue to adjudge in cases involving personal and property rights.

It was asserted by counsel for respondent that the salary of the judge was a claim or demand against the United States, and that the amount alleged to be due by relator to the Panama Canal by way of house rent was a claim or demand against the relator, and that, therefore, the auditor acted within the provisions of that section of the Dockery Act above quoted in submitting this matter to the comptroller. But, as I have said, it was a disputed claim merely because of the fact that the auditor, the respondent in this case, had made it so. It can not be said that the salary of the judge constituted a claim, disputed or otherwise, prior to the time that the respondent in this case saw fit to so assume. Furthermore, the Dockery Act provides that the auditor may submit to the Comptroller of the Treasury a question involving a payment to be made by the auditor. This was no question of a payment to be made from Government funds by the auditor to a party asserting a right to such funds. It is a question of the auditor retaining from a Federal judge, whose salary had been provided for and appropriated by Congress, such amounts as he saw fit to withhold. The claim in dispute was not against the Government; it was against the relator. The act does not provide, and clearly never contemplated, that the auditor should arrogate to himself the right to even consider that any amount, by way of claim or otherwise, could be deducted from the salary of a Federal judge based upon an alleged claim asserted by officials of the Government.

Under this Dockery Act, therefore, this alleged claim was improperly submitted to the Comptroller of the Treasury by the respondent. It seems to me that the Comptroller of the Treasury should have advised the auditor when he submitted the alleged claim that he, the comptroller, had no authority to pass upon it. The law confers no such function upon the comptroller nor upon the auditor. Consequently, the opinion of the Comptroller of the Treasury was extra-official, was not required by law, and constituted purely a gratuitous act of the respondent in this case in furtherance of his endeavor to unlawfully withhold relator's salary from him. The contention of the counsel for respondent that this court is without jurisdiction to issue the writ of mandamus because the Comptroller of the Treasury had "judicially decided the question" is, I think, untenable.

4. I do not think that there is any merit in the respondent's contention that he performs his duty under administrative organization and not under statutory organization. When the Congress passed the Panama Canal act of August 24, 1912, and authorized the President to put it into operation when he deemed it expedient, and further authorized him to create such offices as he deemed necessary to provide for the sanitation and civil government of the Canal Zone; when the President, acting under the express authority of Congress, by Executive order of January 27, 1914, created an accounting department under the supervision and direction of the auditor, who is the respondent; and when Congress later, in March, 1915, appropriated money to pay this relator's salary of $6,000 per annum to June 30, 1916, and provided that it be paid on the Isthmus, it thereby became the duty of this auditor, created in pursuance of the statute, to audit and pay the salary as Congress had directed in the Adamson Act and the sundry civil appropriation act of March 3, 1915.

It is not to be doubted that the Executive orders of January 27 and March 2, 1914, are in legal contemplation integral parts of the Panama Canal act itself and these and the appropriation act of March, 1915, appropriating the funds to pay the relator's salary on the Isthmus, are binding law compelling upon the respondent. In legal appreciation the respondent's office was created by statute—that is, by order in pursuance of a statute, which has all the effect of a statute—and that thereby his duties are clearly defined.

5. The respondent contends that the Auditor for the War Department is the proper party against whom this relator should proceed, and predicates his contention upon this provision of the act of Congress approved October 22, 1913:

"The money accounts of the Panama Canal, under the Panama Canal act of August 24, 1912 (37 Stat. L., p. 560), shall continue to be audited by the Auditor for the War Department."

It must be conceded that this statement is general and that, on the other hand, specific authority is given by the Executive order of the President of the United States to the auditor on the Isthmus both to audit and disburse all funds appropriated by Congress in connection with the Panama Canal.

I do not think that there is necessarily any conflict between the provision last above quoted and the Executive orders promulgated under the Adamson Act. It is clear that prior to October 22, 1913, the Auditor for the War Department had never audited the salary of the district judge for the simple reason that the office of district judge was not created until the Panama Canal act was put in force and effect by the Executive order of the President in 1914. The office was created on April 1, 1914, and the present incumbent was confirmed by the Senate and received his commission as district judge on May 1, 1914. Consequently, whatever other accounts the Auditor for the War Department may have audited prior to October 22, 1913, he could not have audited the salary of the district judge of the Canal Zone, there then being no district judge, and therefore no salary of such officer to audit.

The quotation from the act of October 22, 1913, states that the money accounts of the Panama Canal shall continue to be audited by the Auditor for the War Department. The salary of this relator is a new account which never existed, and consequently did not need to be audited until after the promulgation of the Executive orders of January 27 and March 2, 1914, creating the accounting department on the Isthmus, making the respondent in this case the final auditor and defining the duties of certain of his subordinates both on the Canal Zone and at Washington. I find no law making it incumbent upon the Auditor for the War Department to audit the salary of this relator, and there is nothing to show that, in the absence of statutory authority, this official had any authority to pass upon or to audit such salary.

And, again, when the sundry civil appropriation bill of March 3, 1915, providing for the payment of the salary of the relator and appropriating the amount thereof and directing its payment, was passed, the fund for the payment of the judge's salary was placed under the control of the auditor on the Isthmus. Congress knew when this act making the appropriation for the judge's salary was passed that in January and in March, 1914, the President had created the office of auditor on the Isthmian Canal, with an assistant at Washington, and that this law and the Executive orders in pursuance thereof specifically defined the power and authority that was vested in the auditor on the Isthmus and in his assistant at Washington. Furthermore, when Congress made this appropriation for the payment of the salary of the district judge it was done almost two years after the act of October 22, 1913. If the latter act could ever have had the meaning attributed to it by the respondent, the subsequent act of Congress, enacted presumably with the knowledge and approval of the two Executive orders referred to, destroys the force of the provisions of the act of October 22, 1913, as insisted upon by the respondent. It follows that when Congress, in March, 1915, appropriated the amount of relator's salary that had been previously fixed by the Adamson Act of August 24, 1912, Congress knew the provisions of the act of October 22, 1913, and also knew in making the appropriation for relator's salary it would be paid pursuant to the Executive orders hereinbefore set forth.

It is familiar law that repeal by implication is not favored; and it is a recognized canon that where two acts are in apparent conflict they must be so construed, if possible, as that they shall consist or harmonize with each other. And as a corollary the rule is that when two legislative provisions are in seeming conflict, the one being vague and general and the other clear and specific, the latter will control; and further, that if separate fields can be found for the operation of the two seemingly conflicting provisions, then, in such way, must the apparent hostility between the two provisions be reconciled and each allowed to operate in its own particular field.

6. The respondent contends that this relator should seek a mandamus against the Auditor for the War Department at Washington. Were he to do so it seems to me such auditor would answer that the Adamson Act and the Executive orders of January and March, 1914, and the appropriation act of March, 1915, placing the funds for the payment of the relator's salary under the control of this respondent, would preclude this relator from having any remedy against him. I believe that such contention would be fatal to relator's case there.

The respondent further suggests that Judge Jackson can resort to the Court of Claims for the vindication of his rights. That court passes upon disputed claims, and whenever a judgment is rendered there it is the duty of Congress to appropriate money for its payment. Probably that tribunal would hold that demand for the payment of Judge Jackson's salary could not be a claim triable there; that it is not a claim but is compensation fixed by law, for which payment is provided for by an existing appropriation. (Benedict *v.* U. S., supra.)

7. The rules of law governing mandamus against a public officer are well settled. The difficulty is making the proper application of the law in a particular case. Where a plain ministerial duty is imposed upon an executive officer—such a duty as leaves nothing to be determined according to his judgment and discretion—and he refuses to act under such circumstances, mandamus is appropriate to compel him to perform his duty. This is, of course a principle universally recognized.

I think the misunderstanding in this case is attributable to a misconception of the law. Sometimes a too free use of cyclopedias and digests is resorted to, and too little real study is devoted to adjudged cases cited. It must be understood that no stricture is intended upon the counsel who made the oral argument for the respondent, for he, the district attorney, presented his own well-prepared brief, and has demeaned himself altogether as a thoughtful and competent lawyer.

The numerous cases cited in the briefs for the respondent may be divided into two classes:

1. Cases where the Supreme Court held that executive officers could not be compelled by mandamus to act in matters which had been left to their judgment or discretion. Illustrative of this principle is United States *v.* Lamont (155 U. S., 303–310), where Mr. Justice White (now the Chief Justice), in the opinion of the court, said:

"Much was said in argument at bar upon the question of when a contract is to be regarded as completed, under the circumstances here presented, and the discussion concerning the authority of the Secretary of War to review the action of an officer of engineers in such a case and to direct a new adjudication has taken a wide range. We deem the consideration of both these points unnecessary in view of the relator's bids under the 'second advertisement and specifications' and his contract to do the work at a less price and under new conditions. It is elementary law that mandamus will only lie to enforce a ministerial duty as contradistinguished from a duty which is merely discretionary. This doctrine was clearly and fully set forth by Chief Justice Marshall in Marbury *v.* Madison (5 U. S., 1 Cranch, 137 [2:60]), and has since been many times reasserted by this court. See Kendall *v.* Stokes (44 U. S. 3 How., 87 [11:506], Brashear *v.* Mason (47 U. S., 6 How., 92 [12:357]), Reeside *v.* Walker (52 U. S., 11 How., 272 [13:693]), Holloway *v.* Whitelay (71 U. S., 4 Wall., 522 [18:335]), United States *v.* Seaman (58 U. S., 17 How., 225, 231 [15:226, 228]), United States *v.* Guthrie (58 U. S., 17 How., 284 [15:102]), United States *v.* Edmunds (72 U. S., 5 Wall., 563 [18:692]), Gaines *v.* Thompson (74 U. S., 7 Wall., 347 [19:62]), Cox *v.* United States (76 U. S., 9 Wall., 298 [19:579]), United States *v.* Schurz (102 U. S., 378 [26:167]), Butterworth *v.* United States, 112 U. S., 50 [28:656]), United States *v.* Black (126 U. S., 40 [32:354]), Brownsville Taxing Dist. *v.* League (129 U. S., 493 [32:760]), Noble *v.* Union River Logging R. Co. (147 U. S., 165 [37:123]).

"The duty to be enforced by mandamus must not only be merely ministerial, but it must be a duty which exists at the time when the application for the mandamus is made. Thus in the case of ex parte Rowland (104 U. S., 604 [26:861]) this court, speaking through Mr. Chief Justice White, said: 'It is settled that more can not be required of a public officer by mandamus than the law has made it his duty to do. The object of the writ is to enforce the performance of an existing duty, not to create a new one.'

"Moreover, the obligation must be both peremptory and plainly defined. The law must not only authorize the act (Kentucky *v.* Boutwell, 80 U. S.; 13 Wall., 526 (20:631)), but it must require the act to be done. 'A mandamus will not lie against the Secretary of the Treasury unless the laws require him to do what he is asked in the petition to be made to do' (Reeside *v.* Walker, 52 U. S.; 11 How., 272 (13:693); see also Cox *v.* United States, 76 U. S.; 9 Wall., 298 (19:579)), and the duty must be 'clear and indisputable' (Knox County Commissioners *v.* Aspinwall, 65 U. S.; 24 How., 376)."

And, 2, cases where plain ministerial duty was enjoined upon executive officers and mandamus was used to compel its performance. Illustrative of this principle is Roberts *v.* United States ex rel. Valentine (176 U. S., 221), where Mr. Justice Peckham, for the court, said:

"The writ was refused in the Black case because, as the court held, the decision which was demanded from the Commissioner of Pensions required of him in the performance of his regular duties as commissioner the examination of several acts of Congress, their construction, and the effect which the later acts had upon the former, all of which required the exercise of judgment to such an extent as to take his decision out of the category of a mere ministerial act. A decision upon such facts, the court said, would not be controlled by mandamus. The circumstances under which a party has the right to the writ are examined in the course of the opinion which was delivered by Mr. Justice Bradley, and many cases upon the subject are therein cited, and the result of the examination was as just stated.

"In this case the facts are quite different. There is but one act of Congress to be examined, and it is specially directed to the Treasurer. We think its construction is quite plain and unmistakable. It directs the Treasurer to pay the interest on the certificates which had been redeemed by him, and the only question for him to determine was whether these certificates had been redeemed within the meaning of that act. That they were we have already attempted to show, and the duty of the Treasurer seems to us to be at once plain, imperative, and entirely ministerial, and he should have paid the interest as directed in the statute.

"This case comes within the exception stated in the Black case, that where a special statute imposes a mere ministerial duty upon an executive officer which he neglects or refuses to perform, then mandamus lies to compel its performance; but the court will not interfere with executive officers of the Government in the exercise of their ordinary official duties, even those whose duties require an interpretation of the law, the court having no appellate power for that purpose. On this last ground the court denied the writ.

"Unless the writ of mandamus is to become practically valueless, and is to be refused even where a public officer is commanded to do a particular act by virtue of a particular statute, this writ should be granted. Every statute to some extent requires construction by the public officer whose duties may be defined therein. Such officer must read the law, and he must therefore, in a certain sense, construe it, in order to form a judgment from its language what duty he is directed by the statute to perform. But that does not necessarily and in all cases make the duty of the officer anything other than a purely ministerial one. If the law directs him to perform an act in regard to which no discretion is committed to him, and which, upon the facts existing, he is bound to perform, then that act is ministerial, although depending upon a statute which requires, in some degree, a construction of its language by the officer. Unless this be so the value of this writ is very greatly impaired. Every executive officer whose duty is plainly devolved upon him by statute might refuse to perform it, and when his refusal is brought before the court he might successfully plead that the performance of the duty involved the construction of a statute by him, and therefore it was not ministerial, and the court would on that account be powerless to give relief. Such a limitation of the powers of the court, we think, would be most unfortunate, as it would relieve from judicial supervision all executive officers in the performance of their duties whenever they should plead that the duty required of them arose upon the construction of a statute, no matter how plain its language, nor how plainly they violated their duty in refusing to perform the act required.

"In this case we think the proper construction of the statute was clear, and the duty of the Treasurer to pay the money to the relator was ministerial in its nature, and should have been performed by him upon demand.

The judgment of the court of appeals must be affirmed."

The respondent cites a number of cases to sustain his assertion that mandamus will not lie in this case. He contends that this is an action against the auditor in such official capacity as he may have, and is in effect an action against the United States, and cites United States *v.* Guthrie, Secretary of the Treasury (17 How., 284, 302–334). Of course that case has been many times cited with approval by the Supreme Court of the United States. The principle was correctly applied there to the facts, but the case can not be a precedent here to support the respondent's contention.

There the relator, Goodrich, on March 19, 1849, was duly commissioned chief justice of the Supreme Court of the Territory of Minnesota at a compensation of $1,800 a year, payable quarterly. The tenure of his office was four years. After having received his lawful compensation for the time he had served the relator was informed on October 22, 1851, by the Acting Secretary of State that the President had removed him from office and had appointed in his place Jerome Fuller. After the four years from the date of his commission had expired the relator preferred a claim before the First Auditor of the Treasury for the sum of $2,343 as compensation for the period that had elapsed from the date that he was removed from office to the termination of the four-year period. The claim was rejected for the reason that there was no appropriation to pay his salary, and that the amount of the salary had been paid to Fuller, who had fulfilled the duties of the office, and that the auditor and comptroller were bound to consider the removal of the relator and appointment of Fuller as legal and continuing. The Supreme Court affirmed the ruling of the circuit court in dismissing the application for the writ of mandamus upon the grounds that there is no power in the circuit court or in the Supreme Court to command the withdrawal of moneys from the United States Treasury to be applied in satisfaction of disputed claims against the United States; that no appropriation had ever been made to pay the salary of the relator, but that the appropriation had been made to pay the salary of the subsequent appointee of the President, who filled the office, from which the relator had been removed; and that the acts of the auditor, the comptroller, and the Secretary of the Treasury in

passing upon the claim were discretionary and quasi judicial and that they were not merely ministerial, and that, therefore, the court had no power to mandamus these officials.

The principle announced as governing that decision has no application to the case at bar for the two cases are so different in essential particulars. A statement of these differences and further comment seem to be unnecessary. It is hardly necessary to add that the proceeding here is not an action against the United States but is an action to compel an official of the United States to do his plain ministerial duty under the laws of the United States.

The respondent cites United States *v.* Lynch (137 U. S., 280). In that case the relator was ordered in March, 1872, by his superior officer to proceed from Philadelphia to New York and thence by Pacific Mail to Colon, across the Isthmus of Panama, and thence to Mare Island, Cal., and report for duty on board of the U. S. S. *Lackawanna*. Relator was a naval officer. He traveled 88 miles overland from Philadelphia to New York and some thousands of miles outside of the United States. He claimed that he was entitled to be paid 10 cents a mile for the full number of miles traveled. The respondent, the Fourth Auditor and the Second Comptroller of the Treasury, answered that the relator had been paid 10 cents a mile for the total number of miles traveled in the United States, and his traveling expenses while traveling outside of the United States. It was found that for a number of years the Navy and Treasury Departments had, with but a single exception, held that the 10 cents a mile did not apply to travel to, from, or in foreign countries but only to travel in the United States. This had long been the interpretation of the statute by the auditor and the comptroller. The relator sought to compel these officials by mandamus to interpret the statute differently from the way they had theretofore construed it—to compel them not only to exercise a discretionary or quasi judicial act but to exercise it in his favor. There the relator had at most a claim against the United States for money expended by him. No act had appropriated any money for him that was available and withheld by the respondents. The Court of Claims was the proper forum in which the relator in that case should have sought vindication for his claim if he had any proper claim.

The case of Reeside *v.* Walker (11 How., 290) is relied on by the respondents. There Reeside had certain post-office contracts with the Government of the United States. Alleging that he had been overpaid thereon, suit against him was brought in the Circuit Court of the United States for the Southern District of Pennsylvania for the recovery of the sum of $32,709.62, the amount alleged to have been overpaid. Defendant filed a general demurrer and a counter claim, and on trial being had a verdict was returned finding that the plaintiff was indebted to the defendant for $188,496.06. On May 12, 1842, the transcript of the record bore the following entry: "Motion for new trial overruled; new trial refused and judgment on the verdict, copy of assignment, etc., filed."

Later the executrix of defendant sought to compel the Secretary of the Treasury, by mandamus, to enter on the books of the Treasury Department to the credit of the deceased the sum of $188,496.06, and to pay the same to the relator as executrix of the deceased. The Supreme Court refused to grant the writ for the reasons that from the record no judgment appeared to have been given for the amount of the verdict; that relator failed to show the entry of a judgment; and that the verdict of the jury merely laid the foundation for a scire facias to issue and a hearing to be had on that if desired.

The court said that "The petitioner and her husband have neglected to pursue the case in that way to the final judgment, and, hence, have offered no evidence of one, of the verdict of indebtedness to Reeside by the United States." On these two points the court acted, and the rest of the case is merely obiter dicta. It was further stated, however, that there was no appropriation of Congress to pay the claim, and that it was "a well-known constitutional provision that no money can be taken or drawn from the Public Treasury except upon an appropriation by Congress."

The respondent refers to the United States *v.* Bank (104 U. S., 733) as a supporting authority. That case was an appeal from the Court of Claims. The bank had paid certain taxes and afterwards discovered that $972.69 was wrongfully exacted and paid. It then sought the refund of that amount. The Commissioner of Internal Revenue and the Secretary of the Treasury approved the payment of the claim, and the commissioner certified its allowance. Payment was refused by the officers of the Treasury. The Court of Claims decided in favor of claimant and against the United States, and the Supreme Court sustained this ruling. There is nothing more to that case.

United States *v.* Kaufman (96 U. S., 569) is cited by the respondent as an authority. That was an appeal from the Court of Claims, which had held that it had jurisdiction of a suit to recover an excess amount paid by way of special tax, and that an allowance of the claim by the Commissioner of Internal Revenue was sufficient, and that the court did not need to go behind the allowance and find the facts in respect to the original claim. The Supreme Court of the United States sustained that decision.

It will be noted that although the four cases above cited laid down general principles of law which are well recognized they have absolutely no analogy to the case now under consideration.

Buchanan *v.* Alexander (4 How., 20) is cited by the respondent to sustain the proposition that money in the hands of a disbursing officer is money in the Treasury of the United States and can not be reached by attachment or other process. In that case seamen of the frigate *Constitution* were indebted to boarding-house keepers in Norfolk, Va. They sought to attach the wages of these seamen in the hands of the purser of the vessel. The Supreme Court held that the money was not subject to attachment.

In the case at bar no one corresponds to the boarding-house keeper, no one to the seamen, and no one to the purser, and no writ of attachment is sought.

The respondent contends that the principle recognized in Mississippi *v.* First Comptroller of the Treasury, Durham (4th Mackay, 235), is applicable here. I am unable to examine this case, as the report in which it is published is not to be had in the zone. The respondent gives in his brief the following purported excerpt from the opinion:

"That a court must not permit the United States to be sued by a mandamus directed to one of its officers where it could not be sued directly unless by its own consent under some special statute allowing it. Now, it does not require argument to manifest that a refusal by an officer of the Treasury Department whose general duty under the law is to allow and take steps to issue a warrant for the payment of any claim is a refusal of the claim by the United States for the time being; that a mandamus against him to compel the allowance and payment thereof is a suit against the United States; and that it is none the less a suit against the United States because the ground or notices of refusal to allow may be obviously and notoriously without legal justification. In other words, that no error of judgment or capriciousness of conduct can destroy, for the time being, the quality of agent and actor in the name and on behalf of the Government of the proper Treasury official in disallowing the claim of any State or individual for money due or alleged to be owing by the United States."

I fail to see what bearing that decision has upon the instant case, for Judge Jackson's salary is not a claim and there is no dispute in respect to the payment of the same except that which arises from the denial of the authority of the auditor to withhold a part of the ascertained and fixed salary. I have dealt with this phase of the case in another part of this opinion.

Louisiana *v.* McAdoo (234 U. S., 627), is cited by the respondent. In that case the State of Louisiana, through its attorney general, sought to obtain permission to file a petition against the Secretary of the Treasury and the Assistant Secretary of the Treasury in order to review their official judgment as to the rate of duty to be exacted under various tariff acts. In that case the court said that if the State of Louisiana, as a producer of sugar, could review the action of the Secretary of the Treasury in determining the rate to be collected on Cuban sugar, any consumer, though not an importer, might make a similar complaint, if in his judgment the Secretary of the Treasury exacted a higher rate than justified by the law, thereby enhancing the price he must pay in the market upon the imported articles which he used.

The court held that it was an attempt to review the official action of the Secretary of the Treasury in the exercise of his judgment as to the rate which should be demanded under his construction of the tariff act, and that such suits would operate to disturb the whole revenue system of the Government and affect the revenues which arise therefrom. Furthermore, it was stated that such a suit would obviously be one against the United States as such.

The respondent cites United States ex rel. Goldberg *v.* Daniels (231 U. S., 218). That was a petition for mandamus, praying that the Secretary of the Navy be directed to deliver the United States cruiser *Boston* to the petitioner. It was asserted that the petitioner had bid more than the appraised value of the ship which, after survey, condemnation, and appraisal, had been stricken from the naval registry under the act of August 5, 1902, and proposals for the purchase of which the Secretary of the Navy had advertised. After the petitioner sent his certified check to the Secretary of the Navy the Secretary refused to deliver the vessel and returned the check. The answer admitted the fact and set up that the bid was not the acceptance of an offer, but was only an offer in itself, subject to be accepted or not, at the discretion of the Secretary and that the Secretary never accepted the petitioner's bid, the Government having decided to lend the cruiser to the governor of Oregon for use by the naval militia of that State. The petition was refused by the court below on the ground that the discretion of the Secretary was not ended by the receipt and opening of the bids, even though they satisfied all the conditions prescribed. This judgment was affirmed.

In Ness *v.* Fisher (223 U. S., 683), referred to by respondent, the Secretary of the Interior refused to accept, as conforming to the timber-and-stone act of June 3, 1878, an application to purchase under that act 160 acres of public land in the Roseberg (Oreg.) land district. The relator sought to compel the Secretary of the Interior to accept his application. It had been refused by the Secretary of the Interior, who ruled that the application was objectionable in that it was made upon information and belief and not upon personal knowledge; that it was, in fact, for cultivation and valuable chiefly for its timber, and that it was uninhabited and contained no mining or other improvements. The court said that it was confronted with the question not whether the decision of the Secretary was right or wrong, but whether a decision of that officer, made in the discharge of a duty imposed by law and involving the exercise of judgment and discretion, could be reviewed by mandamus and he be compelled to retract it and to give effect to another finding not his own and not having his approval. Manifestly the court of appeals was right in its refusal to issue the writ of mandamus, and the Supreme Court sustained the ruling.

In Champion Lumber Co. *v.* Fisher (227 U. S., 445), on the respondent's brief, the petitioner sought to compel the Secretary of the Interior and the Commissioner of the General Land Office, by writ of mandamus, to issue a patent for lands. It seems that the commissioner and the Secretary of the Interior were advised by an agent, whom they had appointed to investigate, that flagrant fraud had been committed, and they were requested to withhold patents to the lands. Thereupon the commissioner directed the register and receiver, Jackson, to suspend action on commutations and proofs until further investigation. It was further shown by the report of another special agent that the entry had been made for speculative purposes with no attempt to comply with the requirements of the law, and the recommendation was made that the entry be canceled on the ground of nonremedy, noncultivation, nonimprovement, and abandonment. The commissioner directed that a hearing be had. Petitioner moved for a stay of proceedings, and claimed that his entry should be patented without further proceedings. The motion was denied by the commissioner, and this denial overruled by the Secretary of the Interior who later denied a motion to review his decision, finding that a protest had been filed against the patent within two years from the issuance of the receiver's receipt, and holding that the case should proceed to hearing on the special agent's charge. The petitioner then sought relief in the court, praying that the commissioner and the Secretary of the Interior be directed by mandamus to issue the patent as heretofore stated. The court held that this was an attempt to coerce the Secretary of the Interior in the exercise of his lawful discretion and judgment. It was said: "The case was, therefore, submitted and decided upon the issue whether the action of the Secretary was justified in the exercise of his lawful discretion because of the fact disclosed in the record." The petitioner did not challenge, nor did the court pass upon the validity of an authority exercised, nor was the existence or extent of the authority or duty of an officer of the United States drawn in question in the sense in which it is used in the statute, the Dockery Act. The case was ultimately decided on the ground of jurisdiction; that the petition for the writ of error should be denied. The Supreme Court held that the case was not one that was appealable to that court under the fifth clause, section 250, of the Judicial Code, and, by way of obiter, that the action of the Secretary of the Interior was wholly discretionary and, therefore, not subject to review by mandamus.

In Oregon *v.* Hitchcock (202 U. S.) cited by respondent, the Supreme Court held that the immunity of the United States from suit prevented a State from maintaining in the Supreme Court of the United States a suit against the Secretary of the Interior and the Commissioner

General of the General Land Office to restrain them from allotting and patenting in severalty swamp lands within the limit of an Indian reservation. The court further said that it could not interfere with the allotment and patenting by the Land Department of swamp lands within the limits of an Indian reservation while the legal title was still in the Federal Government. In that case the court stated:

"Now, the legal title to these lands is in the United States. The officers named as defendants have no interest in the lands or the proceeds thereof. The United States is proposing to sell them. This suit seeks to restrain the United States from such sale—to divest the Government of its title and vest it in the State. The United States is, therefore, the real party affected by the judgment, and against which, in fact, it will operate, and the officers have no pecuniary interest in the matter. If whether a suit is one against the State is to be determined, not by the fact of the party named as defendant on the record but by the result of the judgment or decree which may be entered, the same rule must apply to the United States. The question whether the United States is a party to a controversy is not determined by the merely nominal party on the record but by the question of the effect of the judgment or decree which can be entered."

The case was decided against the relator on the ground that the court had no jurisdiction as it was manifestly a suit directly against the United States to seek to restrain it from selling lands that belonged to it; that the court would not interfere with the land department in its administration; and that until the legal title to lands passes from the Government, inquiry as to equitable rights comes within the cognizance of the land department. The court stated that it could not anticipate the action of the land department or take upon itself the administration of the land grants of the United States.

Again, the respondent says that:

"The courts will not interfere by mandamus with the executive officers of the Government in the exercise of their ordinary official duties, even where those duties require an interpretation of the law. (Dunlap *v.* Black, Commissioner of Pensions, 128 U. S., 40.)"

In that case the Commissioner of Pensions adopted an interpretation of the law adverse to relator by refusing a pension certificate, and his decision was confirmed by the Secretary of the Interior. The court stated that it had no right to review such decision. It declined to interfere by mandamus with the executive officials of the Government in the exercise of their ordinary official duties, even where those duties require an interpretation of the law; but held that when executive officers refuse to act in a case at all, or when, by special statute or otherwise, a mere ministerial duty is imposed upon them, which they were bound to perform without further question, then if they have refused to act a mandamus might be issued to compel them. In that case the Commissioner of Pensions and the Secretary of the Interior acted in the discharge of a quasi judicial function. This paragraph from the opinion of the court is sufficient to show that it has no bearing on this case:

"Adjudged by this rule the present case presents no difficulty. The Commissioner of Pensions did not refuse to act or decide. He did act and decide. He adopted an interpretation of the law adverse to the relator, and his decision was confirmed by the Secretary of the Interior, as evidenced by the signature to the certificate. Whether, if the law were properly before us for consideration, we should be of the same opinion or of a different opinion is of no consequence in the decision of this case. We have no appellate power over the commissioner, and no right to review his decision. That decision and his action taken thereon were made and done in the exercise of his official functions. They were by no means merely ministerial acts."

The respondent cites the case of Schillinger et al. *v.* The United States. That was an appeal from a judgment of the Court of Claims dismissing a suit brought by plaintiff against the United States to recover damages for the wrongful use of a patent for improvement in concrete pavement. It was nothing more nor less than an action in tort against the United States. The Supreme Court held that the Court of Claims was correct in deciding that it had no jurisdiction of a tort action against the United States, and that without its consent the United States could not be sued.

8. The respondent insists that the relator is indebted to the United States or the Canal Zone as hereinbefore stated. Is this true? Whether it is or not, the relator denies such indebtedness and his case is justifiable and can not be determined by a mere ministerial officer who has undertaken to decide without the intervention of a court or a judge and jury. It seems rather incongruous, to say the least of it, that this auditor should deny his authority and duty to pay the relator his salary and in the next breath assert that he has the authority and the discretion to withhold from the relator $1,131.76 of his salary for the alleged but denied indebtedness.

It is indisputable that the relator does not owe for house rent or electric lights unless there was some law or some Executive order in pursuance of an act of Congress which imposed the duty to pay or authorized the collection charges for rent and lights. As a matter of fact there was never any congressional legislation or any ordinance of the Isthmian Canal Commission, or Executive order of the President, or any regulation of the Government of the Panama Canal, providing for the collection of rent or electric light charges for the occupation of Government quarters and lighting the same in the Canal Zone until the promulgation of the Executive order of the President of the United States under date of February 2, 1914. Section 17 of this order is as follows:

"Where practicable, such bachelor quarters on the Isthmus as may be available from time to time, will be assigned to all employees desiring them. Family quarters, when available, will be assigned under such rules as may be prescribed by the Governor, and charges will be made for rent, fuel, and electric current, at such time and in accordance with such regulations as the President may hereafter establish."

In pursuance of this provision of the Executive order, the President promulgated, on January 15, 1915, another Executive order in this language:

"By virtue of the authority vested in me it is hereby ordered:

"1. Pursuant to the provision contained in paragraph 17 of the Executive order of February 2, 1914, fixing the conditions of employment governing employees of the Panama Canal and the Panama Railroad Co. on the Isthmus of Panama, a charge will be made for rent, fuel, and electric current on and after March 1, 1915.

"RENT.

"2. The rental will be based on a percentage of the value of the quarters occupied, the rate per cent to be the same for all quarters, and the value of the quarters to be appraised by the Governor of the Panama Canal. The amount to be collected should be sufficient to defray the cost of maintenance of the quarters and grounds, maintenance and renewal of furniture, collection and disposal of garbage, and for bachelor quarters' janitor service. No charge will be made for water.

"FUEL.

"3. Fuel will be sold to employees at cost delivered at quarters.

"ELECTRIC CURRENT.

"4. The charge for electric current will be based on the cost of the current delivered to the quarters. When practicable the current used will be measured by meters; otherwise a charge will be made for each lamp or other device installed.

"5. Where employees for the good of the service are required to live in certain designated quarters one-half of the rental will be remitted.

"6. When an officer of the Army or Navy is detailed for duty with the Panama Canal, and the amount of extra compensation of the position he occupies over and above his official salary as an officer of the Army or Navy is not sufficient to cover his rent, he will not be charged for rent, but will receive no extra compensation.

"7. The governor of the Panama Canal is charged with the duty of issuing such instructions as may be necessary to carry out this order and to fix and change from time to time, if necessary, the rates and charges herein outlined subject to the general instructions provided.

"8. The free use of quarters, free fuel, and free electric current are not, under the conditions of employment now governing, a vested or contract right of employees, but revocable privileges, which it has been considered advisable to continue until the permanent force was organized. The revocation of these privileges shall not be made the basis for increasing salaries or wages or otherwise increasing compensation."

This latter Executive order became effective March 1, 1915, and was continued in force, and under it rent was charged against employees of the Panama Canal and the Panama Railroad Co. for three months thereafter. On May 25, 1915, the President made the following Executive order, superseding or suspending the operation of the above-mentioned order of January 15, 1915:

"By virtue of the authority vested in me it is hereby ordered that the Executive order of January 15, 1915, relative to charges for rent, fuel, and electric current, furnished employees of the Panama Canal and the Panama Railroad Co. on the Isthmus of Panama, is modified by suspending from the operation thereof so much as relates to rent, fuel, and lights during the period of actual construction of the Panama Canal, but not later than June 30, 1916."

It must be observed that during the time for which Judge Jackson is sought to be charged for the rent of the residence and for lighting the same there was no statute or Executive order authorizing the making such charges, and there is no authority for withholding the salary. In other words, prior to March 1, 1915, there was no authority to charge or collect from anyone rent for houses or quarters, or for lighting the same, on the Canal Zone. It is manifest that prior to that date it had not been contemplated by Congress, or by the Secretary of War, or by the Canal Zone officials that rental charges would be made for the occupancy of quarters and lights on the Canal Zone.

The Houses were erected, not for rental purposes, but for the use of the employees of the Panama Canal, the Panama Railroad, and other governmental functionaries who might from time to time, in the discharge of their official duties, be required to reside in the Canal Zone. The purpose of the United States in acquiring the Canal Zone was to use it as a necessary appurtenance for the construction of the Isthmian Canal—for auxiliary works of canal construction, such as abodes for housing employees and the like. It will not be insisted that it was the intention of the United States to engage in the real-estate business for profit or that there was any intention on the part of Congress that a rental should be charged against judicial or other officers who were obliged to live in the Canal Zone.

Moreover, the order of March 1, 1915, above quoted, was the only provision of law for the collection of rents from anyone, and that order applied to employees of the Panama Canal and the Panama Railroad, and not to the district judge of the Canal Zone. But treating the judge as an employee, then we find that for a period of 3 months, less 6 days, the Executive order authorizing the collection of rent from employees of the Panama Canal and the Panama Railroad was operative, and that it was then suspended as to the persons or class of persons to whom it had been made applicable, namely, to the employees of the Panama Canal and the Panama Railroad Co. This Executive order, which authorized the collection of rent from the employees, was suspended during the time of the occupancy of the house by Judge Jackson, and for which he is charged rent by the respondent. It must therefore be held that there was an absence of authority on the part of anyone to make such a charge.

It may be well to remember in this connection that no private person could erect a house on the Canal Zone for his individual use. The judge was required by act of Congress to reside in the Canal Zone, and under the circumstances it was not possible for him to do so except by living in one of the houses owned by the Government. That he should occupy such house seemed to have been understood as being in the contemplation of Congress. In the absence of any legislative expression it can not be believed that it was the intention of Congress that the judge, whose office was created by the Congress and who was required to reside in the Canal Zone, should rent quarters from the Government or from any subsidiary governmental agency.

9. But the respondent contends that he has the right to withhold a part of the salary of the judge, fixed and appropriated for by law, because the Adamson Act provides that the judge shall not receive any emoluments except his salary. Pretermitting for the time being the consideration of other phases of the case or questions, let us ascertain the meaning of emoluments. The definition of the term is ascertained from adjudged cases cited in Words and Phrases, volume 3, page 2367, where it is said:

"Emolument is the profit arising from office or employment; that which is received as compensation for services or which is annexed to the possession of office, as salary, fees, and perquisites."

I think it may be said, therefore, that an emolument is something positively and directly conferred as compensation or gain that the holder of an office receives, and not something necessarily, inseparably, and incidentally used by him in the discharge of his duty, a duty for which he is paid a fixed salary. Certainly it would not be contended that an employee—for instance, a locomotive engineer—could be charged for the use of the locomotive which was necessary in the performance of work he was hired to do. We must not forget that it was the expressed intention to have the judge reside in the zone, and this intention is just as plain as was the other intention that he should per-

form judicial work. His physical presence on the zone was required, and he could not possibly obtain a habitation there except from the Government.

This question here is analogous to the one involved in McCoy v. Handlin (153 N. W., 361). In that case the contest was over an extra allowance of a specified sum per month to such judges of the supreme court as take up their residence at the capital (of South Dakota) to meet the extra expenses thereby caused. The constitutional provisions of the State were that "they * * * the supreme court judges. * * * shall receive no fees nor perquisites whatever for the performance of any duties connected with their offices. It shall not be competent for the legislature to increase the salary of the officers named in this article except as hereinafter provided." And, again, that "the judges of the supreme court * * * shall each receive such salary as may be provided by law, consistent with this constitution, and no such judge shall receive any compensation, perquisite, or emolument for or on account of his office in any form whatever, except such salary."

An extra allowance by the legislature of a specified sum per month for such of the judges of the Supreme Court as take up their residence at the capital, to meet the extra expenses thereby caused, was held not to be inhibited by the constitutional provisions quoted. The proceeding there was for mandamus against the auditor for the allowance of a specified sum to such of the judges as had taken up their residence at the capital, etc., and was resisted by the auditor, upon the ground that the allowance of such sum per month was in contravention of the State constitution. The decision of the court was against the contention of the auditor. The opinion was well considered, instructive, and is illuminating in the consideration of the instant case. There it was said:

"It is clear that the legislature did not intend, in the enactment of such legislation, to increase the salaries of the judges or to grant them any perquisites or emoluments for the discharge of their duties, but only intended to asure them, in so far as possible, that for the performance of their official duties alone, and not for the performance of such duties and the payment of the expenses incident thereto, they should receive the salaries provided by law for the performance of such duties."

And, again, the court said:

These men (the framers of the constitution of South Dakota) must have known that section 1, article 2 of the Federal Constitution declared that the President should receive for his services a compensation 'which shall neither be increased nor diminished during the period for which he shall have been elected; and he shall not receive within that period any other emoluments from the United States or any of them.' These men must have known that the word 'emolument' was, as recognized by every authority, a term broad and comprehensive—one which includes within it 'perquisites,' 'salary,' 'compensation,' 'pay,' 'wages,' and 'fees.' These men must have known that, with the above provisions of the Federal Constitution in force, the Congress of the United States—a body of men which at all times during the history of this Government has had among its Members many of the greatest constitutional lawyers of the day—had enacted legislation under which the President for nearly a century prior to the framing of our Constitution had been furnished a home, horses, carriages, servants, household equipment, and many other things incidental to and appropriate to his high office. These men must have known that such Federal legislation had never been questioned, either as regards its propriety or its constitutionality. These men must have known that in practically every State in the Union (in many of which there were constitutional provisions similar to the one above referred to in the Federal Constitution and to the ones relied upon by defendant in this case) there had been legislative enactments making provisions for the several governors similar to those made by the Federal Congress for the President, as well as innumerable measures appropriating money to be paid other officers to recompense them for expenses incurred in the discharge of their official duties. Is it possible for anyone to presume that these men, with all these facts in mind, intended—by the words used in our Constitution—to prohibit allowances for expenses incident to the discharge of public duties? Further light has since been thrown upon the construction given to the provision of the Federal Constitution above referred to by the act of June 23, 1906 (34 Stat. L., 454, chap. 3523, Comp Stat. 1913, sec. 225), which provides: That 'hereafter there may be expended for or on account of the traveling expenses of the President of the United States such sum as Congress may from time to time appropriate, not exceeding $25,000 per annum, such sum when appropriated to be expended in the discretion of the President and accounted for on his certificate solely.

"Under appropriations thereafter made by Congress, Presidents Roosevelt and Taft received, and to-day President Wilson is receiving, thousands of dollars each year. So far as we know, it has never been suggested that the money so allowed was an 'emolument,' and therefore unconstitutional. No one has ever seen fit to accuse those Presidents of being grafters. The judges of the Federal courts, whose salaries are fixed by a law declaring that such salaries shall be the 'compensation for their official services,' draw from the United States Treasury a sum not exceeding $10 per day when absent from the places of their residence. (Act Mar. 3, 1911, chap. 231, sec. 259, 36 Stat. at L., 1161, Comp. Stat. 1913, sec. 1236.) This allowance is not given as an increase of salary, but to cover the expenses incident to their being away from home in the discharge of their duties."

Paraphrasing, it may be said that the use of the house by Judge Jackson can not be held to be an increase of salary, but was no more than the necessary inseparable incident to his compliance with his positive duty to reside within the Canal Zone during the term of his office. (Sec. 8, supra, vol 37, pt. 1, U. S. Stat. at L., 62d Cong., p. 565.) The relator was compelled to reside within the Canal Zone, and necessarily could occupy no house except one furnished by the Government. It seems fair to say that if Congress had intended the judge to pay rent for the occupancy of a house in the Canal Zone, when it required him to reside there, it must be presumed that it would have been so stated in the Adamson Act. The lawmakers knew that the United States Government was the owner of all buildings in the Canal Zone, and that the judge required to reside there must occupy one of those buildings. By way of reinforcement of this view it may be said that the Members of Congress were familiar with the fact that under the acts or ordinances of the Isthmian Canal Commission the former members of the Canal Zone judiciary had occupied houses free of rent. Act 1 of the Isthmian Canal Commission of August 16, 1904, in referring to each of the circuit and supreme court judges, provided as follows:

"During his term of office he shall be furnished a dwelling house or apartment, or in lieu thereof a sum of money equal to 8 per cent of his annual salary, at the option of the commission."

The Adamson Act continued in operation all the acts of the Isthmian Canal Commission not repugnant to the provision of that act itself. This is shown by section 2, paragraph 2, of the act as follows:

"That all laws, orders, regulations, and ordinances adopted and promulgated in the Canal Zone by order of the President for the government and sanitation of the Canal Zone and the construction of the Panama Canal are hereby ratified and confirmed as valid and binding until Congress shall otherwise provide. The existing courts established in the Canal Zone by the executive order are recognized and confirmed to continue in operation until the courts provided for in this act shall be established."

This provision has direct reference to the courts; consequently when the act required the judge to reside within the Canal Zone his occupancy of a house belonging to the Government or its subsidiary, in the Canal Zone, free of rent, when there had never been any stipulation for the payment of rent, can not be considered an emolument. It was no increase of salary. It was no profit. His occupancy of the house as a residence constituted an incident, and perhaps also an inducement, to the discharge of his duty while away from his home in the United States.

In his letter, introduced in evidence in this case, the Attorney General of the United States, Mr. Gregory, when called upon by the governor of the Panama Canal and the auditor, the respondent here, to pass upon the legality or illegality of withholding from the relator his salary, cited with approval the Benedict case, supra, and appropriately said that the question which the auditor, respondent here, has taken upon himself the authority to decide, and to finally decide, "was one for judicial rather administrative determination, and that it was a claim that could only be enforced through proceedings in the courts." Mr. Gregory is not the only Attorney General who has passed upon cases involving this question. On June 27, 1893, Mr. Maury gave the opinion, as to the right of the Secretary of the Treasury to withhold from the salary of a Federal judge an amount which had been adjudicated against him in favor of the United States, in a final judgment (Ops. Atty. Gen., 22, 626), as follows):

"SIR: It appears by the letter of the First Comptroller of the Treasury of May 27 ultimo, addressed to you, that the United States has recently recovered a judgment in the Supreme Court of the District of Columbia against the Hon. Nathan Goff, as surety on the official bond of James M. Ewing, formerly disbursing clerk of this department, for the sum of $9,000 with interest and costs, and you have referred the letter to me for an opinion upon the following questions presented therein:

"'1. Does the act of March 3, 1875 (18 Stat., 481), authorize and require the Secretary of the Treasury to withhold the salary due a public officer who is indebted to the United States?'

"'2. If so, is there any exception in the case of a Federal judge?'"

"As I may not, however, give an opinion on a hypothetical question without exceeding my power as defined by law, I must, in complying with your request, confine myself to the case calling for the action of your department, and shall accordingly proceed to consider whether the act of March 3, 1875, chapter 149 (18 Stat., 481), authorized and requires the Secretary of the Treasury to withhold Judge Goff's salary as a circuit judge of the United States for the fourth circuit, until the judgment recovered against him as aforesaid shall have been satisfied in that way.

"The act of March 3, 1875, is entitled 'An act to provide for deducting any debt due the United States from any judgment recovered against the United States by such debtor,' and provides as follows:

"'That when any final judgment recovered against the United States, or other claim duly allowed by legal authority, shall be presented to the Secretary of the Treasury for payment, and the plaintiff or claimant therein shall be indebted to the United States in any manner, whether as principal or surety it shall be the duty of the Secretary to withhold payment of an amount of such judgment or claim equal to the debt thus due to the United States.'

"It would be, in my judgment, to abandon the ordinary sense of language and to adopt an unlooked for interpretation to hold that it was in the contemplation of Congress to include, under the expression 'claim duly allowed by legal authority,' the right of a Federal judge to have his salary paid to him out of money in the Treasury appropriated by law for that purpose.

"The allowance of a claim against the United States, involving a discretion which partakes of a judicial character, but it is apparent that there is no room for the exercise, by any 'legal authority,' of such a discretion with reference to the salary of a judge, which the law requires to be paid, if there is money in the Treasury applicable to it, and failure to pay which is an official delinquency which may be summarily corrected by mandamus.

"Without going into the constitutional question and the question of policy suggested in the First Comptroller's letter, I content myself with saying that this is not a case where the ordinary sense of the language of the statute should be extended by construction."

In addition, Attorney General Black under date of July 21, 1858, rendered an opinion (Vol. 9, Ops. Atty. Gen., p. 198), an excerpt of which reads as follows:

"Though I doubt the power of the Secretary, in the present state of the law to set up a counterclaim of any kind in order to avoid payment of a judgment which Congress has ordered him to pay, yet I do not think there would be impolicy or danger of giving him such power where the counterclaim is also a judgment, or where it is established by evidence so conclusive that the opposite party is estopped from denying it. In such a case he would be required to pass on nothing which is open to dispute. His function would be merely ministerial, consisting in nothing but the subtraction of one claim from the other and ascertaining the difference. But here is a claim fiercely contested. It has never been adjudicated in favor of the Government. If it has ever been passed upon by any court, the judgment was against it. There is not a word on record about it. All the evidence concerning it pro and con is in pais. Every fact asserted by one party is not only open to contradiction by the other, but is in fact contradicted, and I have no doubt is most potently believed to be untrue. Not only are all the facts vehemently disputed, but the parties are as wide asunder as the poles on every question of law. It is proposed that this complicated entanglement shall be settled in the chamber of an executive officer, without a trial, without a judge or jury, without examining witnesses, and without hearing counsel.

"No such jurisdiction is given to the Secretary of the Treasury by any law, and if the Constitution is not a dead letter, Congress can not confer it. The fifth amendment declares that 'no person shall be de-

prived of his life, liberty, or property without due process of law.' This means, and has always been held to mean, that the right of a citizen to his property, as well as his life or liberty, could be taken away only upon an open, public, and fair trial before a judicial tribunal, according to the forms prescribed by the law of the land for the investigation of such subjects. If an executive officer can make an order that the widow and children of Reeside shall be deprived of $24,000 without a trial, then the same officer may, with equal propriety, issue a warrant to hang them, since the Constitution puts life and property on the same footing. * * *

'If Congress had power to confer this kind of jurisdiction on the head of the Treasury Department, and would exercise it by passing a law to invest him with all the authority which courts and juries together are clothed with by any defalcation act ever passed, still the Secretary could not set off this claim against that of Mrs. Reeside. Her demand is res adjudicata—fixed and settled by a judgment—and the payment of it in full is sanctioned by an act of Congress. The counterclaim of the Government rests on parol evidence disputed and denied. Now, it is well settled that where one party has a judgment the other can never set off against that judgment a claim not reduced to judgment, however clearly he may be able to prove it. He is always remitted to his action.

"For these reasons, and for others which might be adduced, I am perfectly satisfied that the Secretary of the Treasury has no power to stop the payment of the money adjudged to Mrs. Reeside, however well he may be satisfied in his own mind that the counterclaim is well founded. If he is convinced of the indebtedness alleged, he should order a suit to be brought and give the party a fair chance to be heard before the regular tribunals of the country. I am not aware that such power was ever claimed before it was used by the late Secretary in this case; but if it be a practice of the department, it ought to be immediately abolished, for it is unjust, unlawful, and unconstitutional."

This language is opposite in the present controversy.

As to the force and legal effect of an official opinion of the Attorney General of the United States when rendered to any executive or administrative officer, we can do no better than to refer to the opinion, rendered to the Secretary of the Treasury on date of February 12, 1894, by the Attorney General, Richard Olney (Opinions of Attorney General, Vol. XX, 719, 722), as follows:

"The act of 1870, section 4, establishing the Department of Justice, provided that written opinions prepared by a subordinate in the department may be approved by the Attorney General, and that 'such approval so indorsed thereon shall give the opinion the same force and effect as belong to the opinions of the Attorney General.' This provision is embraced in substantially the same language in section 358 of the Revised Statutes. Evidently, therefore, Congress contemplates that the official opinions signed or indorsed in writing by the Attorney General shall have some actual and practical force. Congress's intention can not be doubted that administrative officers should regard them as law until withdrawn by the Attorney General or overruled by the courts, thus confirming the view which generally prevailed, though sometimes hesitatingly expressed, previous to the establishment of the Department of Justice. (5 Opin., 97; 6 Opin., 334; 7 Opin., 699, 700; 9 Opin., 36, 37.)

"The question now presented is substantially the same as that presented last summer. The duty of this department ended with the rendition of the opinion, and it can not with propriety advise further." (17 Opin., 332.)

Mr. Attorney General Gregory was correct in saying that if the authorities in the Canal Zone believe that the relator in the present case owed any amounts of money whatsoever to the Panama Canal it was "a question for judicial rather than administrative determination," and that the claim now urged by the respondent in this case "could only be enforced through proceedings in the courts." That is a sententious and felicitous statement of this case.

Judge Jackson has never had his day in court. He has been deprived of his salary, or the sum of $1,131.76, without due process of law. It has been withheld from him by the refusal of the auditor in this case to issue his voucher upon which the salary is paid. The indebtedness is denied by Judge Jackson. He denies it upon the grounds that there was no law or regulation under which the indebtedness was or could have been created. He denies that the respondent has authority to withhold any part of his pay in the collection of an alleged but disputed indebtedness. And yet the executive officer has sat as a court, and without evidence or hearing, except what he considered evidence, and except what he considered a hearing, decided a controversy that he created by his own action. He has passed upon a disputed claim, which is a disputed claim merely because he has created the dispute in refusing to make payment where it was his plain duty to make such payment. His conduct, however good his intention may have been, hardly falls short of being shocking to the judicial sense of justice, proper and orderly procedure, in a matter that is clearly justiciable. Perhaps it is not to be doubted that if, after he had made a careful examination, the Attorney General had found Judge Jackson was indebted—owed the items amounting to the salary which has been withheld by the auditor—that the account would have been settled without court proceedings. Or if not so settled, then appropriate court action would have been had for its collection. In any event Judge Jackson was entitled to his day in court. But the auditor here held that, having the money for Judge Jackson under his control and subject to his disbursement, he had the right to determine the claim against Judge Jackson, one disputed in law and in fact, and now insists that his summary way of determining an issue of law and an issue of fact, and the collection by deduction from the judge's salary of a disputed indebtedness, can not be reviewed or questioned by the court. Notwithstanding that view, I think the Attorney General was right in saying that the matter "was one for judicial rather than administrative determination," and that whatever demand or offset that the Government may have "could only be enforced through proceedings in the courts."

The counsel for the respondent in the oral argument before me insisted that Gratiot *v.* The United States, reported in 15 Peters, 336, authorizes the respondent to retain as an offset the amount claimed by him to be due from Judge Jackson. The following quotation shows the ruling in that case:

"There is another instruction asked under this exception, in a complicated form, but which mainly turns upon a consideration whether the Treasury Department had the right to deduct the pay and emoluments of the defendant as a general of the Army and while he was Chief Engineer by setting them off against the balance reported against him on account of his superintendency of Forts Monroe and Calhoun. In our judgment, the point involves no serious difficulty. The United States possesses the general right to apply all sums due for such pay and emoluments to the extinguishment of any balances due to them by the defendant on any other account, whether owed by him as a private individual or as Chief Engineer. It is but the exercise of the common right which belongs to every creditor to apply the unappropriated moneys of his debtor in his hands to the extinguishment of the debts due to him."

The opinion in that case does not sustain the contention of the respondent that Treasury officials have the right to make deductions from salaries of other officers whenever, in the opinion of Treasury officials, such officers may be indebted to the United States. An examination of the opinion in that case shows that no such broad principle as that contended for was declared. The facts of that case are essentially different from those in the instant one.

Gen. Gratiot was a disbursing officer of the United States Army, and as such he had drawn large sums of money from the Federal Treasury on warrants signed by himself. He later converted to his own use the sum of $30,000 from one of the sums which had been drawn by him for engineering work under construction. In the statement of the Attorney General it was asserted that Gen. Gratiot made no objection to the stopping of his pay. He contended, and contended only, that the amount of his defalcation should be credited to an account other than that to which the Treasury officials had credited it. He insisted that the $30,000 embezzled by him should be charged to a particular account that he favored. The court decided in effect that the United States had a right to apply the portion of Gen. Gratiot's salary then due and owing to any of the accounts as it saw fit he had admittedly settled, being a defaulter on all of his accounts.

As has been shown, the amount of the relator's salary had been fixed by law and the money for its payment appropriated, and was by the terms of the law in the possession or under the control of this respondent as disbursing officer, and he as such was under the legal obligation to pay, or, under the regulations and practice, to do his part in the payment of such salary. There was nothing left to be determined by his judgment or according to his discretion. The judge having served as judge the law itself automatically audited and determined the amount to be paid to him. The case of McCoy *v.* Handlin, supra, is, I think, in point as I have endeavored to show, for there it was said:

"On the other hand, where the amount claimed is fixed by the law, as, for instance, an officer's salary, the auditor is vested with no discretion whatever. If he is satisfied as to the identity of the officer claiming a salary it is his duty to issue his warrant for the amount so fixed. In that case there is nothing to be determined by an action at law and, if the auditor refused to issue the warrant, mandamus is a proper remedy to compel him to issue the same."

In Fowler *v.* Peirce (2 Cal., 165–167) the court said:

"It is true that courts can not compel judicial or other officers vested with legal discretion to act otherwise than in the exercise of that discretion. In the present case, it was the duty of the comptroller to audit the appellant's account. The nature and amount of the services are ascertained (or not disputed), and the law has fixed a compensation.

"The comptroller, who is bound to know the law by which he is required to act, has no discretion in such a case. Nothing remains to be ascertained. He must audit the account according to the law in force; and it will be no sufficient answer to a mistake or refusal on his part, to say he acted according to his discretion. The act of auditing an account, under circumstances like these, becomes merely ministerial and can be enforced by mandamus."

In State, etc., Collans *v.* Jumel, auditor (30 La. Ann., 861, 864), the court declared:

"When a judge has acquired his office in the mode designated by the Constitution, he has a vested right to its emoluments during the term fixed by the Constitution for its duration.

"The legislature can not deprive him of it. He may be impeded in the exercise of his judicial functions. He may be shorn of judicial power and be deprived of the opportunity to discharge the duties imposed upon him by the defense of his office, but he can not be divested of the office, except by one of the modes appointed by the Constitution for that purpose, and he can not be denied his just demand of payment of the salary, which is prohibited from being increased or diminished during his term.

"All devices tending to abrasion of the independence of the judiciary, or to subject it to legislative or popular caprice, have been uniformly condemned by the wisest men of our country. Numerous incidents have occurred in the States of attempts of the legislatures to oust judges from their constitutional offices and deprive them of their salaries, and in no instance has the doctrine announced in the relator's case in the Twenty-sixth Annual found any favor * * *.

"The independence of the judicial department of the Government is at once the anchor of our stability, the prop of our strength, and the shield of our defense. * * * The relator is entitled to his salary for the term of his office, not included in his former suit, and the respondent should have audited his claim therefor to the extent of the appropriations, and drawn the warrants upon the Treasury in accordance therewith."

In the case last above cited it appears that the auditor did not have funds sufficient to pay the salary of the judge, but, nevertheless, the writ of mandamus issued for such funds as he did have to apply to the payment of the salary of that judge. It apparently had been sought by the Legislature of Louisiana to legislate the relator in that case out of office, and, although the relator, by reason of the act of the legislature, had no judicial function to perform for a considerable period of time, nevertheless the Supreme Court of Louisiana held that he was entitled to his salary irrespective of the fact that he had not performed the duties of his office, and that mandamus would lie to compel the payment of his salary.

It seems to me that upon reason and authority, when the salary has been fixed by law and the money appropriated for its payment, and the officer who controls the funds refuses to pay the salary to the one entitled thereto, mandamus is the proper remedy and the only remedy which the aggrieved party can invoke for the protection and enforcement of his rights.

Counsel for the respondent cited the case of Butterworth *v.* United States (U. S., 656, 50–69) in support of his contention that mandamus would not lie in the present case. That case not only does not support this contention, but it expressly negatives it. There the superior of the Commissioner of Patents, the Secretary of the Interior, had overruled the commissioner, who had already exercised his judgment and discretion in deciding that the relators were entitled to a patent. The

Supreme Court of the United States stated that, irrespective of the action taken by the superior of the commissioner, the writ of mandamus would lie directing him to issue the patent. The court said:

"Some question is made as to the remedy. We think, however, that mandamus will lie and that it was properly directed to the Commissioner of Patents. He had fully exercised his judgment and discretion when he decided that the relators were entitled to a patent. The duty to prepare it, to lay it before the Secretary for his signature, and to countersign it were all that remained, and they were all purely ministerial. These duties he had failed and refused to perform merely out of deference to the claim of the Secretary to reverse and set aside the decision on the merits in favor of the relators. This we have held not to be a valid excuse."

10. It will be noted that the respondent has withheld $83.33 of Judge Jackson's salary for five days' absence from the Canal Zone in excess, as it is alleged, of the six weeks' annual vacation allowed under the Adamson Act. It is thus seen the respondent was under the misapprehension that Judge Jackson was to be classed as a day laborer, and that it was his duty as auditor, so he contends, to "dock," to use the respondent's language as a witness on this trial, Judge Jackson's salary on account of alleged absence. Of course, any laborer is respected, for labor is honorable, but the judge was not engaged to work by the hour or day. It is sufficient to say that the act of Congress provided that Judge Jackson should be paid an annual salary of $6,000, just as United States district judges are paid, and he was given by statute an annual leave of six weeks; and that this does not preclude the idea that he could lawfully have a longer leave of absence. Undoubtedly he could have been granted a longer leave, and undoubtedly the judge could not be deprived of the six weeks allowed by the statute. If without authority Judge Jackson absented himself from the Canal Zone for a period of time not permitted, the remedy for such dereliction was not committed to the judgment or authority of the respondent. For such an excess the judge was amenable to the President, with his power of removal, or to Congress, with its power of impeachment.

The Adamson Act does not provide for vacation for the marshal or the district attorney, and yet they have taken their vacation and the respondent made no deduction from the salary of either on that account. Presumably he did not make any deduction because they, perhaps, took leave or vacation by the consent of some executive functuary. It is rather strange, to say the least of it, that this respondent should now insist he has the right to withhold a part of Judge Jackson's salary for five days' absence in view of the fact he was informed that the Attorney General, the head of the Department of Justice, advised that the judge's explanation as to why he had been absent for the brief time mentioned was entirely satisfactory. And, moreover, it is stranger still that this respondent should withhold the five days' pay from the judge in view of the fact that the Comptroller of the Treasury, upon whom the respondent says he relied for direction, never advised him to make any such deduction.

I do not believe that law or propriety justified the respondent in this case to exercise the espionage or petty supervision over the time, services, and whereabouts of the judge, as was shown by the testimony on the trial. The testimony in the case warrants the statement that the judge was faithful, efficient, and independent in the discharge of the duties of his office. And testimony introduced at the trial without objection showed that Judge Jackson had so properly and fearlessly adjudged in a case before him as to bring forth from the respondent a published criticism upon the decision by the judge in that given case. But the judge was independent of him, and if he is to continue to be independent of the respondent, as a judge ought to be, he should not be subservient to the respondent for his salary or compensation.

In deducting $83.33 from the salary for the alleged five days' absence of the judge the respondent exceeded his authority.

My conclusion is that the withholding of $1,131.76 of Judge Jackson's salary was without authority of law; that it is the duty of respondent to issue his warrant or pay voucher for the same; that mandamus is the proper remedy to compel the respondent to perform this ministerial duty; and that, therefore, the peremptory writ of mandamus must be issued as prayed for.

It is accordingly adjudged and ordered.

---

## Commercial Attaché Service of the Department of Commerce.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM S. GREENE,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 29, 1916.*

Mr. GREENE of Massachusetts. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I am inserting copy of letter, dated yesterday, which my colleague, Mr. ROGERS, has written to Hon. William C. Redfield, Secretary of Commerce, with relation to the commercial attaché service of the Department of Commerce. I am also reprinting that portion of a speech upon the Consular Service made by Mr. ROGERS in the House on June 6 last, which deals with these commercial attachés. Finally, I incorporate copies of letters, to which Mr. ROGERS's letter is a reply, printed in the CONGRESSIONAL RECORD at the request of Secretary Redfield on June 22 last, written by Mr. Redfield to my colleague, Mr. OLNEY, and to Mr. ROGERS.

The letter and speech are as follows:

HOUSE OF REPRESENTATIVES,
*Washington, D. C., July 28, 1916.*

Hon. WILLIAM C. REDFIELD,
*Secretary of Commerce, Washington, D. C.*

DEAR SIR: I duly received your letter of the 12th ultimo. I observe that you have caused one of my colleagues to insert in the CONGRESSIONAL RECORD of the 22d ultimo (p. 11277) a copy of your letter, and that he includes in his extension of remarks copy of your letter to him dated the 13th ultimo. Both letters deal with a speech upon the Consular Service which I recently made in the House of Representatives, in the course of which I digressed to consider the commercial attaches of the Department of Commerce and to suggest why either these positions should be abolished or the officials should be brought under the control of the Department of State, virtually as a part of the Consular Service.

I had concluded, in view of the tone of your two letters, that they merited neither acknowledgment nor reply. Since then, however, I have received two more letters from you—one dated the 27th ultimo and the other the 25th instant—each citing a stray compliment which had been bestowed upon one of the attachés. In order to spare you the labor of further letter writing, I have now decided to write you somewhat fully of my views. Let me at the outset call your attention to a phase of the matter which you have apparently overlooked.

I think it is not too much to say that both your letters of the 12th and 13th ultimo, to which you caused wide publicity to be given, are deliberately offensive and insulting. I refer, for example, to your statement that "there have been few worse cases of absolute misrepresentations" than my speech, and that "it would be very simple to knock it out and show up the complete untruthfulness" of what I said. This is a direct charge of falsehood against a Representative of the United States for statements in a speech in the House of Representatives.

You, a former Member, though for a brief period, of the House of Representatives, are, of course, familiar with the language of the Constitution of the United States (Art. I, sec. 6) that "for any speech or debate in either House they (the Senators and Representatives) shall not be questioned in any other place." Did it not occur to you that in writing your letter for insertion in the RECORD charging me with falsehood you were committing a gross and palpable violation of the Constitution of the United States, which, as an officer of the Government, you are sworn to uphold? Without discussing how far the constitutional prohibition goes, I would call your attention to various cases where the House of Representatives for much less flagrant cause has disciplined executive officers of the Government afflicted with the letter-writing habit—in one case an auditor of the Treasury, in another a Commissioner of Indian Affairs (see, for example, 3 Hinds' Precedents of the House of Representatives, secs. 2683, 2684). Although I have been advised by a number of my colleagues who are expert in parliamentary law that your letters constitute a clear invasion of the privileges of the House and of myself as a Member of the House, I have not cared to take advantage of this remedy. I am simply calling these facts to your attention for their possible future usefulness to you; another Representative might not be so lenient as I am. I prefer to meet you upon the merits of the case.

As a member of the Committee on Foreign Affairs, I have made it my practice and pleasure to inform myself as fully as possible upon the details of our Diplomatic and Consular Service. I have, for example, sought every opportunity to discuss its needs with diplomatic and consular officers who were in this country on leave, with present and past officers of the State Department, and with persons of intelligence who have traveled extensively abroad. The statements which I made in my speech, and to which you take exception, were based upon and represent a composite of these private conversations. You ask me in your letter to inform you "on what authority" I made these statements, and to submit to you the names of my informants. I answer that I made the statements upon my own authority, basing them upon conversations with a large number of men who were personally acquainted with the matters of which they spoke and in whom I have entire confidence. I decline to give you the names of my informants; it is not my practice to break the seal of confidence which, among gentlemen, is affixed upon private conversations. I am surprised that you should ask me to do so.

You seem entirely to have misconstrued the purpose of my references to the commercial attachés. You seem to think that I have some grievance against the Department of Commerce or against the commercial attachés, individually or collectively. Nothing could be further from the fact. I do not know a single one of the commercial attachés, and have not the remotest personal interest in the matter. My sole purpose was and is to remedy what seems to me a serious flaw in the administration of our foreign service. As I said in my speech, "any such men (as the commercial attachés) to be effective at all, must be, as is the practice of other Governments, under the direction of the State Department. The present division of responsibility and authority works very badly." I stand squarely upon the foregoing statement and, if I knew how, would make it more emphatic.

You question my statement quoted above that it is the practice of foreign Governments to place the commercial attachés under what corresponds to our State Department. Surely you have not informed yourself upon this point. You have doubtless access to the minutes of evidence taken before the royal commission on the civil service of Great Britain in 1914. In the testimony of Sir Eyre Crowe, assistant under secretary of state for foreign affairs (answers 37158 and 37159) it appears that the commercial attachés of Great Britain "are part of the regular staff of the embassy. They report to the ambassador, and take their instructions from the secretary of state for foreign affairs," and are "selected, as well as formally appointed, by the foreign office." The German Embassy states that German commercial attachés are appointed by the foreign office, are under its control, and make their reports to it. Commercial attachés of France are appointed by the minister of foreign affairs and are controlled from the foreign office. The commercial attachés of Japan are also subject to the direction of the minister of foreign affairs. Thus, our four great rivals for the trade of the world—Great Britain, Germany, France, and Japan—control their commercial attachés from the foreign office. The force of example as well as the force of common sense alike condemn our present method.

It is, of course, easy to understand why you should rush to the defense of the commercial attachés of the Department of Commerce. The reason is that they had never existed until your administration, and, I presume, result from a recommendation made in your annual report of 1913. Their creation was apparently the first step in an attempt on your part to extend the scope of the Department of Commerce so as to effect a partial annexation of the Consular Service. If the recommendations on pages 14 and 63 of your report for 1913 had been accepted, we should have had the curious spectacle of our consuls being responsible in some lines of activity to the Secretary of State and in other lines of activity to the Secretary of Commerce. It is fortunate for the country that this suggestion, repugnant alike to precedent and reason, did not prevail.

And yet the creation of the commercial attachés, to work alongside of the consuls, while subject to another branch of the executive, was almost equally absurd. Under our laws (R. S., 1712) it is the duty of consuls of the United States in foreign countries to "procure and transmit to the Department of State authentic commercial information respecting such countries." Your report (1913, p. 13) states that "their (the commercial attachés') purpose will be to study the commerce and industries of the nations where they reside. They will have no other duties. They will collaborate with the consuls, having the advantage of the larger view and of the freedom from other cares."

Is that still their sole purpose? And as collaboration with the consuls was a requisite for this study, do you still indorse the division of authority and responsibility between the State Department and the Department of Commerce?

The commercial attachés were authorized by the legislative act approved July 16, 1914, and, in accordance with your recommendation (1913 report p. 62), were exempted from examination under civil service rules, although made subject to an examination to be held under your personal direction. Most of the attachés whom you selected under this law were appointed during the autumn of 1914. You ask various questions about the individual gentlemen who were appointed. I repeat that I have no disposition to attack any individual; my criticism goes beyond the fitness or unfitness of a given individual or group of individuals. Indeed, I believe that several of the commercial attachés are, as far as possible under a wrong system, doing excellent work. I hear Mr. Arnold's labors in Peking, for example, very highly commended. Mr. Arnold, it should be said, worked his way up through the several grades in the Consular Service, and at the time of his selection as commercial attaché was our consul at Hankow.

I believe you call these attachés "ambassadors of industry," yet I can find in their official biographical sketches but one of them—Mr. Downs—who was ever engaged in business. The occupations of the gentlemen whom I find listed in the latest Government register, aside from Mr. Downs and the three who were taken over from other branches of the Government service, are: Physician, railway engineer, teacher, newspaper man, and builder. Aside from the three former Government officials but two of your appointees are included in Who's Who; the occupation of one is there given as "compiler" and of the other as "sociologist." It was upon this analysis that I expressed my doubts as to the apparent qualifications for the positions. The examination being, under the law, wholly within your control and the occupations of the "ambassadors of industry" being as above, I ventured to suggest that politics played a part in their selection. In amplification of what I mean let me quote from the Cincinnati Enquirer of October 29, 1914:

"A. I. Harrington, who was recently appointed as commercial attaché by the Department of Commerce to go to Lima, Peru, in the interest of trade expansion in Peru and the neighboring countries, Ecuador and Colombia, came to Cincinnati in order to hear from principal exporters who have spent a number of years in South America about the best ways and means to promote American interests there.

"Mr. Harrington has never been in South America, and wanted the advice of those of our manufacturers who are acquainted with the trade in Latin America, and at the same time he wanted to see the goods that are made in Cincinnati."

Mr. Harrington's statements do credit to his candor; but I question whether his statement that he had never been in South America and that he was seeking advice in Cincinnati was calculated to instill confidence in his abundant qualifications for his post.
